There was only one out of the four entries that the judge could make out as of any distinct breed. George M. Kerr's Moss being something like a Skye, was given the prize, and all other mention withheld. This also entailed a special for best of this breed.

BLACK AND TAN TERRIERS.

Two dogs came before the judge in the first lot, and Rochelle Kennels had a pretty easy win over A. Geddes's Vortex, one of the old-time winners. He is too dark in tan and not distinctly marked enough in pencilings and thumbmarks; slightly breeched and is a bit coarse throughout. Rochelle Kennels' The Senator, looking a gentleman beside the other, won by his quality, markings, better shaped head and more symmetrical body; his tail is also ahead of Vortex. In bitches, Rochelle Nadjy was practically alone, her only opponent being one of those thick-headed, bulgy-eyed, pudgy bitches we often used to meet with at our shows, but now, I am happy to say, getting rather rare in the show ring. The judge made another enemy by gracefully handing her out of the ring.

TOY TERRIERS.

These were not real toys, but two rough-haired little customers given first and second; they were Miss May Daniels's Pollie and John Mason's Hoochey Coochey; a much larger name than dog.

PUGS.

I cannot say much for these classes, for with the exception of Miss Bell Forbes's Jim, second in puppy class at New York last spring, they all partook of the provincial style, big, heavy and coarse. Jim of course won in dogs; he is making up quite nicely, good size, fair head and wrinkle, nice ear and good curl and trace. Miss Maud Hurdman's Trixie, second, is not so good in ear or skull and is a bit large. Kelly & Kirby's Punch is also gross, flat in skull and long in muzzle. A. Pepler's Toby, wrong in color, but nice size and fair head, vhc. In bitches only one turned up, Kelly & Kirby's Judy, fair in head, ears carried badly and tail did not show well in the ring. The special for best pug went to Miss Belle Forbes's Jim.

TOY SPANIELS.

All breeds were put together, and for a show like this made quite a display, not a real bad one among them. In dogs, Edward Bradford's Prince, a King Charles better in skull and shorter faced than his Romeo, won, Romeo second, a Prince Charles, and his Sport, also a "Charlie," was given third, not so good in skull or coat. In bitches, Edward Bradford's Fannie, quite a nice one, though in open air she shows a rusty coat, won well over R. P. Forshaw's Ruby, winner at Toronto. She is not quite so good in face nor so high in skull as the winner. Equal thirds were given to J. York's King Charles and Edward Bradford's Nora; both lack volume of skull and are light in body. The special for best toy spaniel in show was won by Edward Bradford's Fannie, a bit better in head than the dog.

YORKSHIRE TERRIERS.

The now well known Symonds Kennels being on hand, there was quality galore, though the four from this kennel were the only entries. Toons Royal, in excellent shape, again beat his kennel mate, Fishpool Gem, in open dogs, and now will walk into the challenge class at New York next spring. In bitches Venus had things to herself, as a challenge class was made for Daisy, whose condition was simply superb; in fact, all these dogs looked well, and when we consider what it is to take a team of Yorkshires round to three shows without seeing home, one can appreciate Mr. Thomas's care of them; but there it is, only here and there will you find a man that can handle Yorkshires.

A very moderate spitz or Pomeranian was shown and considerately given second; not right in coat and too short in head. This one unfortunately had to take the special, too.

POODLES.

The four winners from the A. W. Purbeck Kennels, that

were at Toronto, came on here and were placed in the same way. Dodor, who seems to delight in the muddiest place he can find to the detriment of his long cords, won over Keva II. In bitches Nell beat Cora, as before. As these were at Toronto, it is no use going over them again.

MISCELLANEOUS.

In dogs a fine Russian wolfhound puppy, with an abnormally long head, excellent legs and feet, and nice coat, was alone. One can hardly believe this puppy to be only about 7 months old. He is Hornell-Harmony Kennels' Valdimar, one of the Elsie—Kilnet litter. In bitches Princess Irma, a litter sister to the above and same owner, was alone. She is not so large as the other, but still of good size and fair length of head. They are a handsome couple.

The special for best conditioned dog in the show gave the judge some trouble, the contest finally narrowing down to Dr. Wesley Mills's greyhound Elcho, Hornell-Harmony Kennels' greyhound Hazelhurst and Northfield Kennels' Yorkshire terrier Daisy. All three were in splendid trim and as it was not a question of individual merit the prize was eventually divided equally between them. The special for largest dog in show was won by Laidlaw & McBean's St. Bernard Benmore. H. W. L.

LONDON DOG SHOW.

THE show of dogs in this city commenced Sept. 23 and was brought to a close Sept. 26. With Ottawa show on at the same time, London felt the competition to some extent. The catalogue called for 303 entries, though the actual entries were 256. We have seen many catalogues at many shows of more or less pretensions, but never have we seen such a muddle as this one, numbers jumped ahead in the most exasperating manner, and as many of the dogs were benched in their wrong places, it made it almost impossible to follow the awards; for a collie pup would be found among the spaniels, a dachshund among the fox-terriers and so on. When men give their time and labor without recompense to make a show a success it is hard to criticise matters in this way, but when a show of the importance to dogmen such as London is, does this we should not be doing our duty not to call attention to it; it is a natural consequence of taking entries almost up to the time of the show opening and nothing else could be expected. As a guide to the public the catalogue was almost useless, for knowing most of the dogs as we do we found it a difficult matter to spot the right ones, and if any of our criticisms are a bit "mixed" our readers will know the reason. The officials were kindness itself and did all in their power to make everything go to the satisfaction of the exhibitors. The feeding was excellent, this part being in charge of Dan O'Shea, who fed the dogs on stale bread, soup and meat. The rings were well served, and a great improvement was seen in this respect over last year, two nice long rings being provided at the side of the building. This had been moved forward from its old place.

The benching of the dogs was excellent, if we except those supplied to the pet dogs, which, as before, were benched one on top of the other in one corner, making it awkward for the public to get a good view of them. As these dogs, as a rule, command more attention from the general public than any others, it behooves the management to see that they are better placed another year. The judging was all completed, excepting a few specials, by six o'clock of the first day, reflecting credit both on the management and the judges. Setters, spaniels, fox-terriers and collies were particularly good. There was little grumbling at the awards and everything passed off very nicely Messrs. Davey and Glass were untiring in their efforts to please every one. We were glad to see that one improvement had been made in the flooring, that fine dust of last year giving place to more solid tan bark, which added materially to the comfort of the animals. With these few remarks we may pass on to the criticism of the dogs present, but as we stated before, if, though we think we got them all down correctly, any mistake should arise we claim the indulgence of the owners and will gladly rectify any injustice. It may be said that at this show the blue ribbon occupied its accustomed place at the head of the prize list, red going to second, as usual, in contradistinction to Toronto and Ottawa, where red was the premium color and led to a little confusion at first. Messrs. Davidson and Mortimer were the judges and gave every satisfaction.

MASTIFFS—(MR. MORTIMER).

There were no challenge entries. In open dogs, H. Falconer's Mode, looking a little more like himself, won easily over W. D. Forbes's Grimsby Caution, occupying the same relation to each other as they did at Toronto. Third went to S. F. Glass's Leo, who loses in type, expression and ears; a poor one. Bitches had John B. Battram's Bessie B. the winner, described at Toronto, followed by H. Falconer's Bess, who is a bit long in head, gray muzzle, faulty in eyes, but possessing good bone and substance. In puppies the before-mentioned Grimsby Caution took the ribbon over W. Hauld's Lord Stanton, only a moderate one, followed by Leo, third in open class. These classes, as may be surmised, were wanting in quality.

ST. BERNARDS—(MR. MORTIMER).

No challenge entries. By the way, how is it none of our cracks in these breeds, with the exception of Victor Joseph, put in an appearance at any of our fall shows? Pottersburg Kennels' Bruce, vhc. at Toronto, had here a somewhat easy win over their Bacnie, who is long-faced, lacks massiveness of head, is weak in pasterns, but has a nice coat. H. Gorman's Brian, benched 14, catalogue number 20, has only his good bone and front to recommend him, as his long head and faulty muzzle will always place him back. Pottersburg Kennels' Don Phyllis and Kildonan, puppies, were sent home before we saw them, though Kildonan was described last week. In bitches, Pottersburg Kennels' Phyllis had another easy win, second going to H. Gorman's Blasz, who, like the winner, lacks type in head, but is well off in other respects, such as bone, coat and body. Pottersburg Kennels' Luna, third, has a too settery head, but is good in bone and body; she was nursing a litter. Pottersburg Kennels' Glenisla and their Lady Cerise are both deficient in head properties, but have promising bodies; they are by Pout out of Phyllis. In rough puppy dogs first went to Pottersburg Kennels' Ben Maida, the Toronto winner. John Auld's Jeff, second, is faulty in head and quarters. P. Smith's Nexo, third, no markings, is a large dog, but too long-faced. Pottersburg Kennels' Don Phyllis and Kildonan were again vhc. In bitches Pottersburg Kennels' Glenisla scored over their Lady Cerise. W. H. Auld's Lady Cordelia, coming third, is a nice size, but faulty in head. G. A. McGillivray's May Maida loses in muzzle, but is a nice stamp. Smooth-coated dogs or bitches saw the winner in H. Gorman's Lola, who is a fairly good youngster; a bit faulty in muzzle, but has good bone and body. H Gorman's Brundle, second, is too plain in face; lacks depth of body. F. W. Wilson's Nellie is a plain-headed one; good size. In puppies, H. Gorman's Lola was the only entry and won.

NEWFOUNDLANDS—(MR. MORTIMER).

We expected to see a better show of these dogs in Canada, but they evidently take no better than in the States, and more the pity. W. J. Watson's Leo was the only entry. He won second at Toronto.

GREAT DANES—(MR. MORTIMER).

These dogs showed up fairly well and were redeemed in quality by the presence of Melac and Irene. In dogs, Herbert S. Nichols's Melac, the giant, was, of course, first. Second withheld and third going to F. W. Wilson's Pollux, mentioned at Toronto. These were the only entries. In bitches Teutonia Kennels' Irene, looking fairly well, scored again over F. W. Wilson's Freda, who was at Toronto, with her pups. This is what we call getting the last ounce out of a dog. Surely a bitch when busy with her maternal duties is entitled to a comfortable corner at home. A dog show is not a maternity hospital. F. W. Wilson's Crazy Spot is bad in ear, faulty in head and straight behind. His May also loses in head and is throaty.

GREYHOUNDS—(MR. DAVIDSON).

Only four entries turned up in this breed. In open dogs, Geo. C. Taylor's well known Scavenger won easily over T. Dickinson's Apparition, both described last week. In bitches Geo. C. Taylor's Second Sight had little difficulty in downing W. J. Randall's Grimsby Jess, who is fairly fronted but too light in eye, giving her a bad expression. Only one deerhound turned out the winner at Toronto, B. S. Deering's Nora. These dogs have not shown up at all well this fall.

POINTERS—(MR. DAVIDSON).

Both weights were classed together in dogs and bitches. In the former class T. G. Davey's new purchase, Westminster Drake, won nicely from Hez Milkens's Count Graphic, who is nicely ribbed but loses in muzzle, eyes, legs and feet. Dr. Taylor's King Bow's Brother is houndy-headed and throaty, but boasts good bone. J. E. McGloughlan's Jem was away when we called. T. G. Davey's Toronto winner Fan N. scored again, with something to spare in the bitch class, followed by J. E Gill's Galena, described before. Hez Milkens's Dutch Graphic is a poor one, not depth of chest enough, ears set on badly, light stary eye, but is good in quarters. His Nellie stands a little wide in front and is pinched in muzzle. In puppies, Hez Milkens had both first and second, Judge Lansdown and Sport, the former beats in head, bone and front, and the latter is too round and domy in skull.

ENGLISH SETTERS—(MR. DAVIDSON).

T. G. Davey's Leddersdale was entered N. F. C., which left the honors equally divided between J. S. Hudson's well-known Dad Wilson and his Bohemian Girl. Open dogs saw the winner in Joe Lewis's promising youngster Tony Gladstone, second going to W. B. Wells's Cambrian, who is a bit straight behind and weak in muzzle, J. S. Hudson's well-known Chickasaw coming third. T. G. Davey's Locksey, vhc. J. S. Hudson's Dad Wilson's Boy, well known, and T. G. Davey's Canadian Jester, whose good forelegs and feet are counterbalanced by his thick skull, full eye and straightness of stifles, getting hc. cards. W. S. Smith's Lonoke, only a moderate one, was c. In bitches first was given to W. B. Wells's Matinee, and second to T. G. Davey's Forest Heather, described before, and his Canadian Lillie claiming third; she is too straight in stop, and ears are set on too high. E. J. Walsh's Scottish Belle was vhc., and J. S. Hudson's Sunshine, hc., has a wall eye and is faulty in muzzle and round in skull. Puppy dogs had one entry, T. G. Davey's Locke, only a fairish one. In bitches, his Forest Heather beat his Lordy, followed by W. S. Smith's Maud, a bit long in body, fair front.

IRISH SETTERS—(MR. DAVIDSON).

Two challenge entries appeared, and of course George H. Covert again beat his Toronto opponent Blarney in dogs, and in the ladies' division W. L. Washington's Ruby Glenmore had matters her own way. In open dogs W. L. Washington's Kildare had to give place again to A. V. Armour's Max, Geo. H. Covert's Red River Gleucho getting third, with A. W. Stephenson's Chief S not for competition. These were the only entries, and all were described last week. L. N. Hilsendegen's Biddy Clare was placed for premier honors in bitches, second going to Geo H. Covert's Kildare Ruby, who last week at Toronto could do no better than c., was here placed over the same owner's Glidelia, third, but vhc. at Toronto; his Kate IX., only a moderate one, vhc. In puppies the only entry was absent.

GORDON SETTERS—(MR. DAVIDSON).

The entries though small were choice and consisted of the team Ben Lewis had at Toronto. With Little Boy N. F. C., the competition lay in challenge dogs between Leo B. and Field Marshall, the former winning again, both owned by Dr. Dixon. In challenge bitches S. Hammett's Rose was blooming alone. Open dogs had two entries, these being Dr. Dixon's Ivanhoe, well known, and Gibbs's Clyde again a second to him. No bitches were entered in open class.

FOXHOUNDS—(MR. DAVIDSON).

These were all belonging to the London Hunt, but as the numbers and names were not in the catalogue we cannot particularize them except that the winner, Weasel, beats the second, Genius, in head.

COLLIES—(MR. DAVIDSON.)

Chestnut Hill Kennels' Scotilla was alone in his glory and want of coat. This dog still has a head that puzzles the best of them. Chestnut Hill Kennels' Colonel Scot, though none too good himself in head, beats McEwen & Gibson's Langham, who has also the same faults and is a bit shorter in head, but nicely off for coat and bone. Their Montrose, third, is small, shelly in body and out of coat. H. T. Little's Postern, reserve, is a bit plain-faced, nice ears, moves bad behind. Seminole Kennels' Roslyn Dandy, vhc., is a bit too fine in muzzle, and Chestnut Hill Kennels' Roslyn II. might have been further up, as he has a nice long head, bit big in ear, good bone, good in coat, though a trifle sott. In bitches the well-known Cora II. won somewhat easily over McEwen & Gibson's Ailsa, who is a bit thick in head, big in ear, but has a fairly good coat; they were alone in this class. Puppy dogs had W. H. Beattie's Watch the winner; he is too high in skull and was out of coat Roslyn II. is a better one in head and condition. McEwen & Gibson's Drury, third, was spoken of last week. Bitch puppies had W. H. Beattie's Topsy a winner, though a bit soft in coat she has a very nice head and expression. She was followed by McEwen & Gibson's Clover, who is small. If we had an E. K. C here it would surely be down on this entry. It is stated in the catalogue as by "Mamy Wifoil," which by a stretch of imagination can be turned into "Maney Trefoil." This catalogue needs editing badly.

SPANIELS—(MR. MORTIMER).

These clases were a feature of the show, but as many of them were at Toronto the week before, it is useless to state their merits or demerits over again.

Field Spaniels—R. P. Keasbey's Lady won over Luckwell & Douglas's Woodland Laddie, who though hardly square enough in muzzle and faulty in front, still was in splendid condition and coat. R. P. Keasby's Miss Ben D'Or, bad in front and muzzle, third. No Clumber spaniels were entered, pretty near all the Clumbers in the country being at Ottawa that week. In Irish water spaniels the well-known pair, Ben Lewis's Patsy O'Connor and Joe Lewis's Countess Bendigo, divided the honors in the order named. In challenge cockers, any color, Brant Cocker Kennels' Brantford Red Jacket shows more cocker type than the others and won over their Brant and J. W. Buntry's Sensation. Open black dogs saw Luckwell & Douglas's Black Duke the winner, the same as at Boston. J. A. Spracklin's Dude, second, we could not find. Brant Cocker Kennels' Nap, third, is wrong in front, nice in body. J. W. Bunting's Pedro, vhc., lacks depth of body, and J. G. Mitchener's Dono, also vhc., we spoke of last week. H. B. Nicol's Kildare only received a c. card here; is faulty in head and front. A nice class of bitches was present, Geo. H. Bush's Novel repeating her Toronto victory. Luckwell & Douglas's Martha Washington, a bit out in front, lacking in depth of body and faulty in muzzle, came in second. J. G. Mitchener's Lady Obo, described last week; Brant Cocker Kennels' Busy could do no better than vhc.; and G. H. Bush's Bessy W. was put still further back than at Toronto; her condition is against her. J. A. Spracklin's Frisky II. did not deserve more than her hc., as she is out in front, high in leg and faulty in head and muzzle. Luckwell & Douglas's Marguerite, c., has a field spaniel head. In the any other color division Luckwell & Douglas's King Pharoah's Sister scored another win, Geo. Bell's Little Red Riding Hood being here placed over Brant Kennels' Zetta, all well known. Geo. Bell's Crosby was here given hc. only. In puppies, any variety, Brant Kennels' Nap took the blue ribbon, the red going to Fred Downing's Lady Aberdeen, too domy in skull and not straight in front. Brant Kennels' Fatima came third, and L. A. Webb's Vice, vhc., is a weed.

BEAGLES—(MR. DAVIDSON).

There were few entries in the one class. H. Bennett's champion Little Duke won easily over Middleton Kennels' Jane M., long cast and out at elbow. Bowman's Ruby, third, is plain-faced, wide in front and not right in coat. F. A. Simpkins's Witch Hazel Prince, vhc., was at Toronto.

FOX-TERRIERS—(MR. MORTIMER).

With the Blemton and Oxford Kennels on hand there was some quality. The challenge class had that well-known bitch New Forest Ethel (Blemton Kennels) a winner over their Blemton Rubicon, with Oriole Kennels' Blemton Brilliant third. Blemton Kennels furnished the winner in open dogs with Blemton Racket, who is faulty in feet, though good otherwise. Wooddale Kennels' Starden's Jack (late Frank Dole's) scored second this time, we have described his faults before, and Blemton Kennels' Blemton Rattler came in for third; he does not carry his ears well, but is fairly well fronted. The well known Blemton Trump had here to content himself with vhc., and R. Gibson's Belvoir Bacchanal is bad in feet, but deserved his three letters. Oriole Kennels' Oriole Trap, second, took an hc. card; he was reserve at Toronto. In bitches first went to T.G Davey's taking bitch Ebor Nettle, whose merits we commented on before; Blemton Kennels' Blemton Enid securing the red ribbon, she loses to a good one in feet, ribs and skull. Geo. Douglas's Mischief is round in skull and soft in coat. R. Gibson's Belvoir Tricksey is a bit coarse, and Munro & Cleghorn's Nip C. is a poor one. The puppy dog prizes were withheld, though there were five entries, and Wilson's Moody, first in novice at Toronto, deserved something as well as McPherson's wire-haired Stanley. In bitches Oxford Kennels' Oxford Beauty was given first over John J. Briggs's Nellie Bly. J. A. Burden's Ravel, third, R. Gibson's Witch hc. These had gone home when we reached their benches. Wire hairs were quite a good show, reminding us of Toronto. McPherson's Addswood Jim II., though too short-faced, won over his Patch, who is also faulty in head. T. G. Davey's Nettle Topper, third, is not flat enough in skull, but is nicely fronted. Oxford Kennels' Miss Taylor loses in muzzle, ears and expression.

BULLDOGS—(MR. MORTIMER).

Only one entry, and a poorish one at that, W. Higman's Watch, he received a blue ribbon.

BULL-TERRIERS—(MR. MORTIMER).

These were poor. W. J. Watson's Royal IV. scored, he is thick and coarse in head, and had a bad sore on muzzle, lacks quality throughout. All five were entered by Dan—W. J. Watson. Lillie II. is something of the same type as the winner. Danger, a big coarse brute, with ears like a fox-terrier, did not deserve a mention.

BLACK AND TAN TERRIERS—(MR. MORTIMER).

In the dog class Blake & Herbertson's Prince, first, is a fairish little dog, too wrinkled in skull, lacks thumb marks, nicely-shaped body and good tail, stands a bit out in front and has something the matter with his eyes. Second went to the well-known Sir Wallace, same owner, and third to W. J. Watson's Jack, whose markings are too dark, ears faulty and head coarse. In bitches Blake & Herbertson showed the winner in Nanon, she is a little wide in front, heavy in shoulders and faulty in muzzle, though a fairly well-marked bitch; W. J. Watson's Merry, second, has poor markings and is too coarse; T. Dickison's Jeannie is bad in muzzle, pig-jawed; Blake & Herbertson's Buttercup is a bit coarse in skull, and faulty in markings; a lot of black and tans but not a real good one among them.

DANDIE DINMONTS—(MR. MORTIMER).

First went to J. Butterfield's Milton, a pretty fair one, with hardly length enough, but nice coat; C. J. Daniels's Fan came second, she is nothing very extra.

BEDLINGTON TERRIERS—(MR. MORTIMER).

W. J. Watson furnished the winners in his Zulu and Sting III., the former won at Toronto. Ed. Bissett's Clansman II. is too flat-faced and too straight in back.

SKYE TERRIERS—(MR. MORTIMER).

C. A. Shinn's Sir Stafford, a well known winner, had things pretty well to himself. P. & H. Smith's Toodles, only a moderate one, lacks strength of head and coat, and is too short in body.

IRISH TERRIERS—(MR. MORTIMER).

Chestnut Hill Kennels' champion Breda Tiney made short work of the Lewis & Jarrett combination's Burnside, both are too well known to speak about. W. H. Smith's Young Pedlar is too large, lacks coat, and is too full in eye. The dachshunde Feldmann K. and H. Jenny's dog might have changed places, as the latter is better in bone, crook, chest and length. Ben Lewis's Gilt, third, is well known. The hc. dog is too fine in head. Two of this class were not in the catalogue.

YORKSHIRE TERRIERS—(MR. MORTIMER).

The catalogue says no entries, but we found the names of the winners to be W. H Smith's Dolly first, nice coat and color, and the only one we have seen likely to give the Symonds Kennels a rub; Minnie, second, is a bit too light in tan, and Sandy has a nice long coat, not so good in tan, bit smutty, but body color is quite good.

PUGS—(MR. MORTIMER).

The winners in these classes were all old faces from Dr. Cryer's kennels. Bob Ivey first, Climax second, W. H. Smith's Joe coming third, too flat in skull and a bit large sized. In bitches, with Dr. Cryer's Bessie and Cassina first and second, Mrs. Grange's Fly had little chance. She was either in whelp or very fat. She has a fair head, though ears are badly carried. The pug puppies were poor. Though not in catalogue, they were W. Belton's Bee, Boy and Babe; Bee was given third and other awards withheld.

TOY TERRIERS—(MR. MORTIMER).

A fair little toy in Miss Dickison's Tiny scored over W. Bennett's Pete II., though neither will be heard from again.

TOY SPANIELS—(MR. MORTIMER).

A. Trebilcock's well known King Charles won with something to spare, being better in skull, muzzle and coat than Mrs. R. U. Nicholson's Dandy, second. Only two entries.

MISCELLANEOUS CLASS.

Nearly every dog got a taste of the $25 put up by the show in $5 portions. Joe Lewis's nice little Italian greyhound took one, Chestnut Hill Kennels' schipperke Othello another, Thos. Blake's whippets Beadow, Maggie and Nellie Gray also $5 each, but T. Dickison's light-weight bull-terrier Tip was left out in the cold with a vhc. card.

SPECIAL PRIZE LIST.

Prizes for best kennels, to consist of five or more of the following breeds: St. Bernards, Pottersburg Kennels; spaniels owned in Canada, Woodland Kennels; English setters, J. Shelley Hudson; Irish setters, Geo. H. Covert; Gordon setters, Dr. Dixon; fox-terriers, Blemton Kennels; bull-terriers, W. J. Watson; collies, Chestnut Hill Kennels; pointers, H. Milkens. Largest number of entries, T. G. Davey. Best kennel of English setters, T. G. Davey. Best collie dog or bitch, Chestnut Hill Kennels' Scotilla. Best mastiff dog or bitch, H. Falconer's Mode. Largest number of entries made by London exhibitor (members of London Kennel Club excluded), W. J. Watson. Best pointer dog, T. G. Davey's Westminster Drake. Best cocker spaniel with four of his or her get, Brant Cocker Kennels (C. M. Nelles). Best brace fox-terriers owned in London (members L. K. C. excluded), John J. Biggs's Vixen II. and Nellie Bly. Best Irish setter dog or bitch, Geo. H. Covert's Dick Swiveller. Best brace of English setters owned in London (members L. K. C. excluded), W. S. Smith's Lonoke and Maude. Best dog of any breed exhibited by a lady, Mrs. Nicholson's Dandy. Best fox-terrier bitch, Blemton Kennels' New Forest Ethel. Best black and tan terrier, Blake & Herbertson's Prince. Largest number of St. Bernards entered by one exhibitor, Pottersburg Kennels. Best pair Great Danes, F. W. Wilson's Freda and Pollux. Best pair spaniels, any variety, Woodland Kennels. Best pug, Dr. Cryer's Bessie. Largest number of entries made by one exhibitor, B. F. Lewis. Best English setter bitch puppy, T. G. Davey's Forest Heather. Best pointer, T. G. Davey's Fan N. Best fox-terrier bitch owned in Canada, T. G. Davey's Ebor Nettle. Best pair foxhounds owned in Canada, London Hunt. Best greyhound, dog or bitch, G. C. Taylor's Scavenger. Best St. Bernard owned in London (members L. K. C. excluded) P. Smith's Nexo. Best kennel of St. Bernards, four or more, Pottersburg Kennels. Best pair Irish setters, W. L. Washington's Ruby Glenmore and Kildare. Best pair of pointers, T. G. Davey's Westminster Drake and Fan N. Best pair Gordon setters, Dr. Dixon's Ch. Leo B. and Field Marshall. Best Irish setter, Geo. H. Covert's Dick Swiveller. Best wire-haired fox-terrier bitch, T. G. Davey's Nettle Topper. Best rough-coated St. Bernard bitch, Pottersburg Kennels' Phyllis.

WOODBURY SHOW.

A DOG SHOW was held at Woodbury, N. J., under the management of the South Jersey Kennel Club, on Sept. 26 and 27. The Rink Building in which it was held was amply large enough to accommodate 200 dogs and there was plenty of room there for the number benched, which was a little short of half that number. The club was most unfortunate in the matter of weather, the rain falling in torrents all day on Friday and again on Saturday until noon, which very naturally had a most material effect on the attendance.

The judges announced were Mr. H. F. Smith for setters, pointers and spaniels, Mr. George D. Woodell for bulldogs, bull-terriers and black and tan terriers, and Mr. Jas. Watson for the remainder. Unfortunately Mr. Smith was prevented by sickness from being present, and Mr. Howard Ireland consented to take Irish and Gordon setters, Mr. Woodell taking the spaniels, and the English setters and pointers being added to Mr. Watson's list.

Quite a number of the dogs were well known, and of the new comers the best were the English setter Dashing Kent, a full brother of Sir Tatton, a very good dog indeed, and Mr. Gaus's Gordon's Duke of Kent and Ruby Royal, both of which are nice specimens and are litter brother and sister, sired by Royal Duke.

AWARDS.

MASTIFFS.—1st, H. H. Clark's Captain.

ST. BERNARDS.—ROUGH—*Dogs:* 1st, Swiss Mountain Kennels' Arch Duke; 2d, Associated Fanciers' Celtic Rector. *Bitches:* 1st and 2d, Swiss Mountain Kennels' Betsy Bobbett and Madame Barry.

NEWFOUNDLANDS.—1st and 2d, W. & T. Morris's Prince Henry and Folly's Rose.

POINTERS.—LARGE—1st and 2d, W. H. Weiss's Molly R. and Jess.—SMALL—1st, J. S. Summers's Bing of Kippen.

ENGLISH SETTERS.—*Dogs:* 1st and 2d, W. H. Weiss's Dashing Kent and Carlton Pero. *Bitches:* 1st, W. H. Weiss's Lady Maud.

IRISH SETTERS.—CHALLENGE—1st, W. H. Weiss's Molly Bawn. *Dogs:* 1st, J. W. Kemble's Major. *Bitches:* 1st, 2d, 3d and very high com., W. W. Kendall's Madge, Leda Glencho, Lucille and Stella Glencho.

GORDON SETTERS.—*Dogs:* 1st, J. E. Gaus's Duke of Kent. *Bitches:* 1st and 2d, J. E. Gaus's Ruby Royal and Daisy.

COCKER SPANIELS.—1st, Swiss Mountain Kennels' Toddy Obo; 2d, Barnes Bros.' Red Doc *Bitches:* 1st, E. M. Hall's Smutt II.; Barnes Bros.' Hazel Obo.

COLLIES.—*Dogs:* 1st, J. Maud's Rover. *Bitches:* 1st, Associated Fanciers' Clifton Maid.

BULLDOGS.—*Dogs:* 1st, Associated Fanciers' Quasimodo; 2d, F. Hope's Madge.

BASSET HOUNDS.—1st, Associated Fanciers' Jocrisse.

BEAGLES.—*Dogs:* 1st, W. H. Child's Tony Weller. *Bitches:* 1st, W. H. Wolf's Lady.

FOX-TERRIERS.—*Dogs:* 1st, M. W. Taylor's General Grant; 2d, F. W. Harris's Reckless. *Bitches:* J. G. Thompson's Positive; 2d, M. W. Taylor's Oxford Nora.

IRISH TERRIERS.—1st, H. W. Bloomfield's Lady Irex.

SKYE TERRIERS.—*Dogs:* 1st, M. H. York's Prince Victor. *Bitches:* 2d, M. H. York's Lady Countess. *Puppies:* 1st, M. H. York's Pedro.

YORKSHIRE TERRIERS.—1st, J. Cummins's Dandie. *Puppies:* 1st and 2d, M. H. York's Music and Floss.

PUGS.—*Dogs:* 1st and 2d, Diamond Kennels' Bradford Rowdy and Prince Royal. *Bitches:* 1st, Diamond Kennels' Lady Victoria; 2d, R. T. Harrison's Nellie Bly.

TOY-TERRIERS.—1st, Miss H. Kirby's Tiny; 2d, Miss T. A. Thomson's Miss Topsy. Very high com., S. W. Garregas's Topsy.

MISCELLANEOUS.—1st, Woodbury Kennels' smooth-coated St. Bernard bitch. J. W.

BRUNSWICK FUR CLUB'S FIELD TRIALS.—*Editor Forest and Stream:* The second annual field trials of the Brunswick Fur Club will be held at Great Island, Maine, on Nov. 10, and will continue for one week, or until the various classes have been run off. The meet will be at the Gurnet House, where arrangements have been made to accommodate a hundred guests, and as many hounds as may be brought. Tickets should be bought to Brunswick, Maine, and there teams will take visitors to the Gurnet House, four miles distant. Gentlemen who may be desirous of attending the trials will please send their names to the secretary, Mr. J. H. Baird, Auburndale, Mass. Persons going from Boston should take the 9 A. M. or 12:30 P. M. trains from the East End Station, Boston & Maine R. R. Foxes are reported abundant on the island, and as foxhounds from Tennessee and Illinois are promised, to compete with the Eastern dogs, and the American field cup and a special medal are to be awarded to the best all-round foxhound, the trials promise to be of exceeding interest and brilliancy. Lovers of the chase, and those desirous of seeing everything possible done for the improvement of the foxhound, are cordially invited to attend the trials.—A. C. HEFFENGER, Vice-President B. F. C. (Portsmouth, N. H.).

BRAKE IS NOT THE SIRE.—*Editor Forest and Stream:* In your edition of Aug. 21 a certain individual residing at Red Bank, N. J., claimed the name of Cartaret for a pointer puppy said to be by Brake out of Marguerite II. I have also since learned that there were six of the puppies, and that three or four of them have been sold. Now, I have had considerable correspondence with the owner of the above named bitch, and who claimed the name for the puppy in question, and have conclusive evidence in my possession that these puppies are not by my pointer dog Brake (A.K.C.S.B. 7035) as represented, and in justice to any one who has bought or may think of buying them, I think it my duty to advise them of the above facts.—STANTON W. PENTZ ("The Pines," Fanwood, N. J., Sept. 24).

THE A. K. C. MEETING.

THE regular quarterly meeting of the American Kennel Club was held at 44 Broadway, New York city, Thursday, Sept. 25, President August Belmont, Jr., in the chair. Present: American Pet Dog Club, Dr. M. H. Cryer; American Fox-Terrier Club, W. Rutherfurd; American Beagle Club, H. F. Schellhass; American Mastiff Club, F. T. Underbill; American Spaniel Club, R. P. Keasbey; Associate Members, Dr. J. Frank Perry, J. L. Anthony, A. P. Vredenburgh; California Kennel Club, Max Wenzel; Collie Club of America, J. D. Shotwell; Duquesne Kennel Club, W. E. Littell; German Mastiff or Great Dane Club, G. Mussarnult; Long Island Live Stock Fair Association, J. Van Schaick; Michigan Kennel Club, H. E. Cook; Massachusetts Kennel Club, Robert Leslie; Mascoutah Kennel Club, Jas. Mortimer; National Greyhound Club, L. C. Whiton; New Jersey Kennel Club, A. C. Wilmerding; Philadelphia Kennel Club, J. H. Winslow; Pointer Club of America, G. W. LaRue; South Carolina Poultry and Pet Stock Association, H. Clay Glover; St. Paul and Minnesota Kennel Club, A. D. Lewis; Westminster Kennel Club, T. H. Terry.

Secretary Vredenburgh read the credentials of Rolin P. Keasbey, representing the American Spaniel Club; Mr. Max Wenzel, representing the California Kennel Club; Mr. J. D. Snotwell, representing the Collie Club of America; Mr. L. C. Whiton, representing the National Greyhound Club; Dr. H. Clay Glover, representing the South Carolina Poultry and Pet Stock Association; Mr. W. Rutherfurd, representing the American Fox-Terrier Club, and Mr. W. E. Littell, representing the Duquesne Kennel Club, all of which credentials were on motion accepted.

The secretary stated that President Logan, of the Youngstown Kennel Club, was present as a delegate, but that his credentials had not yet been received.

Mr. Logan stated that the absence of his credentials was undoubtedly caused by an oversight.

The rules requiring the credentials to be signed by the secretary of his club before Mr. Logan could be recognized as a delegate, Mr. Anthony moved that he be granted the privilege of the floor, but without the right to vote until his credentials arrived. Seconded and carried.

The minutes of the last meeting read and adopted. The secretary then read his report as follows:

NEW YORK, Sept. 24, 1890.—*The Executive Committee American Kennel Club:* GENTLEMEN—I beg to submit for your action the applications for admission to membership from the English Setter Club, New York; National Beagle Club, Boston, Mass.; South Carolina Poultry and Pet Stock Association, Greenville, S. C. According to the constitutions of above clubs, they are eligible to membership. In the case of the National Beagle Club, the application specifies that the principal object of said club is for the purpose of holding field trials for beagles; but the constitution also specifies as one of its objects "to promote the improvement on the bench" of its special breed. The American Beagle Club has been a member of this club since Feb. 23, 1888, and was organized for the purpose of the improvement of the beagle, the adoption of a standard to breed to and to be judged by on the bench. It is now for you to decide as to the justice or expediency of the admission of another club confined to the beagle. In the case of the application of the South Carolina Poultry and Pet Stock Association, I would call your attention to the fact that we already have a member under the same title, with its headquarters at Charleston, S. C. Said club was elected Feb. 1, 1889. The application from the Peoria Kennel Club, advertised in June, July and August *Gazettes*, was withdrawn Sept. 3, 1890.

I hereby report that I filed with the Michigan Kennel Club a protest against the award to entry 312, class 148, wire-haired fox-terriers, at its show held Sept. 2-5, 1890, said dog being shown under name of Wentworth Wonder. My reason for said protest was to protect the prefix "Wentworth," which was duly registered June 23, 1888, by another party. I have been instructed by the owner of the dog shown at Detroit, to change the name of his dog to "Wonder," and have corrected it accordingly in the certified prize list, to be published in the *Gazette* for September.

I submit herewith a complaint from Mrs. F. Smyth against the Cincinnati Kennel Club for a violation of its own rules at its show held in June of this year, in that said club reopened a class that had been already judged, to admit two other dogs that had been received on the second day of the show. I also submit an appeal from Dr. M. H. Cryer against the awarding of the special prize "for best kennel of four pugs" at the Cincinnati Kennel Club show, June, 1890. Dr. Cryer protested the said award, and said protest was not allowed by the show committee of the Cincinnati Kennel Club, he now appeals against this decision. The necessary deposits of five dollars with the appeal have been made, as required by the rules.

I herewith submit a complaint from Mr. T. Jacobs, of Newton Abbot, England, against Mr. E. M. Oldham, New York, stating that in connection with the sale of some of his dogs to said Oldham, a balance of £90 or $450 was due; that he accepted a draft on New York for said amount, said draft was not honored by the bank when due for payment, and up to Aug. 13, 1890, had never been redeemed by said Oldham. Mr. Jacobs asks for some action by this club in order to prevent said Oldham exhibiting the dogs not paid for, and advises that his attorney in this city will produce such evidence and proof in his behalf as may be required.

Under date of May 5, 1889, Mr. James Watson filed with this club an appeal from the decision of the Rochester Kennel Club in the matter of his protest against Metchley Surprise, wrongly entered in the challenge class at the show of 1889. At the meeting of this club held May 23, 1889, this appeal was heard and the decision and action of the Rochester Club was reversed and Mr. Watson's protest sustained. In Mr. Watson's protest he requested the Rochester Kennel Club to have reserve numbers taken on account of his dog Clipper competing against Metchley Surprise, for a special prize. As said Watson has never been able to learn from the Rochester Kennel Club whether or not his request for reserve numbers had been complied with, he submitted the matter to this club and asked that some action might be taken to ascertain why his request had not been granted. This matter was referred to the advisory committee, and at its meeting Dec. 19, 1889, the matter was laid over until such time as Mr. Watson would produce evidence to sustain his appeal. And again at the meeting of said committee held April 7, both parties were requested to furnish further particulars as to time and date of protest, and request for reserve numbers. Mr. Watson has complied with all of the requests of the committee, but the committee finds it impossible to obtain any information from the Rochester Kennel Club. Its secretary writes under date of July 26 that he prefers to say nothing regarding the matter and refers me to Dr. J. P. Gray, the president of the club. I addressed a communication to said Gray on April 8, requesting him to reply to five questions, as directed by the advisory committee, to which no reply has yet been received, neither has the letter been returned to this office. I again wrote Gray on July 30 and registered the letter, which was returned to me from the post office as unclaimed. I respectfully submit that the Rochester Club should be compelled to reply to the questions put to it to enable this club to transact the business before it or said club should be disciplined for such neglect.

Owing to an impression that the Danbury, Conn., wins would count this year, probably gained by the recognition of the awards won at that show in 1889, I thought it my duty to publish in the sporting papers the following card:

"In reply to the many inquiries received from intending exhibitors, and for the general information of the public, I desire to give notice through your columns, that the wins at the forthcoming bench show to be held at Danbury, Conn., will not be recognized, the Connecticut State Kennel Club, under whose auspices the Danbury show was held last year, having in the mean time ceased to be a member of the American Kennel Club."

This action has been rather severely criticised, and I desire an expression of the sense of this meeting regarding my action, by which I may be guided in the future.

Respectfully submitted, A. P. VREDENBURGH, Secretary.

On motion received and adopted. The treasurer's report was read as follows:

SEPTEMBER 24, 1890.—*The Executive Committee American Kennel Club:* GENTLEMEN—I beg to submit the following report of moneys received and disbursed by me during the year 1890:

Receipts from all sources from Jan. 1 to date	$7,246.88
Expenses for same period	5,055.69
Balance on hand	$2,191.19

I also beg to report, that since the last meeting I have received the dues for 1890 from the German Mastiff or Great Dane Club, which was reported at that time in arrears. Respectfully submitted, A. P. VREDENBURGH, Treasurer. Adopted.

President Belmont stated that he had been criticised by some of the sporting papers and others on his action in leaving the chair and taking part in certain proceedings from the fact that he was not a delegate. He proceeded: "I never for a moment questioned my right to do so, although there is nothing in the constitution about it, for the reason that the president is not simply and purely chairman of the executive committee or association. The president, under the constitution, is required to act on questions of disqualification. He is obliged to be *ex-officio* of the advisory committee, and to transact all sorts of routine business between the meetings, and I supposed it was my privilege to speak on any important matter that came up, but as the question has been raised I desire to ask the delegates what their views are upon the subject." After some little discussion on the subject, Mr. Anthony offered a resolution that it is the sense of this meeting that the presiding officer on any occasion if he has any remarks to make, be permitted to leave the chair for that purpose. Mr. Cook offered an amendment "That it is the sense of this meeting that we unanimously sanction the action of the president heretofore, according to the spirit of the constitution of the American Kennel Club. That it is also the sense of this meeting that such privilege hereafter be granted to him." Unanimously carried.

The report of the stud book committee was read and adopted.

Mr. Anthony then moved that the club go into committee of the whole to hear the report of the advisory committee, and to take such action upon it as it deemed best. Motion seconded and carried. The meeting then went into committee of the whole. Upon the executive meeting re-convening, Mr. Winslow reported that the committee recommended the disqualification of Mr. C. J. Peshall by the American Kennel Club. Mr. Cook moved that the action of the committee of the whole in reference to Mr. Peshall be accepted and approved by this meeting, and that Mr. C. J. Peshall be permanently disqualified. Motion seconded and carried. Mr. Robert Leslie then called for the ayes and nays. The roll was called and resulted in the following vote: Ayes: Messrs. Rutherfurd, Keasbey, Anthony, Wenzel, Shotwell, Letell, Arnolt, Van Schaick, Cook, Wilmerding, La Rue, Lewis, Terry, Winslow, Mortimer and Glover. Nays: Mr. Leslie. Messrs. Cryer and Schellhass declined to vote. Mr. Vredenburgh asked to be excused from voting. Dr. Perry was absent, and Mr. Schellhass said he did not think it would be policy for the club to accept his vote because he was called out during the meeting of the committee of the whole, and for that reason he declined to vote. Dr. Cryer moved that the appeals, protests and other business reported by the secretary be referred to the advisory committee with power. Motion seconded and carried.

The application of the English Setter Club was read, and on motion of the club was elected a member of the American Kennel Club.

The application of the National Beagle Club, of Boston, was read, and Mr. Anthony moved that it be rejected, as its acceptance would tend to antagonize the American Beagle Club, whose standard had been acquiesced in by this club. Motion seconded and carried.

The secretary also read the application of the South Carolina Poultry and Pet Stock Association, and stated that there was a club of the same State of exactly the same name now a member of the American Kennel Club. Mr. Cook offered a resolution that, as there already exists in this club from South Carolina an association now a member in good standing of the American Kennel Club of the same name, their application be rejected, and that they be notified that their rejection is owing to that fact. Resolution adopted.

The application of the Cleveland Bench Show Association to have its name changed on the records to "The Cleveland Kennel Club," was, on motion, granted.

Mr. Vredenburgh—I desire to give notice that at the next meeting in December I shall propose certain amendments to the constitution of this club, so they may be in force at the annual meeting in February, and I should like to ask the permission of this meeting to publish the proposed amendments in the *Gazette*, that to be the legal notice to the delegates.

Dr. Glover moved that the proposed amendments be published in the *Gazette*, and that the secretary be instructed to send a marked copy of the publication to each delegate. Motion carried. Adjourned.

A. P. VREDENBURGH, Secretary.

BERGEN POINT, N. J., Sept. 27.—*Editor Forest and Stream:* I desire to state for the information of all who may have at any time read any or all of the charges Mr. Chas. J. Peshall promulgated against me through the sporting papers and every other available source, that, after I had taken every proper step consistent with dignity and an honest desire to disabuse Mr. Peshall's mind of what might have been considered a mistake on his part, by having an auditing committee investigate my accounts, securing besides for all doubters the statements of reputable officers of the American Kennel Club that my accounts after thorough investigation were perfectly in order, I concluded to seek protection from the law, as neither Mr. Peshall, nor some of the sporting papers, nor some of his friends would accept the indubitable proofs furnished of the rectitude of my accounts as final. I will not rest under even a suspicion of my integrity from any quarter, however insignificant. The Grand Jury of New York has upon my complaint indicted Mr. Peshall for criminal libel. He was arrested to answer the charge. Mr. Leslie Bruce, who has aided and abetted him in his libelous attacks, very properly went bail for him. Mr. Peshall has for eighteen months threatened both myself and half a dozen prominent officers and delegates of the American Kennel Club with suit, spreading this threat both far and wide, with a view, he claimed, to get my books into court. I am happy to say that this will now be done in the proper way, and I regret for the honor of our sporting press and some of our breeders, who seem to be too willing to think ill of their fellow dogmen, that this course should have been made indispensable for my protection.—A. P. VREDENBURGH.

GORDON SETTER FIELD TRIAL SPECIAL.—New York, Sept. 23.—*Editor Forest and Stream:* The Central Field Trials Club has just offered a special stake of $100 for Gordon setters, providing there are ten entries and eight starters at Lexington, N. C., in December. It is desired to procure $150 more by private subscription. I will give $25. Mr. James B. Blossom has given $25, and it is hoped that friends of the Gordon setter will promptly recognize this opportunity to bring our dog to the front and give him the position he deserves. Subscriptions sent to me will be acknowledged, and further details furnished very soon. Now let the Gordon setter men everywhere join hands and prove their favorite to be as good in the field as he is beautiful on the bench. We cannot do everything this year, but the same efforts made annually will put the Gordon where he should be—at the top.—JOHN H. MEYER, 159 West Thirty-fourth street, New York).

MR. PESHALL AND THE A. K. C.

THE charges preferred by Secretary Vredenburgh against Mr. C. J. Peshall at the meeting of the advisory committee of the A. K. C. last July were these:

CHARGE I. That Charles J. Peshall did circulate and continue to circulate false, malicious and libelous letters calculated to impair the authority and usefulness of the American Kennel Club and its publications, and to injure my reputation and standing as an officer of said club.

CHARGE II. That Charles J. Peshall wilfully violated Rule 32 of the rules governing bench shows as adopted May, 1887. *Specification:* In that he exhibited a dog at a show held under A. K. C. rules in his own name as owner, at which time said dog was not his property.

CHARGE III. That Charles J. Peshall wilfully violated Rule 25 of the rules governing bench shows, as adopted Dec. 6, 1888. *Specification:* In that he misrepresented the value of a dog at the time of making a sale. *Specification:* In that he conspired with one John N. Lewis to give a fictitious value to the dog for the purpose of enabling said Lewis to offer the dog for sale at a price beyond its real value.

The Advisory Committee referred the case to the club, and it came up at the meeting last Thursday. At the suggestion of Messrs. Anthony and Belmont, that the delegates should be free to talk without their remarks being made public, the club went into executive (secret) session to discuss the Peshall case. The evidence presented at the Advisory Committee meeting was again given. As reported in our issue of July 10, it was substantially this, as to the third charge:

Mr. Vredenburgh stated that after the alleged sale of the dog Nick of Naso, Mr. Peshall had come into the office of the A. K. C. and exhibited to him a note for $1,000, which he asserted he had received from Mr. John N. Lewis in payment for the dog. Upon Mr. Vredenburgh's saying to him that he had understood that Lewis had previously owned an interest in the dog, Mr. Peshall declared that he had been sole owner of Nick of Naso and had sold the dog for $1 000 as shown in the note he exhibited. Mr. A. D. Lewis was present when this conversation took place and he corroborated Mr. Vredenburgh's account of it. Mr. Vredenburgh further stated that in proceedings instituted by one Ralph to recover the sum of $1,000 from Mr. Peshall, Mr. Peshall had stated in a deposition that Messrs. Lively and Lewis and himself had owned the dog Nick of Naso conjointly, each having a third interest; but that Messrs. Lively and Lewis had never paid their share of the purchase, and therefore Mr. Peshall had taken the dog back and had subsequently sold it to Mr. Lewis and at Mr. Lewis's request had taken from him a note for $1,000, in order that the dog might have this fictitious price put upon it, but that, as a matter of fact, Mr. Lewis had never intended to pay the $1,000, and that Mr. Peshall had never expected to receive the $1,000; and that the agreement between the two was that the note was never to be given into the hands of a third party, but was to be held by Mr. Peshall. Mr. James H. Elliott, the attorney who was engaged in the action to recover the $1,000 from Mr. Peshall in behalf of Ralph, was present at the meeting and corroborated Mr. Vredenburgh's statement, saying further that it had been his intention to attach the Lewis $1,000 note, and that Mr. Peshall's representation as to its worthlessness had been made by Mr. Peshall to prevent such an attachment. He further stated that the so-called deposition by Mr. Peshall quoted by Mr. Vredenburgh had never been signed by Mr. Peshall; that it was a statement drawn up from Mr. Peshall's conversation, and Mr. Peshall after looking it over had assented to its correctness, and had agreed to sign it before the referee, but when the time came to sign it he had given Mr. Elliott the slip and had not signed it.

When the club came out from its star chamber it voted to disqualify Mr. Peshall permanently.

While his case was being considered in secret session, Mr. Peshall himself was arrested on a charge of criminal libel, preferred against him by Secretary Vredenburgh, based on Mr. Peshall's charges that the A. K. C. accounts had been juggled and falsified. Mr. Peshall professes satisfaction at this turn of affairs; and both sides declare themselves eager for an early trial When the case gets into court the procedure will be slightly different from that of last Thursday, for though the A. K. C. may try and convict a man for conspiracy to swindle without giving him a chance to defend himself and may sentence him without saying on what charges he has been found guilty, they don't do things that way in the law courts.

DOGS OF THE DAY.

THE most important news for this week is the criminal libel suit brought against Mr. Peshall by Mr. Vredenburgh. In my last communication on the subject of the A. K. C. management I concluded by saying that Mr. Peshall would never bring his long-promised suit against the A. K. C., a statement which the lapse of time has proved to be correct. Failing in this action on the part of Mr. Peshall, and knowing as I do the untenable nature of the statements made by him, I am fully of the opinion that Mr. Vredenburgh was perfectly justified in forcing Mr. Peshall to become a defendant. The only way to do so was in an action such as has been instituted. Mr. Peshall had ample opportunity offered him to make the *amende honorable*, but in place of so doing he kept up the ferment and sought to hold together his few retainers by threats of a suit which he knew as well as any man could would but end in disaster to himself. He can now no longer evade the point at issue, and must take the consequences of his published statements. Much as I regret the necessity for Mr. Vredenburgh's taking this course, I do not see how he could consistently decline forcing the issue. The case, as I am informed, was presented to the Grand Jury and a true bill was found against Mr. Peshall, which resulted in his arrest.

Collie breeders would do well to remember that on Nov. 1 entries close for several of the stakes to be decided at the Westminster Club show of February next. Those who have not had a list of the club stakes would do well to communicate with the secretary, Mr. J. D. Shotwell, 82 Hillside avenue, Orange, N. J.

By the way, what has become of the talk of the New Jersey Kennel Club about holding a show at Orange?

What a game 'un Uncle Dick is, to be sure. My little squib about the recent flood at Hornellsville and fear that he might have suffered in the washout extracted the following characteristic reply: "Just got home from Erie county, and found a telegram on my return from Kingston telling me that my wife was sick. I don't need any help after the flood only to get about a hundred tons of sand out of my cellar. I have sand to spare for any of the judges that are afraid to peg back the long and low cocker (?). Half of my lot is somewhere down the Susquehanna River, and if any one finds it he can either give me credit for it or get a working spaniel for its return." Then he gives this reply to my query about interbreeding the red cockers: "About the red and buff cockers, I once had an idea that I could found a strain to be called 'Hornells,' but when I bred red to red I got all solid black or liver. Silk now gets more reds than his own son Dick, a buff, does." Go a little further Dick, and breed the produce back to some of the reds. The color is there, and must come out somewhere if persistently followed up.

Mr. E. B. Sears has added to his kennel the recently imported St. Bernard Lothario, by champion Valentine out of Saffron. He has quite a good record at leading English shows.

Several journals that devote space to the dog have poultry departments, and one of the leading questions of the day with chicken men is that of comparative versus point judging. The custom for years has been to make up score cards, than which a more tedius operation can hardly be imagined. A score card show usually gets through with the judging an hour or two before the doors are closed on the last night. Perhaps part of the reason for this spinning out process is to be found in the fact that poultry judges are usually paid by the day. Just fancy what a kick there would be nowadays if the dog show awards were not all completed, at even the largest shows, on the first or at the very latest the second day of the show.

I understand that "Merlin" Huscroft, having had his services dispensed with by the English Kennel Club, is now connected with the *Canine World*. As usual he has rounded on his late employers, and the attacks on the Kennel Club may be traced to this fact.

Mr. Mayhew has devoted a good deal of space in a contemporary to criticising my recently expressed opinion that it would be well for the A. K. C. to recognize shows held under its rules. But the trouble with Mr. Mayhew's argument is that he does not accept my proposition as his text, but gives one of his own, and seeks to make me father it. He says, "He first advocates all shows adoping A. K. C. rules being recognized by that body. I avoid the word 'under,' as that would imply that the show was recognized by the head body. Now, if the A. K. C. were to accept wins secured at shows adopting their rules without said shows being members, the whole foundation of the A. K. C. would be shattered." Then having placed me in a position I never recommended, he proceeds to demolish his own proposition under the belief that it is mine.

If Mr. Mayhew will take the trouble to look at the propositions for amending the A. K. C. constitution, drafted by Mr. W. H. Child and myself some four years ago, he will, if I mistake not, find one to the effect, that for a show to be recognized it must offer something like $500 in cash prizes. I would advocate some such rule for even A. K. C. shows, so as to keep that up to a decent standard. Outside shows would have to be governed by that, also, and further I would suggest a registration fee of $10, making them pay the same as A. K. C. members. There are lots of clubs and societies that don't care a snap of the finger about being a member of the A. K. C., but they must become so to gain recognition, and as members they are so much deadwood dropping out at the end of the year or being expelled for non-payment of dues. It avoids all such complications as those of the Los Angeles or Elmira shows.

A club say about the middle of last month decides to give a dog show in November, and sends application for membership to the A. K. C. The application arrives a day or two within the limit of notice called for prior to an A.K.C. meeting, and what is the result? It cannot be acted upon until the December meeting, and meanwhile the show has been held and has not had the support it anticipated. That is another point in favor of recognizing shows of non-members. As for suggesting that simply by stating in the premium list that the show would be held under A. K. C. rules I never thought of such a thing. The premium list would first have to be approved as being in accordance with the requirements of the A. K. C. in such cases made and provided. J. W.

DOG CHAT.

IN an experience ranging over many years in our shows, we never remember seeing such an interesting and exciting sight as was seen at Toronto when Mr. Oldham, the judge, ranged eleven of the best cockers we have, on the double judging bench in the ring to decide the winner in the black cocker bitch class, which numbered twenty-five entries. Friend Wilmerding with his camera should have been there and fixed the anxious faces of such well-known spaniel men and handlers as Nelles, Kirk, Mitchener, Luckwell, Laidlaw, Bell, Bush, Dole, Lewis, etc., all striving to do their best to win, and when the ribbon at last went to that neat little bitch Novel, owned by Geo. H. Bush, the sigh of relief that the strain was over could have been heard across the building. It was a crucial test for Mr. Oldham, but notwithstanding this was his début in the judging ring, he acquitted himself like a veteran.

We are sorry to hear that about the best field spaniel we have had, Glencairn, is dead. He died from kidney trouble and a paralysis of the hind parts. He was imported a year or two since by Mr. Oldham, and afterward formed one of the strong team sent out by the partners Oldham & Willey. The former gentleman told us that fortunately Glencairn has left two or three youngsters that are very promising, one, a black and tan, being especially so.

Though the Toronto show was given under the rules of the Canadian Kennel Club, the gentlemen who have done so much for shows in that city are members of the Old Dominion Kennel Club committee which comprised the following names: J. F. Kirk, John Massey, C. H. Nelson, J. Henderson, J. Wilson, W. S. Jackson and the secretary, Capt. C. Greville Harston, so well known in days gone by in connection with collies, etc. To this list the fair people added Robert Junior, J. G. Mitchener and H. B. Donovan, and it was due to their efforts, supplemented by proddings of Donald C. Ridout, chairman of special attractions at the fair, that the permanent building has been erected. We never saw a building better adapted for a dog show than the one in which this show was held. Everything is solidly constructed, and the wide gallery running round it relieves the ground floor from any crush, and will allow of 200 dogs being benched there comfortably.

We were surprised to see that the London committee were so ill-advised as to have that big drum at the entrance to the show again this year. The excuse is that the noise attracts the people. This we failed to see it do, for we are certain it has a contrary effect, if one may judge by the painful expression of those inside. It savors too much of the "fun of the fair" style and especially when the lad shouted, "Come and see the long-coated dogs and the short-coated dogs," etc., people put the affair down at once in the same category as the woolly horse and two-headed calf shows. Dog shows have had to work against public prejudice for some time back and though this false opinion is fast wearing away any resort to such practices as these will only tend to strengthen the public in this unfortunately prejudiced opinion. Try it another year without the drum, it annoys the people, it annoys the dogs and serves no good end, but only the reverse.

Mr. T. G. Davey entertained the boys very hospitably the Sunday before the London show opened. After viewing all the dogs an adjournment was made to the house, where all his treasures of the chase were viewed with interest, guns were examined and tales of shooting days gone by and anticipations of those to come were indulged in. Mrs. Davey is almost as much a "shootist" as her husband.

We hear that Mr. Haywood Lonsdale's team of dogs for the field trials this fall, set sail from England on the 19th, in charge of Mr. Brailford, the noted field trial handler, who was also accompanied by Mr. Cameron Lewellyn. He is bringing over five old and five young dogs and will compete, in the first instance, at the International field trials held at Chatham, Ont., on Nov. 3. Mr. W. B Wells told us that he had secured quarters for the visitors and their dogs near the club home at Big Point, where the club owns about 3,000 acres of swamp, and has the privilege of as many more acres from surrounding farms. They will be lodged at a farmhouse, and thus have a splendid opportunity of getting their dogs into shape and becoming acquainted with the country, so that by the time they have worked through the Canadian trials they will be in good fettle for those further south. We extend them a cordial welcome, and trust their plucky venture will be as successful as could be wished.

The whippet dog racing at London was one of the most interesting features of the show. Mr. Tom Blake, having been engaged to bring his whippets on from Detroit, he gave exhibition races every afternoon on the track in front of the grand stand, where a good 200yds. straight could be obtained. On Thursday they were sent for a record and Benbow did the 100yds, in 6½ seconds, and the 200yds. in 12¾ seconds. They claim a world's record for this, but we believe the 200 has been done in 12½ seconds. A few minutes afterward Benbow ran 206yds. in 13 seconds, which is excellent time, for the track was quite heavy. Mr. Blake's Nellie is a faster bitch than Benbow, but was out of shape, having been shut up for two or three weeks. Any one who could have seen the interest taken by visitors in the grand stand during these races would know that this sport only needs a little fostering to become a very popular feature in any fair's programme. Mr. Blake tells us he has two engagements ahead now.

A small dog show was held at Port Jervis last week, in connection with the Orange county fair, at which Mr. E. P. Cloud, of Kenneth's Square, Pa., judged. Mr. J. Cleeves, Washingtonville, N. Y., was superintendent.

Dr. Foote's black and tan Meersbrook Maiden arrived home again on the steamer Majestic, Sept. 24. She was served by T. Ellis's Broomfield Dick Sept. 2. She arrived in good shape and none the worse for her long trip, but just too late to scoop in those fall prizes, eh, Doctor! By-the-way, his terrier Dick, well known on the bench, has been sold to Mr. J. H. Hawley, of Detroit, who owns Rochelle Grit. Dick's winnings are: Second New York, second Syracuse, 1888; third New York, first and special Danbury, 1889; third New York, third Chicago, first Rochester, second Buffalo, first Wilmington, 1890.

We hear that Mr. Winchell, the mastiff and bloodhound breeder, has instituted proceedings against the National Express Co. for damages sustained by his mastiff bitch Boss Minnie. The trial comes off sometime this week. The nick of Beaufort and Gerda seems to be the right thing, for we hear astonishing accounts of two puppies from this union, one we have seen and he is a good 'un, the other, a bitch, is said to be wonderful in head, they will be seen at New York show and are now owned by Mr. Hayes, the bull-terrier man. It seems that in taking the crate with Boss Minnie to the station, the expressman let it fall and allowed the bitch to get away, she not being found for two days. She was hurt internally, and has never been in whelp since. Mr. Winchell is suing the company for $1000.

We have received a bundle of premium lists of the coming great show at Crystal Palace, London, Eng., Oct. 28 to 30. Any one wishing a copy of the same can have one on application, for whether they are needed for entering or not, though it is now rather late, as entries close Oct. 11, still as a guide for novelties in the way of classification and so on, a copy ought to be in the hands of every important show committee in the country. The classification is enormous. There are over 300 classes and 176 specials, principally cash. Mr. Taunton, the well-known mastiff man, who, it will be remembered, judged at New York two or three years since, is the secretary and the prime mover in the whole affair.

Here is something to further back up the "nature method." As it is a matter of argument what the Schipperke is, how bred and so forth, perhaps a clue can be found in the following from the *Canine World:* "That bitches will often steal away to some secret place to give birth to their puppies is well known, but previous to this week I had never heard of one burrowing into the ground and fulfilling her maternal duties beyond all reach. Such, however, is the case with a Sch'pperke, and I have no doubt the little family will really do well in its earth kennel. This little bitch, whether a terrier or no (is a Schipperke a terrier?), can lay claim to being an earth dog at any rate."

It is a pleasure to meet a true fancier of man's best friend, and such we may say are friends W. S Jackson, of Toronto, and F. H. F. Mercer, of Ottawa. To both we are deeply indebted for their kind courtesy and hospitality during the shows held in those cities during the past weeks. Our only hope and wish is that they will attend our "little" show in February next, when it will be our turn then.

In speaking of Mr. Keasby's new field spaniel purchase, Beverley Negus, the *Fanciers' Gazette* says he is one of the best bred spaniels we have, going back to Mr. Royle's Solus, Beverley Bess, Rap II., etc. Mr. Keasby is to be congratulated.

In writing the criticisms of the great show at Edinburgh, Scotland, recently, the correspondent of the *Field* (Eng.) says: "With few exceptions, the dogs did not look workers; soft and nice in coat they were, handsome enough, too, and bright in color; but we are sorry to say that attractions such as these are usurping the pride of place of sensibly-formed heads, strong backs and loins, close, thick feet and other working properties they should occupy." This, in a country so strong in these dogs as Scotland is or should be, gives another knock at fancy. He also says of Mr. Megson's new purchase, the young dog Leofric, that "he is a far too fully furnished dog to make a good old one," and sticks to his first opinion that "he is more of a bitch."

Mr. Dana, proprietor of the New York *Sun*, who has been in England for some time past, has, we hear, purchased several pugs. One is Charlie, a very small one, very much like Royal Mite, that created such a sensation some time back at one of the big London shows. We wish Mr. Dana could be persuaded to enter the fancy, Dr. Cryer has had a long innings now and a little competition would be healthy. In connection with this we see that Mrs. Proctor, an English exhibitor of pugs, had a cablegram at the Edinburgh show from an American, offering her $500 for the noted pug Confidence, which took second in challenge class at that show. The offer was declined, but who was the would-be purchaser?

THE ENGLISH SETTER CLUB.—*Editor Forest and Stream:* An adjourned meeting of the English Setter Club will be held on Oct. 23 at the office of the secretary, Mr. P. C. Ohl, 50 Broadway, "for the consideration and adoption of a standard, and the transaction of any other business that may come before it." The postponement of action to this date is taken at the suggestion of the standard committee, and is intended to afford every one interested an opportunity to present his views on the matter. Therefore all breeders and owners of English setters, and all persons interested in the breed are now again earnestly invited to join the club, and give the benefit of their opinions and experience, to the end that the standard as finally accepted may be as nearly as possible in accordance with the true weight of opinion among English setter men in this country. A copy of the standard as reported by the standard committee will be forwarded to each member for criticism, on which subject all communications from members will have full consideration: and as provided by the constitution any member not able to attend the meeting in person will have a right to vote by proxy.—PERCY C. OHL, Sec'y.

SALE OF NOTED BULLDOGS.—Birmingham, Conn., Sept. 26.—*Editor Forest and Stream:* For a long time Mr. Frank F. Dole, of New Haven, Conn, has been making me very tempting offers for my bulldogs, and to day we came to terms and made the sale. It includes champion Harper (British Monarch—Judy), winner of 35 first and special prizes in England, first and special New York, first and special Chicago, first Rochester, first and special Baltimore, first and special Boston, challenge Buffalo, challenge and special Detroit, and challenge and special Toronto, 1890. A good showing I assure you. Carisbrooke (Lion—Thespian), winning vhc. Chicago, Baltimore, Boston and Rochester (in very poor condition), and in the hottest classes of bulldogs ever seen in America; first Detroit and first and special Toronto, 1890. He has improved greatly in the last six months, and in another year can hold his own in any company, and should make a grand stud dog. Dolly Tester (Black Prince—Dunny), winner of first and special Detroit, and first and special Toronto, 1890. Dolly is a good bitch, a breeder and a good mother, and should breed winners, as she is in whelp to champion Harper. Mr. Dole also takes the five bitches I have in England, they are waiting to be bred to the most noted dogs in that country, and when they arrive he can claim the title of owning the best kennel of bulldogs in America, barring none. His kennel contains the best and largest assortment of bull-terriers in this country, as he is constantly buying the best in England; and can please any one looking for the above breed of dogs, or, in fact, any breed the person may desire. Any one looking for dogs will do well by writing to him. Hoping he will have overwhelming success with my favorite breed of dogs, and that I may have the pleasure of seeing them again on the bench, I remain, R. B. SAWYER.

BEAGLE JUDGING AT OTTAWA.—Ottawa, Sept. 29.—*Editor Forest and Stream:* In your edition of the 25th inst. you mention Ava W. as winning first in beagle bitches under 12 inches. May I ask how this occurs? When I entered my bitch Dot (I see you call her Doll) I mentioned to Mr. Geddes, chairman of bench show committee, that Dot was under 12 inches, and he said there was only one open class for bitches, which was class No. 22, and showed me the prize list; so I entered her in that class, Mr. Geddes assuring me that it was the right one. Again, when the catalogues appeared there was no such class mentioned as 22½ for bitches under 12 inches. I was not personally present when the open bitch class was judged, but am assured by persons who were that Ava W. appeared in the ring along with Elf and Dot. Elf getting first and Dot second, left Ava W. out. This evidently not suiting some parties, the class 22½ was added for Ava W. alone, giving her a first. Now I ask, was this fair or honorable? If the committee (after consideration) wished to form another class for bitches under 12 inches, why did not they inform me, so that I could change my entry, as I certainly would prefer entering my bitch in the class where she properly belonged, she being only 10½in. high at shoulder.—F. P. ROBSON.

RED COCKER SPANIELS.—Worcester, Mass., Sept. 29 —*Editor Forest and Stream:* In your issue of Aug. 21 your regular correspondent, "J. W.," concludes his very interesting quotations and remarks regarding color of cocker spaniels by asking Mr. Fellows: "What happens when the creams or reds are interbred?" Not having seen any reply, I beg to offer my experience in that direction. I have a red dog, from black sire and liver dam, to whom Mr. H. B. Tallman bred a buff or cream-colored bitch, she from black sire and liver and white dam, resulting in a litter of 6, all red or buff (as noted in "Namquoit's" notes in your issue of June 12). Mr. Whitehead, Trenton, N. J., bred also a red or buff-colored bitch, but unfortunately she whelped a little prematurely and I did not learn the color of pups. Again, Mr. Wm West, Philadelphia, Pa., bred a black bitch (from straight black stock) and got a litter of 5, all red or buff. While this goes to show that the reds can reproduce their color, yet on the other hand I have also seen litters by this same dog with but one or two reds, and in one case bred to a black bitch, he produced 5 solid black pups, scarcely a hair in the whole litter but black.—C. G. BROWNING.

THE ST. BERNARD CLUB MEDAL.—We had the pleasure this week of examining the medal of the St. Bernard Club of America. Cuts of this medal were published in our issue of May 8. The design has been artistically reproduced in the medal, and members of the club who are fortunate enough to win it may well take pride in its possession, both as a work of art and as a memento that records the worth of a good dog.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Montrose. By Eberhart Pug Kennels, Cincinnati, O., for silver fawn pug dog, age not given, by champion Kash (champion Bradford Ruby—Lady Cloudy) out of Lavinia Belle (champion Treasure—Viola).

BRED.

☞ **Prepared Blanks sent free on application.**

Victoria—Homer. J. H. Pritchard's (West New Brighton, S. I.) mastiff bitch Victoria (Bismark—Nana) to Somerset Kennels' champion Homer (Cato—Queen II.), Sept. 7.

Belle—Bradford Ruby II. Mrs. S. E. Davis's (St. Paul, Minn.) pug bitch Belle (Colonel II.—Queenie) to Eberhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby—Puss B.), Sept. 11.

Lady Flossie—Lord Clover. Thos. I. Ballantine's pug bitch Lady Flossie to his Lord Clover, Sept. 22.

Flirt—Master Obo. W. F. Murphy's (New Haven, Conn.) cocker spaniel bitch Flirt (champion Black Pete—Doris) to R. Stovy's Master Obo (champion Obo II.—Critic), Aug 7.

High Rock Jet—Doc. Wilmerding & Kitchel's (New York) cocker spaniel bitch High Rock Jet to A. C. Wilmerding's champion Doc, Sept. 7

Boulette—Black Prince. J. P. Carson's spaniel bitch Boulette to A. C Wilmerding's champion Black Prince, Sept. 4.

Lassie—Doc. A. C. Wilmerding's (New York) spaniel bitch Lassie (Young Obo—Newton Abbot Lady) to his champion Doc, Aug. 15.

My Lady Betty—Doc. Dr. F. W. Kitchel's (New York) spaniel bitch My Lady Betty to A. C. Wilmerding's champion Doc, Aug. 11.

Beauty—Black Prince. H. Chapman's spaniel bitch Beauty to A. C. Wilmerding's champion Black Prince, June 12.

Meersbrook Maiden—Broomfield Dick. Rochelle Kennels' (New Rochelle, N. Y.) black and tan terrier bitch Meersbrook Maiden (Meersbrook Chance—Meersbrook Empress) to T. Ellis's Broomfield Dick (Halifax General—Pearl), Sept. 2.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Juno. F. S. Foster's (Beloit, Wis.) St. Bernard bitch Juno, Sept. 17, nine (six dogs), by Rajah (Sir Charles—Clio).

Donna Juanita. J. W. Wood's (Poughkeepsie, N. Y.) English setter bitch Donna Juanita (Rockingham—Donna), Sept. 23, seven (six dogs), to F. Windholz's champion Count Howard (Sir Alister—Mena).

SALES.

☞ **Prepared Blanks sent free on application.**

Don III. Red Irish setter dog, whelped July 28, 1886, by Elcho, Jr., out of Pequot Jess, by R. H. Burr, Middletown, Conn., to M. E. Doyle, Shenandoah, Pa.

Masher. Silver fawn pug dog, whelped Aug. 5, 1890, by Spokane out of Lady Verne, by Eberhart Pug Kennels, Cincinnati, O., to Chas. F. Borden, Winchester, Tenn.

Banjo G. Silver fawn pug dog, whelped April 18, 1890, by Sir Loris out of Phyllis II., by Eberhart Pug Kennels, Cincinnati, O., to Falls City Kennels, Louisville, Ky.

Montrose. Silver fawn pug dog, age not given, by champion Kash out of Lavinia Belle, by Eberhart Pug Kennels, Cincinnati, O., to Judge A. Thornton, Shelbyville, Ill.

Newcastle and Tyne. Orange and white Clumber spaniel dog and bitch, whelped June 11, 1884, by Ben out of Joan, by Wilmerding & Kitchel, New York, to Jacob Morelein, Cincinnati, O.

Doc—Gypsey whelp. Liver spaniel dog, whelped April 29, 1890, by A. C. Wilmerding, New York, to J. G. Falls, Memphis, Tenn.

Dick. Black and tan terrier dog, whelped June 6 1886, by Prince out of ——, by Rochelle Kennels, New Rochelle, N. Y., to J. G. Hawley, Detroit, Mich.

Rochelle Laddie. Black and tan terrier dog, whelped Jan. 27, 1890 by Dick out of Rochelle Lass, by Rochelle Kennels, New Rochelle, N. Y., to Albert Hess, Broad Brook, Conn.

Buffalo Bucks. Black and tan terrier dog, whelped Aug. 6, 1890, by champion Buffalo General out of Buffalo Lass, by A. W. Smith, Buffalo, N. Y., to F. C. Fuller, same place.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

NOVICE, Philadelphia.—I have a fox-terrier. He is fed on wholesome food, has a roomy and airy kennel, the run of a large clean yard, does not go on the street, except when taken, washed at least once a week. But ever since I got him, last June, when 6 months old, has had a strong odor and as it's coming toward cold weather want to have him in the house, but he is too offensive; and with the care he receives I can't understand it. What can I do to counteract it? Ans. Use carbolic soap and wash twice a week.

T. K. J., Indiana —I have a setter puppy 7 months old that has a trouble in the ear; it is very red and inflamed, and he keeps constantly shaking his head. Ans. Wash the eyes with borax and warm water, teaspoon to teacup. After washing and drying let a few drops of the following fall in the ears:

R Tr. opii	ʒ ii
Bromo-chloral	ʒ ii
Aq.	ʒ ii

HOUSE AND PET DOGS.*

IF it is worth while to have a dog at all, it is surely worth while having a good one. And a good dog means a well-kept dog. To have an intelligent, obedient, well behaved, accomplished, healthy dog costs no more than to be plagued with a mongrel nuisance about the house; and one affords satisfaction while the other is a constant source of annoyance. The pages of "House and Pet Dogs" have been written to encourage the selection of good dogs for the home, and to teach how to care for a good dog when you have one. The purpose of the book is to supply hints and instruction concerning the care and management of house and pet dogs. What is here written is all the fruit of practical and extended experience with these classes of dogs. Several of the chapters have been written by a feminine pen, and will be especially valued by ladies. It is hoped that the diligent study of these pages will lighten the lot of man's best friend by securing for him sensible treatment. If the reader who is so fortunate as to possess a fine dog shall follow the instructions here given he will not fail of finding increased satisfaction and joy in that possession. The book is profusely illustrated with excellent portraits of prize-winning specimens of all breeds of dogs, including the mastiff, smooth-coated St. Bernard, rough coated St. Bernard, deerhound, greyhound, great Dane, pointer, English setter, Irish setter, field spaniel, cocker spaniel, Clumber spaniel, King Charles spaniel, beagle, dachshund, collie, poodle, bulldog, bull-terrier, fox-terrier, Scotch terrier, Dandie Dinmont terrier, black and tan terrier, Skye terrier, Yorkshire terrier, pug, and bloodhound. The scope of the work may be understood from the following list of contents: Choice of a House Dog. Care and Feeding: Feeding Puppies, To Rid of Fleas, Exercise, Treatment for Worms, A Portable Kennel, Exercise for a Chained Dog, Treatment of Sick Pet Dogs, Care of Dogs in Spring, Treatment of Poisoning, Training Pet Dogs: Teaching to Come, Teaching to Charge, Following at Heel, Sitting Up, Going to Bed, Teaching to Fetch, Other Accomplishments, Whipping, A Woman's Experience, Teaching Tricks, Useful Hints, Teaching Canine Manners: Obedience, Dogs and Flower Beds, Bad Habits, Food and Feeding, Good Behavior and Happiness, Training Collies.

*HOUSE AND PET DOGS: Their Selection, Care and Training. New York: Forest and Stream Publishing Co., 318 Broadway. Paper, price 50 cents.

Rifle and Trap Shooting.

RANGE AND GALLERY.

TARGETS.

DOLORES, Colo.—It is the present style of target that is worrying me. The standard, or Hinman target, although it is almost universally used, I have proved to our satisfaction, is very inaccurate. I never took kindly to it from the first. The Massachusetts target is my idea of what a target should be, except for the fraction of inches between circles, to combine it with the old Creedmoor target.

A few weeks ago I conceived the idea of trying an experiment to ascertain if the standard gave correct count. A friend and I very carefully drew, with compass and lead pencil, the inch rings on a 100yd. standard target, then put it up at 100yds. (giving the rings the Massachusetts count), fired 5 shots with the .40 cartridge, then very carefully counted the score, found I had made 34 by standard and 48 by the inch rings; fired 5 more shots, making 31 by standard and 48 again by the inch rings. The next trial of 5 shots counted 34 by standard and 50 by the inch rings. I think string measure the only correct way, but life is too short to use it. If we have a little time for target shooting, we don't want to spend half of it measuring shots, and I think any one will acknowledge that regular-width circles, if not too large, come next for accuracy. Now I wish that any and all doubting the result of my experiment would try it for themselves.

I should like to see two targets adopted in the United States. For 100yds., one with inch rings and counting from 2 to 10, and one with half-inch rings counting from 2 to 20. For 200yds., the target double size, or one with inch circles, the other with two-inch circles. I don't think the 4in. bullseye for 100yds. could be improved on. I should very strongly object to shooting a match on a standard target. One or the other is sure to be cheated in the count. The standard has had its day, and has done mischief enough. I believe many a person has been beaten that should have come out ahead, with correct count. I think it would be a slight improvement also to score by the center of the bullet hole instead of the inside edge.

We have no regular organized club. Through the fall and winter we have a number of matches for turkeys. Our rule is for the lot of shooters each to pay his share for the lot of turkeys, and put them up one at a time. Each fire five shots at the inch-ring target at 100yds. The one making the most points takes the turkey, and so on until the turkeys give out. DOLORES.

SPRINGFIELD, Mass., Sept. 23.—*Editor Forest and Stream:* The Springfield Rifle Association will give a two days' shoot, open to all comers, any rifle, on Oct. 9 and 10, and offering $175 in cash prizes, three best scores to win, 50 cents a ticket, three shots. Horse cars pass the range. Hotel within 400yds. of shooting house. No postponement on account of the weather.—GEO. H. STEBBS.

MERIDEN, Conn., Sept. 24.—At a prize shoot given by the Citizens Rifle Club to-day, at their new range north of the State fair grounds, Mr. Lyon, of Collinsville, Conn., made the very fine score of 74 out of 75 possible, on a 25-ring target. According to Mr. A. H. Merriman, president and father of the Citizens Rifle Club, and an enthusiastic sportsman, it is the first time this score has ever been made in a public prize shoot in America.—NEMO.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

Oct. 7-8.—Altoona (Pa.) Trap-Shooter's Tournament, at the Driving Park. Live and inanimate targets. Sweepstakes and guaranteed purses. G. G Zeth, Secretary.

Oct. 14-16.—First Annual Tournament of the Boiling Spring Fishing and Gunning Club, at Rutherford, N. J. Sweepstake purses. Address P. A. Jeanneret.

CHICAGO.

CHICAGO, Ill., Sept. 24.—In the private match between Mr. C. B. Dicks and Mr. R. C. "Stevens," shot at Mak-saw-ba Club grounds last Saturday, Mr. Dicks came out winner, his competitor withdrawing at the 77th bird. Terms, 100 live birds, $100 a side. Score.

	0100122220102010102122201 12—18—	51

Sept. 26.—A very spirited little live bird shoot, $100 a side, 100 birds, came off this afternoon at John Watson's comfortable new shooting grounds at Burnside between Mr. C. B. Dicks and Mr. Geo. T. Farmer. The weather was cool and the birds about as good as can be got at this season of the year. Much interest had been manifested in this race, and the attendance of local shooters was large. Mr. Dicks added another to his string of recent achievements, and his record of 95 out of the 100 is one not often passed at such birds. Mr. Dicks shot an old Parker 10-gauge, and it is a phenomenal shooting gun to-day, but it gave him much trouble from misfires, a new tumbler not working well. It so often happened that Ben snapped at a hard tailer and then drew a soft incomer at the next roll, that the boys guyed him and said he did it purposely. Dicks has a wicked second. Farmer shot a very nervy and creditable race, and his score of 87 at the birds is by no means one to be held lightly. His string of four straight misses is due to the fact that he drew four screaming tailers right on end. He shot a 10-gauge Daly. The left barrel of this gun makes a good clean target, but the right barrel is open and poor. Mr. Farmer shot his left barrel first, although he is a right-handed shooter. His second was therefore often needed where it couldn't come, and this fact did much toward losing him the race. Mr. Dicks shot 4drs. of Schultze and No. 7 New York soft in both barrels. Mr. Farmer shot Schultze and No. 8 soft in his left. Score:

F A Place	1222210120— 8	W L Shepard	2212121220— 9

Ties on 10, miss and out: Kleinman and Wadsworth 10 each and div., Reeves 7, Price 8, Watson 9, Dicks and McFarland 0.

Sept. 27.—The Gun Club of Chicago, at 10 live pigeons, 30yds. rise, 80yds. boundary, Illinois State rules:

R B Wadsworth	1111112102—9	W D Price	2201011211—8
L C Willard	1001111111—8	E Steck	1*21100111—8
B Rock	2201120220—7	J Watson	1011112121—9
F Willard	1102222111—9		

Ties on 9: F. Willard won with 11 out of 12, to Wadsworth's 10.

At 20 Peoria blackbirds, same day, for medal:

Wadsw'th	10001101101101100w.	L Willard	11111011011110111011—16
B Rock	..03011111111111111111—17	F Willard	11111101111111111111—19
W D Price	11111101101101100001—13	E Steck	..01111111111111111110—18

F. Willard won medal.

The preliminary preparations for the selection of a Chicago team to shoot in the great return match at Kansas City next November, were made this evening. A call for this purpose was issued, signed by the following gentlemen: H. D. Nicholls, C. B. Dicks, W. P. Mussey, Henry Ehlers, Chas. S. Wilcox, George Hofmann, R. A. Turile, L. M. Hamline, P. C. Bradley, H. C. Buchner, C. R. Babeuf, T. W. Wilmarth, C. E. Felton, R. B. Organ, Geo. T. Farmer, L. K. Waldren, Jno. B. Wiggins, C. D. Gammon, Geo. W. Andrews, P. F. Stone, W. G. Payson, J. M. Hutchinson, E. M. Steck, W. D. Price, C. E. Willard, M. J. Eich. The attendance was good. The meeting was held at the Sherman House.

Mr. H. D. Nicholls was called to the temporary chair, Mr. W. P. Mussey being elected secretary *pro tem.* Mr. Nicholls stated that his sole wish was that we might see all the shooters of Chicago united with the one purpose of selecting a winning team, all personal, club or other reasons being forgotten. Mr. Organ's motion for permanent organization was carried, and the following officers were elected thereunder: President, Wolfred N. Low; vice-president, H. D. Nicholls; secretary, W. P. Mussey. Discussion on Messrs. Organ and Farmer's motions resulted in favor of appointment of a board of management, the chair appointing Messrs. R. B. Organ and M. J. Eich members of such board, with the three officers above members ex-officio.

On motion of Mr. Organ the chair appointed as finance committee Messrs. R. B. Organ, Al. Hoffman, W. W. McFarland, C. E. Felton, Ab. Price, John Gillespie and C. D. Gammon. On further motion the chair appointed as committee on transportation Messrs. R. B. Organ, C. S. Burton and Fred Lord. After some rambling and unparliamentary discussion of the generally premature features of some parts of the evening's work, Mr. John Gillespie's motion was finally carried in amended form, and the secretary was instructed to open correspondence with Mr. J. A. R. Elliott, representing the shooters of Kansas, and to state it as the demand of Chicago that the match be shot 20 men a side, the preference being for 50 birds and $50 a man.

It was moved by Mr. Organ that a preliminary team of 30 men be chosen, these 20 to choose from among themselves the 20 who should make the shooting team. This prevailed and then followed long discussion as to how the 30 should be chosen. Mr. Organ's motion to ballot on the team members, man for man, was carried and ballot began. The 30 men were chosen in the following order, the highest ballot and not the majority of all cast, determining: R. B. Organ, M. J. Eich, Henry Kleinman, Geo. Kleinman, C. B. Dicks, John Watson, W. P. Mussey, W. G. Payson, W. McFarland, Geo. Airey, Geo. T. Farmer, Abe Kleinman, John Kleinman, Harry Loveday, Ab. Prince, C. E. Felton, C. D. Gammon, C. E. Willard, Geo. Hoffman, Lem Willard, Henry Ehlers, J. E. Price, W. L. Shepard, W. F. Phillips, Wolfred N. Low, R. A. Turtle, John Orvis, C. S. Burton, P. F. Stone, F. W. Wilmarth.

At 11:25 the meeting adjoined on call. E. HOUGH.

CLAREMONT SHOOTING GROUNDS, Sept. 27.—Ten bluerocks, 50 cents entry, ties divided:

	1	2	3	4	5	6	7	8	9	
Johnson	8	8	9	8	9	8	10	..	..	
Collins	9	7	9	10	8	8	6	8	4	
Simpson	8	9	6	5	7	4	5	..	..	
Thompson	4	8	6	5	5	7	6	2	10	
Hathaway	5	7	6	..	10	8	6	..	..	
Rowley	9	8	9	7	8	7	9	8	6	
Hunt	..	6	2	9	..	6	9	6	..	

Four live birds, $2 entrance, ties shot off miss and out:

Johnson	1012—3	Simpson	0111—3
Collins	2121—4	Hathaway	1011—3
Thompson	0222—3	Mead	1120—3

Ties for second: Thompson 5, Simpson 4, Johnson 1. Collins first, Thompson second.

Sweep No. 2, same conditions:

Johnson	2111—4	Rowley	2210—3
Collins	1122—4	Mead	1121—4
Thompson	2121—4	Vincent	0201—2
Simpson	2111—4	Hunt	1222—4
Hathaway	0220—2		

Ties for first: Thompson 1, Hunt 3, others 4.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

EXCELSIOR GUN CLUB SHOOT.

CHICAGO, Ill., Sept. 27.—The Excelsior Gun Club, a young trap organization of Morgan Park, a suburb of this city, closed its first tournament, a very pleasant little affair, this evening. The shoot lasted three days, Sept 25, 26 and 27, but very little was done to-day, most of the visitors having gone home. The shoot was very successful, about 40 shooters being on hand, thus showing the truth of the recent saying that little shoots are better than big ones. But small as this shoot was, it attracted from afar such shooters as Budd, Cahoon, Ruble, Latshaw, O'Neill, Skinner and others of that grade, and these had it much their own way. Messrs. Price, Farmer, Eich, Shepard, Reeves, Steck and others of this city ran out and shot a while. The shoot was held at live birds, bluerocks and tin pigeons. The weather was not very good, rains and high winds making shooting very disagreeable. Scores are appended:

Shoot No. 1, 10 single tin pigeons, entrance $1.50, five moneys:

Cop	0001111111—7	Atwater	1111111111—10
Ashley	0011111111—8	McAllister	1101010001— 5
Lewis	1111101111—9	Cahoon	1110111111— 9
W H Skinner	1111111110—9	A W Reeves	1101111010— 7

Atwater first, other ties div.

Shoot No. 2, 10 tin pigeons, entrance $2.50: Atwater 10, Lewis 8, Ashley 10, Skinner 10, Cop 7, Gardner 8, McAllister 4, Roll, 7, Cahoon 9.

Shoot No. 3, 7 live birds, entrance $5, five moneys:

Geo T Farmer	2112211—7	Cahoon	1011111—6
Ashley	2212112—7	Cairncross	1121101—5
Skinner	2121211—7	Budd	2111211—7
Atwater	2021051—4	Cop	0012130—4
Tokington	1112211—7	Reeves	0102211—5
Gardner	0121121—6	Latshaw	1121121—7
Lewis	0022121—5	Eich	1112211—7
Price	0112212—6	Ruble	2122120—6
Merrill	1111010—5		

Farmer, Skinner, Budd and Latshaw first; Gardner, Price and Ruble second; Lewis and Cairncross third; Atwater and Cop fourth.

Shoot No. 4, 20 tin pigeons: Atwater 18, Lewis 12, Roll 17, Cop 18, Gardner 17, McAllister 14, Hart 17, Ashley 19, Skinner 19, Marble 13, Ames 10, Cahoon 18. All ties except for third money, which was won by Gardner in the shoot-off, were div.

Shoot No. 5, 7 live birds, entrance $3.50: G. T. Farmer 6, J. H. Asbley 6, Reeves 7, J. E. Price 7, Atwater 6, Skinner 7, Lewis 6, McElligott 7, Hamilton 4, Gardner 5, Shepard 7, Green 4, Merrill 6, Torkington 5, Chas. Budd 7, Cairncross 7, Latshaw 6, S. Wright 5, T. Iglehart 5, Geo. Airey 5, A. Baker 5, Cop 7, Cahoon 6, Eich 6, Steck 2, Creiger 5. Ties for first and second div. Gardner and Baker won third in shoot-off. Hamilton and Green fourth, Steck fifth.

Shoot No. 6, 20 tin pigeons, entrance $3:

Ashley	11111111111111111001—18	Lewis	01001100000001010010— 6
Cahoon	11111111111111111111—20	Roll	11001011011111010110—14
Atwater	01011111111111111111—18	Ames	11110011111010111111—16
Skinner	01111111111111111111—19	Marble	01110011111010101111—14
M'Allister	01011011111000101111—14	Hart	11111111101101111011—17
Cop	11111111101111111111—19	Gardner	01111110110110101111—16

Cahoon first, Cop second; other ties div.

Shoot No. 7, 10 tin pigeons, entrance $1.50: Skinner 9, Roll 8, Cop 8, Price 6, Hart 9, Ashley 7, Atwater 9, Sharon 2, Marble 10, Cairncross 9, Gardner 10, Cahoon 9, Eich 9, Campbell 4, Ames 7, Reeves 9. Marble and Gardner first, Skinner and Atwater second. Other ties div.

Extra No. 1, 10 single bluerocks: Hart 6, McAllister 0, Ames 6, Roll 8, Marble 7, Airey 8, Iglehart 4.

Extra No. 2, 10 single bluerocks: Hart 6, McAllister 7, Ames 7, Roll 9, Airey 9, Iglehart 9, Steck 9.

Extra No. 3, 10 bluerocks: Hart 4, Steck 7, Roll 7, Krueger 5, Marble 7, Lauterbach 4, Green 4, McAllister 5, McElligot 3, Ames 6, Iglehart 5, Airey 8, Ruble 10, E. C. H. 7.

Extra No. 4, 15 bluerocks: Park 6, Cahoon 12, Eich 13, Steck 11.

Extra No. 5, 15 bluerocks: Airey 14, Budd 13, Merrill 10, McAllister 10, Marble 8, Ruble 13.

Extra No. 6, 10 tin pigeons: Latshaw 10, Steck 4, Hart 9, McAllister 7, Ruble 9.

Second Day.

Shoot No. 1, at 10 single bluerocks, entrance $1.50, 5 moneys:

Budd	1111110111— 9	Skinner	1011100101—6
Park	1110110111— 8	Davis	1110001001—4
Cahoon	1111111111—10	Schorling	1010011001—5
Cairncross	1111110111— 9	Morgan	1101010101—6
Merrill	0001010001— 4	Palmer	1000010010—4
Glover	1001101001— 5	Airey	1111111101—9
Cop	1010111111— 8	Torkington	1011111111—9
Ruble	1111111101— 9	Gardner	1111111101—9

Cahoon first, Budd and Cairncross second, other ties div.

Shoot No. 2, at 5 live birds, entrance $3, 4 moneys:

Wilcox	11111—5	Airey	10100—2
Richards	10101—4	Lauterbach	11100—3
Hicks	00111—3	Cop	11110—4
Merrill	11111—5	Palmer	11011—4
Skinner	11111—5	Cairncross	01110—3
Gardner	11111—5	Mulford	00111—3
Budd	11110—4	Cahoon	11111—5

Cahoon and Merrill first, Budd second, Cairncross third, Airey fourth.

Shoot No. 3, 15 single bluerocks, entrance $2.50: Budd 13, Cairncross 14, Park 15, Lewis 12, Merrill 9, Airey 10, Gardner 13, Cop 14, Schorling 9, Glover 10, Skinner 9, Cahoon 12, Ruble 12.

Extra No. 1, 10 bluerocks: Budd 9, Park 8, Cairncross 9, Cop 9, Campbell 3, Gardner 7, Ruble 8, Lewis 9, Airey 7, T. W. Taylor 1, Cahoon 7.

Extra No. 2, 10 bluerocks: Park 3, Merrill 6, Cairncross 8, Budd 9, Ruble 9, Skinner 7, Cop 10.

Extra No. 3, 10 bluerocks: McAllister 9, Sporling 3, Glover 5, Davis 6, Cahoon 9, Morgan 6.

Extra No. 4, 10 bluerocks:

Budd	1111111111—10	Davis	1110000101—5
Cairncross	1111111111—10	Morgan	1100000010—2
Park	1111010111— 9	Airey	0001111111—7
Skinner	0100101111— 6	Schorling	0101011110—6
Cop	1111101101— 8	Lewis	1011011110—7
Glover	1010011101— 6	Gardiner	1111101111—9
McAllister	0001001100— 3	Merrill	1110001110—6
Nortolk	0011100000— 3	Ruole	1111111111—10
Cahoon	1101101111— 8	Torkington	1000111000—4

Extra No. 5, 10 bluerocks: Cop 8, Morgan 8, Schorling 5, Glover 4, Palmer 3, Taylor 3, Davis 3, Gardner 10, Campbell 6, McAllister 9, Park 10, Price 7, O'Neill 7.

Extra No. 6, 10 tin pigeons: Campbell 5, O'Neill 10, Morgan 7, Glover 4, Schorling 3, McAllister 5, Park 7, Price 5, Waters 6, Steck 8, Ruble 8.

Extra No. 7, 10 tin pigeons: Cahoon 9, Budd 10, Skinner 7, Merrill 5, Gardner 9, Cop 8, Lewis 8, Cairncross 9 Ruble 8, O'Neill 8. Budd first, ties on 9 second, Ruble third.

Extra No. 8, 10 tin pigeons: Campbell 6, Steck 9, Cahoon 9, Ruble 7, Skinner 7, O'Neill 10, Schorling 4, Budd 10, Cairncross 10, Merrill 8, Palmer 8, Park 8, Wilcox 6, Cop 9, Meeks 9, Richards 8, Lauterbach 6, Mulford 5, Hecks 7.

Extra No. 9, 15 tin pigeons: Cop 13, Palmer 10, Richards 11, Cairncross 14, Meeks 10, Budd 15, Hicks 12, Cahoon 12, Ruble 13. Budd first, Cairncross second, Ruble third.

Extra No. 10, 5 live birds, three moneys:

Merrill	11011—4	Torkington	10111—3
Wilcox	11110—4	Airey	11111—5
Hicks	11111—5	Mulford	10000—1
Park	10111—4	Lewis	11111—5
Gardner	11110—4	Campbell	11111—5
Lucktemyer	10101—3	O'Neil	11111—5
Steck	11011—4	McAllister	10111—4

O'Neil first, Steck second, ties for third div.

Extra No. 11, 5 tin pigeons: Steck 4, Cop 5, Richards 4, Ruble 5, Cop and Ruble first, Richards second.

Extra No. 12, 5 tin pigeons: Steck 3, Cop 3, Richards 5, Ruble 4, Cahoon 4. Richards first, other ties div.

Extra No. 13, same as preceding: Steck 3, Cahoon 2, Richards 5, Cop 4, Ruble 4. Richards first, Cop and Ruble second, Steck third.

Extra No. 14, 5 tin pigeons: Ruble 4, Cahoon 5, Merrill 4, Richards 4, Cop 5, Hicks 3, Palmer 5, Campbell 1, Steck 5, Davis 2.

Extra No. 15, 5 tin pigeons: Richards 4, Cahoon 3, Hicks 3, Ruble 3, Cop 5, Palmer 3. Cop first, Richards second. Ties for third shot off on doubles, miss and out, Hicks and Palmer winning.

Extra No. 16, same as above: Ruble 4, Cop 5, Hicks 4, Richards 4, Cahoon 5. Merrill 4, Palmer 3, Campbell 4. Cop and Cahoon first, Ruble, Richards and Merrill second, Palmer third.

Extra No. 17, 10 single tin pigeons:

Budd	1110101111—8	Richards	1110111101—7
Wilcox	1011011111—7	Skinner	1110101010—5
Cairncross	1111011111—9	Cop	1111111110—9
Cahoon	1111111100—8	O'Neill	1101011110—7
Waters	0000000001—1	Dr Meek	1101111110—8
Merrill	1101111111—9	Mulford	1111111110—9
Ruble	1111111011—9	Steck	0111110100—6
Hicks	0110111101—7		

Extra No. 18, 10 tin pigeons: Ruble 10, Campbell 3, Steck 7, McAllister 6, Park 7, Waters 3, Pride 4, O'Neill 9.

Extra No. 19, 10 tin pigeons: Pride 4, Park 9, Steck 9, Ruble 8, O'Neill 7, Schorling 6, Campbell 3.

Extra No. 20, 10 tin pigeons: Gardner 8, Palmer 4, Park 7.

E. HOUGH.

HARRISBURG.

A full report of the Harrisburg tournament will be given next week.

TOURNAMENTS OF THE EASTERN NEW YORK TRAP-SHOOTERS' LEAGUE for the month of October.—Albany Gun Club at Elm Grove Shooting Park Oct. 7; special prizes for highest aggregates. Catskill, Oct. 14, contest for the E. N. Y. League medal; George F. Tolley, manager. Trojan Gun Club at Young's Grove, Lansingburgh, Oct. 21; A. Paul, secretary, Cohoes. Saratoga Gun Club, Oct. 28; H. M. Levengston, Jr., manager, Saratoga Springs.—HORACE B. DERBY, Secretary Eastern New York Trap-Shooters' League, 448 Broadway, Albany, N. Y.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

THE BUILDING SEASON.

THE prospective owners of two of next season's racers have shown their wisdom by placing their orders early, with a certainty of having their boats in good time for the opening of the season. The spars for the new Belmont and Thayer 46-footers are now being roughed out with the whole winter to dry, a big handicap in itself from the boats which are likely to be ordered for the class next February, and whose sticks will at that time probably be part of a raft of spars yet afloat. In cases where men have made up their minds to build there can be few reasons for delay, nearly all questions of type and dimensions can be settled now as well as in midwinter, the advantage of knowing what others are doing is very slight, and more than balanced by the inevitable delay over later orders. The man who has his yacht ready for launching in March, with the sails and gear waiting in the lofts, not only has a better built boat than those whose decks and planking are being rushed on at that time, but he has a fair show to win the early races from which the late boats will be absent, and all the same time to enter the summer races in far better shape. Now is the time to get the best work from the designer, the builder and from all the mechanics whose labor goes to make the complete yacht. Before the short days and the cold weather, before the designer is busy with other work and the builder has his sheds full, is the time for the yachtsman to decide on what he wants and to go to work immediately to get it in time

WINTER WORK.

COMPARED with last season, the present one has ended very quietly and peaceably, and with little prospect of a renewal of the measurement discussion which occupied last fall and winter. That this is so is not due to the fact that the question of corrected length classification has been abandoned, or that any less interest is taken in it now than last year, but to the conviction on the part of many that though such a classification must come in time, there is no pressing necessity for it as matters stand, and every reason why careful and deliberate action should be taken. So far from being dead, corrected length has made quiet but steady progress throughout the year; many who were opposed to it at first because it was new and strange to them have, as the result of last winter's discussion, given serious thought to it this year, and either favor it or admit that though they do not yet approve of it, the change must come in a short time. While it is still probable that under the present rules power may be made to pay, and that in good hands a "brute" may be built that will win from the present boats, there is no immediate danger of such an attempt being made in any class save the smallest, and for the next year or two the influence of Minerva and her fellows well predominate.

Such being the case, there is no need of pressing for any change, but at the same time there is work to be done in every club in the country in the way of improving and strengthening the racing rules, especially in the direction of uniformity. The old, old question of the organization of some general body on the coast, similar to that which has been in successful operation on Lake Ontario for the past 7 seasons, is heard of late in the clubs, and it is evident that the time is nearly ripe for such a movement, though it is impossible to predict just what form it will take; a union of such clubs as the New York, Larchmont Eastern, Seawanhaka and Atlantic, or, as in Great Britain, an organization of individuals only, regardless of clubs. The obstacles which have always existed in the past are slowly disappearing, and before many seasons the way will be opened for an association of some sort.

There is already an opening for work in this direction in the elimination of the minor differences that exist in the various rules, and the publication by these clubs in concert of one book of rules, which shall contain all the information which a man needs to sail a race at Marblehead, Newport, Larchmont or New York. With the exception of the classification of the Larchmont Y. C. the rules of these clubs show no important point of difference, and it is probable that more good will be done in the end by all working together with such rules as suit the majority than by any one pushing ahead alone, however real the advance may be. The need of one system of sailing rules, of starting signals, one allowance table and one classification is more evident each year, and now that the great drawback in the past, the difference in the rule of measurement, has disappeared, the minor differences should be eliminated with small difficulty. This work might be done as well this winter as at any time, and once accomplished the united efforts of all the clubs concerned could be turned to the further perfection of the minor details of sail measurement, etc.

As for the classification, the question with it now is not whether it shall come at all, nor when it shall come, but in what form, under what measurement rule, what allowance table, and what the class limits shall be. The great point is not to do it quickly, but to do it well, so well that when once adopted by a majority of the clubs, it shall be adopted by all with the agreement that it shall be tested without change for a period of at least three years. No partial trial by one or two clubs or for a single year can prove anything, but the measure must be taken up by all together for a sufficient period to give some opportunity for building and racing.

That the time for such concerted action has not yet come will be apparent to all who have given any thought to the matter. In one way this is a matter for regret, there is now a fair promise of building for next season and in some practically new classes. As each new keel laid makes any change of rule more difficult, it is unfortunate that the change, if it is to come at all, has not been made before any further building begins, but the new fleet is likely to be confined to such types as will accommodate themselves fairly well to the proposed corrected length classes.

Hindsight is a great thing, or would be if it came sooner; the proposition was made two or three years since, first by Mr. J. Beavor Webb, if we recollect, that the new 40ft. class, then with only two or three boats, should be made a trial class under a corrected length measurement, say of 43ft. It is easy to see now that if this had been done in 1888 we should have been several years ahead of where we are now in a knowledge of the practical working of the rule. Minerva was then built, and Liris, Mariquita and Gorilla would probably have been built and raced, but with them we should have had a dozen others of various proportions of length and sail. The result in any case could have been no worse than the actual state of the 40ft. class to-day, with only three or four boats left to race, the rest for sale or in use as cruisers.

The Atlantic Y. C. has lately shown an unwonted spirit of enterprise that speaks well for the foresight of its officers in establishing a similar trial class with a limit of 25ft. corrected length. This will include yachts of about 20ft. l.w.l., boats within the means of the younger men in the club. There is little doubt that the class will take, and that in addition to some exciting racing next year there will be a substantial addition to the data now at hand on the subject of corrected length. A class of this kind in the Corinthian Y. C. of Marblehead, a club that numbers more young amateurs than any other in the country, should be a success from a racing standpoint, and also as a practical experiment in corrected length. The present 20ft. l.w.l. class of the club is, we believe, in a rather poor condition just now. Mr. John B. Paine having topped the class with his new Hornet just as he did the 25ft. class two years ago with Swordfish. Such a change as this would be likely to give a new life to the class, especially as Boston has so many amateur designers among her yachtsmen. The Larchmont Y. C. has already such a class on its books, but no yachts in it. Such boats, however, would be admirably fitted for a Saturday afternoon class, to race every Saturday in summer, and a little encouragement from the club in the way of an early promise of suitable prizes might be enough to induce building during the winter. It is not to be expected that the results of trials in so small a class will show beyond question the winning types in all sizes, but a great deal may be learned from the racing of half a dozen boats of the same corrected length but of different proportions of sail, length and beam.

Another change that is coming nearer each year is the separation of the racers and cruisers; a very difficult matter, but one which will have to be dealt with some day if racing is to continue in any but the classes under 6ift., and especially in the large schooners. Such a measure will not be a complete panacea for the lassitude and lack of spirit which has characterized the past year, but it may be made to increase materially the entries and the interest in the large regattas and to restore some of their lost importance. At the same time the tendency is toward the substitution of match races between the smaller racing craft such as have been so numerous this year, for the once popular spectacle of a big regatta with twenty to fifty yachts, many of large size. Such spectacles, with a big fleet scattered over miles of water and only partly visible from any one point, are losing favor with yachtsmen who have been able to follow every maneuver of such boats as Minerva, Gossoon, Mariquita and Liris over the Larchmont and Marblehead courses; and however important they may be in their way as appealing to the public and keeping up the general interest in yachting, they are likely to be few in number each year. The details of a definition which shall admit the cruisers to certain races, while barring the recognized racing cracks, will be difficult to decide on; but no harm can come from a trial in this direction this winter, to be put into use next season.

THE CHESAPEAKE FLATTIE.

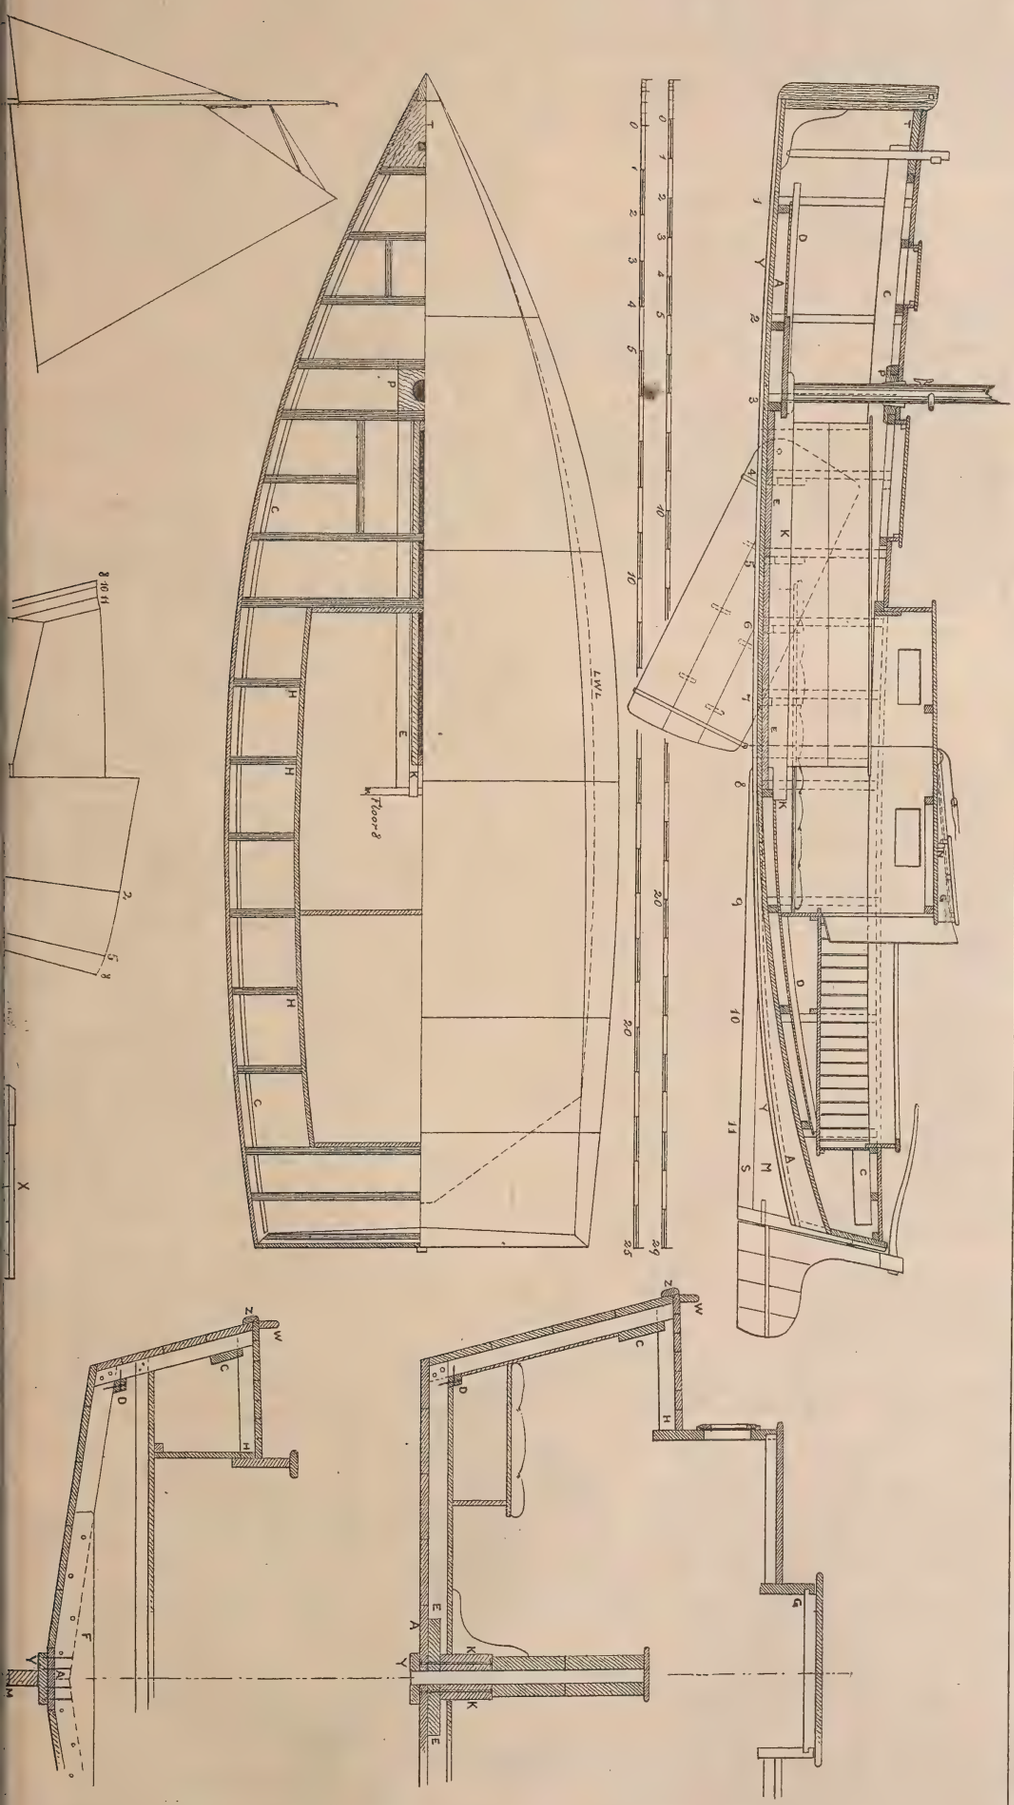
MUCH of the sailing that will be done in the next six months will be in the Chesapeake and south of it, and mainly in localities where the depth is limited. The accompanying cuts show a boat of cheap and simple construction that may be built by the amateur or any good mechanic, and which will prove a very serviceable craft for camping and hunting in Florida waters or on the sounds of the Atlantic coast. The boat is properly a native of Chesapeake Bay, where it is known as the "Flattie."

In general she may be described as a beamy sharpie. The bottom has but little camber fore and aft, and the run is helped out by some rise to the floors. With the aid of the accompanying plans, any one handy with simple tools can put a keelless flattie together in the following manner:

On the building stocks the keel plank, *A*, is sprung to shape by blocks underneath and shores from overhead. This plank may be 10 to 12in. wide in wake of centerboard and taper a little toward the ends, although an even width may be preserved fore and aft. The frames 1, 2, 3, 4, etc., are got out by sawing scantling to the requisite lengths obtained from the body plan and uniting their heels to the floors, giving the frames their respective flare, stay-lathing them as necessary. Each frame is then set up in its place across the keel plank and then nailed down. In the run, floors 9 and 10 can be cut out of plank deep enough to allow for the rise on each side. Frame 11 will have the floor in two pieces, the heels nailed to the keel plank and connected by a deep floor plank, *F*, as shown in the diagram. The clamp, *C*, is run round near the heads of the frames, and a piece of scantling, *D*, along the corners of frames and floors to which the sides are then planked up, after putting in enough beams to secure rigidity to the frame. If not too large, the boat can be turned bottom up and the bottom plank nailed on in fore and aft lengths, the inner plank being brought up to the edge of the keel plank to permit tight caulking. The counter has also in the meantime been shut in with cross plank. The rest of the deck framing is then finished, the hatches, house and cockpit built and the deck laid, all of which will be understood from the diagrams. Beams are notched down into the clamp and spiked to it, also nailed through the plank from outside. No fore and aft carlins are needed for house and cockpit, the thick coaming being itself sufficient to support the inner ends of the half beams, *H*, in nailing. The house can be built up upon the coaming in one or more depths nailed down, or vertical staving can be nailed outside the coaming. The dead-wood aft is composed of a filling piece, *M*, nailed up to the keel plank and a shoe piece, *S*, underneath, with a post aft, the rudder being hung to the latter. For additional stiffness a flooring is laid fore and aft inside. Around the gunwale a chafing batten, *Z*, is nailed, and a low waist, *W*, along the sheer. The deck is laid fore and aft, the outer plank or planksheer being, however, sprung to the shape of the side.

A stout piece of plank crossing two floors, and a block of wood make the mast step. The partners, *P*, consist of a block let up between the beams. Forward a solid triangular piece of wood, *T*, fills the eyes of the boat abaft the stem. It serves as a breast hook, and has the bitts or sampson posts down through it. A knee ties the heel of the stem to the bottom plank. This stem is, of course, rabbeted to receive the hood ends of the side plank, as shown in the half-breadth plan. The hatch coamings are simply nailed down to the beams. The covers are held in their place by their own cross framing. The companion slide travels in a groove taken out of the coamings as at *G* in the cross section. A lip under forward end of the slide brings up against a ledge *N*, nailed down to the cabin top between the slide coamings, when the slide is closed. A clasp from side over the door and padlock secure the entrance, the door being first bolted on the inside by reaching over. The rudder can be nailed up of three thicknesses to avoid bolting according to diagram *X*, or else spiked together out of narrow pieces and strapped by an iron band. To protect the bottom upon grounding, a chafing plank should be nailed on underneath the bottom plank, as *Y*. If carried up to the counter as a strengthening to the keel plank, it must be put on before the dead wood is added.

The centerboard trunk is built as follows: A stout plank, *E*, is nailed to the bottom inside over the slot previously cut. This plank reaches between frames 3 and 8, on top of this fit two fore and aft logs, *K*, jogging the ends over floors 3 and 8 upon which they should also rest. Bolt down through the bottom plank with ¾ or ⅞ iron to ties all together. These logs are intended to transfer the weight and thrust of the trunk to the whole cross floors of frames 3 and 8, otherwise the weight would fall upon the bisected floors of frames 4, 5, 6 and 7, which are without support in the wake of the slot, other than that derived from the bottom plank. Insert the headposts of the trunk between the logs *K* and plank up the sides. The split floors will be supported if jogged over the stout plank and may also have a knee up the sides of the trunk. It is important that the trunk and boat's bottom be rigid to avoid troublesome leaking.



The centerboard is dowelled together and strapped with light iron at each end. The pin is an ordinary bolt, which should be driven a tight fit to prevent leaking. The pennant for hoisting passes up through the cabin roof, over a half round block of wood, and has a single sheave strapped in the end. A whip is rove through this sheave, one end being fast to the cabin top and the hauling part belaying to a cleat on the after end of the cabin within handy reach. The interior of the cabin can be lightly ceiled over and supplied with transoms and lockers to suit. A drawer under the cockpit will serve as ice chest, and water may be carried in a breaker or small barrel on deck.

The diagrams have scales for 30 and 26ft. boats over all length. The cross sections are on double scale. Scantling for a 30ft. flattie about as follows: Stem, 6in. sided; keelplank, 10×1½in.; frames, 2¼×2½; floors 3×2¾; clamps, 6×1¼in.; corner tie 2in. square; deck frame, 2¼×1½; bottom plank, 1¼; side plank, 1¼; deck stuff, 3 or 4×1in.; inside flooring, ¾in. thick; centerboard bed plank, 8×1¾in. each side of slot; truuk logs, 8×2½in.; siding of trunk, 2in.; head posts, 3ft.×2in.; chafing plank on bottom, 8×1½in.; deadwood, 2 to 3in. thick; coaming of house, 1½in. thick; mast, 5in. at partners; sails, 10oz. duck. Caulk with cotton and putty or pitch the seams. Ballast with stone as required.

It is customary in working boats to bring the tack of the jib to the stem head, but a short bowsprit can be spiked down to the deck, affording more headsail for cruising purposes. By the exercise of some taste, it is possible to model quite a handsome and fairly smart boat on the foregoing ideas. A slight bollow may be introduced in the bow frames and a round to the quarters without resorting to other than straight grained stuff. The chief point is to give the model good clearance, as dragging water aft is very detrimental to speed. The body plan can be got by squaring across the block model at frame stations, and deducting thickness of plank for getting out the frames. The cost of a flattie should be less than half that of a round-bottom yacht, according to finish of detail.

TITANIA.—On Sept. 23 as Mr. Iselin's yacht Titania was cruising on the Sound, bound from Newport to New York, she carried away her mast when off Fisher's Island. She was towed back to Newport, and later was towed to City Island, where she will lie up.

MINEOLA.—Mr. Belmont has selected this name for the successor to Mariquita; the design is about ready and Lawleys will begin work at once. It is reported that a match has already been made between the new yacht and Jessica.

CHESAPEAKE FLATTIE.

A MISADVENTURE.

IT is a curious thing that with a foreign-built yacht at the head of the class for five years, and with the many advantages which a modern 53-footer offer to yachtsmen at a moderate cost, so little should have been done to develop and build up the class. Of the three yachts built since Clara came from England, two—Cinderella and Anaconda—are well known; the third deserves at least a notice before she passes to that unknown realm that has charitably enshrouded so many of the wild ventures that flourish so well in the latitude of New York. It is not a pleasant task to pass judgment on any *bona fide* amateur work, but the yacht in question has already received sufficient notice in the daily papers to warrant us in speaking of her, even though there be nothing to say save in condemnation.

Though but lately launched, the boat was begun early last spring, and when we first saw her was partly planked and ceiled. In looking her over very carefully it was hard to say which was the worst, the dimensions, model or construction. For a keel craft of 53ft. waterline, with a beam of 12ft. 6in., an extreme draft of but 6ft. was taken; and with these dimensions a midship section with a hollow garboard and general S form that gave a very small displacement. The peculiarities of the model are hard to describe in words; the bow was a wedge, with its butt abreast the mast, where a strong hump was visible; the bilge ran along the waterline for the whole length of the boat, the hull just below water being cut sharply away; the keel was straight for the whole length; the sternpost was upright and the forefoot little cut away, running up into a curious clipper stem above water; while the stern was of a sort that harmonized with the rest of the boat. The construction was that of a working schooner or barge: stem and sternpost sided 12in.; keel, 18×18in.; frames double sawn hackmatac, sided 3½in.; deck beams sided 6in., moulded 5in.; clamps of 4×7in. pitch pine; bilge clamps, 4×9in.; planking, 2 and 2¼in. white oak; ceiling, 1½in. pitch pine. The deck beams were kneed off with twenty 4in. hackmatac knees on each side; while the hull was fastened with galvanized bolts through planking and ceiling, headed over washers. The deadwoods, especially at the bow, were enormous, there being some 3ft. of stem outside of the rabbet, and there was literally wood enough wasted to build two yachts of modern construction. Looking at the light displacement and the great weight of construction, added to which was a lead keel of 11 tons and an iron shoe under it of perhaps a ton, it was very evident that the yacht would go far below her lines, while even if properly constructed and ballasted there was nothing in the model to warrant that it would ever carry sail or that it could be forced through the water at a reasonable speed.

This may seem a pretty hard estimate of a new boat, but when the yacht was launched last month she fully justified it by going down to a waterline of 57 in place of 55ft., while she heeled over under the weight of spars and canvas in a light breeze and refused to mind her helm. Her rig was no less remarkable than the hull, the mast very far aft with two enormous headsails, her boom being 56ft., mast 47ft. 6in. deck to hounds, with 48ft. from jibstay to mast. The *ensemble* was completed by a coat of white paint from keel to rail, a blue stripe marking the intended waterline.

As nothing could be done with her on trial, she was taken to a neighboring railway where we lately had the pleasure of seeing her. The forefoot has been liberally cut away, the great amount of deadwood outside the rabbet making this possible. Her deadwood aft has been cut out to receive more lead, while the keel will be deepened in addition. Presumably to increase her stability, the planking has been stripped from her quarters and the frames have been padded out 4in., but as this increase is greatest about 2ft. above the waterline, it is not apparent how it will help her, unless she is to be ballasted until she has practically no freeboard aft. Her bowsprit has been reduced 6ft. Even these alterations cannot make of her a fairly manageable cruising yacht, and what her ultimate end will be it is hard to conjecture, as she could hardly be converted into any serviceable sort of working craft. For the money she has cost, some $12,000, a very superior cruising yacht of greater size could be had, or even a racer in the same class, but taken as she is the outlay must be considered a dead loss to her owner and to yachting.

HAMILTON Y. C., MONCK CUP., SEPT. 13.

WHEN Mr. J. F. Monck retired from the position of commodore of the Hamilton Y. C. last spring he presented the club with a magnificent silver cup for annual competion by the yachts of the 35 and 40ft. classes. The deed of gift provided that the race should be sailed in the lake five miles to windward or leeward by Hamilton piers and return. The first race for the cup took place on Saturday afternoon, and if Mr. Monck's idea in stipulation for a lake course was to give the boats a better chance of testing their weather qualities his utmost hopes must have been fulfilled. The club boats eligible to compete for the cup are Deerhound, Psyche, Coquette, Alert, Cyprus, Laurel, Lotus and Samoa. The latter is properly a 30-footer, but by a slight alteration in her rig her racing length was increased from 29.92ft. to 30.08ft., thus bringing her in the 35ft. class. It had been arranged to start the race at 3 o'clock, and at 2 when the steam tug F. G. Beckett—which had been engaged to lay down the buoys—arrived at the piers the wind was blowing very hard from the west and northwest, so much so that after waiting round some time Capt. Beckett declined to go down the lake with the buoy. Psyche, Coquette, Alert and Samoa were then in the piers but Psyche and Samoa were the only boats which proposed to start, the centerboarders evidently being of the opinion that the day was not suited to them. When the difficulty as to laying the lake buoy arose, Capt. Jarvis generously offered to go down the lake and heave Samoa to and Psyche could follow down and round her and thus win the cup on a walk-over. This Skipper Greening, of Psyche declined to take advantage of, but suggested that the race should be sailed in the bay, where buoys were already laid down, and with the consent of Mr. Monck who was one of the crew of Samoa, this was arranged. The course was to be from a line between the south pier end and the Government buoy moored off it, to and around No. 1 buoy at the Desjardins Canal, then returning and crossing the starting line at the finish. By this time the wind had increased to a moderate gale, and both boats, while in the piers, had housed their topmasts and taken a reef in their mainsails. The Beckett's whistle sounded for the start at 3.34.25, and about a minute later Samoa crossed the line, followed closely by Psyche. Both boats immediately stood over for the north shore, were smoother water was to be obtained. It at once became apparent that Samoa's reputation in heavy water was not a fictitious one. While footing as fast as Psyche, she seemed to be outpointing her all the time, and before Oaklands was passed she had assumed a comfortable lead. Here Samoa got in slight trouble by carrying away her jib sheets, but the delay was brief and she gradually increased her lead all the way to the buoy, which she rounded about 6m. ahead. On the run down both boats shook out their reefs and set masthead spinnakers. Samoa also sending up a small topsail; but, although Psyche made a slight gain before the wind Samoa came in an easy winner by 5m. 13s., and as Psyche allows her 3m. 59s., she actually won by 8m. 52s. The following are the times:

	Start.	Finish.	Elapsed.	Corrected.
Samoa	3 34 25	5 11 25	1 37 00	1 33 21
Psyche	3 34 25	5 16 38	1 42 13	1 42 13

"WHO WON?"—The need of a good yacht list as a permanent and reliable institution is felt more and more each year, and to meet it the energetic compiler of "Who Won?" is constantly working his little book up to a greater degree of perfection. The great points in such a book are that it shall be complete and accurate, and by diligent work each year Capt. Summers has brought his list of yachts up to a point where it will compare favorably with any that has preceded it, while the small size of the volume and the wide range of general information which it contains in addition to the yacht list proper, the plates of flags and the list of winners, add greatly to its value. This year's edition contains handsome portraits of the late Mr. George L. Schuyler, of his son Mr. Philip Schuyler and of ex-Com. S. Nicholson Kane and Jas. D. Smith, of the New York Y. C. While the book is small enough to slip easily into a pocket, it is large enough to contain most of the facts that a yachtsman is likely to want in a hurry at times when club libraries and chart lockers are not accessible. The late date at which it has thus far appeared has been an objection, but yachtsmen can in a measure remedy this themselves by sending in at the end of the season a record of their races and of their yachts, thus lessening the labor and delay of hunting up much of the needed information.

AILEEN.—On Sept. 13 in the cruising race of the R. C. Y. C. from Toronto to Port Dalhousie, the cutter Aileen carried away her chainplates and the mast went about 12ft. below the masthead, the topmast and bowsprit being broken as well. The schooner Oriole was within sight and returned, sending a line on board after some difficulty as a heavy sea was running, after which Aileen was towed to her moorings. She was fortunately but a couple of miles out when the accident happened.

BAY VIEW Y. C.—On Sept. 27 a race of the Bay View Y. C. was sailed in Boston Harbor, the times being:

FIRST CLASS—KEELS.

	Length.	Elapsed.
Annie, Brunnings & Donovan	24.08	2 28 25
Saguna, L. Worth	34.00	Withdrew.
Naiad, E. Gallagher	25.05	Withdrew.

CENTERBOARDS.

Julia, B. Johnson	21.03	1 14 45
Sike, J. Leveridge	20.01	1 27 17

THIRD CLASS—KEELS.

Lottie, H. G. Hazlett	14.00	1 34 40
Pink, G. Corbett	15.02	1 48 50
Vida, J. Wilson	18.03	2 03 25
Eva, J. Bertram	16.06	Withdrew.
Huron, S. Boysen	17.05	Withdrew.

Judges, E. C. Pence, J. B. Smith and B. Johnson.

THE NEW SHOAL DRAFT STEAM YACHT.—At Wintringham's yard the new Gardner steam yacht for Mr. Rutherford Stuyvesant is now planked. The twin screws will each work in a separate tunnel or depression in the run of the boat, the planking of these requiring some skillful work. In order to secure strength and lightness the vessel has a double skin of white cedar on steamed frames. She will have two 3in. cylinder compound trunk engines.

MAGIC.—The lines of this little catboat, which were published in the FOREST AND STREAM of Jan. 16, brought an order to the builder from a Western yachtsman for a duplicate boat, which was shipped on a freight car early in June, since which time she has done some very successful racing.

PIEPGRASS'S YARD.—Mr. Piepgrass has lately added further improvements to his already complete plant in the shape of a steam outfit for his two smaller railways, with new chains and hauling gear. He also intends to apply steam to the large ways.

SOUTH BOSTON SCHOOL OF NAVAL ARCHITECTURE.—The fall term of the Hawes fund school will begin on Oct. 6, Prof. J. L. Frisbee being still in charge. Why cannot New York show an institution of this kind when Boston has two?

VASHTI, cutter, has been sold to Mr. John Stetson, of Boston. Mr. Chas. A. Welsh, for whom the boat was originally built, will have a 34ft. cruiser of modern type, but with iron keel, to be built by Lawley & Son from their own designs.

ATLANTIC Y. C.—On Sept. 23 the formal opening of the new club house of the Atlantic Y. C., at Fifty-fifth street, was celebrated by a reception and dinner, with dancing in the evening.

LARCHMONT Y. C. REGATTA—PHYLLIS AND RIVAL.—We learn that Phyllis and not Rival was the winner in the Larchmont Y. C. regatta on Sept. 6.

MAGNET, sloop, which was sunk by a tug on Aug. 31, was raised last week by the Chapman Wrecking Co.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1889-90.

Commodore: WALTER U. LAWSON, Boston, Mass.
Secretary-Treasurer: F. L. DUNNELL, New York.

	Vice-Com.	*Rear-Com.*	*Purser.*
Central Div.	Geo. A. Warder	E. L. French, 110 Diamond street, Pittsburgh, Pa.	J. K. Bakewell,
Eastern Div.	Dr. J. A. Gage	A. S. Putnam	Ralph F. Brazer, Lowell, Mass.
N'thern Div.	W. J. White	C. M. Whitlaw, Montreal, Can.	
Atlantic Div.	M. V. Brokaw	I. V. Dorland	W. R. Haviland, Yonkers, N. Y.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by address ing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—D. H. Crane, Chicago, Ill.
Vice-Commodore—N. B. Cook, Chicago, Ill.
Rear-Commodore—O. A. Woodruff, Dayton, O.
Secretary-Treasurer—J. H. Ware, 130 Rialto Building, Chicago, Ill.

Applications for membership should be made to the Sec.-Treas., on blanks which may be obtained from him, and should be accompanied by $2 as initiation fee and dues for the current year.

A RIVER CRUISE IN A FOLDING BOAT.

ON the morning of June 7, 1888, Messrs. S. and W.—the first in need of a few weeks' recreation from his turmoil of business, and the second in pursuit of exercise and open-air restoratives for an over-taxed brain—started from Garrettsville (near Cleveland, O.) upon an expedition of several weeks' duration, upon new and untried waters. A new three-section Stranahan folding canvas boat, built by Frank Holmes, at Chagrin Falls, O., and named Wanderer, had been equipped with a set of Allen's bow-facing oars and supplemented with a brace of light paddles, as the means of conveyance, while a pack-basket, that had seen service in the Adirondacks, contained clothing, cooking utensils, hatchet and supplies; and a rubber-blanket package, strapped a-la-shawl-strap-style, contained blankets, pillow cases, and canvas tent, snugly stowed away. A 38-calibre Winchester rifle, with the highly-prized Lyman sights, a Smith & Wesson revolver, and a Wheeler split-bamboo 7oz. rod completed the outfit.

The waters of Silver Creek were at low tide, and notwithstanding the fact that the trim little craft, with crew and baggage, drew but three inches, numerous riffles were found where the crew, in rubber boots, stepped out and practiced lightering, and occasional flood jams required a portage of boat and duffle, by way of variety.

During the first three days the narrowness of the stream brought the paddles into almost constant use, and with W. in the bow and S. in the stern, the rapids were run with safety, and considerable progress made, considering the windings of the stream and the fact that it had never been opened for navigation. An occasional mill pond gave S. an opportunity to stretch himself and get familiar with the bow facers, and at such times the little 12ft. fairy fairly bounded along; much to the amazement of spectators who failed to understand the *modus operandi*, with an oarsman near the stern, facing the way he was going. The scenery was delightful, and the overhanging branches of trees broke the force of the sun's rays refreshingly. When the weather was fair a halt was made and dinner cooked by a camp fire in primitive style, and at night the little A tent pitched in some favorable spot, with bough beds; but in unfavorable weather accommodations were had at convenient farmhouses or hotels.

On the first day out S. had his clothing, but not his ardor, dampened. He had stepped into the stream to remove some brush that barred the way, and, while pulling with might and main, a limb broke and he suddenly dropped backward into the water, W. dryly asking, "Did you get anything wet?" However, the sun and the exertions of the baptized at sundry portages generated sufficient heat to quickly dry the wet portion of his garments; and he even smiled when W., prompted thereto by observing a group of country people watching the boat's progress, lapsed into poetry thusly:

"Ye natives on ye river bank
Do cast a wishful eye
Upon ye graceful Wanderer
As she goes floating by!"

On the afternoon of the third day, just as the tortuous windings of Silver and Eagle creeks had been nearly accomplished, and Mahoning River was in sight, an approaching storm whose coming had been portended by ominous mutterings of thunder, forced the pilgrims to tote their duffle and seek shelter in a convenient sugar camp. S. asked poetically, "Shall we now pitch our moving tent, a day's march nearer the Mahone?" But night coming on, and the rain still pouring in torrents, they were induced to seek quarters at a neighboring farmhouse where the most genial hospitality was extended, and the evening merrily passed with cards and music, W. producing from the depths of the pack basket his diminutive Distin cornet, that had been his companion during thousands of miles of Adirondack touring. The next morning the family accompanied the tourists to inspect their wonderful boat and bid them God speed on their journey, and in half an hour the broad waters of the more symmetrical Mahoning River were reached and the route thenceforward presented less difficulties.

A laughable incident occurred just prior to embarkment that morning. A six-year-old son of the host had taken quite a liking to the visitors and was particular in his attentions to S., who wore a pair of knickerbockers (a relic of his bicycling days). He had eyed them with much curiosity and finally broke forth with, "Mr. S. are those the only pantys you've got; did you have them when you was a little boy?" He evidently was burdened with the idea that S. had outgrown his nether garment. The laugh was on S., who immediately wrote home to have a pair of "man's size" sent him at a prospective stopping place.

With the exception of portaging around two dams—one at Leavittsburg and one at Warren—and running a series of rapids of nearly a mile in extent between the two, the trip of the fourth day was smooth sailing and through a delightful portion of country. A few squirrels were discovered as the route passed wooded sections, and W. added to the supplies by bringing some to bag with the Winchester. S. grew poetical en route, and launched forth to the air of "Sweet Belle Mahone" the following:

Soon beyond the Eagle's bar
Will our craft be floating far,
Through the world we'll wander lone,
On the old Mahone.
Chorus—On the old Mahone! On the old Mahone!
Thus we sing as we float by,
On the old Mahone!

The scenery as we approached Warren became very fine. Shale rock lines the river on either side, while the bed of the stream is also solid rock. The banks are high, being in some localities from 40 to 60ft. above the water, and extremely picturesque and interesting to the student of nature. Camp-fire for dinner was made on the left bank at a very romantic spot, and a cigar enjoyed while lounging under the shade of grand old trees and watching the wild antics of a lot of boys bathing a short distance below our bivouac.

Warren was reached at 3 P. M., and the novel craft attracted considerable attention. A storm threatening, we concluded to go into port. Among those whom we met on landing was the Mayor, who greeted and gave us the freedom of the city. S. began to prepare himself in suitable rig to go up town, when he discovered that he had left his light shoes at the last halt safely deposited under an oak for some one in need of foot gear. It being Sunday he said nothing desperate, but thought a few hard things, besides remarking that it would be pleasant to walk around the city in rubber boots to hunt up a dealer in lighter articles more suited for hot weather. At last "the rains descended and the floods came" to such an extent that it was deemed wisdom to remain another day at Warren and accept hospitalities tendered by new and old acquaintances.

We were provided, to establish our identity in case of shipwreck, with a card which read as follows:

E. S. W. L. V. S.
"PILGRIMS TRAVELING FROM AFAR."
BOAT "WANDERER." JUNE, 1888.

The pilgrims attending the opera that evening in working costume were recognized and became the cynosure of many eyes and the lions of the hour as it were.

A friend presented them with a neat "*In Hoc Signo Vinces*" flag to float from the stern of their boat, and on Tuesday morning it was flung to the breeze and a start made for Niles, which was reached in due time and a start made for refreshments, then a delightful run to Girard, through charming bits of landscape and on splendid waters for boating. Our fame had preceded us, and we were met en route by the enterprising Lotze brothers, who have placed a number of boats on the river at Girard and control of the commodious picnic grounds near there, and given the privileges of both their boat house and boarding house and introduced scout town and made to feel at home. A gentleman from Youngstown appreciating the fine opportunity afforded for five miles of excellent boating from Girard up, has placed in the river at Girard a commodious private steam launch and built a boat house for storage of cedar canoes and general supplies, and being within a few minutes' run by rail from Youngstown, spends the greater portion of his leisure upon this fine stretch of water.

The next morning with cheery "good byes" and "bon voyage" ringing in our ears, we swung out into the stream and were soon en route, portaged a dam, and then ran a succession of rapids in good shape, reaching Youngstown at noon, where lunch was taken, mail received and new supplies secured, and were presently below the dam and working through the riffles that stretch for a mile below, and are especially dangerous for light craft owing to the fact that much of the refuse or cinder from the numerous iron mills has found a lodgment in the river, and has corners sharp as glass. We succeeded in passing the rapids without accident, and were congratulating ourselves thereupon as we shot into the deep water, and in fact were a bit careless supposing all danger over, when a slight grating indicated that we had run upon a cinder reef, and water pouring into the boat from an inch hole neatly cut in the canvas near the stern, demonstrated the fact that "in the midst of life we are in death," unless different arrangements are made, and impelled us to "paul, rothers, paul, pull for the shore," which we did and saved ourselves and baggage from a wetting. This was the first and last accident of the kind during a trip of 700 miles, and might have been avoided had W. in the bow been attending strictly to business. A bit of canvas, some waterproof cement and needle and thread soon repaired the damage, and we were again under way, passing Hazelton and numerous foundries and rolling mills, shooting the various rapids in a creditable manner, and at about five o'clock P.M. arrived at a beautiful site for a camp on a high bluff facing the south, and in sight of Struthers. Here we pitch our tent, swing hammock, prepare beds and supper, and as the sun slowly sets enjoy the outlook, which is a charming panorama of hill and valley, dotted with mills. As darkness settles down the camp-fire is replenished, and the melody of voice and cornet fills the air with pleasing sounds until the hour of 10 arrives, and warns us to rest and refresh ourselves.

Next morning we broke camp after an early breakfast, and pursued our winding way. Suddenly W. makes a discovery, turns and requests S. to keep quiet and hold the boat where it was, saying: "See the head of that big turtle near shore?" and at the same reaching for the rifle. S. looked in the direction indicated and soon announced: "Old man, that's not a turtle, but part of a big straw hat!" It was sad, but nevertheless true. If W. thereafter mentioned "pants," S. evened up by responding "turtles." Passing Struthers, we soon reached Lowellville, where necessary supplies were laid in and the dam portaged. From this point for four or five miles is a constant succession of rapids, in which, we had been told, our boat could not live, and advice had been given to portage by team. A survey of the first series decided us to at least make the attempt to run them, which we did successfully, although at times it looked more hazardous than was realized. We crossed from Ohio into Pennsylvania at high noon, and stopped for rest and dinner at one o'clock.

This portion of the Mahoning River is well stocked with black bass, and the enthusiastic angler would be repaid for a short sojourn in the vicinity of Lowellville or Edinburg, easily reached by railroad, and fair accommodations at moderate rates. A few casts were made and enough secured for a meal. As our pennant with its red cross floated in the breeze just above the surface of the water, it was a source of attraction to hungry bass, and many a one leaped from the water toward it. In particular one large fellow struck the slight staff with such force as to nearly demolish it. In fact, they were so plentiful about us that S. thus recorded in his journal: "The bass are so thick in these waters that we are obliged to lie (this might be underscored) down in the boat out of sight while baiting our hooks!"

The excitement of swift waters, lovely views and balmy air made the day quickly pass. As we drew near to Edinburg a storm that had been gathering gave warning that it would soon be upon us, so we pulled the oars and worked the paddle as though making a race, and the Wanderer fairly skimmed through the water. Ten minutes more would have sufficed, but the rain was not a respecter of oarsmen, and we were forced to run ashore and as quickly as possible place the baggage under a wide-spreading oak, and invert the boat over it, then investing ourselves in our waterproofs we waited an hour ere the clouds passed, and then ran into port at Edinburg, and put up at the little hotel, and had a good supper, and held a levee as it were, explaining to the crowd that were attracted, the mysteries of canvas boat, bow-facing oars, and pleasing old hunters with a peep through the famous Lyman sights, until a late hour, when we retired and enjoyed the night's rest.

In the morning, having restocked our larder, we made an early start and ran a mile in good water, when, arriving at a rapids with excellent outlook for good bass fishing, we came to a halt, and W. got out tackle and was adjusting it when he sudden y remembered that he had left his coat at the hotel. Having uttered a benediction, he resigned the rod to S. and walked back across lots, ostensibly for the coat, but on his return produced a couple of bottles of ginger ale, and after refreshments took a fresh start, S. manipulating the boat and W. fishing for bass, and in a very short time enough were secured for immediate wants, and not wishing to sacrifice fish for mere sport, the rod was put up and we ran on down to Cross Cut, and thence passing Mahoningtown a short distance, stopped for dinner in a wild and romantic gorge near a cool spring brook. We broiled our fish on forked sticks over the coals, made coffee, boiled eggs, and adding some relishes from our regular supplies, had a meal that was thoroughly enjoyable. As the weather was very warm, we took a two hours' rest, enjoying the grandeur of the scenery.

For miles along the river we had encountered numerous native fishermen, but the greater number were angling for bass with shotgun or rifle, either from some favorable place on the ground or perched in a convenient tree where a watch could be maintained over favorite feeding grounds; and from the number of reports which we heard during the day opportunities for shots must have been frequent. No one, however, would acknowledge success, or admit that they were shooting at fish, there being a law upon the statute book of Pennsylvania intended to prevent such practices.

At Mahoningtown the Shenango River joins the Mahoning, and from thence the united waters flow under the name of the Beaver River, and for some miles there were rapids in profusion, and we had some exciting runs. We passed Moravia at four P. M., and east of town found the swiftest rapids we had yet been in, fully a half mile long, and with a drop of nearly 50ft. The striking of a single stone, and numbers were everywhere visible, would have swamped our frail craft. The experience of the last ten days had been of service, and the Wanderer rocks so slightly and obeys the paddle so quickly, that we went through without a scratch. The excitement wrought S. to that pitch that we found that he had in that short time completely chewed up a fresh cigar that he had placed unlighted between his lips but a few moments before.

We found a handsome spot for camping at the foot of Moravia Rapids, on a triangular platau at the mouth of a wooded ravine, and adjacent to a fine spring of sweet, cold water, and with a most charming outlook, where we proceeded to pitch our tent. As we were thus engaged the owner of the premises, who resided within 80 rods, put in an appearance, evidently to ascertain what a couple of tramps might be about. We introduced ourselves, and after he had found out who and what we were, not only gave assent but remarked that as there were signs of rain he thought we had better strike our tent and bring our baggage to the farmhouse and camp with him for the night. We did not waste words in arguing the matter, but at once accepted Mr. Morrow's kind invitation, found an interesting family, had a bounteous supper, and in the evening, at their request, treated them to quite a concert of vocal and cornet music, with organ accompaniment.

Next morning arose at 5:30 and breakfasted, and as we bade them adieu were invited to come again if ever in their vicinity. We were soon afloat, and presently reached what we have been led to dread, the famous Hard Scrabble Rapids, and Irish Ripple. There being a fair stage of water we went through them flying, and without accident, and soon passed Newport and Wampum, and found a long stretch of deep water with high wooded banks, and the wind being at our backs, we floated for miles without exertion, and gave ourselves up to a full enjoyment of the panorama. After passing Clinton we found more rapids, the swiftest of which is near Homewood, which we went through in rapid style, much to the interest and admiration of a number of sportsmen who were casting for bass in that vicinity. At noon we went into camp at a lovely spot on a high wooded bank four miles above Beaver Falls; which, from remains of tent stakes and hammock ropes about the beautiful grove, seemed to have had previous occupants.

After two hours of rest and refreshment we swung out for Beaver Falls, which we reached at 4:30 P. M. almost without pulling a stroke, as we were running before the wind. On our way we went around the famous horseshoe bend of the P. & L. E. R. R. and passed multitudes of stone quarries in the high banks on either side, and the "Coast of Joppa" was forcibly brought to mind. We portaged our boat and baggage to the freight depot, it being the only available place near the river, and the courtesy having been duly extended by the officer in charge. It being our intention to remain over the Sabbath, we found comfortable quarters at the Grand Hotel, and in the evening took a carriage and drove about the city. On Sunday we started over to New Brigaton, found a cosy nook on the bank of the river and perused the papers; and again in the afternoon took the bluffs west of town that rise fully 500ft. above the valley, and obtained a view that well repaid the effort, and the exercise gave us a good appetite for supper, and for sleep.

On Monday, June 18, we launched our craft, ran to the mill dam, portaged into a raceway on the New Brigaton side, through which we passed for a mile, and then carried into the river and had good water until we reached the Fallston dam, and there a picnic seemed to await us. We ran first to the left, but found it impossible to get around without a portage of nearly one-third of a mile, and then went over to the west bank and found we could carry over a steep bank with an abrupt descent into a mill race. As the Wanderer, without baggage, could be carried almost anywhere, we unloaded our packs, which S., feeling in good vigor, at once tackled, and soon demonstrated the fact that he was in Fallston by taking a fall therewith down the hill some 8ft. in close proximity to the raceway, snaking him up seriously and with slight damage to man and apparel, besides causing him to give utterance to something that rhymed well with mill dam, or at least it so sounded to W., who was then ascending the bank with the oars, paddles, gun, etc.

After S. had rubbed his knee and gathered up the scattered baggage, the boat was taken over and we were again under way, and soon found an easy portage into the river and good running, and ere long passed West Rochester and Bridgewater, where we found the last dam on the Beaver River, made an easy portage, shot the rapids below, and passed under the C. & P. R. R. bridge into the waters of the Ohio River. We ran across to Phillipsburg and found a splendid beach, with good shade and conveniences for a camp dinner, and while W. went up into the town to procure supplies, S. started the necessary fire and got the coffee in readiness. After dining and resting a short time, we again embarked and were soon in a swift current running down the grand old Ohio on the afternoon of one of the finest of June days.

Our course was now decidedly easy in comparison with the prior experiences, and we had more leisure to enjoy the ever-changing and picturesque views that abound along the shores of the upper Ohio. Passing Beaver, Vanport, Shippingport, Bellevue and Industry, we sought for and found what seemed a good place to camp for the night, with a stream trickling down the bank on the southerly side of the river, and ran ashore for that purpose. The boat was unloaded and taken up on the bank, a spot selected for the tent, but before setting up it was suggested that it would be a good idea to try the spring water. Holes were dug out and the water permitted to settle while the crew took a rest. S. was the first to test the quality, and sang out, "I've struck it rich! Shall start a factory at once! There is millions in it!"

W. tasted, too, and his mouth began to pucker up as in younger days when he had been induced to partake of green persimmons, and the face dawned upon him that a superabundance of ammonia must exist in that particular bluff and something in the nature had assumed the responsibility of "reducing the surplus." We concluded to move on to the next favorable locality, which was discovered in less than a mile, and on stepping ashore the first word spoken was in favor of trying the water before unpacking. After one trial and strict examination the waters of the second spring were pronounced of a copperas tendency, and unfit for use. As night was coming on and Smith's Ferry, with a comfortable country hotel, was in easy distance, we decided to make it our camp for that night and were in port at 6:30. From the porch of our hostelry we could look into three States only a mile away, viz.: Pennsylvania, West Virginia and Ohio. Georgetown is opposite and Glasgow a short walk below, and were duly inspected. A fine grove on the river bank in front of the hotel was utilized for concert purposes by particular request of the proprietor—a queer genius of 72 years—who insisted upon W.'s playing for him his especial favorite which he called "the Blackbird." S. was much amused at W.'s perplexity and finally whistling a strain of the "Mockingbird," relieved W. and aided to the old gent's gratification. "A rose by any other name," etc., and why not so a tune?

GANETSVILLE, Ohio. E. S. W.

[TO BE CONCLUDED.]

THE PADDLING CHAMPIONSHIP.—The proposed race between Messrs. MacKendrick and Jonnson, in answer to the former's challenge, has as yet progressed no further than a dispute over the date.

MEET AND REGATTA.

THE OTTAWA C. C. AND AYLMER BOATING CLUB.

A MOST successful camp was held under the joint auspices of the Ottawa C. C. and the Aylmer Boating Club on Deschenes Lake near the village of Aylmer, Canada, from Sept. 4 to 8. Lake Deschenes, it may be explained, is an enlargement of the Ottawa River, the lower end of which (where the camp was situated) is about nine miles above the city of Ottawa. The present was the first attempt of the two clubs to hold a canoe meet on a large scale, and their efforts were crowned with such signal success that it has been decided to make the meet a regular annual affair. Owing largely to the late date when the decision to organize the camp was arrived at and the consequent short time at the disposal of the committee, the attendance of outside canoeists was not as large as was hoped, but those who did come were so thoroughly pleased with the affair that next year's meet is likely to be attended by members of most of the Canadian canoe clubs. The camp site chosen by the committee was all that could be desired. A grassy sward, shaded here and there by maples and cedars, sloping down to the lake, where it ended in a shelving pebbly beach. As a substitute for a restaurant the committee had made arrangements with a summer hotel, about five minutes walk from the camp, where the hungry canoeists were fed at the very reasonable charge of twenty-five cents per meal; while the more industrious who did their own cooking had whatever supplies they required delivered at their tent doors by huxter's carts from Aylmer. There were altogether over two hundred in camp during the meet, including a large contingent of ladies at "Squaw Point," and the result was some of the jolliest camp fires that it has been the writer's good fortune to attend.

The racing took place on the 5th and 6th, and, as a rule, the entries were fairly numerous and the events well contested. The sailing course was a triangle, one-half mile to each leg, laid out directly opposite the camp. The lake presents exceptional facilities for sailing. It is a large sheet of water, with low shores, and so the winds are steady, squalls being comparatively rare. There is, moreover, practically no current, and the lake is free from the sawdust and mill refuse which have given the river below Ottawa such an unenviable reputation. The feature of the meet was the race for the Lansdowne cup, which was called on the afternoon of the 6th, and sailed in a light wind. The Lansdowne cup is a handsome silver challenge trophy presented to the Ottawa C. C. by the Marquis of Lansdowne when Governor-General of Canada. By the deed of gift the race for the cup is open to all members of recognized Canadian canoe clubs sailing Canadian-built canoes, and by a further restriction imposed by the Ottawa C. C. decked canoes must be so constructed that their owner can sleep on board, and all canoes must be able to carry a proper outfit for a week's cruise. In other respects the A. C. A. regulations govern. The cup was presented in 1888, and in that year, as also in 1889, it was won by Mr. R. W. Baldwin, of Ottawa, in Irene. This year it was won by Mr. Chas. E. Archibald, of the Point Claire (Montreal) Canoe Crew, the winner of the Ottilia cup at the meet of the Northern Division of the A. C. A. The distance was three miles, or twice around the course.

The canoes started well together, but on the first leg Archibald took the lead and turned the buoy a few seconds ahead of the others. On the second leg he was passed by Gisborne, but on the third leg, which was a beat to wind'ard, he again took the lead and retained it for the balance of the race, passing the finish 4m. 20s. ahead of R. W. Baldwin in Irene, who was the second man. Archibald's time was 1:38:30. Other canoes finished in the following order: White Wings, W. McL. Mainguy; Banshee, A. Adamson; Eira F. H. Gisborne; Nixie, P. B. Symes; Musette, Henry Roy. P. A. Mainguy's Myrabel did not finish. W. McL. Mainguy, sailing White Wings, was very late in getting out, the race having been started before he had time to return from acting as starter for another race. Frank Day of Ottawa also sailed over the course in a canoe of his own build, and finished ahead of the second canoe, but being a professional he was not allowed to enter the race.

Among the paddling races the Morris Cup race (double blades, open canoes) and the tandem single blades were particularly well contested, the competitors in each race finishing well together.

Two attempts were made to get the St. Lawrence skiff sailing race off, but on both occasions the time limit was exceeded and the race declared off. One heat has since been sailed and won by Mr. R. H. Haycock, of the Aylmer Boating Club; E. H. Hubbell being second and Geo. Burn third, but the other heats are still to be sailed.

A feature of the regatta was a rivermen's race in the large and heavy driving boats used in rafting timber down the river. Several boats entered, manned by French Canadian voyageurs, four oars and a steering paddle to each, and the race, which was a very close one, was the signal for the wildest excitement among the friends of the contestants, a large number of whom had come out in their boats. The following is a list of the events with the winners of each:

Friday.

1. Bark canoe race, single blade, one-half mile straightaway: H. P. Ross first, W. McL. Mainguy second.
2. Open canoe sailing race, one and a half miles: F. Merret first, R. D'Arcy Scott second.
3. Maneuvering race, one and a half miles, canoes to start with sail down, during race at a signal paddle to be thrown overboard clear astern and recovered under sail: Chas. E. Archibald first, F. H. Gisborne second, R. W. Baldwin third.
4. St. Lawrence skiff sailing race, three miles: Time limit of one hour exceeded.
5. Steam yacht race, three miles with turn: Jas. Bourgeau first, A. Driscoll second.
6. Gunwale race, 100yds. with turn (no keels or ballast or projecting centerboard): Chas. E. Archibald first, Henri Roy second.

Saturday.

7. Double scull (pleasure skiffs), one mile and turn: L. Coste and G. L. Bourchier first, Archie McDonald and J. Watt second, C. Morse and W. H. Norton-Taylor third.
8. St. Lawrence skiff sailing race: Time limit again exceeded.
9. Single blade paddling (open canoe), half mile straighaway: W. Johnston first, R. D'Arcy Scott second, E. W. Gilbert third.
10. Landsowne cup race, three miles; Chas. E. Archibald first, R. W. Baldwin second (other names above).
11. River men's race, one mile with turn: Joseph Le Clair's crew first, Ed Madare's crew second, Pierre Dion's crew third.
12. Tandem paddling (single blades), half mile straightaway: W. Johnston and A. May first, W. H. Oronk and N. Lett second, W. H. Norton-Taylor and J. Jackson third, J. W. Hanning and — Lister fourth, G. L. Bourchier and C. M. Wiggins fifth.
13. Morris cup race (double blades), half mile straightaway: Le Sueur first, F. H. Gisborne second, E. A. Black third, R. D'Arcy Scott fourth, E. W. Gilbert fifth.
14. Log-rolling competition (for river men): — O'Donnell first, — Elliott second.
15. Upset race (paddling), 100yds.: R. D'Arcy Scott first, R. W. Baldwin second.
16. Greased pole and pig race: W. H. Norton-Taylor first (among a large number of contestants).

The weather, that all important factor to the success of a meet, was all that could be desired, not a drop of rain falling during the five days of the camp. Altogether the affair was such a success that, as has been said, it is henceforth to become a regular annual event. Next year it is proposed to extend the time to ten days. The date will, of course, not be fixed until the spring, and will largely depend on A. C. A. and other fixtures, but it will most probably be arranged for the latter part of August.

AMATEURS VS. PROFESSIONALS.

THE following circular, which we copy from the *Field*, is interesting, from the fact that the amatuer question comes up at times in American canoeing, the conditions being practically the same in rowing, swimming and canoeing. It will be seen that the present English rule would not be applicable here. The circular, which was sent out by the Trent Rowing Club, reads as follows:

DEAR SIR—We desire to draw your attention to Rule 22 of the Amateur Rowing Association:

No person shall be considered an amateur oarsman, sculler or coxswain:

1. Who has ever taken part in any open competition for a stake, money or entrance fee.
2. Who has ever knowingly competed with or against a professional for any prize.
3. Who has ever taught, pursued or assisted in the practice of athletic exercise of any kind for profit.
4. Who has ever been employed in or about boats, or manual labor for money or wages.
5. Who is or has been by trade or employment for wages, a mechanic, artisan or laborer, or engaged in any menial duty.

Thinking this to be most arbitrary, rendering a very large number of members of rowing clubs unable to compete at any regatta held under its rules, we ask the opinion of your club as to the desirability of a conference of delegates, one from each club, to discuss the formation of another amateur rowing association.

The definition of an amateur oarsman we think should be on the same lines as Rule 1 of the Amateur Swimming Association, which reads:

All amateur races held under the Amateur Swimming Association rules must be confined to amateurs, according to the definition of the Amateur Swimming Association, which is as follows: An amateur is one who has never competed for a money prize, declared wager or staked bet; who has never taught, pursued or assisted in the practice of swimming, or any other athletic exercise, as a means of pecuniary gain; and who has not, knowingly or without protest, taken part in any competition or exhibition with any one who is not an amateur. Rule 2. A swimmer ceases to be an amateur, and becomes a professional, by—engaging in swimming or any other athletic exercise—or personally teaching, training or coaching any other person therein—for pecuniary gain. Selling, realizing upon, or otherwise turning into cash, any prize won by him. Accepting remuneration for swimming in public, or by being employed for money or wages in a swimming bath or elsewhere as an attendant on swimmers.

Should you not see your way clear to send a delegate to the proposed conference, we should be glad of an expression of opinion from your members on this matter.

Trusting that you will be able to favor us with an early reply, we are, dear sir, yours etc.,

PERCY EVERSHED, Pres.
CHAS. FLEMING, } Hon. Sec's.
BURTON-ON-TRENT, June 9. HY. JOHNSON, }

THE POINTE CLAIRE C. C.—The annual general meeting of this club was held at Pointe Claire on Sept. 13, the captain, Mr. David A. Poe, in the chair. The log book as submitted showed that during its first active season the crew had held three decked canoe races for the Pointe Claire canoe trophy, two open canoe races, four races for the skiff trophy and an extra skiff race. There are 31 members in the organization, and its fleet consists of 8 sailing canoes, 6 St. Lawrence skiffs and 20 open Canadian canoes. Mr. W. J. Wallace, on behalf of the subscribers, presented to the crew the Pointe Claire canoe trophy, a handsome silver bowl with the totem of the club, the great bear, upon it in blue enamel; and the trophy was formally presented to Mr. Chas. Archibald, of the canoe Mab, who won two out of the three races sailed for it. This trophy is a perpetual one, and must be sailed for yearly by the members of the crew. The skiff trophy, an engraved and enameled pewter mug, given by the captain, was then formally presented to Mr. C. Montserrat, of the skiff Jean A., who had won two out of the four races sailed for it. The election of officers, which brought the meeting to a close, resulted as follows: Captain, W. I. Wallace; Mate, A. C. Thomas; Purser, Chas. Archibald.

THE JESSUP'S NECK, SAG HARBOR & GREENPORT NAPETHA TRANSPORTATION CO. (LIMITED).—The publication of the annual report of the treasurer of this company has been delayed on account of our having not yet obtained a settlement from the A. C. A. in regard to the mail contract. If our claim against the Association is allowed the stock of the Transportation Company will be redeemed at par. As soon as the matter is adjusted a statement will be sent to the stockholders.—EDWARD W. BROWN, Pres.

MASSASOIT C. C.—The Massasoit C. C. held its annual races on Sept. 21, the course being a triangle of three miles, commencing at the Dolphin, opposite the club house in Boston harbor, thence proceeding on a southerly course toward Squantum and thence returning on a northeasterly course to the point of commencement. Canoes to the number of 14 sailed off, but some of these were only friendly escorts. After fifty minutes from the time of starting Vincent B. Johnson, in his self-designed and self-built Vee-Bee, crossed the line and heard the whistle which announced that he held the club trophy for the ensuing year. Some four minutes elapsed before Emile Johnson, in Allie A., came in, and he was followed three minutes later by Sappho, with her captain Allan, third. The paddling race, from the Cow Pasture to the Dolphin, was won by C. F. Perry, in the Moondyne; Allan Hurd and John Lannon, in Sappho and Winonah, respectively, taking second and third place. This race was a well-fought one, only a few seconds dividing the first and second men. Reverting to the past year, the Massasoits can contemplate their record with satisfaction. The membership of the club has been nearly doubled, the club house has been finished and greatly improved, and much good sport has been had by the members. Not a Saturday has come round but its quota of members has started off on an over-Sunday camp-out on one of the many adjacent islands. Our summer programme is now almost a record of the past, the only two outstanding events being the dedication of the newly finished club house and the annual supper, which events will shortly be celebrated.—JAMES J. BROOKS, Sec'y Massasoit C. C.

A NARROW ESCAPE.—It is early for stories, as winter has not yet set in, but as this is a true bill (Wellerian) it should be told. We were sitting in a stuffy room on a ranch this summer having a quiet game of "draw." There were four of us; one tenderfoot and three who knew the ropes. A jack pot happened, as it sometimes does, and it became interesting until the tenderfoot won the pot, which was sufficient to cover promises as well as cash. "Now it is time for one of us to cross the river," said one of the bold rancheroes. "What river?" said another. "The River Larrats, of course." "There's no such river; it's Sticks." "Sticks, your grandmother. If I had to invent a name I would get a better one than that to a—" "Stop," said the tenderfoot, "don't draw until I get my reeling gear in order and the hull of my canoe sandpapered." "What! Are you a canoe man that sits in the water and tries to keep his feet dry? Boys, save your powder; it would be spoilt before the lead reached him."

NEW YORK C. C.—The fall regatta will be held on Oct. 4 off the club house, at Stapleton, starting at 2 P. M.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

J. H.—See answer to "J. M. B."

PINNATED.—For Minnesota chickens try Ashby, in Grant county, or Glenwood, in Pope county.

C. H., Maine.—The trout season in Maine runs from May 1 to Oct. 1, with local exceptions.

DOC.—For bear and deer in Michigan go to Metropolitan and thence to the lumber camps in the vicinity.

H. B., Mt. Vernon, N. Y.—It is forbidden to shoot "highholes" in New York State at any season of the year.

A. T., San Francisco.—Choose a .45cal. There is little, if any choice between the two makes; both are perfectly trustworthy.

L. T., San Francisco, Cal.—A bitch if well matured should throw as good puppies the first litter as subsequently. If she is not well developed the puppies are apt to be weakly.

J. R. P., Philadelphia.—We advise you to try the Pocono Mountains. Go to Canadensis; stop at D. M. Crane's. This region is highly recommended by our correspondent "Jacobstaff."

J. M. B., Atlantic City, N. J.—For grouse go to the Pike county, Pa., resort described in our shot columns to-day. Then for quail in North Carolina, go to Greensboro, in Guilford county, writing to Mr. McAdoo, hotel proprietor there. Quail season in that State will open Oct. 15.

R. J., Boston.—Will you kindly inform me whereabouts within about fifty miles of Boston I can find good Thanksgiving shooting of small game, including ruffed grouse and rabbits? Ans. Your best plan will be to go up into New Hampshire, or else try along the Fitchburg railroad, anywhere from ten miles out of Boston to Fitchburg.

J. L. B., Little Boar's Head, N. H.—Do gun barrels of 28in. shoot as hard as those of 30 or 32in.? Would a set of 28in. barrels be as effective in duck shooting as 32in. ones, other conditions as to caliber of shells being equal? Ans. As a rule the longer barrels will shoot harder because they will burn more powder, and the 28in. would not equal the 32in. "Contents of shell being equal," a shell load adapted to a 32in. would not do its full work in a 24in. barrel.

H. F. R., Fulton, Kas.—1. What is the proper charge of powder and shot for a 16-gauge full-choke gun, 10lbs.? 2. What per cent. of the pellets should it put into a 30in. circle at 40yds., shot ranging from 1 to 8 in size? 3. What per cent. of buckshot, size from 2 to 8 (according to what size chambers), would you consider a first-class pattern at 40yds., same sized target? 4. What would you consider a good pattern for buckshot at 75yds.? Ans. 1. Dars. powder, 1¼oz shot. 2. An average of 66 per cent. 3. The same. 4. From 6 to 9 shot.

L., Louisa county, Va.—I have a fish pond of several acres, in which I placed six years ago 80 adult silver perch (croppie). I have continued to add to that number every year since, until I have put in the pond over 700. Only about one-half dozen have been taken out, but they will not bite at all, except in April, May and June and July, and are very uncertain even then. This is the report of many others who have perch ponds. I am thinking of placing large-mouth black bass in the same pond. The deepest water is 6ft.; average, 4½ft. Which will exterminate the young of the other, the perch or the bass? The pond is well stocked with minnows. Ans. We have in mind several ponds in which crappies and black bass harmonize without injury to either. If one should have occasion to prey upon the other the bass would unquestionably hold the fort against crappies, pickerel and most other fishes. The depth of water in your pond will be sufficient for the large-mouthed bass, but scarcely for the small-mouthed kind unless the water is cool. It would be advisable to keep up the supply of minnows.

CANVAS CANOES,

AND

HOW TO BUILD THEM.

By PARKER B. FIELD.

The directions are as plain and explicit as possible for the construction of a canoe 13ft. 6in.× 27in. at an expense of not to exceed $7, while the simple operations are within reach of the skill of any careful amateur. No technical terms are used and the successive operations are carefully described in detail, each step being made clear before proceeding to the next. Illustrated; paper 48 pages; price 50 cents.

FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.

DAVIES & CO., 1 Finch Lane, Cornhill.

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

BY G. TRUMBULL.

Contains the local names in popular use, and eighty-nine illustrations, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

To all dwellers by the water and in the country and especially all who shoot, the book will supply a great need, and every one who is interested in birds will be interested in it.—*Boston Evening Traveller.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

There is a delightful dearth of dead languages in this book. The sportsman who looks between the covers for a description of some game bird—a description which will enable him to identify the creature should he meet it in the woods or on the water—is not compelled to shut the book, drop a bad word or two upon it and go in search of some Greek and Latin dictionaries to find out what the description means.—*New York Herald.*

PRICE $2.50.

LOG CABINS

AND

HOW TO BUILD THEM.

By WILLIAM S. WICKS.

This is a complete exposition of the art and method of building log cabins from the simplest dog kennel to highly artistic dwellings. Everyone going into the woods and designing to construct his shelter with the materials at hand, should procure "Log Cabins," for in its pages he will find a variety of designs, simple and ornate, adapted to temporary shelter or to permanent homes, with full and clear instruction and illustration in every matter of detail. Sent, post free, for $1.50.

WILD INDIAN LIFE.

PAWNEE

HERO STORIES AND FOLK-TALES.

With Notes on the Origin, Customs and Character of the Pawnee People.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages. Illustrated. Price $2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parellel to the East Indian mango feat. . . . Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—*N. Y. Tribune.*

FOREST AND STREAM PUB. CO., 318 Broadway, N. Y.

LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 98 pages. Price $1.00.

Kennel Editor London *Field*.

NEW AND ENLARGED EDITION.

15 Portraits and Illustrations; 180 pages.

PRICE, $1.50.

FOREST AND STREAM PUBLISHING CO.
318 Broadway, New York

In the Stud.

FOX-TERRIERS.

Puppies for sale from such well known terriers as Champion Raby Mixer and Reckoner out of champion bitches.

IN STUD.

RABY MIXER.....$25.00
RECKONER.....$25.00

HILLSIDE KENNELS,

LANCASTER, Mass.

STUD YORKSHIRE TERRIERS

Fishpool Gem, fee $25; Prince A. I., $20; Toons Bright, $20; Harry, $15; Toons Royal, $10; Roy, $5. Photos of the group with pedigrees, 50c. NORTH FIELDS YORKSHIRE KENNELS, 4 Dearborn street, Salem, Mass.

YORKSHIRE TOY TERRIER. Champion **Bradford Harry**, described in show reports as "best Yorkshire in America." Pedigree and winnings free, photos 50cts. A limited number of his puppies for sale. P. H. COOMBS, 1 Exchange Block, Bangor, Me.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, OCTOBER 9, 1890.

VOL. XXXV.—No. 12. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 80 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price for single copy $4 per year, $2 for six months. Rates for clubs of annual subscribers:

Three Copies, $10. Five Copies, $16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

A DIFFICULT SHOT.

WRITING of the ways of the ruffed grouse, a correspondent whose notes are printed in our shot columns, alludes to the difficulty of "getting on to" the bird when it makes a pitch downward from the top of a tall tree. It is indeed a shot which may well be classed as one of the most difficult feats to accomplish in all our American upland shooting; and he who can perform it successfully, if but rarely, may justly feel proud of his skill.

There are many conditions which combine to make the shot a hard one. The bird in pitching down adds vastly to its momentum by quick strokes of its pinions; and by the time it is near the ground the velocity of its flight is comparable only with that of a cannon ball. Then there is always a most decided uncertainty as to the limit of that downward plunge. Not even the most experienced of partridge shooters can tell beforehand whether the bird will fall only a few feet or whether it will drop down almost to the ground before sheering off; the problem cannot be solved until the turn is made; and that is, of course, just too late. Should the bird shoot off at a tangent, when only a short distance from the perch just left, as it often does, the chances are ten to one that the shooter has prematurely calculated the exact distance to aim below the falling meteor; and sends his hurtling lead anywhere from ten to twenty feet astray from the hurtling grouse. It is twenty to one, too, that even if the bird does not swerve off, but his plunge is continued, and the shooter holds to the best of his calculation, the shot is about as wide of the mark as before.

In these cases it is rarely of any use to wait fire until the bird shall have attained its desired depression of flight and go skimming off on a level; for before leaving its elevated perch the grouse has carefully and completely studied the situation; its downward plunge is calculated to an inch; and when the turn is made there is sure to be between the shooter and the game a tree or a bush that effectually conceals and protects the grouse.

No argument can induce the man who has had repeated experiences of the sort to believe that such strategems are not carefully planned and executed with intelligence by this provoking bird. And the opinion is held with general unanimity that such trickery by a bird that has already been counted as bagged, is reprehensible in the extreme. More than one grouse hunter, who may perhaps lay claim to being a true sportsman, on an occasion like this, when nettled by this exasperating proceeding, will simply grit his teeth, and "cut loose" with both barrels, and then perhaps not entirely overcome an impulse to kill his dog.

The best ruffed grouse shooter we know claims only the skill to shoot a down-plunging bird once to a score of clean misses. An old hand takes the hard fortune of such experience with equanimity, but the novice is rattled by his want of success. On one occasion, after a new hand had missed half a dozen of these droppers in succession, his comrade, an old shooter, rallied him on his want of skill; and himself letting go at a plunging grouse, by sheer accident killed it. The bird fell with such force as to be impaled upon a sharp stub. "There was no necessity of shooting that bird," said the younger man, "if you had let it fly it would have killed itself."

THE QUESTION OF NUMBER.

A QUESTION often arises as to how far it is allowable to make the most of one's opportunity of bringing to bag when game is plentiful; and he who would rush in to lay down the law *ex cathedra*, would do well to follow the example of the Catholic bishop who invariably prefaced his reply to all questions with the qualifying remark, "I make a distinction," and who adhered to the usual formula even when his cardinal host, with a sly side twinkle, propounded the question: "Is it lawful to baptize in soup or not?" In this case the bishop risked his distinction on the quality of the soup, and the laugh was not wholly against him when he gave his reasons for the conclusion, that it would be lawful to baptize in His Excellency's soup, for His Excellency was renowned for niggardly fare.

It is by no means easy to lay down hard and fast rules as to the conditions under which it is justifiable to add to one's bag.

Some general propositions are easily arrived at with regard to a sportsman's action in respect of certain classes of game. For example, in respect of game shot only for the pot, it is perfectly legitimate to shoot as much as can be utilized in camp and advantageously disposed of on the return home. If a gunner destroys more game than he knows how to utilize, and allows it to go to decay, or if he shoots out of season, he is deserving of the most severe censure. But there is no accepted canon of ethics to debar the gunner from bagging as much game as he can utilize. We may feel a certain kindly regard for the man who shoots a few birds and then stops for fear of ruining the chances of later arrivals; but we should regard the act rather as a virtue of supererrogation than as of ethical obligation. We must not set the ethics of sport on an unattainable pinnacle.

As regards the shooting of bears, panthers, wolves, wildcats and all that class, the sportsman is generally conceded to be justified in availing himself of his opportunities to the utmost. The object here is to annihilate, and no sportsman is called upon by the ethics of sport to throw down his gun and run up a tree that he might give the next comer the pleasurable excitement of killing the game, even if it is a "silver tip."

But when we turn to the consideration of the mountain sheep and other big game pursued primarily for their horns as a trophy, and only in a secondary degree for their flesh, the ethics of sport become slightly tangled. Shall the man who has just bagged a noble pair of antlers withhold his fire in presence of an opportunity to add as fine or even finer pair to his bag? In deciding on this case it would perhaps be well to adopt the tactics of the wary old bishop and "make a distinction," and here the distinction would be between the ethical obligation of the sportsman to other sportsmen and the ethical obligation of the State to all sportsmen. As regards the individual, it is too much to ask that he should withold his fire from ethical considerations; as the Bengal officer remarked when he angered the Prince of Wales by taking first shot at a bear which rushed out between them, "By heavens, sir, I couldn't have helped firing if it had been the Angel Gabriel in place of Your Roya Highness!"

LONG ISLAND DEER.

THE New York deer law is construed as giving an open season during the first ten days of October on Long Island; and as is usual each year the hunters have been out in force, vastly outnumbering the deer. Possibly there was little if any exaggeration in the story told us the other day of one party of fifty hunters wrangling over the ownership of one doe, a doe which our informant describes as standing about as high as a pig.

Dogs are used to do the driving; guns are loaded with buckshot, and it is almost beyond reason that some of the participants do not shoot each other in the fusilade. Many deer have been killed, among them was one buck which weighed dressed 257lbs.; this was captured by a Patchogue party; and another party from the same town secured a buck tipping the beam at 285lbs. dressed. A New York company, among whom was Mr. Gustave Boysen, also returned with one buck.

It is worthy of note that there should be such a supply of big game here at the very threshold of the great city of New York. The conditions now prevailing in that district of Long Island are peculiarly favorable for maintaining the deer. There are several large tracts of land, including those of the South Side Club, the Vanderbilt and Cutting estates and others, adjoining one another and comprising many thousands of acres, all of which are strictly protected. Here the game finds safe refuge; and it is only the surplus or overflow that can be reached by the hunters. As decided interest is shown in securing protection for the deer, and as the conditions now prevailing will probably continue for a long time to come, the promise is that the Long Island deer supply will be maintained without serious diminution. We trust that when the commission on codification of the New York game law shall make its report, it will recommend for these deer no less of legal protection than they now have.

THE NEW CORRECTED LENGTH CLASS.

IT is not likely that any general change of classification, such as was proposed last fall, will be carried through this season; but discussion, which has been alive all summer, has been going on in a quiet but satisfactory way, and it is only a time before the classification of all the clubs will be remodeled on the basis of corrected instead of waterline. The subject was by no means dropped with the close of the hot campaign of last year, but yachtsmen have thought and talked over it a great deal this summer, the result being that many have changed their views and at least recognize that the movement is bound to succeed ultimately.

In order that when the change is made it shall be in the most perfect manner possible, it is highly desirable that the rule should be tested by actual building and racing under, and the Atlantic Y. C. has taken steps to this end by the recent creation of a class limited to 25ft. corrected length. One handsome 20ft. waterline racer has already been designed to race under the rule, and others are likely to follow, as the cost of such boats is within the means of many young and enthusiastic yachtsmen.

The designer being at liberty to chose his proportions of sail and length can try such a type as he considers fastest, and the question of beam that has come up so prominently in the discussions of last season can be settled by practical trial, which will be better than tons of theory. The results obtained by a season's racing of half a dozen yachts of various types in this class should be of the greatest value in settling the proper basis for a corrected length classification for all yachts.

OUR WELL KNOWN CORRESPONDENT "Stanstead," Mr. N. P. Leach, has severed his connection with the Dominion Cartridge Co., and will take the management of a new cartridge concern with works at Akron, Ohio.

THE Massachusetts Association is bent on making an experiment with the California quail. One lot of mountain quail has already been received, and will be put out where they will have protection.

The Sportsman Tourist.

MOOSE RIVER AND THE WEST BRANCH.

I.

IN the great wilderness which covers the northern part of the State of Maine, and extends across the line into Canada, is a lake whose area is larger than that of any other body of fresh water in New England. It is surrounded by the forest, and on its four hundred miles of shore line there is only one village, and the clearings are few. It is guarded on all sides by rugged mountains, some rising directly from its waters, while others are dim and blue in the distance. By the Indians it is called Sebamook, but it is better known as Moosehead.

The lake is thirty-eight miles in length, and its width varies from fourteen miles, which is the distance from the east outlet to the head of Spencer Bay, to a mile and a half, the distance from the mouth of Moose River to Kineo Mountain. The shores are very irregular and are indented by many bays and coves, of which Spencer Bay, almost another lake by itself, is the largest, being five miles from the narrows to the head. Its surface is dotted with islands, ranging in size from the little sandbar with its few bushes to those whose extent is reckoned by acres.

The basin of Moosehead is a vast reservoir, from which the noble river Kennebec flows to the Atlantic; and only two miles from its northern end are the waters of that other great artery of Maine, the Penobscot. The Kennebec flows over the great dam at the outlet, and for twenty-five miles, or as far as the Forks, is known as the East Branch. The Forks are the junction of the East Branch and the Dead River, which forms the true Kennebec. Moosehead's principal inflowing stream is Moose River, which comes in from the west, about midway of the lake, after flowing through a chain of smaller lakes and ponds.

Directly opposite the mouth of Moose River is Kineo Mountain, the most prominent landmark of the Moosehead region. Kineo juts into the lake from the eastern shore, and there are but few points from which it cannot be seen. An arm of the lake sets in behind it, forming Kineo Bay, from whose water rises the great precipice, 763ft. in height, which forms the eastern face of the mountain. Kineo is a solid mass of flint or hornstone, and was a great rendezvous for the aborigines of New England, who resorted to it in quest of material for arrow heads and other implements. It is the largest mass of this substance known. Many other noble mountains tower above the Moosehead water, the two Spencer peaks, Kokadjo and Sabotawan, east of Kinco, the City Bay group, Old Squaw, near the foot of the lake, the Blue Ridge, parallel to whose base flows Moose River, and Bald Mountain to the northwest, are among the most prominent, and from several parts of the lake, notably the North Bay, fine, though distant views may be had of Mt. Ktaadn, which rears its lofty summit far away beyond the Chesuncook forest.

II.

There is an old saying in the State, that Maine was made for the lumber business, and surely with this end in view there seems to be nothing wanting. The country is crossed and recrossed by a net work of lakes and streams, which afford the lumberman a means of transporting his logs to the settlements and the mills. Millions and millions of feet of lumber go over the East Outlet dam and down the Kennebec every season, while other millions are borne by the Penobscot and its branches.

In the fall the crews go to the localities which are to be operated on during the winter, and live till spring in a little world of their own. They are divided under three heads—the swampers, the choppers and the teamsters. The swampers build the roads and dams, the choppers fell the trees, and the teamsters haul the logs to the banks of the streams, where they are piled in readiness to be sent down in the spring.

After the ice goes out comes the great spring drive. The logs, each one of which has the owner's private mark cut into it, are rolled into the stream, now swollen by the melting of the winter's snow, and their long journey is begun. Down the stream go the logs, floating slowly along the dead water, plunging over falls and hurrying through the rapids. The drivers follow them, giving those which become stranded on the shore a new start, and breaking, often at the risk of their lives, the jams which are sure to form. On the lakes which have to be crossed the logs are rafted, towed across to the outlet, and again turned loose, to continue on their impetuous voyage. An apparatus called a "headworks" is used in the process of rafting the logs. It consists of a raft, on which is a rude but strong log capstan, and usually a shanty in which the men eat and sleep. The "headworks" is anchored in any desired place, and after the drive has passed it is left till the next year. On Moosehead the rafts are towed across by steamers.

The river driver's insignia of office is the cant-dog and his ruler is the boss driver, whose authority is analogous to that of the captain of a ship. Logs belonging to many different owners go charging down many little streams to the main rivers, down which they journey in company. As they approach civilization and the mills they are collected in booms and assorted. Each owner here takes his own and those for miles further down stream are again sent on their way.

During the summer prospectors go to the forest, timber suitable for commercial purposes is located and the tracts surveyed. In the autumn batteaux of provisions, the greater bulk consisting of pork, beans, flour and molasses, are sent to the logging camps and another campaign against the forest is begun. Lumbering is hard, continuous work—from sunrise till dark, day after day—but a hardy, manly life, withal; and the men enjoy it and return to their free life in the woods gladly.

The roads made by the swampers serve their purpose in the winter, when the snow lies deep and level under the evergreen trees, but in summer they become simply trails through the forest, almost impassable and used only by the deer and moose. So too, many of the streams which are raging torrents when the logs are rolled into them degenerate into laughing brooks, which would hardly float a stick of cordwood.

Moosehead Lake is now touched by a railroad, which lands passengers at its foot, but it is still a lake of the woods, and retains its charm as a bit of primeval nature. At no place is its beauty marred by so called camps, which are really modern houses with modern conveniences, whose owners make a pretense of "roughing it." At Kineo is a hotel which provides every comfort, but it is in the midst of a wilderness. From time immemorial a route from Canada to the coast has gone by way of Sebamook, and it is now the gateway to the great forest region in which are the headwaters of the Kennebec, the Penobscot and the St. John. The Indian, the hunter and the lumberman, the lover of nature, the angler and the sportsman, all cross the broad expanse of Moosehead Lake en route to their labor or their pleasure.

The West Branch of the Penobscot is only two miles distant from the head of the lake, and may be reached either by the North West or the North East Carry. From Umbazookskus Lake to Mud Pond another two mile carry leads from Penobscot to Allagash waters, which flow to the St. John. And so, although the country is a wilderness in which savage, uncompromising nature holds full sway, the intricate tangle of water courses furnishes highways by which any point may be reached.

The Indians and others familiar with the woods know the routes as we who dwell in the cities know the streets. If we wish to go to a cersain place in the town, we go, perhaps down a street, around a corner, across a square and up another street, and so on till we arrive at our destination.

In like manner the voyageur in the forest paddles his light canoe down a stream, across a lake, makes a carry to another lake, from which he descends or ascends another stream, and finally he steps ashore at his journey's end.

As we may know which are the best hotels and the places of amusement, he knows where are the best camping sites and good localities for game.

"Many men of many minds" go to the woods, but the true lover of nature goes with a feeling almost of reverence, for he is leaving everything hollow and artificial behind him and is to enter in among the beautiful and wonderful works of nature as they came from the hand of the Creator.

III.

We read much about the wild Indians of the West, but it is seldom that the journals of the day contain anything pertaining to the more civilized red men of the East. Yet in New England the remnants of once powerful tribes still exist. On the islands in the Penobscot River dwells a tribe of the Etchinnis nation, known as the Penobscot tribe. They own the islands and have their principal settlement on a large one, known as the Indian Island, near the village of Oldtown, which is itself on an island which was sold to the whites many years ago.

Here the Penobscots had a peaceful existence, electing their own governor and sending a representative to the Maine State Legislature. The men spend much of their time in the woods of the great northern wilderness, at the threshold of which they live, finding employment in the lumber camps and on the drives. They also act as guides for sportsmen, and go hunting and trapping on their own account. The cultivation of a few vegetables is the extent of their farming.

The women manufacture quantities of fancy baskets, which are sold at various seaside resorts during the summer, and the men build birch canoes for sale as well as for their own use.

One summer afternoon I stood on the bank of the Penobscot and raised the white flag, which is the ferryman's signal. A few moments later I was crossing to the Indian Island in a batteau which was propelled by a dark-skinned Penobscot. I was in quest of an Indian to accompany me on a trip to the woods, and I wanted to get Francis Soccalexis, a trusty man and a good guide.

I found Francis on the island, and as I shook his hand I asked, "Well, Francis, do you want to go on a trip with me?"

"Yes, I like to go; don't like to stay in village so well; like to live in woods better," and his eyes glistened as the instincts of his race found expression in his words. "You comin' this way; go right to Moosehead from here?"

"No," I explained, "I want you to meet me at Moose River Bridge. There are three of us going; and I have guides coming for the other two. Dennis is going to cook for us."

"That's good; Dennis is a nice fellow, good cook," for Francis and Dennis are the best of friends.

After we had arranged the preliminaries and fixed the date we strolled over the island From the place where the batteau grates against the shore runs a road which is the only street in the Indian village. On either side are the houses, most of them gray and weather beaten, but here and there is one smart with paint. On the right of the road and a few steps from the landing is the Catholic chapel, and beside it a shrine, for the Penobscots still follow the faith taught to their fathers by the Jesuit missionaries, who were the first white men to penetrate these northern wilds. On the left and almost opposite the chapel is the house of the present governor, Sol Neptune. A few rods further is the graveyard, beyond which the road gradually degenerates into a footpath, which straggles along a devious course and is finally lost in a swampy meadow. In the graveyard one reads the names of men who have been leaders of the tribe, and one inscription I copied, that of Francis's father:

GOVERNOR
THOMAS SOCCALEXIS.
DIED
SEPTEMBER 30, 1870.
ÆT. 68 YEARS.

He was governor of the Penobscot tribe at Oldtown thirty-five years. He was an honest upright man, loved and respected by all his people. That is an epitaph which any man might be proud to have. Near the gate is the grave of Joseph Polis, whom Thoreau has immortalized. Polis guided the Concord naturalist on his last journey to the Maine woods, and died five years ago. His widow still lives on the island, an aged woman; and on his house is still seen a small sign with the legend,

JOSEPH POLIS,
DEALER IN BASKETS AND CANOES.

"I suppose you knew Polis, did you not, Francis?" "Oh! yes, he was fine man; great hunter when he was young man," was the reply in a tone which indicated that this praise of his qualities as a hunter was the greatest which Francis could bestow. In front of some of the houses were camp-fires, over which water was boiling in kettles, and preparations were in progress for the evening meal, for though these people dwell in houses they retain many of their primitive methods.

Canoes were seen turned bottom up at many of the houses, ready for use, as one has one's horse at the gate. In the doorways and at windows sat squaws busily engaged in weaving sweet grass and colored splints into baskets of various shapes, and they glanced curiously to see whom Francis had for a companion and at the camera which I carried. Two of them, whom I knew, I requested to sit for their photographs; one consented without urging, and I secured her picture with the unfinished basket in her lap and a pile of material at her feet. Then I said to the other: "You see, Mary, the operation is not dangerous; you had better let me take yours too," and she went into the house, to reappear in a few moments with the announcement that she was ready. But she had changed the gray dress which she had worn and which draped itself in graceful folds for a new calico of striking design, which did not add to the picturesqueness of her appearance. However, I took another picture, and before I had the apparatus packed her change of dress was again made.

On our return to the landing we stopped to chat with an old man, Louis Pielsaux, who was building one of those craft peculiar to his people, a birch canoe. He had just cut the bark into the required shape and had it on a raised platform, where it was held in position by large stones, placed inside. On the ground was another canoe nearly ready for use, and several more were drawn up on the shore. "Birch is gettin' putty scurce now," said the old man. "Have to go good ways back in woods now for get bark big enough for canoe. Used to go one day and back the next and find tree, but can't do so no more. Spruce and cedar too, used to grow all round here, most all gone now, cut off, burnt off, all goin' putty fast."

In making a canoe the birch bark is stretched over a frame of cedar, and spruce roots are used to sew the seams and bind the parts together. The seams, cracks and holes are made water-tight with pitch and the forest furnishes all the material for this boat of tradition and romance. The paddles are of rock maple and the setting poles of spruce.

Francis had a good birch, but it was rather heavy, and he said he should take a canvas-covered canoe on our trip. The Indians always speak of a canoe as a "birch," and this appellation clings also to those of canvas, which are built on the same model as the boat of bark. The canvas canoes are somewhat lighter and are cleanlier, the use of pitch not being required.

When the waning sunlight warned me that I must return I stepped into the batteau, and as I floated across the dark water of the river I felt that I was on a stream which separates the dim past from the present practical age. For there, on the shore which I was leaving, was old Louis Pielsaux building his birch canoe as his fathers built them long before the white man ever saw the river; and ahead, looming darkly against the sky, were the brick walls and tall chimneys of a great mill. On one side of the current the Indian Island, on the other the railroad and the factory.

WILLIAM AUSTIN BROOKS.

CAMP ON BLUE RIVER.

SOUTHERN INDIANA has many beautiful camping grounds. Along the banks of the Blue River and other streams, shady groves, gravelly beaches, swift currents and deep pools, springs of pure cold water, welling from out the base of rocky wall, go gurgling into the stream. Giant plane trees grow by the side of the spreading elm, the odorous Balm of Gilead has for a neighbor the stately ash, near by is the sugar maple, with a sturdy oak interlocking branches with the sweet sap giver. From this point to the mouth of the river, nine miles by road and thirty odd by water, more varieties of trees can be found than exist in a state of nature on almost any other territory of equal scope. It is a field for botanists. The alternate hills and little sequestered valleys afford a variety of verdure seldom equalled. The geologist would also find much to attract attention. Here is the cavernous limestone formation. Within a mile of our camp is the famous Wyandotte Cave, with its 26 miles of subteraneous passages, its underground mountains, great halls and pillared domes, a grand study of itself. It is still in the family, Rothrocks, who have owned it from the earliest settlement of the country, about the beginning of the present century. What a grand time the Wyandotte chief and his tribe must have had about here before the white men came to disturb him. And just think what happiness there would have been in this country if Colombo had never come here. By the way, what a great old humbug he was. He went over to Iceland, listened to recitals of Sagas, gathered up manuscripts and maps, which with the help of his friend, the priest Marchena, in translating, told the way to the new country. Miscalculations, or bad seamanship, took him to South instead of North America, but all the same, the hordes of Europeans followed him and the fun of the Indians was spoiled. This thing called civilization is not what it is cracked up to be. However, a few spots have escaped the hands of the spoiler and Island Camp is one of them.

I have no big fish stories to tell of our party, but just before we came another set of campers a half mile below caught five large pike (Dr. Jordan says they are the maskalonge of the North), the smallest weighing 7lbs. and the largest 21lbs. We caught bass, sunfish and channel cat, and the latter are very toothsome. I have eaten whitefish on Lake Michigan, trout from the Big Sioux, cooked by Mother Hochdanner, near the south shore of Lake Superior, and I won't say that Blue River channel cat quite equal either of them; but they are very good. And turtle! I wonder how many readers of FOREST AND STREAM ever tasted snapping-turtle soup. Here is the boss recipe for preparing the delectable dish: First cut off the head and leave two hours or longer to bleed. Douse it in boiling hot water. All the outward scales are easily removed. Cut the claws, unjoint the legs from the under shell, split the belly and remove entrails, take off upper shell, cut up the meat, with the shell, and stew. If all the meat is not needed for soup take out a portion after stewing, fry or boil to taste, and it will almost equal frogs' legs. Then brown some flour and stir in slowly if desired use tomatoes, corn, potatoes, an onion or other vegetables, salt, pepper and other condiments to taste It is good, especially in camp.

There is canoeing, with oars or paddle, on the Blue Rapids for those who like such sport and quiet, long pools for the more sedate. Boats are not kept here for hire, although they can generally be had at some points on the river. We have two in our outfit, one built for a man, Dr. Cannon, who weighs over 300lbs. and has a heart in proportion, is a good fisherman and loves a camp in the woods. A camping party some distance below visited us in a boat propelled by a paddle-wheel with human muscle for power, invented by one of the campers, Mr. Mitchell. It might be used in harbors or bays to good advantage.

Our tents are pitched on an island; in front is a pool some hundred feet in diameter, fifteen to twenty feet deep in the center, with a gravelly beach on one side affording fine bathing. Looking out from our dining room (the fly off a wall tent), we can see down the river a third of a mile, over two grassy islands and with bold Wyandotte Mountain forming one side and the background of the view. It is a beautiful picture, a charming place.

In addition to the provisions of nature for our pleasure and comfort, and the "provisions" we brought along, we have only to cross the river to Mr. James Sibert's, where fresh milk, cream, butter, eggs, vegetables, etc., etc., can be procured at reasonable rates, and where help at wood cutting, rowing, and any other assistance needed, can be had on call.

Of coure, the northern streams afford their trout—and mosquitoes; the lakes yield lordly bass and maskalonge—and no-see-ums; the seashore gives surf bathing, big fish and other enjoyments, also flies, gnats, etc., in additin to storms. Here we have no pests. Not a gnat or mosquito, no hogs, cattle or other camp nuisances; and for "plain people," who must count the expenses of their outings, along the Blue, within striking distance of Wyandotte Cave, can be recommended.

Persons desiring further information should correspond with Mr. James Sibert, White Cloud, Ind., or H. A. Rothrock, Wyandotte, Ind. JAP.

NEW ALBANY, Ind., Sept. 25.

THE PACIFIC NORTHWEST.

SEATTLE, Washington, Oct. 1.—*Editor Forest and Stream:* The game outlook along the Pacific coast promises unusually fine this fall. Reports at hand from California, Oregon and this State all tend to confirm this belief. A trip made last week to various parts along Puget Sound brought out the information that large game had not been so plentiful for years as at present. Several parties are now outfitting here for the fall campaign; two in particular going into a comparatively unexplored portion of the Olympic Mountains, where they anticipate finding a veritable sportsman's paradise. Surveying parties who have lately returned from this region relate stories that are simply marvelous, but which, later on, have been verified by an exploring expedition sent out under the auspices of the *Daily Press.* Small game has been considerably thinned out this season, owing to the severe drouth and local causes, but a good day's sport can still be obtained in the eastern part of this State or northern California.

Fishing is up to the usual standard, and large numbers of trout and salmon are being taken from the neighboring streams, while Puget Sound fairly teems with its salt-water fishes. The U. S. Fish Commission car No. 3, under charge of R. S. Johnston, arrived here Sept. 24, bringing a quantity of fish to be planted in the lakes. There were altogether about 3,000, chiefly black bass and croppies, with a sprinkling of catfish, pike and perch. They were immediately liberated in Lake Union and Lake Washington. Anglers feel elated at the prospect of black bass fishing in Lake Washington in the near future. This lake is a lovely sheet of water set in the most picturesque surroundings it has ever been my lot to see. At the head of the lake silver-tipped Mt. Baker rears its head above the clouds; at the foot of the lake, majestic old Mt. Rainier rises 14,444ft. above the sea level, while to the north and east can be seen respectively the Olympic and Cascade ranges. A sportsman who could not enjoy a day's outing here, even with proverbial "fisherman's luck," surely has no eye for the truly beautiful. JO.

A THOUSAND MILES IN A NAPHTHA LAUNCH.

THE VOYAGE OF THE MIRA FROM FERNANDINA TO KEY WEST. BY CAPTAIN CLARENCE ANDREWS AND CHIEF ENGINEER ELWOOD "BILLY" HOFER.

THE Mira is 30ft. long by 8ft beam, with a draft of 16in. She is fitted with a sail placed in the bow to be used in case of emergency, and an engine of 7-horse power. There is a standing roof with canvas storm curtains, extra wide lockers running the whole length of the boat, with subdivisions for guns and fishing rods, clothing, stores, etc., having ample sleeping accommodations on top for four people; behind the engine is an oil cooking stove and water tank. A 10ft. cedar tender, oars, boat hooks, etc., complete our equipment.

Our plan was to travel from the Atlantic to the Gulf Coast of Florida by river or lake, and to return by the Atlantic coast. Owing to lack of time, however, only the first half of the trip trip was accomplished, but that the most unusual and interesting part.

The Mira was shipped to Fernandina on Feb. 28. Arrived there by the Mallory Company's steamer City of Texas on March 4, in charge of "Billy" Hofer, of National Yellowstone Park fame, and Timothy Mullins, engineer from the Gas Engine and Power Co., who accompanied us until we learned to run the engine ourselves. Detained in Fernandina until March 7 waiting for naphtha, a pilot was taken on board and the trip begun on the afternoon of that day; anchored for the night off Shell Island.

March 8.—Arrived at Jacksonville by inland route, the Sisters and Amelia rivers, at noon, when Captain Andrews took command. An addition to the crew was made in the person of William Scott, colored cook, who proved himself a veritable *Cordon noir*, the pilot leaving us here. We stopped at the Standard Oil Co.'s wharf to fill our naphtha tank, which contains 60 gallons. We cannot procure naphtha, however, as it is not sold in Florida, but we were given No. 74 gasoline and assured that it is practically the same. Then we follow the St. John's River for 10 miles and anchor for the night off Buckly's Bluff. There are very good charts of the river and the channel is marked out by beacons, so that there is no difficulty in navigating without a pilot.

March 9.—We are off early, the river is wide and forms really a "chain of lakes," which is the meaning of its Indian name "Welaka."

In the widest part in a strong wind and choppy sea, while hoisting sail, we break our tiller rope and are obliged to heave to for repairs. Notwithstanding this delay we make Palatka in eight hours, a distance of 60 miles. Here we remain two days, Captain Andrews visiting his land at Blue Springs, near Ocala, in the center of the newly-discovered phosphate district.

March 12.—In the afternoon we fire up and continue our journey up the river, taking on board 50 gallons of gasoline: what we cannot put in the tank we carry in cases, each case containing two tin cans and holding 10 gallons. This is an expensive way to carry it, costing $2.50 a case instead of 17 cents a gallon by barrel, but is worth the difference, as it is safer and more convenient. An iron drum holding 100 gallons or a barrel of 50 gallons would be difficult to handle, besides taking up too much room. The river to Sanford is so crooked that the distance is twice as long as by rail, 110 miles from Palatka. We anchor for the night off Welaka, opposite the Ocklawaha, where Captain Andrews had passed a night a year ago after a most exciting trip down that river, getting lost several times in "dead" rivers, in a pelting rain storm in the middle of the night.

March 13.—We cross Lake George, 16 miles in two hours being the best speed we can make and anchor off Volusia; in the night we are awakened from our gentle slumbers by the waves from a passing steamer coming over into our bunks; but as the water is warm and the weather also we are not much disturbed.

March 14.—The river narrows and becomes more attractive. We see plenty of heron and cranes, and have an enjoyable sail; anchoring toward evening on a beautiful inlet called Blue Springs from the transparent blue of its water. Reminds one of its namesake near Ocala, but with less picturesque surroundings.

March 15.—Find contents of tank very low, but as we have less than thirty miles to make to Sanford, decide to push on. Weigh anchor at 9 A. M. in a heavy rain storm, but well protected from it by our lowered storm curtains. Unfortunately the curtains prevent the engine from drawing well, and suddenly it is enveloped in a bluze. We extinguish the fire easily, and decide to return to Blue Springs rather than risk having our fuel give out midway. Take train to Sanford and succeed in shipping fifty gallons by a night freight boat, and the following morning, March 16, Mira is safely anchored off Dr. Barry's wharf at Sanford, 200 miles from Jacksonville. We have burnt 100 gallons gasoline, and although we learn to economize later on and keep the consumption down, we do not get it much lower than this.

From Sanford the launch has to be shipped by rail to Kissimmee about sixty miles distant on the South Florida Railroad. Although the company have a dock here, they have no derrick or other means of hoisting a boat weighing from two to three tons; so we have to haul her on the beach. By means of an extemporized windlass, much difficulty and swearing, Mira is placed on a cradle and left high and dry for the night. It takes a whole day to do this, another to get her on the flat car, a third to transport her to Kissimmee, where she arrives comfortably lying in her cradle on March 20. Col. Kraemer, the chief engineer of the Disston Land Improvement and Drainage Co., is familiar with the route we are to take, viz.: Down the Kissimmee River to Lake Okeechobee, then through the channels to the Caloosahatchee and so on to Fort Meyers and the Gulf. The Colonel who has recently made the trip, tells us that owing to unusual drought the water is so low in the first canal between Lake Tohopokaliga and Lake Cypress, that no boat drawing more than 10in. of water can push through, but that afterward we will have no further difficulty. It was too late now to turn back. We could not give Mira such another railway jarring again, so we charter a barge and a sturdy little sternwheel steamer of twenty-five horse power to push us through the shallow canal. Mira is placed on the barge, cradle and all (after a hard day's work), surrounded by freight of various sorts to be left at settlements along the lake.

March 22.—We are off at 9:40. Our crew is increased by the addition of Captain King of Kissimmee, who is to pilot us through the winding channels and across the uncertain lakes. Besides, there are Captain Johnson, owner of the steamer Cincinnati and barge, with his own crew of three men. Mira propped high in her cradle, 10ft. above the water, looks queer as she is pushed slowly out into the lake. We stopped three times to allow Captain Johnson to dispose of his freight. Have a fine view of St. Cloud, where are the sugar mills, which we hear working day and night, grinding the cane brought from the plantations of the Disston Land Co. Lake Tohopokaliga is very pretty, islands of high hickory woods dot it here and there. Among them Paradise Island may deserve its name, covered with trees, containing 100 acres of rich loamy soil; we are told it can be purchased for $7,000. Sixteen miles bring us to the entrance of the Southport Canal, 4 miles long, our course, due south, wind ahead, weather warm, with occasional showers. Here we find our first obstacle, a sand bar.

We go for it stern on and the wheel soon digs a channel in the soft bed. A half mile further we stick in hard bottom, and we wriggle, pole, push and sweat our way through, the crew stripped to their waists in the water most of the time and Captain Johnson, when not in also, directing their movements from the upper deck in airy attire and shirt-tails flapping in the breeze. As we pass through the canal we see the "Arbuckle," a small flat river steamboat, with double deck (like a house-boat), entering. Chartered for the trip by an English gentleman, he wisely allowed us to go first and prepare a channel for him.

The banks are flat and swampy; when the drainage is complete the land will be valuable for the cultivation of sugar cane, bananas, oranges, lemons and pineapples, all of which are already grown in the neighborhood. At 6 P. M. we reached Lake Cypress, 2 miles across the lake take us to the Hatchineha Canal, 2¾ miles long. This brings us into the lake of the same name, and 3 miles across it to the Gardiner River (really the upper Kissimmee) where we anchor, at Fort Gardiner, for the night. This is a roundabout course, but the canal connecting Cypress Lake directly with Lake Kissimmee is not yet finished. The sail in the bright starlight was full of charm; perched high upon her cradle Mira glides smoothly along, swamps, hammocks or cane forests on either side, alligators grunting along the banks or splashing into the water at our approach. Fish jumping out, fireflys and croaking bullfrogs animating the scene, while the new moon silvers all.

March 23.—At 5:30 A. M. we are off through the Gardiner (Kissimmee) River; heard the wild turkeys cackling, and would like to remain for a shot at them but Captain Johnson is anxious to hurry on, as his time is limited and he must be back at Kissimmee in time to carry the mail. We arrive at Lake Kissimmee at 8 A. M. Then all hands begin to knock the Mira's supports from under. She glides gracefully over the rollers, stern first, cradle and all into the water. We load our skiff with our spare cases of gasoline, and she sinks down nearly to the gunwales. In all we carry 170 gallons. The crew of the "Cincinnati" gave us a cheer and we are off, flags flying. Our course is straight across the lake, 20 miles long, but the water is rough and we are obliged to unload the skiff, which has gradually filled, and take her load on board. Then we hug the shore (which increases the distance ten miles) in order to avoid the heavy seas, passing Bird and Plummers Islands, and several smaller ones, on which we are told deer abound. We pass Floradelphia, plotted out in avenues and streets, but containing only one house, as yet. We pass "Grape" hammock, where the live oaks are covered with wild grape vines. In the vicinity are cattle ranches of two or three thousand head of cattle, and the few houses we see belong to the cowboys. At 1:15 we enter the Kissimmee River. The banks are alive with curlew, duck, water turkeys, heron, limpkins, cranes, etc. A flight of white heron flash like silver against the sky. We shoot a few duck and other birds as specimens, when they are in our course, and pick them up as we sail along without stopping. At 3:40 we tie up against a low bank for the night, having made 50 miles.

The current is with us all through our trip, and we can economize fuel. Our camp is called Alligator Bluff. The ranchmen who live twenty miles back come here for their supplies and to ship their crops to market by steamer, which runs regularly to Fort Bassinger. The river is a favorite resort near by where thousands of different kinds of birds make their nests. It is surrounded by swamp, and even with my high waterproof boots I fail to get within gunshot of them.

March 24.—After a general haul over and clearing up we are off at 9:30. About five miles down the river we stop at Orange Hammock, where a Mr. Griggs lives and occupies himself with plumage hunting and orange growing. We buy some lemons fresh from the trees and eggs more or less fresh from the hen. We shoot a couple of ducks, which the natives say are "Blue Petes." We pass Fort K., where there is only a fence, and enter Guy's Cut at 11:15, pass through it at 11:25; plenty of duck, but wind and current too strong to allow of our picking them up. Past Prairie Bluff, taking short cuts in narrow streams where there is just room for Mira to pass; yellow and white water lilies, occasional clumps of oak trees seen in the distance. Sometimes a peculiar water grass called "bonnet" entangles our propeller, but we untwist it by reversing. The larger alligators have been killed off by the professional hunters, and those remaining are comparatively small. The land on either side for miles back is held by the Government for the Disston Co. for the drainage improvements the company proposes to make.

Some settlers squatted here before the company received its concession, and we see their herds of fair but thin cattle. We come to Mikos Bluff, named after an old Indian, now belonging to Mr. Alderman, a ranchman, owning some fine buildings. At 4 P. M. Istokpoga Creek, which drains the large lake of that name, is passed, and at 4:30 we stop for the night. Our engine catches fire; cause, stopping the wheel and not turning off the injector! We learn only by experience, and no harm is done. Distance traveled, about forty miles.

March 25.—The pleasantest part of the day for me is after breakfast, while cook is cleaning up and Billy oiling the engine, I being *de trop* start off in the skiff provided with my Parker, a pipe and a book. I have a good hour's start and float lazily down the stream, watching the "gaters" and the innumerable birds disporting along the banks unmindful of my silent passage, until a shot brings one or the other to his doom.

We are now 125 miles from K. by water, and 90 by land; that is also the nearest railway point. We are off at 9:15; a heavy rain overtakes us, but we were snug with our storm curtains down. We pass Dougherty's Hammock and cornfield 7 miles above Fort Bassinger; banks higher here and country more attractive. At noon arrive at Fort Bassinger, where, as usual, there is no fort, but a store. We buy a few stale provisions and depart; pass the Hamilton Disston, a big flat-bottomed steamboat laboriously poled up stream, with an official of the company on board. At 2:30 stop for the day at Platt's Landing, 20 miles below Fort Bassinger, having made 35 miles and burnt 30 gallons. We catch five bass with a spinner averaging three pounds a piece in weight. At night the rain pours down in torrents, accompanied with thunder and lightening. We sleep as calmly as ever.

March 26.—Take a day off. Therm. 100 in the sun. Billy finds a few quail in the afternoon and we tramp through the pine wood after deer, but unsuccessfully.

March 27.—The grunting 'gators in a swamp awaken us by their noise. We leave them in peace, though they will not leave it to us, and are off at 8:30. The river grows narrower as we near the great inland lake, 50 miles distant. The land is marshy on either side, with occasional clumps of palmetto or cypress trees. At 12:30 we enter Lake Okeechobee, and are greeted by the ever-welcome "Bon nets." Around the lake are swamps and marshes extending many miles back; no dry land in sight. We take a southwesterly course for 20 miles, but the wind has risen, our roof begins to rack from side to side, and we roll considerably; so we decide to anchor behind some beds of saw grass, which act as a breakwater, and heave to at 4 P. M. What a desolate and dreary picture! No sign of animal life except the ever-present water turkey. The mournful cypress rises here and there out of the water; 60 miles of dark and dreary waste stretch before us; behind, another sea of swamp and morass (soon to be reclaimed by drainage); 15 miles of saw grass. We made 40 miles to-day and burnt 25 gallons.

March 28.—At 9 A. M. we warp our way out of the grass by means of the small anchor, which we carry 50ft. ahead in the skiff, then cast over and haul ourselves up to it by the line, thus saving our screw from dredging. The fastenings of our roof are very weak; we steady them with boathooks and guy ropes, take our course along the western shore and thus have the seas head on. At 12:20 we sight a landmark at the entrance of the Hickpochee canal, consisting of a tin can attached to a tree. Without some sign the canal would be imperceptible. It is about 30ft. wide and runs southeast. We feel a great relief in leaving the gloomy and treacherous lake.

The water is of normal depth here, about 8ft. We expected to find it much shallower; in fact except in the first canal leading into Lake Cypress we have had plenty of water. Again birds of all kinds scream and flee at our approach.

As the wind is favorable, we hoist sail and stop the engine, getting along nicely for about 2 miles, when we reach Lake Hickpochee; at its approach we are bothered by mud flats and grass, but we drag along slowly through them; 3 miles across the lake and we enter the Drainage Canal again. We see low, flat meadow lands and poor looking cattle grazing about. In the distance forests of palmetto, backed by pine; cypress and water oaks dot the land here and there. We anchor early in the afternoon at "Coffee Mill Hammock," and stroll through the forest with our guns, but see no game, save a few hogs left by a former settler and since grown more or less wild. Sauntering about here is delightful. In the summer the ground is flooded, so now there is no underbrush, save the saw palmetto. The foot treads a pliant velvet carpet of moss; we find good bass fishing near our boat.

March 29.—We take another tramp through the forest to visit the "Ancient Indian Mounds" about 2 miles to N. E. We traverse first the palmetto, then further on the pine forest; crossing a gully we reach a hill upon which grows a solitary pine; around this hill, about 30yds. long and 10 wide, is a circular mound about 3ft. high. Billy climbs a tree to see if he can distinguish any intended shape to the mound, but time, the winds and the spade have destroyed any symbolical form it may have had. In older times the Seminoles had a canal by which they reached their burial grounds in canoes from the river. Army buttons and accoutrements, as well as Indian arms and implements, have been found, showing that as late as the Seminole war the Indians buried their dead here, together with trophies of war.

On our return to the boat we passed a forsaken Indian camp; a few poles stuck in the ground, an old embroidered and tattered shirt—perhaps left as an offering to the gods—a broken oven, and a pair of discarded moccasins, attest the presence of "redskins" and suggest that they came here on a pious pilgrimage to the necropolis of their ancesters. As we see no traces of game on this journey, we decide to leave our camp the same afternoon.

At 2 P. M. we weigh anchor, and soon came to mud banks, weeds and floating islands; we push slowly through all obstacles, we enter the Lake Flirt canal, at the entrance to which is an old wrecked steamboat, and the worst part of our journey begins. As the screw becomes entangled continually, we stop the engine, and pole, row, and sail through the blockade of weeds; the floating islands of grass, bonnets, lettuce, etc., reach entirely across the stream. Finally we reach the ill-defined and so-called Lake Flirt (which is no lake at all), and run aground, but kedge our way into deep water. On either side of us are swamps, which, being flooded in summer, give the appearance of a lake. Beyond, to the right, a beautiful dark thicket of forest oaks and cypress. In front a fence seems to cross our path, but we find a sudden turn to the right and we are in the Caloosahatchee again. The cattle we have seen belong to Captain Henry, of Fort Myers; these fences are his land marks, and a wagon and team stopping on the bank are also the Captain's.

At a quarter to five we reach Fort Thompson, see a horse and some men, but do not stop. Henceforth the river is beautiful; the banks 4 to 6ft. high are covered with attractive trees and dark foliage. We wind picturesquely in and out, avoiding the snags and rocks projecting out into the stream. We are loath to stop at our usual hour, the sail down the swift flowing river is so pleasant. A strong current helps us along with a favorable wind until six o'clock, when we tie up on the north bank, 50 miles above Myers. Time, 3½ hours for 20 miles.

March 30.—We were without our usual midnight concert. The forest surrounding us is unusually quiet. No noise disturbed our slumbers save a wandering coon who knocked up against our bows, and whose tracks were discernible in the sand. We catch a "strawberry" bass for breakfast and are on our journey betimes. We see shark and varieties of small fish. The water is so transparent that they are difficult to catch.

The morning sun shines brightly through the forests which line both banks. We pass a large sternwheel steamboat engaged in removing snags. The river is navigable as far up as Fort Thompson for good-sized steamboats; many excursions are made by tourists from Fort Myers. We see beds of coral for miles along the banks. Marks on the trees show signs of high water, many of them 10 and 15ft. above the present water level. Air plants, with their red and blue flowers and other parasites, cling gracefully to the branches. Wild grape vines festoon the saw and cabbage palmetto, giving a tropical aspect to the scenery.

We pass a herd of cattle quietly browsing on the banks. An unfortunate cow is bogged up to his body in the mud at the water's edge unable to rise; the poor animal gazes at us calmly, apparently as unconscious as his fellows of the death that awaits him from starvation. The buzzards will pluck at his eyes and begin their meal before he is dead.

At 11:30 we come to the town of Alva, twenty-five miles from Myers; we pass the first clump of mangroves we have seen. The river banks are flatter here and resemble those of the St. John's. The tide reaches nearly up to Alva and the water soon grows brackish, so we fill our water tank for the first time. We sight Myers at 2:30, the river here being a mile wide. Arrived at 3:15, making 50 miles in six hours and a quarter.

We sup at the Caloosie Hotel for a change. Wild turkey and guava jelly make a pleasing variety to our diet. A small town, but rapidly growing, charmingly situated at the mouth of the river; wide, shady, grass-grown streets, old-fashioned Southern houses and new brick stores.

March 31.—Slept on board in the gorgeous moonlight. Took a pilot, as Captain King leaves us here, to steer us between the oyster beds, the channel not being marked, as far as Punta Rassa. Started at 11:30 for St. James City, 23 miles distant; passed Edison's winter home, a pretty place where the inventor has a laboratory and dwelling, but seldom uses either. A 'gator 10ft. long glides curiously within 10ft. of us, as if attracted by the peculiar sound of our engine. See porpoise disporting. At 2:30 arrive off Punta Rassa, where is a telegraph and cable station for Cuba. Putting our pilot off on a returning steamboat, we were left for the first time to our own skill in navigating. At Punta Rassa is a small, cosy hotel, run by the operator more especially for fishermen, as it is near the best tarpon grounds. We go on by ourselves through the channel, staked out plainly, to St. James City, on Pine Island, where we arrive in less than one hour, 4 miles, without mishap; until we run aground alongside the dock, and have to kedge off rather a la-bed, as we are watched by curious eyes from the shore. Here we engage the services of a blacksmith to strengthen our roof. This is accomplished satisfactorily by placing iron around each stauchion, and an arrangement of iron straps and rods running from the roof and crossing each other down to the sides of the boat, making all perfectly secure. Did our best while here to engage a pilot to take us through the Keys,

but these men make so much money from the tarpon fishermen, who come down to St. James City bent on the capture of at least one of these monsters, that they refuse to go for less than three dollars a day. They make as much as that going out with the sportsmen, who, when successful, reward their fishermen highly.

[TO BE CONCLUDED.]

Natural History.

FISHES FOR THE NATIONAL AQUARIA.

OWING to the high temperature of the water in the U. S. Fish Commission aquaria during the past summer, it was impossible to save the salt-water fishes, and on the first of September there were but a few variegated mummichogs, horseshoe crabs, and a small number of other marine species to be seen in the tanks. To replenish the display of interesting and instructive animals, Mr. Seal planned a trip to the Chesapeake Bay and left Washington on the 15th of September for Cape Charles, Va. He was accompanied by Messrs. L. G. Harron and D. W. Kenley of the commission, both of whom, like Mr. Seal himself, have had much experience in the handling of live fishes and seining. The party camped out on the beach right off the docks of the town. Here fairly good seining was found, the first three hauls of a 30-fathom fine meshed seine brought up twenty-five species of fishes, besides shrimp, squid, crabs, etc. Young spots, croakers and mullets were found here in large numbers. Young sea bass are common, as are young bluefish. Half-beaks were also very common. This most interesting fish will not live in captivity, and we fear that Mr. Seal has been unable to get them alive to Washington.

The party arrived in Washington on the morning of Oct. 5, and brought with them the following species, for the most part alive and lively: Soles (*Achirus* and *Aphoristia*); several species of flounders; a hake-like fish (*Ophidium*); blennies, several species, one 5in. long. Some of these were found with mature eggs. Toadfish, a plenty; young tautog; angelfish or porgy; pompano; banded rudder fish; channel bass; trout or weakfish; spots; croakers; yellowtail; scup; Holbrook's scup, interesting; sea bass, one with telescopic eyes, very curious; grunts or hogfish, several kinds; mullets or fatbacks, very lively; lizard fish, curious; eels, sting rays, etc. This list is by no means complete, your correspondent only saw the fish as they were emptied from the cans into the receiving pool at the Central Station. Among the blennies several genera are represented, as is the case, also, with the grunters, flounders, etc.

Cape Charles is on the bay, about five miles from the ocean inlet, and twenty-four miles from Old Point Comfort, from which point and Norfolk it is reached twice daily by steamer. The New York, Philadelphia & Norfolk Railroad transfers passengers for the south from the railroad to the boats at this point.

The water of the bay along the eastern shore of Virginia is very salt, there being no fresh-water streams of any consequence falling into the bay here, and, as would be expected, many species of fish, which are strictly marine forms, are found here in considerable numbers. The water right in front of the town is too shallow for seining purposes at low tide, but is good when the tide is up.

Mr. Seal's party visited the pound nets and found in them much of interest. We shall have more to say about this region in a subsequent number.

FISHES OF ST. PAUL'S ISLAND.

OWING to the abundance of seal life, fish are not abundant about the Prybilov Islands, in Behring Sea. This year after seal-killing ceased, on July 20, many of the natives went fishing on favorable days, as many as ten boats leaving St. Paul's at one time. They usually returned early in the evening, but their catch was rarely an equivalent for the time and trouble expended, at least an average catch would never pay a white fisherman. On Aug. 4 one of the boats with two men caught seven halibut, one of them weighing 150lbs., but the others averaging not over 25lbs., and three cod-fish averaging not over 5lbs. The halibut were very good, and compared well with Eastern fish, but the cod presented a very unsightly appearance. Instead of the cleanness and lightness of color characteristic of the Eastern fish they appeared diseased, being dull in color and very slimy. They improve greatly when taken further from shore; but fish taken within a few miles of land are considered by the white people as being unfit for food. With these are also taken large specimens of a sculpin, some of them being over 2ft. long. Another species is taken among the rocks at low water by the natives, and it is an interesting sight to see a party of natives, men and women, catching "kahlogs" (sculpins) with a short line a few inches long attached to a pole about 3ft. long. A cod hook, baited with a piece of meat, is used, and the hook and line are inserted between the rocks and left in motion until a fish is hooked. I rarely saw more than six caught by one man, and they seemed to have greatly decreased in numbers of late years.

About ten other species of fish are found about the islands. Salmon are sometimes washed up during storms, but never in any abundance. The attu or atka mackerel (*Pleurogrammus monopterygius*) has been taken but rarely. I found several small flounders after a storm, but all the other species collected are either young or belong to small forms. A species of stickleback is abundant in the great lake on St. Paul and is the only fresh-water fish.

WILLIAM PALMER.

A BIG HAWK ON THE BRIDGE.—People who take for their morning or evening "constitutional" the walk across Brooklyn Bridge often see strange and interesting sights, but never a stranger one than was seen yesterday morning. A hawk, of such size that some of the beholders insisted it was an eagle, having made capture of a pigeon, fluttered for a time over the New York tower and presently settled upon the south side cable and proceeded leisurely to devour its victim. A large crowd gathered on the promenade and craned their necks, but the big bird, caring nothing, plied beak and talons until nought save bones and feathers was left of the poor pigeon. After arranging his sailing apparatus the bird winged his way out over the bay toward Staten Island. It was the first time that a large bird of prey was known to have perched on the Brooklyn Bridge.

Game Bag and Gun.

ADIRONDACK DEER.

CAMP PARKER, Moose Pond, Essex County, Adirondacks, N. Y., Sept. 25.—"Gentlemen, don't leave your watch-ground until the hunt is up or you are no true sportsmen." Our first hunts proved very unsuccessful, and the hunters had all returned; yet the dogs were still out, a sure proof that should in general direct the sportsman to keep his watch.

The Court from Glens Falls, Mr. Fissy, a merchant from Philadelphia; Punky, a broker from New York, the inventor of that destructive Holland ball, and the subscriber were assembled at the camp table talking all at once, trying to reconcile the transactions of the day. The Court was just getting off some of his fun, when a handsome three-pronged buck in the full blue coat came bounding down the mountain side within 50yds. of the camp-fire and stood for a moment gaping at the strange group. In a second there was a rush for the guns. One left his hot flapjacks. The cook upset his frying pan. Another spilt his coffee. A third cried out, "To the lake!" The Judge was the first on the trail, as bare-headed he took the track with a shout, following the beautiful creature down to the water about 100yds. off. The Inventor had left his gun at the landing and started at a 2.40 gait to secure it. The heaviest weight in camp opened the valves and soon reached the shore. Mr. Fissy never having killed a deer had been promised the first to supply venison. He also reached the lake a little out of breath, though quite cool. When the subscriber arrived among the excited hunters the fated beauty was hopefully sailing on the placid waters simply thinking over the table scene he had just witnessed, congratulating himself on his narrow escape. Little did the creature think that a dozen eager eyes were then watching and waiting for him to reach the middle of the lake, when his fate would be sealed by a ball from Fissy's rifle. This part of the play I will not describe, as I have never indorsed this kind of hunting, except when in need of food. The venison proved excellent, and all enjoyed it except the gentleman who secured it, who said he could not touch it, feeling as if he had committed murder.

On this same day several of the party returned from a hunt, and one had scarcely passed along the lakeside when a deer followed right on his track; and several had the mortification of seeing the creature wave his flag in their faces and disappear in the woods.

Of all the years it has been my privilege to enjoy an outing in these grand old woods, this one has proved the most trying from the constant rains and unsettled weather, with high waters everywhere, conditions which throw a damper over everything. Our party felt it, and the Court decided to return to civilization, the Inventor and Philadelphia merchant concluded to accompany the Judge. Consequently last Saturday they took their departure for the waters of the Horicon, much to our sorrow. To make matters still more unfortunate for the subscriber, a telegram called the Broker to New York on Monday, leaving your humble servant alone to fight out another miserable, rainy, cold and unsuccessful week. Again, Mr. Editor, have I witnessed the destructive effects of the hollow ball.

H. C.

WAYS OF THE RUFFED GROUSE.

THE ruffed grouse is universally pronounced by sportsmen to be the wildest, the wariest and the wiliest bird in this or any other country. Shooters from the old world make a meager showing in his pursuit, being utterly baffled by him. His natural wildness is greatly intensified by his being chased by dogs and fired at by men. I regard hunting the "partridge" as the most manly and noble recreation that a gentleman can engage in. It brings strength of body, elasticity of mind and gladness of heart among the pleasantest scenes of nature.

The ruffed grouse knows the color of his feathers; he also knows the color and size of surrounding objects. He takes in the situation with great readiness, and utilizes it like a flash of light. While standing in the woods one day admiring the beauty of a silver maple decked in all the gorgeous coloring of autumn, a grouse suddenly dropped in the fork where the two principal grand branches met. He came down silently, softly, and without ruffling a feather. Immediately after he placed his back against one limb, while his breast looked strikingly like the other in color. He had no sooner got himself in position than he detected me, and reasoning that I must have seen him come down, he flew.

Soon after on this same occasion a grouse sailing in whirled and dropped on the ground in between two small trees that stood, as I afterward measured it, 5in. apart. No sooner had he settled down than he realized that danger was near, and turning his head looked back at me over his shoulder. One glance was enough, for like a flash he was up and away.

The ruffed grouse knows also intuitively when he is seen by the person in pursuit of him. One day a grouse, started in the low grounds, flew up on a well-wooded hillside. Following him I got on a path, and walked back and forward several times near the spot where I supposed he had lit. Finally I went over the ground again for the fourth time and had just passed under a bough that projected over the path about 5ft. above my head, when the bird flew from it. He knew I had not seen him, and took his own time about getting away. On another occasion I was coming out of a woods intending to go to another one, when on suddenly looking up I saw a grouse on a limb about 20yds. off. The moment I saw him he knew it, and flew.

The grouse is always difficult to distinguish when on the ground, as the following incident will prove. Once I was out with an old grouse shooter, and in the woods we met the owner of the land. He expressed surprise that any one could shoot partridges or even see them before they flew. My companion said he could shoot them easily, and could make them out on the ground or in a tree every time. "Now," said he to the farmer, "do you see that object down there? [pointing to something about 40yds. away.] Well, you would suppose that was a grouse, would you not?" The farmer said he would, that it looked something like one. "Well," said the old hunter, "it is not one, and you would be sold on it." While we stood talking the object rose and flew away. It was a grouse. At this occurrence the look on the face of the old hunter was worth going some distance to see.

The most difficult shot at the grouse (in my opinion) is when he darts down from the top of an immense pine, which is a favorite spot for them to take refuge in. The tree usually stands on the brink of a gorge, and the bird is in sight for some distance, yet I have never seen the man who could successfully accomplish this shot.

DORP.

OHIO GAME.

DAYTON, Ohio, Sept. 30.—The New York *Sun*, of Sept. 21, began a paragraph of (mis) information about the Ohio game laws in this way: "For monumental imbecility, probably the game laws of Ohio are in the lead. The open season for woodcock has been changed from July 4 to July 15. Why a period of only eleven days? The use of sneakboats, batteries, etc., has been forbidden in Lake Erie, its bays and estuaries, where ducks cannot be killed except through the use of these devices. The law which protected ducks while breeding has been repealed entirely. The open season for quail in Ohio is only one of thirty-five days from Nov. 10 to Dec. 15." The facts are that the law is eminently satisfactory to all concerned in this State, and to all others who are in any way posted as to Ohio seasons, except the clause pertaining to wild duck shooting, and which is exactly the reverse of what the *Sun* man publishes.

The law reads: "No person shall upon any bog, estuary, marsh, mudflat, river, or any cover to which wildfowl resort, by the aid of any swivel or punt gun, or any other gun than a common shoulder gun, or with or by the aid of any artificial light, or with the aid of or from any sink boat or battery, steam or naphtha launch, or with any trap or net, catch, kill or wound, or pursue with such intent, any wild goose, or brant, or wild duck or any other waterfowl, or destroy or disturb the eggs or nests of any birds named in this section, excepting in the waters of Lake Erie, estuaries and bays thereof; and no person shall in any place catch, kill or injure, or pursue with such intent, any wild duck on Sunday, Monday or Tuesday of any week, between the first day of September and the tenth day of April of any year."

Thus it will be seen that these devices for trapping, luring and killing wild geese and ducks may be used freely and to the utmost extent four days each week during the open season in Lake Erie, and in the marshes, estuaries and bays thereof, while in the other nineteen-twentieths of the State restrictions are ironclad. The only waterfowl breeding grounds in Ohio are in these marshes and bays along the lake, except to some extent around the reservoirs in Central Ohio. Occasionally a woodduck nest is found along the rivers of southern Ohio, but very seldom. The pot or market-hunters along the lake, through the representative from Erie county, influenced insertion of the exception that gives them the exclusive privilege of slaughtering ducks on their nests, and all the rest of the State is suffering from it.

The woodcock open season begins later because it was found that usually the young birds are not large enough to take care of themselves before the 15th of July. Open season for pheasant, Sept. 1 to Dec. 15; gray, fox or black squirrel, July 1 to Dec. 15. Hunters and farmers agree that Nov. 10 to Dec. 15 gives all the time desired for quail shooting. We usually have heavy snow by the middle of December, and shooting after that means extermination of quail. Under the present law quail have increased wonderfully, and the people are willing to let well enough alone. The open season for wild turkeys begins to-morrow, Oct. 1. All kinds of game are sufficiently protected by law except wild geese, brant and ducks, and it is fair to presume that the law will be amended to take away from northern Ohio pot-hunters their murdering privileges. Rabbits, snipe and doves are outlaws in Ohio, and may be shot at any time.

Oct. 6.—The northern portion of Darke and Shelby counties, and all through Mercer and Anglaize counties, Ohio, and Jay and Adams counties, Ind., lie the best pheasant regions of the two States, and the birds also abound, though not to such extent, north to the Michigan line. The hatching season was early and favorable, cover has been superb and feed abundant, and the law protecting pheasant until Sept. 1 was effective.

Broods run evenly this year, from 12 to 15 birds, the largest number, 15 chicks, being reported by William Lowry on a farm not far from Fort Recovery, near the headwaters of Wabash River, in the reservoir region. The young pheasants are too small for the table, therefore the market hunters have not disturbed them and they are not wild. Farmers are about the only ones who have been doing any pheasant shooting, and they finding the birds not full grown, and that the hunters were not out, have put up their guns, only desiring to be in the field in advance of the skirmish line of town shooters.

BROWN.

DEER IN NEW HAMPSHIRE.—Colebrook, N. H., Oct. 1.—In regard to Amasa Ward's camp as a desirable resort for still-hunting deer, I consider it the most satisfactory place for that sport of any in northern New Hampshire. In fact, I could almost warrant one a deer every day after the first fall of snow in the fall. Dogging deer is allowed in Coos county, in this State, and is practiced to some extent both at Diamond Ponds and Connecticut Lakes; but Amasa has a law of his own, which reads like this: "Any dog found running deer on his territory will be shot at sight." And as it is pretty well understood that the "law" will be enforced by Amasa, it is seldom violated; and as a result the deer are not all driven from the vicinity of his camps and it is not necessary to make a day's journey to some locality where the game may be found. That, together with the fact that his camps offer good accommodations in the way of comfortable beds and a good table, make it to my mind the best place for fall and early winter deer hunting of any in this vicinity. —ROB.

DEER AND MOOSE IN MAINE.—Eustis, Me., Oct. 6.—Mr. F. E. Butterfield and myself have been in camp at Big King and Bartlett Pond for the past two weeks. From Sept. 20 to 30 fly-fishing was excellent, fish ranging from 1¼ to 2¼lbs. Oct. 1 being open season for large game, we commenced hunting. On Saturday, the 4th, we killed one moose and two deer, which we have ready to take out with us to-day. Game is very plenty here. Deer and moose are undoubtedly increasing in this part of the State, and any sportsman can get game here during the open season without much difficulty. I write these few lines thinking it might interest you and your readers.—L. ATWOOD.

CHICAGO AND THE WEST.

CHICAGO, Oct. 2.—The ducks are agin us and not wid us, so far this fall. Fox Lake is no good, so the boys say, and thus far no bags of consequence have been made on the Kankakee. The best shooting has been on the famous Horicon Marsh of Wisconsin. Percy Stone went up there again yesterday. Messrs. Fred C. Donald and Ben Dicks go up to-night. Mr. Donald had his plans laid yesterday to go with Mr. Fred Lord and Mr. Charles Levings down to the Spring Lake country, of which mention was made last week. Mr. Levings was the engineer in charge of the Government works on Copperas Creek dam, and is thoroughly acquainted with Spring Lake, Clear Lake, Beebe Lake and all that country in there. He goes on down and will put in a week or two fishing. He says the bass fishing below the Government dam is the finest he ever knew, when at its best.

Mr. C. W. Lee and Mr. J. W. Keogh are back from their bicycle tour through England. Mr. Lee says they could not see much popular interest or general participation in field sports, the main things seeming to be horse racing and cricket, which everybody was ready to talk about. In Devonshire they saw some beautiful streams, and here Mr. Lee thought the angling was good, most of the waters, of course, being closed to the public. At the Lakes of Killarney some good catches were being made. Mr. Lee heard nothing of shooting during his trip, and thinks that a poor country for the shooter of average means. Even boating and canoeing seemed to be dull in England.

Mr. J. O. Blake, of Spaldings', is back from his grand western tour in company with Mr. Geo. J. Charlton. At Denver they joined the excursion of the American Association of General Passenger and Ticket Agents, and went to all the great scenic localities of the Rockies and the West, from the Grand Cañon to the Park. That this is a country alike beautiful and stupendous Mr. Blake is ready now to attest to any extent.

Mr. W. C. Wire, of the same house, enjoyed himself during a sick spell of six weeks on his vacation, near Oshkosh and Lake Winnebago, this fall. He reports some fishing, and shooting just beginning.

Messrs. H. M. Levy, Jos. A. Fuschlander, Albert Heidelbach, J. L. Workman and S. Kuhn, all of Cincinnati, have just passed north for a fishing and shooting trip in the woods of Wisconsin, where they should have a pleasant time at this season.

Mr. W. L. Shepard and Mr. J. T. Cowler have left for a deer hunt on the Upper Peninsula. They go about 40 miles northwest of Branscombe, and will start from the station as soon as they get off the cars, their team and camp outfit being in waiting for them. They are almost certain to get deer. Mr. Cowles has often hunted the country. They will have good local guides also.

Messrs. Alex. T. Loyd, R. R. Donnelley and Wallace De Wolf returned lately from a three weeks' chicken trip in Minnesota. They shot near Tyler, north of Pipestone, and seem to have had fair luck at snipe, ducks and curlew until the water dried up in the sloughs, after which these birds left. It is very dry in Minnesota this season, according to all reports. Mr. Donnelley thought that the chicken shooting they had, while fair, was not so good as that they had in Iowa last year. Nobody seems uproariously enthusiastic this fall about the chicken shooting in any of the States west of here.

Dick Turtle has gone back to Saybrook, Ill., this week, to get some more chickens.

Oct. 3.—It might be well for FOREST AND STREAM to send its natural history man out here to inoculate the daily press of this city with a little common sense. Nearly every paper in the city has published the news of a child here, whose death, it is officially announced, was caused by a cat that "sucked its breath." This is good matter to class with the hoopsnake story. The paper which first printed this cat yarn, the *Journal*, had in the same issue about half a column cut from FOREST AND STREAM without any credit. Superstition and loose morals go together.

But of late the city papers here, with a charming unanimity and a display of intelligence that is remarkable, have been giving our friend Mr. Brusewitz, the Chicago game warden, a good warming up. FOREST AND STREAM is a little ahead of them on that, but it is all in the family. Brusewitz is quoted as having publicly admitted that he didn't know what the game law was, had never read it, didn't know a chicken from a duck and didn't know what all this fuss was about anyhow. He is about the most modest game warden ever was. He don't know anything and he don't think he knows anything, and he don't care who knows that he don't know anything. But Gov. Fifer keeps him right where he is. He'll do, Gov. Fifer thinks, because he stands in with the boys. At the next meeting of the Legislature a determined effort will be made to have Brusewitz removed and a tin man put in his place.

Evidence has been collected of late by one Bortree, which in case of prosecution by the legal warden, would convict two prominent South Water street game dealers of illegal handling of game. But Brusewitz didn't see it, so the prosecution can't go. Great country. Great law. Great Brusewitz. Stonewall Brusewitz.

The *Herald* of this city this morning prints an astute article on "Law-Breaking Game Eaters," in which it proves to its own satisfaction that about the only breakers of the law are sportsmen. Their bad example, it thinks, demoralizes the public. It says: "If people knew the law was going to be enforced, and they were in danger of arrest if they violated it, they would not run the risk of getting into trouble by purchasing game. The hotels and restaurants would not buy it, and the dealers, having no market for it, would cease to purchase it from the so-called market-hunters, and the latter's occupation, consequently, would be gone. Thus, if the sportsmen only keep the law themselves, game preservation will be perfect." That is an easy way of figuring. The *Herald* writer forgets that the legal season of selling game would afford the market-hunters an occupation. In short, the *Herald* forgets a good deal, and don't know a good deal more, about this game law business. For instance, it says: "Another breaker of the law is the man who shoots grouse and quail in Illinois and brings them home by railway. There is a law prohibiting the transportation of Illinois game by rail, and if it is illegal for the railway company to carry them, it is equally illegal for the man who has shot the birds to bring them with him on the cars." A statement like that is misleading and ought to be corrected. The best correction is to call it plain nonsense. No such law exists. The railroads cannot carry illegal game to market, but they can carry legal game, with or without the owner's presence, to his home or to his friends. Any lawyer will tell you that. The article in question is miscolored and hurtful. The *Herald* knows more about the Cronin case than it does about the Effingham county case.

In talking over some of these things to-day with Mr. Wolfred N. Low, legal counsel of the Illinois State Sportsmen's Association, that gentleman said:

"As a matter of fact, we have now got very fair game laws on the statute books of Illinois. At next winter's meeting of the Legislature, I shall be at Springfield with the sportsmen's committee, and we shall ask for only one change, and that is to make the prairie chicken date Sept. 1 instead of Sept. 15, as the late accidental law has made it. As a compromise with the southern part of the State, we should make the date Sept. 1. Their harvest is earlier than ours, and by Sept. 15 it is impossible for them to get any chicken shooting over dogs at all, as the birds all pack up and will not lie to the dogs."

In this I do not agree with Mr. Low. I do not think we ought to ask how many, but how few, prairie chickens we can kill now. Don't kill the birds when they are young and easily approached, so that the whole covey can be bagged. Wait until they are big and strong, even if you do have to inaugurate another style of shooting them. We have got a few chickens in Illinois now, thanks to the three years close law, and let us keep them now we have them, and make it harder, not easier, to kill them. Let us establish the bird firmly all over the State again, and this time take care of it. Every one knows how babyish and how exterminative is the "sport" of kicking young prairie chickens out of the grass or stubble and killing them at a few yards distance. Shoot them out of the corn, the birds can then take care of themselves. But Mr. Low further remarked:

"What we need now is not more laws, but better enforcement, and our next move will be toward getting better executive machinery. At the next session we shall try to secure the passage of an act authorizing the appointment of two or more wardens for each county in the State; no warden, however, to be appointed except upon the petition of twenty-five or more residents of that county. This will do away with the political features of that work, and should secure the right men. We shall also ask that these wardens have police powers to arrest without warrant on detection of an offense against the game laws. I believe that in this way we can really do much to break up illegal shooting.

"I attended the meeting of the Central Illinois Association, at Jerseyville, and am pleased to state that we shall have the coöperation of that body. They have promised to get the pledge of every candidate for the Legislature from their districts in favor of the measures I have just mentioned.

"There is unquestionably a great deal of illegal shooting done in that lower country. While I was at Jerseyville a fellow by the name of Bauer declared that his neighbor had been shooting chickens all summer, that he had eaten some of them and that upon invitation he had gone over on his neighbor's farm and shot chickens before the season opened. Dr. Henry, of Jacksonville, heard him say this and said, 'Bauer, I am going to see that you are expelled from this association and not allowed to shoot here next year. A man who will do what you have done is not fit to belong to a sportsmen's association!' There is absolute truth in that last and I hope Bauer will be expelled. He certainly is a disgrace to the association.

"The Central Illinois men appointed as their committee Mr. I. Taylor, of New Berlin, Mr. J. Brown, of Havana, and Mr. C. W. Parent, of Jerseyville. These are good men and we hope for some good work to show results next winter. It is not probable that the man Brusewitz will last longer than that session."

It is to be hoped not, and hoped further, that out of the plans above outlined there may come success, and such an agitation of the matter as shall amount to an education of the people who are now so ignorant and careless. Even such articles as the inaccurate one of the paper above quoted do good, for they keep the matter before the public.

E. HOUGH.

BEAR TRAPPING.—The result of Mr. Bayard Thayer's bear hunt has at last come out in full. It will be remembered by the readers of the FOREST AND STREAM that, with his guide, he ran on to a cub, which little fellow took up a tree. He was treated to a charge of bird shot, which brought him down from the tree, wounded, and that in dispatching him with an axe the guide kicked up so much of a yell and a rumpus that the old lady herself suddenly appeared on the scene and made for the men in a manner that caused some uneasiness. The guide shouted to Mr. Thayer to reserve his fire—only bird shot in the cartridges—and if possible to get another cartridge into his gun. In trying to obey these admonitions and at the same time not to let the old lady get too near, Mr. Thayer tripped on a stick and fell backward, discharging his gun into the air. Fortunately the old lady took fright at the smoke and discharge and ran one way about as fast as the men did the other. The men do not confess to this latter feat, however. They came back that day with more help and more powder and lead. They carried the cub to camp and set a trap for the old bear. They visited the trap only once, a few days afterward. But on the last day of September, some 20 days later, they went to take in the trap. It was gone. They followed the marks of the clog a mile or two, and finally came to the decayed carcass of the old bear, where she had died in the trap, doubtless of starvation. Oh, the cruelty of this trapping, even of savage bears! When will men with souls learn to have pity for animals and birds? The agony of that poor old bear in the trap, waiting for death from starvation! My guide tells me that he heard dismal howlings on calm nights, that made him think that the old bear must be in the trap. The least that those who set steel traps for bears can do is to visit them daily.—SPECIAL (Boston.)

TOWANDA, Pa., Oct. 4.—Ruffed grouse season in this State opened Oct. 1. A number of sportsmen from this place took the opportunity to go out the first day. Very small bags were made, owing, they claim, to the dense cover the birds frequent. Some report finding many grouse, others say they are scarce.—W. F. D.

NEW HAMPSHIRE DEER.—Colebrook, N. H., Oct. 4.—Sporting matters have been nearly at a standstill in this vicinity for the past month, owing to the continued rains. The opening of the season for deer afforded us about five days of fine weather, and a number of parties were already on the ground ready to participate in the first deer hunt of the season, and several deer were brought in here as a result. Harry Huston, of Concord, N. H., brought in the first deer to the Diamond Pond Camps; and he it was who brought in the first one at the same place last year. Otto Haufbaur, of Holyoke, Mass., brought in the second deer at Camp Diamond; and a fine one it was, too, a five-year-old buck, with as handsome a pair of antlers as are often seen. Mr. Haufbaur left the head with Albert Wallace, of this place, to be mounted. Two gentlemen from Massachusetts, with Charles Kelly and "Spoff" Flint as guides, left here for Connecticut Lakes Sept. 3, returning the 6th with two deer, a buck and doe, and several more are reported from Errol, Greenough Ponds and Ward's Hell Gate Camps. But for only a short time were these things possible, for with the beginning of the second week the rain descended and the floods came, and both hunting and fishing were hung up to dry.—BOB.

A HAWK RETRIEVES A DUCK.—Winona, Maine, Oct. 2.—A party of young men from Winona, at Marshall, were out duck hunting a few days since. As they were watching the flying of the ducks over the lake, one came within gun shot of them. It was shot by Harry E. Melvin, and came down into the water a few rods from the shore. It lay floundering there, the hunters having no way of getting it. The dog was lame, and no boat was at hand. While pondering and trying to devise some means to reach the game, a large hawk came flying over head. The hawk spied the duck and soon commenced circling around, and in a few moments shot down out of the air, seizing it, commenced flying over the young hunter's head. Thereupon Mr. Melvin blazed away at the hawk, which came down with a thud a few feet away with the duck, thereby saving all trouble of wading or swimming after the game. Who will say that Winona hunters are not ahead this year? By the by, this was the first duck ever shot by Mr. Melvin. He will probably shoot thousands more before he has another one retrieved in that fashion.—X.

Sea and River Fishing.

ANGLING NOTES.

A LATE number of the Springfield *Republican* mentions the fact of the great improvement noticed this season in the size and number of trout caught in the White Mountain streams. These waters have been well restocked, and this encouraging result is a proof that restocking pays. Because a few people have made a failure of their attempts to raise trout for the market, it does not follow that all artificial trout breeding is a failure, as some cranks would like us to believe.

There have been a number of instances where restocking of old and fished-out trout waters have been followed with excellent results. There is hardly an angler who has not noticed this fact.

The Castalia Club waters in Ohio, for instance, is a remarkable proof; for there were absolutely no trout in these waters originally, and now their streams contain any quantity of fine, well-fed fish running up to 4lbs. in weight. The return of the salmon in the Penobscot and Hudson rivers is a well-established fact, and dozens of other cases could be mentioned.

Of course, it is necessary to do something besides restocking. Proper protection and food must be provided, and means taken to prevent the trout hog from killing off the fingerlings. If this is done, success is found to follow.

Last season we had occasion unfortunately to call the attention of our readers to the condition of affairs in the Adirondacks, showing a state of lawlessness that in former years was unknown. We refer to the robbery of Gen. Brandreth's baggage on his way into the woods; and that was followed by the stealing of trunks from the Prospect House. Senator Livingston, who has just returned from the Adirondack Club, relates the following incident. He went to Andrews' pond one rainy afternoon intending to fish there for a day or two. The club have a camp there and always keep a few simple cooking utensils and an axe. When he and his guide arrived just before dark they found everything had been stolen. They were in a very disagreeable predicament—wet through, no axe to cut wood and nothing to cook in. Fortunately the guide, while hunting about for dead wood, found the axe where it had been left by the thieves, so they were enabled to get firewood. The next day the Senator caught some forty-five speckled trout, which he cleaned and covered up with moss. The next morning they were there all right and he added a few more to the pile. The guide and the Senator then crossed the lake to a spring for some water, and though away only twenty minutes, they found on their return that their trout were all stolen. So they had to go back to the club house empty handed.

The footprints were quite distinct, showing what had become of the fish, and the thieves had evidently come a long distance intending to poach; but seeing some one there, had kept in hiding until the Senator and his guide crossed the lake. Then they stole what they could and left in a hurry. Hereafter the club will keep a man there.

In old times such occurrences were unheard of, and no one ever dreamed of taking precautions against thieves in the woods.

MR. OSGOOD'S TROUT.—Colebrook, N. H., Oct. 6.—The weather effectually stopped fishing here during September, and none was attempted; but as a rule in some localities here the fly-fishing in September is better than at any other time during the season, especially in point of size. In "Special's" letter in last issue he mentions a trout caught at Middle Dam, Me., by Mr. Osgood, which weighed 9lbs. 2oz. I have a letter before me, written by a gentleman who was present at the time. He says: "Mr. Osgood caught with fly on a 5½oz. rod a trout that weighed 9lbs. 2oz., which beat anything that I had ever seen. It was a male fish, and a perfect beauty. I was close by at the time." The gentleman also mentions two of 6¼lbs. and one of 8¼lbs. taken at the same place.—ROB.

MEMORIES OF MELISSA.

IN your issue of Sept. 4, Mr. A. E. Goshorn talks entertainingly of "The Pike (perch) of Lake Melissa," or, to be more accurate, the pike (perch) of Buck's mill pond. The subject possesses peculiar interest to me, as these pike are old friends of mine, and many a gallant fight have I had with them in which it would have been impossible, I think, for any one to have told whether a pike or a bass was the other party to the difficulty, until the test of the landing-net was applied.

In the summer of '83, I think it was, some half-dozen of us, lovers of the rod, formed the "Casselton Fishing Club," purchased an acre of land from good old Father Corbett on the shores of Melissa, and erected a simple shanty, which we dubbed "Camp Comfort." We flattered ourselves that we had secured a retreat, "far from the madding crowd," where we could "loaf and refresh our souls" undisturbed by the stream of summer idlers that were already beginning to flow into Detroit city. We were six miles from the latter place, and our friends there wondered at our queer taste in going so far into what many of them seemed to think a howling wilderness. Whether we set the fashion or not, I don't know, but now (I haven't been there since '88) I am told cottages have sprung up to right and left of "Camp Comfort," dams have been built, and outlets deepened between Lakes Detroit, Sally and Melissa, and the whistle of the steam-tug, and the laugh and chatter of the summer tourist, have taken the place of the "loon's low laugh" and the wood-duck's note. The charm of the place has gone, and I am glad I left before it had all vanished. Ah, well! one consolation we have—though 'tis but a selfish one—we had the cream of the fishing.

Never again, I think, can two anglers, as did Langdon and I in that halcyon first summer, anchor their boat on the bar just at the inlet into Melissa, and catch small-mouth bass so fast that it soon impelled Doc to exclaim: "This is sheer slaughter!" And by mutual consent we reeled up and quit, though we had been at it less than half an hour. Ah, what days those were! Days when Langdon, McLeod, Rutledge and myself had Lakes Sallie, Melissa, Fox, Meadow, Witch and the mill ponds practically to ourselves, and when we were as sure to catch a fine string of bass when we wanted them, as to find a match in a smoker's pocket. Once in a while, indeed, some adventurous spirit from Detroit would boldly penetrate as far as Melissa, but such visitors were rare. We were often for weeks at a time without seeing a boat on the lake save our own.

As I look over my old "Angler's Score Book" (for after the first summer, Langdon and I at least, never were found without that in one pocket and a pair of standard scales in another), what memories it recalls! Take, for instance, this entry: "Date, 6, 26, '86, Buck's Mill Ponds: Fish caught, pike-perch 9, largest 4½lbs., total weight 22lbs. Black bass (large-mouth) 5, largest 3½lbs., total 14lbs. *Mem.:* Day of the storm." That was the day when I initiated Kemp into the mysteries of "planked pike," close rival to planked shad, cooked under the big tree which overhangs the race just below the old mill, the day we climbed the hill after dinner for a drink of cold water from the 80ft. well on the summit, and were met by the lady of the house with two brimming bowls of wild red raspberries smothered in sugar and cream, and perfect strangers though we were to her, were fairly forced to take a big bucketful back to the boat with us—the day we got entangled in the floating islands on our return home and spent weary hours therein, unable to get either forward or back, until they opened as mysteriously as they had closed and gave us an outlet, reaching the lake just as darkness and the "big blow" of '86 closed in on us—the day, or night rather, when we foolhardily attempted the passage in the teeth of the gale, and were caught up and whirled away into the darkness by the mighty wind, only able, by the most violent exertion, barely to keep our boat out of the trough of the seas, one bailing for dear life, while the other felt every sinew crack as he tugged at the oars, the night when a higher power than man's drove that frail and staggering skiff straight through that welter of yeasty foam, till in the blackness of the darkness of that awful night its keel grated on the shingle almost in front of our tent, and we, with just strength enough left for the effort, staggered up the bank and fell exhausted on our camp bed, there to lie till morning in our sodden clothes, and never a whit the worse for it next day.

Or take another entry, almost at random. "Date, 7, 4, '85. Lake Melissa. 'Toiled all the day and caught nothing.'" That was the day when McLeod, slipping away from the hurly-burly of architectural work and building contracts, joined me for a "quite, good old Fourth of July fish." As I met him at the train the night before I was able to tell him, "Bass biting splendidly, lots of fine minnows for bait, we'll have glorious sport to-morrow." In the gray of the dawn we started for the "reef," about three-quarters of a mile away, diagonally down the lake. We had hardly got quarter of the way when a wool-white fog settled down on us, so dense that Mac swore it choked the rowlocks so that he couldn't move his oar. In two minutes all sense of direction was lost. We rested on our oars for the fog to lift, but it only settled down the thicker. Then we started off, hoping to strike the shore somewhere soon, for the lake is only a small one, only two or three miles across, and we thought we could surely row the boat straight enough to hit the shore somewhere. But for what seemed interminable hours we rowed and rowed, but came to no shore.

"The witches have us," quoth Mac. "Hark! there's the Banshee now."

"Ha! that's Father Corbett's old Drive. He's chained him up to keep him from following the boys to town, and he's howling to get loose. If he'll only keep it up we'll strike the shore near the cabin, and we can make a fresh start."

Keep it up he did, and we rowed, guided by the sound, till we ran plump into a bed of rushes.

"Hullo!" cried I, "what does this mean? There are no rush beds on this side of the lake!"

Pushing the boat to the shore, but a few yards distant, we found ourselves at the head of the lake, three miles above the cabin—by the shore that is. Following up the howling, we found old Drive, sure enough. He had been tied up, had broken the chain, had started off to make some friendly visit, had tangled the chain in a clump of bushes and was calling for help. Having released him, we returned to the boat.

"Well," said Mac, "we can follow the shore anyway and get back to the cabin."

So along the shore we crept, losing it now and then in the fog, until we ran into another bed of rushes, and found ourselves *at the foot of the lake*, having passed the cabin in one of our momentary obscurations. While we were objurgating our luck the fog suddenly cleared away, and we again started for the "reef." But before we had gone half way that dam-p fog settled down on us again, and, warned by experience, we turned and rowed for the shore. But luck was still against us, for again the shore was non-findable. After rowing a while in wrathful silence, Mac dropped the oars, vowing that he wouldn't row another stroke till that——fog lifted, if it took till Christmas. As I felt the same way, I did not say him nay, and we both curled down in the bottom of the boat to take a nap. When we woke, which seemed to be at the same moment, the fog was gone, the sun was shining brightly, the boat was rocking idly on the water within bowshot of the dock, and—it was 3 P. M. As Mac had to take the 6 o'clock train, and the depot was eight miles away, we made no further attempt to reach that elusive "reef."

Another record—"Meadow Lake, June 28, '87. Black bass (large-mouth) 18, weight of largest 5½lbs., total weight 56; pickerel 7, largest 8½, total weight 41. *Mem.:* Langdon caught 15 bass and 5 pickerel; High-hook on bass, 6¾lbs." It rained all the morning, and the harder it rained the more furiously bit the fish. The bass which I have recorded as being caught by Langdon—a large-mouth—(the fish I mean, not Langdon) was the largest of which I have any positive knowledge as having been caught in those waters, except one caught by Ike Wood, which weighed 8¾lbs; but as this latter showed up a double handful of shot on being dressed, there is room for suspicion.

Here is the record of what I believe, on mature consideration, taking into view the state of the weather, my "personal equation," the gaminess and size of the fish, and in short, all attendant circumstances, to have been the most satisfying and idealistic day's fishing I ever had, nor do I ever hope to have such another. Lightning strikes but once in the same place: "July 18, '87, Fox Lake. Black bass (small-mouth) 21, largest 5¼lbs., total weight 59lbs.; bait, live minnow; weather, hazy; wind, S.S.W.; rowed by Dennis; time, 5:40 A. M. to 9:15 A. M. High-hook on *M. dolomieu.*"

Here is a score, remarkable not so much for the number as for the size and uniformity of the fish caught: "Aug. 21, '88. Pelican Lake, bar at mouth of inlet. Black bass (small-mouth) 7: weights, 4½, 4¾, 5, 5, 4¾, 5, 4¾. *Mem.:* Brackett fished with live minnow on bar itself, 6ft. water; caught 18, average weight 2¼. H. P. U. cast McHarg spinner, just on edge of bar. Big fish all came from deep water."

Finally, to "return to our mutton," of Buck's mill ponds, I give the score of my last day's fishing there. "Sept. 23, 1888, black bass (small-mouth) 8; largest 2¾, total weight, 15¾lbs.; bass (large-mouth), 13; largest, 4½lbs.; total, 42½lbs.; pike-perch, 23; largest 9½lbs.; total, 71lbs. Total of all, 129½lbs. *Mem.:* Pike perch all bronze-backers—all fierce fighters—many broke water like bass, one three times. The 9½-pounder, only one I've ever known caught in these waters over 6lbs. All pike-perch caught in open channel free from weeds; small-mouth bass in inlet and below dam; large-mouth at edge of floating islands. All on frogs."

Eh! What? "That's the score of a fish hog?" Well, it does look that way, but let me plead:

First, I had been laid up for over a month, unable to touch a rod while every one else was having glorious sport.

Secondly, the fish were hungry and would not be denied.

Third, I had paid a cent apiece for frogs, and couldn't afford to waste 'em.

Fourth, I knew it was the last day's fishing I would have there, "it might be for years, and it might be for ever," and

Fifth, I had rashly promised too many Fargo friends to send them "a mess of fish," and wanted to keep my word—and save my pocket book.

If my action was a sin, I have faith to believe that it met with the same treatment as Uncle Toby's oath:

"The accusing spirit which flew up to Heaven's chancery with it, blushed as he gave it in, and the recording angel, as he wrote it down, dropped a tear upon it, and blotted it out for ever."

H. P. UFFORD.

LAKE CHARLES, Louisiana.

BASS ON THE FLY IN THE FALL.

Editor Forest and Stream:

"Will black bass take the fly in the fall?" the question referred to in FOREST AND STREAM of the 2d inst. is one that interests a good many anglers. I cannot answer for October, but am able to throw some light on the September branch of the inquiry. On the 25th and 26th ult. I was at the Woodmont Club house (on the Potomac River, a little more than a hundred miles above Washington), largely for the purpose of testing this very question, and respectfully report results. Though the water was too cloudy to be regarded as in good condition for fly fishing, I succeeded in taking nineteen of the small-mouth variety, on the first named date, between 3 and 6 o'clock P. M., and ten more on the succeeding day, between the same hours. I may add that the thirty fish constituting the catch were notably even in size, averaging about a half pound each, that they were all taken in rather shallow water, near the rocky or gravely banks of the river, and that nearly all were taken with a large orange-colored hackle. It may be added, also, for the comfort of fly-fishermen, that my success both days considerably exceeded that of those who used bait, though one gentleman took with a minnow a much larger one than any I caught. It weighed something over 4lbs., while none of mine exceeded a pound.

K.

WASHINGTON, Oct. 3.

PENNSYLVANIA BASS.—Towanda, Pa., Oct. 4.—So far this season bass fishing in this neighborhood has been very poor, owing to frequent rains and high water. Last week, however, a change took place, and fishermen are having rare good luck catching from twenty-five to one hundred in a day from one boat, two fishermen generally fishing together. Minnows seem to be the most killing bait. Fish mostly medium size, with an occasional large one.—W. F. D.

THE GILLAROO TROUT.

I HAVE read with great interest the "Notes and Queries" respecting the species and varieties of the great family of the *Salmonidæ* which have from time to time appeared in the pages of FOREST AND STREAM, and as I may claim some acquaintance with those of the north of England and south of Scotland, having been an assiduous angler in those waters for over twenty years, besides having assisted in several of the annual experiments instituted by the Berwick Shipping Company relating to the breeding and growth of the *Salmonidæ* of the Tweed, I feel as if I might add a small modicum to the vast fund of valuable information on this family to which FOREST AND STREAM has given such an extensive circulation. I shall, on the present occasion, confine my remarks to the relation of my personal acquaintance with the fish whose name stands at the head of this paper.

During my earlier piscatorial and ichthyological studies I had read notices of this variety in which it was described as having a gizzard like a fowl, and some disquisitions as to whether it should be ranked as a species or as a mere variety, and this excited in me a strong desire to examine into this matter for myself. The first opportunity which offered for this purpose was in 1832, when paying a visit to a friend in the Perthshire Highlands of Scotland. In the course of conversation my friend informed me that a small lake or tarn up among the hills contained a particular sort of trout which grew to a large size, and would not take any kind of bait, and could only be captured in September when they drew up to a shallow bay for the purpose of spawning. He had occasionally at that season taken up a small boat and seine, with which he assured me he had taken fish up to 12lbs. weight, and had seen others leaping which he estimated at fully one-half more. I got one of the gamekeepers to conduct me to the spot, where I found an expanse of dark-brown water apparently some forty or fifty acres in extent, lying in a "corrie" or hollow on the side of a hill some 800 to 1000ft. above the level of the sea, and having no visible inlet or outlet. It being midday in July and the sun shining brightly, there was nothing to indicate that any living thing inhabited the dark and sluggish water; but my guide assured me that if I waited till sundown I would see plenty of fish leaping.

Next day I returned to the Dhu Lochan (black pond) about seven oclock P. M., when large numbers of small moths, resembling our tent caterpillar moth, were flying over the pool and occasionally dipping on the surface, and the fish, many of which appeared of large size, were taking them freely. I selected from my tackle-book a pair of flies as closely resembling the moth as I could find, and by casting from a prominent of the shore succeeded in capturing two specimens, one of 8oz. and the other 3oz. weight, the larger fish keeping toward the middle of the pond, far out of the reach of my cast. On examination I found that they answered in most particulars the description I have read of the gillaroo, resembling outwardly the trout of the stream which ran at the hill some 300ft. below, only heavier for their length and richer in color, while on dissection I found its stomach dilated and its membranous walls thickened and corrugated, its contents consisting of the comminuted shells of fresh-water mollusks mixed with fragments of moths.

My next opportunity of examining fish of this description was some ten years later, while residing at Berwick, on Tweed. In discussing with a few brethren of the angle the different species of fish we had severally taken, I related my Highland experience, when Mr. A. N. Steele, a prominent dry goods merchant of the town, stated that on his brother's farm, at Branxton, there was a small lough which contained fish similar to those I had described, individuals of which weighing from 4 to 5lbs. he had occasionally captured, and invited me to accompany him on a visit to the locality. As that did not suit my convenience Mr. Steele went alone, and brought down two specimens of the fish in question, one slightly over 2lbs. in weight, and the other fully 1¼lbs.

With the assistance of my friend, Dr. John Manners, a clever operating surgeon, and an ardent and accomplished angler, I made an exhaustive *post mortem* examination of those fish, comparing them at the same time with fresh specimens of the common trout (*Salmo fario*) of the river. We compared them closely from point to point, noticing the scales, spots, gill-covers, lines and features of the head, the disposition of the teeth on the jaw, tongue and vomer and the number of the rays of the several fins. In all these particulars they exactly agreed, and the only external differences we could find were the greater richness and intensity of the colors of the Branxton fish and the greater depth and thickness of their bodies, and consequently greater weight in proportion to length over the river trout. On dissection we found the internal organs alike in both varieties with the exception of the stomach, which in the Branxton trout resembled that of my Highland specimens, only from their greater age and size, more fully developed. The containing membrane was thickened and corrugated until it resembled nothing so much as a piece of wet untanned buckskin, and the contents, like those of the Highland fish, consisted of broken and comminuted fragments of mollusk shells, mingled with a few remains of insects. The stomachs of the river trout, on the other hand, were inclosed by a soft and delicate tissue, as having had to act upon the tender and succulent food and not having been exercised upon such "hard tack" as constituted the nutriment of the gillaroo.

Taken in connection with the peculiar features of its habitat, the Branxton trout afford a remarkable instance of what Herbert Spencer calls "modification by environment." A small spring creek, which runs down a steep and narrow cleft in the side of a hill, and which is inhabited by numerous trout, which seldom exceed 7in. in length or 4oz. in weight, has at some remote period in the prehistoric ages been dammed up at this point of its course so as to fill up a portion of the valley and convert it into one of those fluviatile lakes so common in mountain streams. In the course of time the pond became filled up, partly by the silt brought down from the upper part of the channel and partly with the remains of the numerous generations of mollusks which lived and died in its waters, until it became shallow enough for the aquatic plants to take possession and convert into a bog or marsh. In the meantime the stream, cutting its way through the obstacle which confined it, gradually drained off the surface water until it became something like an old beaver meadow, and offered a

bed of shell marl two or three acres in extent. A former tenant of the farm had discovered the existence of this valuable manurial deposit, and used it to its full extent to increase the fertility of his fields. When the supply was exhausted the dam which was raised to exclude the water of the creek was removed, and the water of the next and successive floods filled the excavation, carrying with it a number of its finny inhabitants. The fish finding themselves in a more favorable position, in deep still water with plenty of nutritious food accessible, rapidly increased in size and massiveness of proportion, while the necessity for crushing the shells of the mollusks, in order to make their flesh available for digestion, caused the modification of their stomachs, from which they derive their name: though the expression, "a gizzard like a fowl," is a manifest, though perhaps a not unnatural exaggeration.

I should like to be informed by some of your numerous angling correspondents, whether the American speckled trout (*Salmo fontinalis*) is subject to a similar modification under similar conditions. I. T. BELL, Sc. D.

BELLEVILLE, Ont., Can.

MAINE TROUT, ANGLERS AND GUIDES.

THE Maine trouting season has closed, and the record has been a truly brilliant one. The number of trout taken at most of the better-known resorts has been larger than on previous seasons, while concerning the new-found resorts the sportsmen are loud in praises. The size of the trout taken has averaged well with other seasons, though not quite as large specimens as the largest on record have been taken. One trout of over 10lbs. was taken at the Narrows, Richardson Lake, in May, and a trout of over 9lbs. was taken at the upper dam in September. It is claimed that this trout rose to the fly and was handsomely hooked and landed. He is reported to have taken the brown-hackle, though the cast contained the silver-doctor and Parmacheene-belle besides. The record of smaller trout is very good. But the very late fishing was generally a failure. The weather was very fine on the last days of September, but only a few trout were taken, though previous to the fine weather and during the cold days of about the 20th to the 22d, the fishing was excellent. Early in September the fishing was also all that could be desired. It is suggested by experienced guides that the trout went to the spawning beds early. On the first day of October, the beginning of the close season, rods and lines were cheerfully put away, and the camps and fishing resorts were quickly deserted. Even the guides gave up the contest. It is gratifying to be able to say that the trout law in Maine is very cheerfully obeyed, at least so far as ceasing to fish on the end of September is concerned. Guides are generally on the watch for poachers, and they, many of them, especially about the Rangeley and Moosehead Lakes, refuse to work for people who desire to fish after the beginning of October. A single case is reported from Richardson Lake, where a 6lb. trout was seen on the evening of Sept. 30, on the spawning bed. The guide of the gentleman who saw it tried hard to induce the fish to rise to the fly on that day, but the next day he would take no hint that the big trout would be acceptable, and finally declined point blank to try to get the fish.

At the Rangeley Dam there is a sight to behold. The water is swarming with great trout, and a landlocked salmon that will weigh 8 to 10lbs. is seen among the trout. These trout are on the spawning beds or on the way there. In their course up the stream they are stopped by the dam. The Union Water Power Co. is obliged by law to provide a fishway for this fish to ascend into Rangeley Lake above. But this they have never done. The people owning cabins and hotels on the lake above complain bitterly of this neglect, alleging that they are deprived of good fishing in their lake, for the reason that the great trout cannot get up there, though their course down in the high waters of spring is unobstructed. Complaint has been made to the Fish and Game Commissioners, and these officers have suggested that the Union Water Power Co. must put in fishways, not only at this dam, but also at the Upper Dam below. That company declares that if they are forced to build these fishways they will open the gates of the Rangeley Dam altogether, since they care nothing for the flowage of Rangeley Lake. They threaten to open the gates, thus complying with the law concerning a fishway. But this threat has alarmed the residents about the lake. The shores will be ruined by drawing off 8ft. of its waters. Dr. Dickerson, of Philadelphia, who is the owner of Ram Island, in the middle of the lake, where he has cottages and buildings to the amount of some $30,000, is greatly alarmed, and is reported as trying to buy the right of flowage of the lake, together with the dam. If he buys this right he will doubtless open the gates during the spawning season of the trout and close them during the summer season.

The coming of the railroad to Rangeley—promised for another season—has caused a boom in real estate on the borders of the lake of the same name, and on these shores are to be seen sign boards advertising "cottage lots for sale."

The Franklin County Fish and Game Association is prospering, as it richly deserves to prosper, and it is trying to do a good work, that of restocking the Rangeley waters in a manner that the State is too penurious to do. Uncle Jerry Ellis is employed to watch the dam and Rangeley stream below to prevent poachers from stealing the noble trout that are there. This stream is perpetually closed, as one of the trout breeding places of these waters. His modest cabin stands by the dam. He is very polite and kind to people who desire to see the great trout, but woe be to the poacher who attempts to steal one, either by night or by day. Uncle Jerry is armed, and they say he is a good shot. On the walls of his cabin is the modest collection box of the Franklin County Fish and Game Association, and all moneys dropped in are for the purpose of fish propagation. One of the best features of this work is the fact that all the guides are members of the Association, and they are all of them interested in the protection and propagation of fish. They have come to understand that a big trout is worth far more to them when taken by one of their patrons than when stolen off the spawning beds by a worthless poacher. I know that this sentiment prevails, for one of these guides, Mr. Martin L. Fuller, gave me the facts. He asked me in a very nice manner to become a member of the association, which I gladly did, and was in other ways very polite to me. He explained how glad his brethren were at the change in affairs, and how they hoped for better fishing and better patronage at their end of the lakes. This is just as it should be. The guides are generally sensible fellows; in fact full of plain common sense. Would that the sentiment in regard to the game laws was half as good. But, alas! it is not. The State has treated these same guides, as well as the sportsmen they work for, shabbily, and they feel it. What has been the result? I will answer in another letter to FOREST AND STREAM, and I shall tell a story that is a shame. SPECIAL.

OHIO ANGLING.

DAYTON, O., Oct. 1.—Fish are almost without protection. There is a State law requiring fishways constructed over the dams, yet the State dams are not even provided with means for fish to ascend the streams to spawn. The streams may be fished at any time of the year with rod and line, and seines, nets and traps are again coming into use. Parties at Miamisburg, ten miles down the Miami River, have an 80yds. seine that they use at pleasure, after night of course. This seine is long enough to reach across the river and recently in one sweep two tubs of bass were caught below Carrollton Dam. Another night the party caught three barrels of carp and left their seine hidden in the center of a field for two weeks before taking it home.

Though fall fishing has begun the waters are not in desired condition and minnows have been scarce. A number of trot lines have been set, but not many channel catfish or bass taken. All the streams are full of carp, and fears are expressed that feeding like suckers, as they do, the carp will eat all the spawn of bass and other game fish. BROWN.

LAKE MAHOPAC BASS.—Mr. Daniel Bradley, of this city, caught a 5¾lbs. small-mouth black bass in Lake Mahopac, Putnam county, N. Y., last week. This fish is said to be high-hook for those waters this year.

THE CLUBS OF THE ST. CLAIR FLATS.

VII.—THE DELTA CLUB—THE CANADIAN CLUB.

THE constant passage of the big lake boats up and down the narrow ship channel keeps up more or less wash along the planked face of the "made land," and when one of the great steamers plows by there is a cross sea that has swamped many and many a careless rowboat on the channel. Even a small steam yacht sends quite a spiteful series of waves along the docks, as I noticed when Mr. Boydell came to pick me up in his little steamer. We tied the duckboat up behind the yacht, and there it stood, half out of water on the surge thrown up by the screw. These little yachts steam along very rapidly, and make the best craft for a cruise around the Flats. They are not the safest thing in the world. One went over and I believe drowned one or two persons lately on the Flats. These shallow waters have their fatalities and are not devoid of a certain romantic interest of their own.

Above the Peninsula Club is the little green cottage of Mr. C. P. Collins, and then the Gibson cottage, and then the Hoff cottage, and then the Riverside Hotel, 60×70ft., two stories and comfortable. Then there is the Duggan cottage, and the Jas. Wilkie cottage, of Detroit, and the Jas. Higgins cottage, of Detroit, and the cottage of Geo. Smith, of New York, and then another cottage and two cabins belonging to Capt. Freeman, and then the cottage of M. Louis Benaur. I give these names and their order chiefly from memory, but they are substantially correct. Next is the Bishop cottage, and then the Fred. Opper, Peter King, A. Kate and Kulp cottages strung along, and just beyond is the old cottage of M. Jules Soulier, and then you have the modest structure of

THE DELTA CLUB.

There was nobody at home but the hired girl when I called at the Delta Club, but I had a very pleasant visit with her, and had time to cast a glance over the rather compact little premises. The Delta Club is a "thirteen club," having just 13 members. The house is small, with only six bedrooms, but everything is neat and handy. There are only six or eight boats. The only yacht, the Dream, belongs to Mr. H. H. Taylor, of the Detroit Screw Works. "You want to see Mr. Taylor, if you're after fish stories," said the handmaiden naively, "He's a great one to talk."

I did see Mr. Taylor later, and a very cheerful and obliging gentleman he proved himself. From him it was learned that the Delta Club was organized five years ago, for the purposes of a quiet fishing and boating lodge. It is made up of people who are all friends and intimates, and who delight in a pleasant summer day among the channels. The membership will probably not increase much, as the club is well satisfied now. The members are all conscientious sportsmen, but anglers rather than shooters, but observers of the law in every case. There were three men in this club formerly who used to spear bass. These men are now out. The dates of the Delta Club are, opening day June 1, closing day Oct. 1. This is a sort of nice little family club. It was named from its location on the "delta" of the St. Clair River. The Rushmere Club fancied this name before it chose its present name, and tried to buy the copyright from the Delta folks, but the little 'un said it got there first and must have the name.

In common with everybody else, the Delta people were invited by Mr. McQueen, the modest Canadian who thinks he has the Flats by the tail, so to speak, to contribute to his Herse Island fund. He has been cheerfully referred to Pluto. Mr. Taylor says McQueen originally bought a strip along a fence of the island, in width forty feet, "more or less." Mr. McQueen interprets that to mean "more." He quit claims for anything you will give him. Mr. Muir, keeper of the Canada Club, paid him $30 for 400ft., and he promised to pay that back if he could not show title. He struck Joe Bedore, the old fisher and hunter, one of the quaintest characters of the Flats, and as quick as Joe learned what McQueen wanted, there was music in the air. McQueen couldn't get away quick enough.

Mr. Taylor is an ardent and successful angler, and from him were gathered some interesting details about the fish and fishing of the Flats.

"I don't think the bass fishing is what it once was," said he, "although big runs are still made. On the 4th and 5th days of October, 1889, I caught 70 black bass, running 3 or 4lbs. in weight for the most part. So far as I heard, this was about the best catch of 1889 made among my friends. One day in August, 1888, I caught 105 white bass. We don't care much for the big-mouths, or mud bass. By casting with a frog among the rushes, I suppose a man could catch two bushels a day of them in the summer time. When the perch are running, there is no limit to the fun, such as that is. I have known a man to fill a bushel basket to the brim in a couple of hours.

"We fish bass by casting with the minnow chiefly, the fishing being done usually in from 4 or 5 to 11 or 12ft. of water. We don't favor the spoon much, and the man who would use a "deep spoon" or "bottom troller" would be tabooed, in our club at least.

"A 'bottom troller' is made in this way: A heavy sinker of lead, about 2lbs. in weight, is the foundation of it. The current is often very swift and it takes a heavy sinker. This chunk of lead bobs and thumps along, right on the bottom all the time. Above this sinker is a heavy wire, a couple of feet long, with a sort of hinge in its top, to which is joined a second length of wire, at whose top the line is made fast. At each of these hinges there is made fast, by a swivel joint, or rather a looped hinge, the leg of a long triangle of heavy wire. This triangle is thus forced to play in any direction, and it can be spun around and around the wire that connects the sinker to the line. The legs of the triangle are of stiff wire, and its apex is bent into a loop, into which is tied what may be called the trolling line proper. This trolling line is only about 10ft., and at the end of it is a spoon. Of course you can see that the spoon plays along behind the bumper, only a little way above the bottom, and right along where the bass lie. It works very smoothly and freely as the boat is pulled along, and it has been found to be an exceedingly deadly lure for small-mouthed bass. Sportsmen will not use it. Market fishers and fish hogs do.

"I suppose you know what a 'chug' is? That is a French fisherman device, and although very rough it is very killing. A 'chug' is, roughly speaking, a sort of block of wood, weighted with lead and bristling with hooks. It has a long handle, and is jerked forward and upward along near the bottom. It is thought that the fish follow it in its movements; at any rate, a great many of them are struck by the hooks and thus yanked into the boat. I do not know that this is especially destructive to bass, but it is one of the methods of the French fishers. When they bring in fish you will always hear them asked whether they got them with the 'chug' or the spear.

"Another contrivance akin to the 'chug' is the 'lead minnow.' This is made of an alloy of tin and lead, and is always kept very bright. It is shaped roughly like a fish and has two or three hooks projecting from it. It is so hung on the line that when jerked up sharply it darts a little at an angle. It being bright the fish dart at it, and when one is felt to touch it a sharp jerk on the line usually snags him.

"Another form of the 'lead minnow' is a sort of bright lead squid, with two or three hooks triangled at the bottom of it. It is bobbed up and down in the deep water, and snags the fish that run over it to watch it in fish curiosity. These last two devices are especially killing on the wall-eyed pike. The Frenchmen know how to use them. I need not say that the members of the Delta Club do not. We just do good, plain fishing, mostly with the short rod and the minnow. You may say that the Delta Club is perfectly happy and comfortable, that it has lots of fun, and that it don't want any fun that isn't gentlemanly and sportsmanlike, beyond a question."

This is a nice little club, and if there were a thousand like it, and a million men like Mr. Taylor, the world would be a bit better off. Following is the membership of Delta Club: Pres., Mr. H. G. Smith; Sec'y-Treas., Mr. W. S. Ostler. Members: Messrs. Andrew Cooley, H. H. Taylor, Clarence M. Burton, John C. Goodrich, John Kay, Chas. H. Burton, R. A. Parker, Geo. Thrall, H. M. Utley, Dr. J. A. Post. All these are all solid business men. Mr. Utley is city librarian of Detroit, Dr. Post is secretary of the Detroit Association of Charities, Mr. Thrall is Mr. Taylor's associate in the Detroit screw works, etc.

But meantime our narrow tongue of land is still curving on up along the ship channel, and we have still a few more choice cottages and one or two celebrities to mention. Reference has been made to Joe Bedore. Joe runs the best and most practical duck shooting box on the Flats in all probability, and gets a great deal of the "fish supper trade" of the Detroit boats. He is a popular old character, pretty well understood, but pretty well liked. In sheer oddity he is one of the most delightful features of the Flats; and he who leaves that region without seeing Joe Bedore has missed half his trip. Joe is a man of fifty or sixty years of age. He is about as broad as he is long and good-natured clear through. His dress consists of a hat, a shirt, a pair of overalls and a pair of boots. His speech is hard for an American to understand, being a mixture of French patois and broken English. Joe is an outgrowth of the Flats. Did we say he was sixty years old. He is older. He has been there ever since the Flats were, and what he does not know about them never began to happen. Doubtless he is as good a guide as any that can be had in the region. He has quite a good little sportsmen's hotel, well supplied with boats, decoys, etc. His dock is just across the waterway from the Delta Club. Just across the channel from his house Joe will point out to you a green tree or two on the other bank, and tell you that he lived there for years and had built him up a home there with his wife and children, when the Canada Club came along and evicted him. For that act he hates the Canada Club with all the hatred of a natural-born squatter. He says they have no regard for game laws and shoot with perfect disregard of everything, but selfish pleasure.

Joe's reputation on the Flats is hardly that which Cæsar desired for his wife, but I vow I couldn't talk with the good-natured old fellow and believe him as bad as they try to make him out. Joe admits that he has bought speared bass of the Indians, at one time eight barrels speared in one day, which he sent to Detroit market; but he says he did no more than the rich club men do right along, and he deprecates all such work, for he knows the fish supply is decreasing. This he ascribes to spearing and netting. He says there are no pound-nets near the St. Clair River now, but that these nets have cleaned out the fish very much. Once he could catch quantities of mascallonge, but now that fish is rarely seen, except now and then a small one taken in a net.

The end of the "Little Bassett" Channel, one of the winding, wandering, deep creeks or channels that go meandering through the wilderness of rice across the river, through the alleged preserves of the Canada Club, lies not far from Joe's house, across the channel. As we talked of this, I asked Joe where and at what time the best bass fishing was to be found on the Flats. He replied that the earliest fishing was usually on the Horseshoe Bay, about four miles distant from the "made land" where we were. Next came the "East Ground," about three miles distant, east of the piers, in Canada; then Johnson's Channel—or "The Johnson," as it is commonly called—about ten miles; the "Any Carty,"* distant about ten miles; Mitchell's Bay, twelve miles; the Big Bassett, two to four miles; the South Channels and Little Bassett, one to two miles; the last fishing of the season he was prone to expect on the lower end of the pier, and here some big bass were taken.

Back of Joe's house and the Delta Club is a stretch of marsh, over which it is a wide look to Hersen's island. In the shallow water back of this marsh the bass were spawning at that date (May 31). Soon they would begin to "run" and would commence biting.

Joe showed me the nests of two dusky ducks (black mallards), in the marsh just back of his boat house, not 100yds. away. He insists on an observance of the game laws among his guests, and has kept these ducks safe all the spring. This back marsh is good shooting ground.

The finest redhead decoys I ever saw in my live were here at Joe Bedore's. He explained to me that there was only one man in the country who could shape these decoys right. This man boards with Joe during the winter, and they put in the evenings working at the decoys, Joe doing the rough work and the artist furnishing the higher skill. The decoys were beauties. Joe explained to me that a redhead decoy, to be lifelike, must have the top of the head just about on a line with the top of the back, not higher. The back is humped up very high and sharp, and the curve of the back runs right down behind into the water, not showing any tail at all. I guess he's right about that. These decoys were nicely painted, the head being treated with a bronze powder which is simply a stroke of genius. The eyes are glass. All these decoys are hollow and flat-bottomed. Joe told me that no man could make wages by working at these decoys, and that the only way he got them was by the night work in winter time. There was an individuality about these birds which made me want one for a specimen, and Joe promised to finish one up and send it to me; but he never did. I could not buy any from him.

I would rather sit and talk to a man like old Joe Bedore than do anything else; but he, too, had to be left behind. I can't believe all the hard things they say about Joe's being in league with the half-breeds and the Indian fish-stealers, or about his shooting ducks before the season opens. It may be because everybody along the Flats tries to jump on Joe that I don't feel disposed to jump on him myself. I believe he is as good as the average up there. I would rather jump on the Canada Club, and I am due to do that pretty soon now. It reads English, and can take care of itself.

For a little distance above Joe Bedore's there is a crude beginning at land-making, and then the marsh sweeps up, with about the nearest approach to a natural river bank to be seen for a long way down. Beyond the marsh is the little cottage of Louis Gorman, and then the goodish small cottage of Dr. Woodward. Then there is some more marsh, and then the cabin of John Witmer. Right on the point is a neat cottage belonging to Mr. Cromharn. We have now come about to the end of our journey. We are directly at the great sweep of the ship channel known as the "Southeast Bend." Here, roughly speaking, ends the tongue of land to which our main interest is confined, and we shall not go any further up the river. To the left, above us, we can see the green of Hersen's island; to the right the timber of Walpole Island. There are hotels up there still further, and at Grande Pointe there are cottages up and perhaps a club or so going in. They are making a summer resort there. But we shall have to draw the line somewhere this side of Lake Superior. Across from the point where we now stand is the long pier and somber-colored house of the last club we shall visit up this way. The course of the noted Big Bassett Channel is visible from where we stand, and so we know that we have come to the

CANADIAN CLUB.

It may have been gathered by remarks made in earlier articles, that the "Canadian Club" is not popular on the Flats. There may, or may not, be a reason for that. I confess that I have no business in "writing up" the Canadian Club on such information as I secured personally, for that was very little. It is not journalistic fairness to hear only one side of the case, and although the best effort was made to secure both sides of the evidence, this at the time could not be done. There exists the danger of hurting the feelings, or the *amour propre*, of some member of the Canadian Club who may, for all we know, be the very best of fellows, and fully disposed to do only what is right and sportsmanlike. We shall go far wrong, however, if we confine the story to what was actually seen, and credit assertions simply as assertions and not as facts.

It was growing late when Mr. Boydell's steam yacht dropped me at the dock of the Canadian Club, and as he must soon go back down the river, my stay at this club was necessarily short. I hurried over the long walk from the pier to the house, which I could see was a big frame house, dark-colored, roomy, but plain and unpretentious. Even the dogs here were inhospitable, and it was only due to the aid of a small boy that my legs were preserved from contact with a big retriever that ought to have known a great deal better. At the house I learned that Mr. Muir, the steward, or "caretaker," as he is there called, had just left on the boat. At the house there were two or three women, among them Mr. Muir's daughter and his wife, a typical Scotch woman if I know what that is. I tried to engage Mrs. Muir in conversation, seeking to get a few little points about the club which would help me in the work, but found myself altogether unable to get along at it. Mrs. Muir may have been unable to understand my language, or she may have been startled by the hurry I was evidently in—a hurry which will be understood by any visitor who makes the journey of the whole channel in one day, stopping at all these points of interest the necessary length of time. Or, upon the other hand, as seems more probable, the good lady may have understood more than she seemed to, and have remained discreetly mute on points whereon she could not consult the gudeman of the place. Be that as it may, and be the right to knock uninvited at the door of a sportsman's club as it may, all the answers I could obtain were "I dinna unnerstand," "I canna tell," and "Mr. Muir is awa'." I must compliment the gentlemen of the Canada Club upon the discretion of those left in charge. Mrs. Muir, poor lady, was obviously suspicious of the newspaper man, and perhaps thought she was receiving a visit from an insurance man, tax collector, excise man, Government detective or something of the sort; but after all, I must confess that since I tried my best to explain the object of the visit, and since the reception here was so very different from what it had been at all the other clubs, the feeling carried away was one of a rebuff, and so, with very little reason for it, I began to wonder if there was not a disposition in this select organization to keep quite to itself and to repel questions whose answers might bring out facts that it didn't care to have known. This conclusion, like most others merely jumped at, is probably wrong, but it was at that time so strong within me that I made no further effort to get any information about the Canada Club. I do not know who are the gentlemen composing it—I hope this will offend none of them—and I do not know the officers. There are only 24 members, and they must represent a good deal of wealth or influence. Mr. James Muir is the resident, or "caretaker." His address is Port Lambton, Ont.

Of all the clubs on the Flats the Canada Club is by far the best situated and most fortunate. It is right upon the Big Bassett Channel, and directly accessible therefrom are the best fishing and shooting grounds of the region. As I understand it, this is chiefly a shooting club. The preserves are the best anywhere in that country. From the looks of the club house I should think this was the sporting ground of a few hard shooters, who come out not so much for summer pleasuring as for duck hunting, and care more for comfort than for style. The Canada Club house is out of the world of the other clubs, its situation being very remote, away up on the point of the big bend.

There must be a good many thousand acres of marsh in the Canada Club preserves. No one knows just how much they claim, or rather have a right to claim, for they are alleged to claim all out-doors, like our friend Mr. McQueen. Their lease is from the Walpole Indians. Whether these Indians owned this marsh in their reservation, or whether the Canada Club took the comfortable ground that the marsh was all a part of the island which they did own, is more than the writer knows or more than any one on the Flats seems to know. You will hear plenty of denials of the validity of the lease, but as to that it is impossible to say anything here. I will ask Queen Victoria about this the next time I see her and then report, unless she happens to be as taciturn as Mrs. Muir, good lady.

It has been stated earlier that much of the best bass fishing is found over on the Canada side, and on these same preserves. These channels being navigable, cannot be preserved, and the complaints of the Canada Club against the anglers cannot be sustained. It is an open question at law whether the Canada Club could convict or get damages against any one who should shoot ducks in season on this "preserve." The club would have to prove its legal and definite boundaries before it could sue in trespass. But no such thought as this obtains among the better sentiment of the flats. Perfect comity exists, and by club courtesy the limits of this "preserve," which hedge in the best shooting and some of the fishing, are respected perfectly. Unless memory is at fault, there has been something said in these columns about this same controversy. My own facts are so limited that it would be a pleasure to see others take the question up and get at the full actual facts in the case.

*By some mysterious twist of comparative philology abbreviated from "Chenel Ecarté."

THE CANADA CLUB.

Editor Forest and Stream:

In the articles upon the clubs of the St. Clair Flats which have appeared in the last five numbers of your valuable paper, there have been interlarded with much that is of interest to sportsmen in general many statements which are entirely misleading to your readers, and very unfair to the Canada Club with its "alleged preserves."

Perhaps your writer is not aware that the "alleged preserves" are held by the Canada Club (a corporation organized and existing under the laws or Canada, and representing an investment of some $40,000) directly from the Indian Department of the Canadian Government, for which it pays a large annual rental. The means used by the club to preserve the game are mostly those employed by similar organizations: First, the Canada Club does not open until the 15th of October, thereby putting a closer restriction on the shooting season than the law provides. Second, during the season no member is allowed to shoot before 8 A. M., nor after sundown, thereby giving the ducks ample time to rest and feed in the marsh. Third, much food which tends to make the marsh a natural feeding ground for ducks is put in at no little expense to the club.

No doubt your writer represents the feelings of the hotel keepers and those who hunt for the market, but we do not believe that he represents the feelings of any true sportsman, any one of whom must realize that if it were not for the means which the club has used there would not only not be fair shooting in all parts of the Flats, as there is now, but no shooting on any part of the Flats.

JAS. H. MCMILLAN,
GEO. M. HENDRIE,
DETROIT, Mich., Oct. 2. Members of Canada Club.

I am in receipt of the following letter, relative to the club articles that have been running:

"DETROIT, Oct. 2.—Your articles on Clubs of St. Clair Flats that have appeared in the last five numbers of the FOREST AND STREAM, show a marked dislike to the Canada Club. Now your information has either been gathered from some very prejudiced party or else you have never gone into the matter, and just written down the common talk of the market-hunters and others that reside along the river. In the Canada Club marsh, more has been done to preserve ducks on the great St. Clair Flats than all other clubs put together. As regards our 'supposed' lease, the same is held from the Indian Department of the Canadian Government, for which we pay a large annual rental, and at present the club stands as an investment of some $40,000. You call the Canada Club jealous of its fishing rights. Now, this is not so; it is true we protect the best shooting on the marsh against American shooters, and mean to do so to the end of the chapter. If the American marsh was not drummed to death with shooting, in and out of season, daylight and dark, there would be lots of ducks there also, but under the present circumstances I am afraid that our friends across the river must forever 'look upon the flaunting rice of the grinding monopoly.' Every sportsman loves fair play, and this you have not accorded the Canadian Club. Yours truly, GEO. M. HENDRIE, Member of the Canada Club."

I am very much obliged indeed to Mr. Hendrie for the above, for it carries additional data for a work where the widest possible information was the one thing wanted. It was one of the regrets of the trip to the Flats that so little could be definitely learned of the Canada Club. To the newsgatherer it was simply one of the clubs of the Flats, nothing more, nothing less, and its news was wanted just as much, not any more. It is of course not the case at all that I have shown a "marked dislike" for the Canada Club. It is the case that what information I got was necessarily obtained almost altogether outside of the Canada Club, but it hardly seems to me that the gentlemanly reserve of the American Club members, and their courteous treatment of the boundary lines of the Canada Club, imply any undue prejudice on their part. It certainly is not the case that all the "common talk" I heard, of market-hunters and others—principally others; I believe I did not talk with any market-hunter at all—was just written down, although I beg Mr. Hendrie's attention to the fact that what it common talk is painfully liable to be common truth. I am sure FOREST AND STREAM will be very glad to publish the fact that the Canada Club is of more worth in game protection than all the other clubs. The information about the lease is also welcome, though not conclusive as to the validity of the lease. As to the "large annual rental," Mr. Hendrie will oblige the writer and hundreds of club members who read this paper, if he will state accurately just what that rental is. The American club men say it is too insignificantly small. How much is it, really?

I must confess I do not see how the Canada Club can be so very jealous of its fishing rights, because the best fishing as I understand it, is in navigable channels; but in the statement that the Canada Club means to protect its shooting against American shooters "to the end of the chapter," we get directly at what is my estimate of the Canada Club, and which now seems to me just, although it may not be just, for I have not all the facts. I think the Canada Club has got a good thing and wants every bit of it. I think the Canada Club is pretty fond of the Canada Club. No one blames it for this. The big American clubs respect its lines and its lease perfectly, although the one and the other are not, so far as I could learn, definite or proved. In view of all this feeling that exists on the Flats, I should think it would be well for the Canada Club to define its lines and publish them, and to define its lease and publish that, too. That is just the sort of news that this paper would like to have, I feel sure. It is something that no paper, so far as I know, has ever been able to get. Such publication would stop much "common talk" and much ill-feeling. Let us have it. We can then see whether or not there is any "pull," any "ring," and "standing in," any consideration which practically amounts only to hiring of some Indians for pushers, yet smuggles in for a select few some very valuable privileges. These are said to be facts. I do not know them to be facts. If they are not, it would be a pleasure to show that they are not. I cannot do this without the assistance of the Canada Club. Let us have that assistance, and let us get to the bottom of the matter.

At the hands of the servants of the Canada Club, as is said later in the course of remarks, which I fear will yet more displease Mr. Hendrie—the writer received treatment which any unreasonable man would in America have called inhospitable in the extreme, if he did not call it worse. This was not the case among the other clubs. There I got help in the hunt for news. From the Canada Club I have had no help, but this one "kick"—as newspaper men euphoniously term that article—from Mr. Hendrie. I am thankful for what news the letter holds, and any future letters on this topic, if gentlemanly in their nature, shall have as early publication as I can secure for them. If there is anything on earth that FOREST AND STREAM wants I am sure it is both sides of any case, for no fairer-minded paper is published. After this I do not think the Canada Club should complain of unfair treatment. The articles constituting this series were all written long before the receipt of the above letter. I do not see any reason for changing any of those papers which have not yet been published. I certainly should not be moved thereto by the assertion that fair play has not been shown to the Canada Club. It is not less than misfortune when one wishes to show absolute fair play and is accused of not doing so. But the cry of unfair play too often arises when our neighbor's estimate of us is not that which we put upon ourselves. Will the Canada Club, seriously, quietly, with no hard words, but only an earnest desire to get at the full facts, please tell us more about itself and so enable one to spread a better estimate?

E. HOUGH.

Fisheulture.

U. S. FISH COMMISSION WORK.—Dr. Hessel, superintendent of the U. S. Fish Commission carp ponds, Washington, D. C., estimates the number of carp now in the pond to be upward of 400,000. Owing to the cold weather of last May the season is at least a month backward, and the ponds are not to be drawn off until about Nov. 1, instead of early October, the usual time. The month of May, the Doctor says, is the most important one of the year to warm-water fishes, and a low temperature of the water then makes a very late season. Besides the carp there will be about 6,000 tench and 30,000 gold fish for distribution. The ponds are in good condition, and have a good supply of stock fish for breeders in them. Since the flood of 1889 there has been little trouble from snakes. In one year, previous to 1889, 1,900 snakes were killed at the ponds with a 22-cal. parlor rifle.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

The Kennel.

FIXTURES.

DOG SHOWS.

Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury Conn. B. C. Lynes, Secretary.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 13 to 17.—Third Annual Dog Show of the South Carolina Poultry and Pet Stock Association, at Charleston, S. C. Benj. McInness, Jr., Secretary.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1658.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.

March 3 to 6.—Second Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderffer, Secretary.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

FIELD TRIALS.

November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 3.—Fourth Annual Field Trials of the Indiana Kennel Club, at Carlisle, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 3.—Second Annual Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Toronto, Ont., Secretary.

Nov. 4 to 8.—First Beagle Field Trials of the National Beagle Club, at Hyannis, Mass. F. W. Chapman, Secretary, 364 Washington street, Boston, Mass.

Nov. 7.—Ninth Annual Field Trials of the Robins Island Club, W. L. Wellington, Secretary, Brooklyn, N. Y.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York. Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

COURSING.

Oct. 21 to 25.—Fifth Annual Meet of the American Coursing Club, at Great Bend, Kan. I. D. Brougher, Secretary.

A RUN TO NORTHVALE, N. J.

"DR. GLOVER in?" I inquire of the suave clerk in the pleasant outer office at 1293 Broadway.

"Did you wish to consult him professionally, sir?" is the reply, as he bars ingress to the Doctor's private sanctum against the dreaded intrusion of the possible book agent or drummer.

"No, personally. Take in my card," and in a moment I am shaking hands with the big "American Sewell."

"There's a friend of yours in there," says the Doctor presently.

"Indeed," I reply, "and who may that be?" Another pleasure is in store, for "Billy" Tallman comes out from the window recess, and greetings passed we sit down and dog, dog, dog is immediately the burden of our song.

Every one in dogdom knows of "Doc" Glover and "Billy" Tallman, even if he has not the pleasure of their personal acquaintance.

To give the professional the precedence, Dr. H. Clay Glover is a self-made man, and one of those successful self-made men whose success is worthy of exciting envy. His practice is by far the largest of any of the kind in America, dogs being his specialty, and the esteem he is held in is evidenced by the fact that I saw in his basket the cards of several medical men who had consulted him professionally. The sale of his remedies is even more lucrative, I fancy, than the other branch of business. I think it is the duty of every one to give his brethren of the fancy any "straight tips" that may possibly alleviate the sufferings of some poor, sick dog, therefore I say use Glover's remedies if you need them. I have tried them all and they are good with a big G. The Doctor told me that when he went up for his V. S. degree the faculty thought him very "unprofessional" and mean, because he would not disclose his formulas. But, as he remarked in justification, "I don't pose as a benefactor of the race. My object in life is to benefit myself, and dollars fix that better than anything else I know. So I didn't give every chump student a chance to cut my throat."

For the benefit of those who do not know him Dr. Glover is a man of about forty-five, above 6ft. in height and a very large man altogether. He is very bald with a heavy moustache and a decided inclination in the direction of "dress." Sitting in his pleasant and handsomely furnished office, the blankness of the walls relieved by portraits of many a canine celebrity, he wears an extremely natty velvet and silk lounging coat, while an immaculate top hat and frock coat can be seen in a recess. Yes, "Doc" Glover is decidedly a "dandy."

"Billy" Tallman is the Doctor's autithesis; short, small, dark and wiry, he carries the weight of thirty-five years lightly. He is a native of "little Rhody," and there first learnt the rudiments of dog handling and training, which have since stood him in such good stead. I don't think there can be much doubt but that "Billy" is the most successful field trial handler in America. True, Avent has won more stakes, but they were taken with dogs that he had handled and trained from puppyhood, while Tallman's successes were generally made with aged dogs, often ones that had never been broken. As an evidence of his ability he took hold of Mr. Mason's pointer, the great and only champion Beaufort, when the dog was, I think, about six years old and had never really been trained, but hacked around from one bench show to another or penned in a city yard. Yet in a few months he landed him into third place at the Eastern field trials. He tells me that Beaufort had more natural ability than any pointer he ever handled. Tallman won the first All-aged Eastern Field Trials Club stake with his old Jenny, a native bitch; and the *Turf, Field and Farm's* cup, won on that occasion, is naturally one of his most treasured relics.

The great setter Grousedale's career is closely identified with Billy Tallman's name, for he handled him in all his victories and defeats. This grand old dog he considers the best he ever handled. Foreman beat him in range and style, but old "Grouse" was fast enough and stylish enough to suit most men, while his "bird sense" and reliability were phenomenal. The great $1,000 Lit-Grousedale race is still a sore spot with Billy. The dog outclassed the bitch in his opinion pretty well all around, but on the day of the race was so weak from dysentery that he could scarcely run. Lit won, but Grouse fit and well it would have been the other way.

Old Foreman was Tallman's particular pet, and well worthy was he of esteem. Where can we find such another, in sawdust ring and field alike? In '86 he took the field with probably the most valuable string ever handled by one man. There were the English setters champion Foreman and champion Plantagenet, the great and only Red, champion Elcho, Jr., and the pointers champion Beaufort and Bradford, his brother.

But to leave biographies and reminiscences.

"I have some pups I'd like you to see," quoth Billy, after some hour's conversation; "they're waggle-tails, and though some of the boys will laugh at them, they just fill me chock full with pleasure. They are descended from old Jenny, and, though they look mighty funny, can everlastingly go, and don't you make any mistake about that."

"I'd like to see them awfully. Where do you keep them?"

"Down at Spratts Kennels. What have you to do tomorrow?"

"Nothing. Have got to kill time for about two months, and I'd like nothing better than a run down with you."

"Well, my setter bitch Galatea is down there with a litter of Roger puppies, and Mr. Gardner wants to have a look at them. I'll wire him now, to see if he can go to-morrow. Anyway, what do you say to our meeting at the Central Depot at 9:30 in the morning and taking a run down?"

"Agreed."

In due course I met Mr. Tallman. He was accompanied by Mr. L. Gardner, owner of the English setter celebrity, Roger, and the heavy-weight pointer Duke of Vernon, who is just about the best of his breed in the country now. Mr. Gardner was anxious to see Galatea's Roger puppies and select one of them to keep, Taking the ferry we soon arrived at Jersey City, just in time to catch a train for Northvale, N. J., where are situated the Spratts Patent (America) Limited Kennels.

No dog man need be told that time did not hang heavily on the train in company with two such staunch doggy men as Billy Tallman and the owner of Roger. As we passed the Jersey meadows a longing came upon me for a few days' snipe shooting over them behind the Clumbers; but no such bliss was in store. What an ideal snipe ground they make though.

Field trials, pointers and setters were the all engrossing topic of conversation, spaniels being deemed beneath the notice of these ranging magnets. "Billy" is about as poor a hand at writing as I know of, but start him on field trials and reminiscences and he'll talk for ever, and interestingly, too! I think one can get more downright information on his hobby from Tallman in a given time than from any man I know. Every man and dog ever known in connection with trials he has at his fingers' ends, and his sharp, crisp sentences dispense the information without circumlocution, while he at the same time, by pantomime, shows how Grousedale collared this bird or Roderigo nailed that.

Northvale station does not impress one with the importance of the place, and, indeed, about all of Northvale I could see was the station. Turning up a pretty country road to the left, Tallman points out Spratts' Kennels. He selected the location, and displayed pardonable pride at his happy choice.

The dwelling house is situated at the brow of a hill, well sheltered from winter's winds by a fine clump of cedars. It is a large, comfortable and commodious residence, just the sort of a place one likes to spend the summer months in. Behind, on the slope of the hill, are the kennel buildings and yards, the former good-sized, comfortable and dry, though scarcely light enough for my fancy. Another thing that I thought could be improved was the fence around the yards. This is made of 3in. scantling only about an inch apart, and seriously obstructs a view of the dogs. Wire netting would have been cheaper, neater and altogether better. The yards stand in a nice orchard, and behind it all is a paddock for the cows, with the inevitable railway in the rear. Altogether it is just about as nice a situation as could be wished for.

Brett, the kennelman, comes to the gate to greet us, surrounded by a motley and varied group of privileged dogs.

Merlin, a very large and nice mastiff, was the giant of the party. While not quite up to the present fancy in heads, his great size, type and common sense head took my fancy greatly. He would please Mr. Wade. I might mention here that I took no notes of my trip or the dogs, for the very good reason that I couldn't see to write, and consequently am obliged to draw entirely upon memory for this account.

A great Dane, blue and white, came next in size. This is a breed I do not fancy, consequently I did not observe the dog closely, except to notice that he was about the stiffest-legged customer I ever came upon. His legs moved like stilts and he didn't appear to have any joints. Brett told me that both he and Merlin were in a dreadful state when he took charge, each being one mass of putrid, running sores. Merlin has some terrible scars to show how he suffered, poor fellow.

Dr. Glover's field trial winning Llewellyn setter, Sam C., by King Noble, was in Brett's following. A fine upstanding dog and one that can everlastingly go. Another was a little lemon and white pointer dog, one year old, named Grouse. This dog was the biggest sort of a surprise. With head hunched below his shoulders, nearly on the ground, and tail between his legs he could put rings around the crack Sam C. and Tallman's by no means slow setter bitch Galatea. We could hardly believe our eyes. None of us, not even Brett, knew to whom he belonged, but "Billy" at once broke out that in two months he could come pleasantly near winning the Eastern Derby with the little runt, and after this evidence of his speed no one felt inclined to contradict him. Had his owner been present then that little pointer would have sold for more money than, judging by looks, he was worth. He was an express train for speed.

Galatea came barking and bounding from her puppies in the orchard to the whistle of her master. Though not a show bitch, she is a mighty nice sort and well bred, too. Just the sort of dog to shoot over, steady, fast and kind. We at once adjourned to the orchard to inspect the puppies that claim Roger for their sire. Mighty nice little beggars these, and as usual, when I see nice pups I at once announce my intention of having one, but changed my mind on reflecting on the score of dogs I already paid feed bills for. They were quartered in a kennel in the orchard and looked healthy as clams, despite a noticeable dampness in their bed.

While their two proprietors were debating on the momentous question as to which to keep, Brett and I began talking Clumber. I found that his first experience with dogs was in the Duke of Portland's kennels at Welbeck Abbey, where he had charge of his Grace's celebrated kennel of Clumbers. The ducal breed holds a warm spot in his heart, and needless to say, such a lover of "the breed of breeds" as I am, did not require much encouragement to launch into the ever-interesting topic. Brett did a lot of field trial handling in England, and is the only man in this country who has won the English K. C.'s Derby cup. From the photo he showed me of it, the trophy is a mighty handsome piece of plate.

He also showed me a photo of a group of his old Clumber charges, and I forthwith broke that commandment (I forget the number) which talks about one's neighbor's goods, their mis-appropriation, etc. The two setter cranks now turned up and we crossed the road together to see the dogs move, Sam C., Galatea and Grouse, the little pointer aforementioned. We tried them on, but Merlin, thinking Sam was putting on a little too much "side," undertook to bring him to a proper estimation of his physical standing in the community. As the wizard's namesake would have made four Sams, the blue-blooded scion of Llewellyn had to play second fiddle until rescued, when he sat and grinned a comprehensive, soul-satisfying grin as the John L. Sullivan in dog flesh yowled and writhed under Brett's well-plied lash.

The dogs—Grouse I think it was—soon pinned a quail by the fence; so we let them stand to cool off and commune with Nature on their points, while we proceeded to inspect the kennels and their inmates, especially the "waggle-tails."

The main building is of good size, with stalls for about thirty dogs. As boarders come in additional kenneling will be built. In the main yard there were about a dozen dogs, and among them I noticed champion Madge and Countess Flo, Dr. Myer's Gordon bitches. This pair, though, are a long way off comparing with the Doctor's other brace, champions Beaumont and Bellmont. Madge is hardly one's idea of a champion Gordon setter, being very small and light all through. Countess Flo is a much better bitch, and, though light, is built on racing lines.

It was now nearly train time, so, as the "waggle-tails" had still to be inspected, I did not have an opportunity to more than glance at the other inmates of the yard. Among them I noticed a Scotch and a bull-terrier, a bulldog and a couple or two of pointer and setters, all living at peace with one another.

We now adjourned to the barn where the puppies were housed, and on the way Tallman learned, to his great regret, that the most treasured of all the "waggles" had gone where the good little dogs go. Why should it always be thusly in dogs?

Well, they were funny-looking dogs, and if they filled Billy full of pleasure, they certainly filled Mr. Gardner and I chock full of laughter. "Laugh away," quoth Billy; "these aren't setters, they're just waggle-tails, and the living picture of old Jenny, too."

Such bent hindquarters you never saw. Reminded one of a kangaroo; but on hearing this their owner said they were just kangaroos to go, and we restrained our killing fund of wit for some other more auspicious occasion when we weren't quite so much at Billy's mercy.

Outside their hindlegs they were mighty likely-looking pups; nice intelligent heads, good bodies and forelegs, black, tan and white in color. Just the sort of dogs that look as if you could go right out and shoot birds over them without any training whatever. This was what Tallman said they would do. DOGWHIP.

GORDON SETTER SPECIAL STAKE.

Editor Forest and Stream:

At the request of several Gordon setter men, the Central Field Trial Club will run a special stake for the Gordon or black and tan setter. The club gives $100. Dr. J. H. Meyer and some other gentlemen are endeavoring to raise $250 additional. Mr. Blossom informs us that they have about half of this amount already subscribed. Entries close Nov. 1, 1890. All entries and communications should be addressed to Dr. J. H. Meyer, 159 West Thirty-fourth street, New York.

CENTRAL FIELD TRIAL CLUB,
C. H. ODELL, Sec'y and Treas.

NEW YORK, Oct. 4.

Editor Forest and Stream:

The Central Field Trial Club has extended the date for closing the entries for their $100 special stakes for Gordon setters to Nov. 1; $10 to forfeit, $20 more to fill; races to take place at Lexington, N. C., in December; open to any Gordon in the land. Mr. H. F. Smith, of Philadelphia, the owner of the well-known Gordon setters champion Roxie, King Item and Countess Roxie, has subscribed $25 toward the private fund of $150, by which it is intended to raise the stakes to $250, leaving only $75 to complete the sum wanted. This total stake of $250 will be awarded as follows: $125 to winner of first, $75 to second and $50 to third. Five entries have been made already, and more will doubtless come in when the terms are generally known. This should certainly stimulate owners of Gorden setters to make the trials a success. There must be in this country many Gordon setters fit to run in any company, and it is hoped that Gordon owners will embrace this fine opportunity to prove it. We can't do everything this year; but continued efforts to bring out into public notice the many good field Gordons known to exist, will soon furnish a list of Gordons at field trials worthy to compete with any breed. Enter a dog, if you cannot subscribe; but do both if possible. Subscriptions and entries will be acknowledged promptly, and entry blanks furnished by me. JOHN H. MEYER.

159 WEST 34TH STREET, New York, Oct. 6.

DOG TALK.

AN enthusiastic meeting of the National Beagle Club was held at the Quincy House, Boston, Saturday evening, Oct. 4. The president, Mr. O. W. Brooking, opened the meeting. After the regular course of formalities were gone through with, and new members were elected; the coming field trial was discussed pro and con. Some twenty odd entries are already assured, and between now and the 10th I certainly expect to see every class filled. Every detail has been attended to, and it certainly looks to the writer that the trial will be a perfect success. Any one that cannot attend personally desiring to send a dog, may secure a handler by addressing Mr. A. Russell Crowell, Box 13, Lynn, Mass., steward of the trial. Entries close positively on the 10th, all entries mailed before 12 P. M. of that date will be accepted. The question of framing a standard was laid on the table. The nomination of officers for the ensuing year then followed. The nomination will be mailed to every member. Mr. H. H. Brown was expelled from the club by an unaminous vote.

I was very much astonished to hear that the National Beagle Club were refused admission to the A. K. C. at their last meeting. The only reason given by Mr. Vredenburgh in his letter was that it was antagonistic to the American Beagle Club. Where on earth were Messrs. Watson, Malcolm, Leslie and others that are well aware of the standing of the two clubs? The National is numerically and financially the stronger club of the two; they have done more to advance the interests of beagle breeders in 6 months than the American has in four years. They are already giving cash specials at the leading shows, and have every prospect of holding a successful field trial. On the same ground the A. K. C. can expel the Mass. K. C. because it is in the same State as the New England, or for that matter the Westminster K. C. is just as antagonistic to the New England K. C. as the National Beagle Club is to the American. At each meeting new members are elected from all over the country, and I fail to see what excuse the A. K. C. have for "sitting upon" them and damaging the interests of the beagle.

NAMQUOIT.

THE SPRING CIRCUIT.—Ottawa, Canada, Oct. 4.—*Editor Forest and Stream:* Now that the autumn shows are practically over, it is time to turn our thoughts to the spring circuit. My object in writing is to suggest to show managers the advisability of running their dates close together, that is if there are eight shows, to run them into two months, instead of leaving several weeks without a fixture of any kind. The benefit to both exhibitors and clubs will be obvious. The former, instead of having to keep their dogs in show condition from February to June, can have the whole circuit completed and the dogs at home again in two months' time if the dates are conveniently set. There will be no board bills to pay between shows. This is quite a consideration to those of us who exhibit from a distance and, mayhap, do not see our dogs from when they leave home to go to New York in February until summer is pretty well under way. The shows would get better entries, as once "on the go," owners would think it as well to send dogs the round, when shows continue week after week. Only Lynn, Baltimore and New York have claimed dates so far, and there is plenty of time for other committees to fit in their dates.—F. H. F. MERCER.

SPANIEL JUDGING AT TORONTO.

Editor Forest and Stream:

The Toronto dog show has come and gone, and proved even a greater success than last year's show, the receipts up to Thursday amounting to $3,350.10 at the door. The building could hardly be improved upon either for benching, ring or comfort to the spectators. The show of cocker spaniels was immense, there being seventy-six, and not a bad one among the lot. But I must say that I was greatly puzzled as to the awards in the different classes. The judge followed no type, but gave the awards to every style and type. Had all the dogs' numbers been taken and shuffled in a hat and their handlers taken a draw for the prizes and cards, the winners could hardly have turned out of more different types than they did. One first prize winner had a defective muzzle, it being pointed and lacking in depth, flat head, with small, vine-shaped ears, set on high and almost devoid of feather. Another first prize winner, which having a good muzzle, head and ears, had crooked forelegs, very little feather on legs, with a tail quite devoid of feather, and carried way up over the back, on breast it had a very large patch of white, altogether too much. Another first prize winner had a small head and dished face, pointed muzzle, inclining to the greyhound type. Another prize winner had a coarse skull, large heavy head, underhung muzzle, lower incisors projecting nearly half an inch. Another prize winner had a wretched wooly coat, and was quite devoid of feather. The winner in the novice class was a large cocker, well up to weight, and being a young dog will some day find himself in the field spaniel class. He is as good a cocker as there was in the show with one exception, that his rather long tail is devoid of feather, a big fault in a field or cocker spaniel. While all the prize winners, and I might say all the cockers in the show, were low set, some of the prize winners were long in length, while others were short. One first prize black dog has a bitch's head, and appeared to be an extremely timid animal. Another prize winner has a cataract in one eye and is quite blind in that eye. The cocker taking special for best cocker in show is not of correct cocker type. The judge favored the small type; in fact it is hard to believe that three of the prize winners are over 18lbs., useless little things for any purpose but ladies' pets.

With few exceptions I found among the rejected or unnoticed ones, dogs with square muzzles, good heads, well-set lobular ears, good coats, with lots of feather on their legs, well-feathered tails and straight legs, with lots of bone. These dogs were also the healthiest, without any suspicion of skin disease, as was the case with some of the winners. The following is very hard to understand; it has puzzled me and possibly others. In the year 1889 at Toronto we find, first, Obo, Jr.; second, Black Graf; third, Black Duke; vhc., Pedro; Bob Obo not noticed. In 1890 at Kingston we find, first, King of Obos; second, Obo, Jr.; equal third, Bob Obo and Dono. At Toronto in 1890, open class blacks, we find first, Black Duke; second, King of Obos; third, Dono; vhc., Pedro; hc., Bob Obo, with Obo, Jr., and Black Graf not noticed. Also in same class Brock and Kildare, first and third this year at Detroit, not noticed.

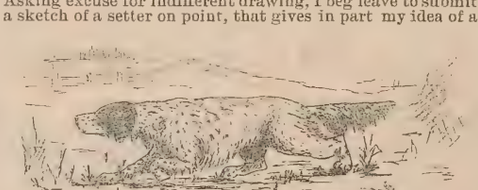
In the year 1887 at Detroit, Obo Jr. was first, beating Master Shina and Dixie, the second and third prize winners at New York that year. What is one to think of dog shows after such work? Perhaps "Mephisto" can cast some light on the matter, I wonder if he was at the Toronto show? If he was he must still be growing fatter.

Field spaniels, open class for dogs were a curious lot. Beau, first, I would like to weigh, his weight must be 60 or 70lbs., that alone ought to have kept him out of the blue ribbon. Black Knight, hc., had a white front foot, Napoleon had all the hair and feather completely off one ear, Black Diamond, the best of the lot, had not a symptom of feather on legs or tail, and was bad with skin disease. In looks he was the worker all over, and would be my choice if I wanted a spaniel for the field, of course supposing him to be trained. The judge's decisions in the open class for black cocker dogs gave the greatest dissatisfaction, I was informed that some of the handlers used pretty strong language to his lordship. There are numbers of dog lovers that look upon Mr. Chas. H. Mason as one of the best judges of dogs we have in America. What do we learn from his criticism of the cocker spaniel in his work "Our Prize Dogs"? That skull should be well formed, with clean cheeks, and median line well defined. Muzzle should be square and deep, with no projection of the lower incisors. Eyes corresponding as to color with coat (no blind eyes). Ears lobular, set on low, and well clothed with long hair. Neck, chest, back, loins and hindquarters very strong and compact. Forelegs straight, and heavy in bone. Feet thick through the pads, neither turning in or out. Coat flat and smooth. Stern well set, with a downward carriage. Chest, legs and tail well feathered. Hocks well bent, and straight. (There was one prize winner at Toronto that if used much in the field, would cap her hocks from their coming together when in motion.) How many of the prize winners at Toronto resemble Obo II., the dog selected by Mr. Mason for illustration in "Our Prize Dogs"? The dogs most resembling this dog were Obo Jr. and Kildare, not noticed.

I wonder why so many of the bench show committees insist upon only making one class for English and American foxhounds; they might just as well make one class for bull-dogs and bull-terriers, for there is just as much resemblance in the one as the other. I only had but a short time to spend at the show as I was unable to get there until Thursday. I spent a most amusing hour listening to the comments of the different people in the audience, as they stopped a few minutes before the foxhounds. Had the decision of the awards been left to them the American foxhound would have won first by long odds. One elderly lady, accompanied by a very portly old gentleman, waxed quite wrathy in her indignation, and I heard her say to the old gentleman, "The idea! Such lovely ears, and such a beautiful head, and such soft eyes, my! I would just like to give that judge a piece of my mind." Just as I was leaving three young men came up to see the foxhounds, and I heard one say that he did not care what any one said, that that hound, pointing to the American one, was the best hound in the show. Of course he was wrong, as the English hound that got first was a good one, as was also the bitches, although one of the bitches had no brush. The American hound is a good one, with good coat and brush, splendid head and ears, good bone and straight legs, but having the usual fault of all American foxhounds, being too much bent in the pastern joints. The English hound dog had immense bone and muscle. The English foxhound may be good to hunt in a pack, in open ground and open coveys, but is nowhere in this country with our foxhound after a deer or hare.

The owner of the cocker Kildare had a challenge up for a field trial with dead birds, retrieving from water to count. I felt sorry that out of 75 cockers there was not one that took the challenge up. One young man spoke to me and said that there ought to be a class for working cockers, as his dog was present at the show and was great on woodcock and snipe. I mentioned to him that a gentleman had a challenge tacked up over his dog, and I thought he meant business, as he also had birds (a brace of woodcock) hung up in his dog's stall. He went over where I directed him and read the challenge, with points for contest, and remarked that the woodcock were a fine pair of birds, marched off and I saw him no more. I quite agree with the young man, that every bench show ought to have a class for working cockers. A field trial for these little dogs in covert for live birds would be useless and a farce, as in most coverts they cannot be seen 10yds., and it would be quite impossible to judge of their merits. The right place for such a trial is the show grounds. After trials in the open as to retrieving dead birds and trailing by scent, a covert could be improvised with a few dozen stick with straw tied about them, and stuck perpendicular in the ground. The pond at the fountain in Toronto would be just the thing for the water trial. One would suppose that a trial such as the above would draw well, and be very interesting and attractive to all lovers of the little cocker.

AMATEUR.



STYLE AND OTHER FIELD POINTS.

Editor Forest and Stream:

With your consent I here ask the opinions of your readers upon certain matters concerning field dogs, pointers and setters, and I am quite sure that I am not alone in feeling an interest in the telling, discussing, or questioning of ideas thereupon. In the first place, what is style? I am not acquainted with field trials nor the winners of such, but yet I have a sort of a notion that I have an idea concerning style. I have seen many of Mr. Tracy's paintings, a number of Mr. Swords', a great many fine engravings and drawings also, of dogs in the field, and I have seen quite a number of finely bred and finely trained dogs at work, and have owned a few myself. As I generally carry a gun I may be permitted to say that with extremely few exceptions none of these seem to me to come up to the standard. Style is lots. A lover of the beautiful he must be to appreciate it, and the more ardent the lover the keener the appreciation. No dog of mine should be devoid of a certain style of motion and position when on point; I value it more highly than perfect staunchness; yet I believe that a really stylish dog is a rare dog.

As far as pictures go, as much as I have seen, Mr. Tracy's painting of the famous Roderigo (with Paul Gladstone) comes the nearest to a fine position on point. Now, my idea of what style should be comes from the fact that I once owned a dog. And now I hear the gentle reader commence to climb on to me in the usual way. "Oh, yes, he had a dog that was stylish; perfection! grand! went ahead of anything he ever saw, and all that." Well then the gentle reader has hit it. I won't disclaim. That's the very wording to suit the case, and if he will know still more he will open your book, Mr. Editor, "Training vs. Breaking" and turn to the sketch of old dog Trim and then to the description of that noble animal when on point, and the reader may know just what my dog was as to style, in better wording than I could put it. My dog was a Laverack setter, son of the famous Thunder, a fine nosed, fine ranging, intelligent fellow, staunch to a fault, unutterably handsome in coat and figure, clear black and white and belton, and so wonderfully graceful in the field, so perfect in motion and the power to get himself in shape when on point, that—well I never have nor never expect to see his equal. But he was spoiled on dead birds; he wouldn't retrieve nor point dead, nor notice aught but life and activity, so he lacked perfection after all, poor fellow. But had I the touch of the fabled Midas, I would have his memory perpetuated in solid gold, carved as he stood on point, though even then I could not see the breezy wave of his long coat, nor the glance of his deep brown eyes.

But I have roaded long enough and must locate, and come to the point in saying that I do not like the position given a dog by his simply poking out his head, stiffening his tail and perhaps raising one foot. A handsome dog looks gamy even then, even at backing with head held high, yet the transition between that and the real gamy point is a broad one, though seemingly slight in wording. I cannot say that my idea of a stylish point or stylish roading is merely a crench, yet it partakes of that, and is something more, that appeals to the eye alone and charms beyond expression. Asking excuse for indifferent drawing, I beg leave to submit a sketch of a setter on point, that gives in part my idea of a

stylish dog. A twist of the body, turn of the head, a position a little more forward, or one in which both hind legs are stretched back near together or both forward under the body, as if the animal was afraid of being shoved forward on the birds, these often give more beauty to the position, the latter one arguing well for staunchness. In roading, or working out a scent-covered ground, a gamy dog should get himself into all these positions, and do the sneak act to perfection when closing on the birds. Moreover, he should drop to a gamy point when striking scent suddenly, and as this generally means a turn it is often the most handsome.

Well, nobody else may agree with me, but just that is what I would like to know, and if the highly gamy point is really the most desirable, will our breeders, those who have the future of the field dog most in hand, not breed to this end in a measure, try to produce a dog that goes at the birds as if he well knew that his beauty was a joy to his master and tried the more to please him?

Concerning the breeding of handsome setters, irrespective of style when hunting, let me ask why the regulation dog of the day is less feathered and more slimly built than formerly. I can understand the advantage of the small setter. I would be about as well pleased if my dog stood not much higher or heavier than a spaniel, but why he should be shorn, so to speak, of the feather under neck and thorax and on the flanks I am at a loss to know. Is it because it is less hot in woodcock season, less a burr-gatherer, or that breeders think it more handsome than the longer coat? I like the type of dog that Emperor Fred represented, the deep-shouldered, heavy-head sort. Such a dog cares nothing for brier patches, be they the nasty tangled green variety or the dense sharp-stickered blackberry bushes, and neither scrub-oak nor laurel is more to him than meadow grass to the close-haired setter or the pointer. There is a ruggedness about the setter that is very taking to the mountain forest gunner, and the long-coated dog possesses most of this. He will go wherever his master will, and where he won't, too, and ever seems glad to show his tough-skinned, everlasting powers. Where hillside dashing brooks of clear cold water, and valley swamps and ponds abound the long-coated dog finds no discomfort from the heat in shooting season. Moreover, there is far more beauty in the long silken hair, reaching nearly to the ground when roading, and waving in the breeze, an elegance that seems wanting in the currish-looking short coat. All this to my thinking; what say my brother sportsmen upon the question?

Another matter—that oft-mooted question, pointer vs. setter—may not more light be shed upon it by a *résumé* of the field trials held for several years back, and most interestingly and carefully reported in FOREST AND STREAM? Both breeds have shown some wonderful examples of dog sense and training, prominent among these, from what I read, the grand Roderigo and last year's winner, the pointer Ossian. What a pity there is not a more earnest greed for glory among the owners of such dogs, so that the best everywhere could be matched against each other, and under all sorts of conditions as to country, weather, ground and different game. But, as it now stands, it seems to me that much valuable summing up might be done by one very familiar with the ins and outs of the trials, taking into consideration all the relative conditions such as the majority of dogs run, the number of winnings of each breed, the handling, the training, the weather, the character of the country, the number of birds, the work on its several merits, the judging, etc., etc., and making careful comparisons.

Furthermore, it seems to me that the opinions of this or that shooter (who may have owned a dozen dogs, and one or two of exceptional worth belonging to one breed) are nearly worthless unless his comparisons are drawn from a very thorough knowledge of the working of a great number of dogs under much the same conditions.

S. FRANK AARON.

PHILADELPHIA, September.

THE A. K. C. TROUBLES.

NO further progress is reported in the Vredenburgh-Peshall libel case, though we are advised that efforts are making for an early trial. The indictment is here given, showing the precise passages in the FOREST AND STREAM publication on which Mr. Vredenburgh based his complaint:

COURT OF GENERAL SESSIONS OF THE PEACE OF THE CITY AND COUNTY OF NEW YORK.

The People of the State of New York against Charles J. Peshall:

The Grand Jury of the City and County of New York, by this indictment accuse Charles J. Peshall of the crime of publishing a libel committed as follows:

The said Charles J. Peshall, late of the city of New York, in the county of New York, aforesaid, on the nineteenth day of June, in the year of our Lord one thousand eight hundred and ninety, at the city and county aforesaid, unlawfully and maliciously contriving and intending to vilify and defame one A. P. Vredenburgh, who was then and for a long time prior thereto, to wit: from and since the month of May, 1886, had been, the secretary-treasurer of the American Kennel Club, and as such had charge of and kept the books and accounts of the said club, and had the charge and control of its financial affairs, and to bring him, the said A. P. Vredenburgh, into public scandal and disgrace, and to injure and aggrieve him and to cause it to be believed that he, the said A. P. Vredenburgh, had been guilty of gross and fraudulent irregularities in his accounts as such secretary-treasurer, and had fraudulently falsified the books and accounts, and maliciously did publish and cause and procure to be published in a certain newspaper and publication known as the FOREST AND STREAM, published in the said city and county, a certain false, scandalous, malicious and defamatory libel, of and concerning the said A. P. Vredenburgh, in a certain part of which said libel there were contained certain false, scandalous, malicious, defamatory and libelous words and matters of and concerning the said A. P. Vredenburgh, according to the tenor and effect following, that is to say:

I have also opposed the financial management of this Club [meaning the said American Kennel Club] and for fear that I may have been misunderstood, permit me now to say that the financial management as evinced by the reports made, are not only false and fraudulent, false, because they are not true, and fraudulent because they have been made with the intention to deceive.

And in certain part of which said libel, there were contained other false, scandalous, malicious, defamatory and libelous words and matters of and concerning the said A. P. Vredenburgh, according to the tenor and effect following, that is to say:

A few days after this meeting, while the writer of this was in the American Kennel Club [meaning the said American Kennel Club] office, Mr. Vredenburgh [meaning the said A. P. Vredenburgh] stated to me out of his own mouth, substantially that I had made no mistake in nominating Mr. Belmont, as he had come into the office mourning over the smallness of the bank account and replenished it with a large sum of money. At the annual meeting of the American Kennel Club [meaning the said American Kennel Club], which was held Feb. 21, 1889, Mr. Vredenburgh [meaning the said A. P. Vredenburgh] as treasurer made two reports, commencing from Dec. 5, 1888, and showing the balance as reported at the previous meeting $539, and on Jan. 11, $1,228.28. If any book-keeper will now take these two amounts and examine them, there is only one conclusion that he can come to, and that is this, that they are false. The item of $1,228.28 was not earned by the Club [meaning the said American Kennel Club], there was no possible resource from which the club could earn this item, and the club [meaning the said American Kennel Club] did not earn it, it was either borrowed, book-keeped or juggled into the accounts.

And in a certain other part of which said libel there were contained certain other false, scandalous, malicious, defamatory and libelous words and matters of and concerning the said A. P. Vredenburgh, according to the tenor and effect following, that is to say:

May 8, 1888, the American Kennel Club treasurer's [meaning the said A. P. Vredenburgh's] report shows $128.01 on hand. Secretary goes to Europe, returns Dec. 3, 1888. Dec. 6, 1888, makes a report dated Dec. 5; balance on hand $5.59. At the same meeting asked to have registration fee increased 100 per cent., because stud book was always published at a loss. On same month states to the writer, received a large amount of money from the president, Feb. 21, 1889, makes two reports on one day, which shows upon their face fully as much jugglery as could have been gotten into one report in two days.

And in a certain other part of which said libel there were contained certain other false, scandalous, malicious, defamatory and libelous words and matters of and concerning the said A. P. Vredenburgh, according to the tenor and effect following, that is to say:

January, 1890 secretary and treasurer [meaning the said A. P. Vredenburgh] published an annual statement showing that from and during the year 1889 he [meaning the said A. P. Vredenburgh] had received from the dog men and breeders of this country $8,312.26, and that he [meaning the said A. P. Vredenburgh] and a few others had expended $7,027 66, and yet he [meaning the said A. P. Vredenburgh] fails to show in any of his reports where the dog men and breeders have received any benefit from the expenditure of this money; for no stud book was published during the year and for some two months thereafter.

To the great damage, scandal, disgrace and infamy to the said A. P. Vredenburgh, against the form of the statute in such case made and provided, and against the peace of the people and their dignity.

JOHN R. FELLOWS, District Attorney.

A KENNEL CLUB FOR HAMILTON.—Hamilton, Canada, October.—*Editor Forest and Stream:* A very largely attended meeting was held here last night in the Board of Trade rooms, when it was decided to form a local organization to be known as the Hamilton Kennel Club. The object of formation is to encourage the breeding of good dogs and to hold a first-class annual bench show. This is such a doggy town and the situation so convenient and central that American and Canadian exhibitors will learn of the new club with delight. A capital working committee was appointed, and Mr. A. D. Stewart, the founder of Canadian bench shows, was unanimously elected president. Affiliation will be asked for with the American and Canadian kennel clubs, and the prospects for success are as rosy as could be desired. The election of officers resulted as follows: President, A. D. Stewart; Vice-President, Andrew Murdoch; Secretary, C. W. Mulligan; Treasurer, Geo. T. Tuckett. Committee, E. Tinsley, J. M. Harris, Frank Close, H. S. Case, Wm. McDonald. Veterinary Surgeon, Dr. Moler.—ONT.

BALTIMORE DOG SHOW.—Baltimore, Oct. 3.—*Editor Forest and Stream:* The Maryland Kennel Club claim the dates of March 3, 4, 5 and 6, 1891, for their second annual dog show at Baltimore, Md.—H. STEWART DIFFENDERFFER, Sec'y.

DOGS OF THE DAY.

MR. E. H. MORRIS, in correcting a statement of Mr. Peshall's that the pointer is a creation of the present century, quotes some obituary poetry which appeared in the *Dublin Magazine* of December, 1787, regarding a dog which had, singularly enough, been owned by Mr. Peshall's great-grandfather, Sir John Peshall. When I read this I thought I would turn to the "Treatise on Field Diversions," from which I have drawn before, and find out what the "staunch sportsman" who hailed from Suffolk had to say regarding pointers. For the benefit of those who did not read the extracts previously given I will say that this work was originally published in 1776, and was "the result of many years' experience with the dog, the net and the gun." With regard to the pointer this little little book takes us back to 1750 in the matter of personal knowledge of the author, as will be seen by his opening statement, which is as follows: "This kind of dog was introduced here in the beginning of the present century, and is acknowledged to be a native of Spain or Portugal, as many *were* and yet *are* brought to us from both kingdoms. The first I remember to have seen was about forty years back. Black and white, heavy, slow, without any regularity in beating, under no command, but a NATURAL POINTER." The old fellow had a most thorough contempt for the pointer. Perhaps, however, it was only a bit of the Englishman's usual way of speaking of anything foreign. Any way he gives the pointer this black eye to start with: "The most general import [importation] was in the liver and white, especially mottled. They all fall under a parity of description as to shape and performance; nor can nature be much improved or assisted by art, as they have a ferocity of temper which will not submit to correction or discipline, unless taken in hand very young. The activity of our modern race of pointers we are indebted for, I presume, to the cross between the foreigner and our setter. The mixture in this case was successful: as thereby we are furnished with a strain that will act in a greater variety of capacities than any other." It would be well to say here that the English setter of that day was either a spaniel, high on the leg, or a cross between the English spaniel and the foxhound or pointer. The name was given him because he set—down—charged—when he found game and allowed the men to draw the net over him until the birds were covered by it and thus caught. The crosses with the foxhound in the composition of the setter is spoken as probably arising from whim, but such a cross is not mentioned in regard to the improvement of the pointer. But listen to this, ye members of the Pointer Club: "The setter cannot be degraded into a pointer; but a pointer may be elevated to a setter, though but of the second class. * * * He answers the purpose in one sense, it is certain; but by way of humble imitation at best. He insults the finished fine setter by invading his province; and admitting game enough may be taken at him it is the same as challenging a delicate greyhound with a cream lurcher, because he can kill as many hares." The pointer he ranks ahead of the cocker (the author calls him the springing spaniel, the cocking or gun spaniel), and says he once had a remarkable one, "as many gentlemen in the vicinity well remember, who would stand for a gun at one bird, drop for a net at another, and so on, as I thought fit. In covert he would do the work of a brace of spaniels. Take him into field directly, he was as clean and regular in his hunting as if he had never acted in a lower character. This supports my assertion of general utility. * * * There are many pointers, which, by use, will stand woodcock very well. And I knew of one of a very eminent physician (Dr. Begsbye), that, if she found in covert, unperceived, would give tongue for discovery; and that, repeatedly, till she was relieved from her point."

In glancing over this old book again to get the foregoing extracts, a thought occurred to me in connection to red spaniels. Those interested in this will remember that I resurrected the dormant subject by quoting a reference to a breed of red cocker spaniels referred to by the author as having been known in Suffolk early in the eighteenth century. Now, when we take into consideration that we get these reds from the Obo strain, and that Mr. Farrow who brought what we may call the original Obos to the front does not reside so very far from Suffolk, is it not within the bounds of probability that he has a dash of that old strain, and that our reds are but a reversion thereto? Such a theory is at least plausible.

The difficulty in researches of this kind is that English fanciers with but few exceptions take the slightest interest in back pedigrees, and any attempt to get them to trace back a pedigree is but love's labor lost. The one exception to this rule that I know of is Mr. M. B. Wynn.

Mr. Wade has sent me a copy of a communication respecting a tall young mastiff we measured at New York dog show in the spring of 1884. He is right as usual, and it had quite slipped my memory. I do not recall the measurement, but I remember he was very tall and Mr. Wade is sure to be right. If I had any doubt upon the subject I would have made an effort to get my marked catalogue for that year, which is locked up with my household effects. The dog was named Senator and was owned by Mr. Geo. L. Thomas, of Albany. He was bred by Mr. John Ogden, of New York, and was by Buff out of Nina. I fancy Mr. Wade is wrong regarding the other "Jim," for Mr. Ogden and I were old Atalanta Boat Club friends, and I would use his Christian name, or rather the name his friends used, "Johnny," and it was probably he that was taking so much interest in the dog he bred. I did think when I first read Mr. Wade's letter that the third party might be the late W. R. Hill, of Albany, known to all old boating men as Billy Hill, but I now believe it must have been Mr. Ogden. That of course is aside from the question of the height of Senator. I further remember that I was particularly anxious to have Senator at the National Breeders' Show at Philadelphia in October of that year, and Mr. Thomas sent the dog, but unfortunately Senator arrived the day after the judging. I have no distinct recollection of the dog as he was then, I had so many other things to attend to at the time, but I have an impression that he had not improved much if at all, but was still somewhat light in frame.

The St. Bernard bitches Dart and Donna Silva arrived from England last week by the Montana, direct to Philadelphia from London. I saw them on arrival and have since been to the Swiss Mountain Kennels, at Germantown, to take a second and a better look over them. Dart is the taller of the two and is a very good colored bitch. Donna Silva it would be hardly fair to criticise, as she arrived in very low flesh and entirely out of coat. On a second inspection she showed much improvment in condition, while in the matter of coat there was also a change for the better. She is not quite so tall as Dart, and is lighter in color and is well-marked.

I learn from a friend of Mr. Mitchell Harrison that some of the Chestnut Hill Kennels collies are going over to England, which they are I have not had time to find out as yet. Considering that it will be dull times here for nearly five months, it is by no means a bad idea to let some of them take a turn at the English shows. Mr. Harrison has become very much interested in the breeding and development of hunters, and has made a miniature steeplechase course on the Roslyn Heights Farm. Indeed, so much is he taken up with this, as well as his large and extensive business, that I should not be surprised to learn that there will be more of a chance for other collie owners than has fallen to their lot at the dog shows since the advent of Dublin Scot, Scotilla and their successful kennel companions.

Gen. Henry R. McIvor has been paying a visit to the Quaker City, and tells me he has sold his collie Brankie (Metchley Wonder—Miss Charlemagne) to Mr. Smith, of the Consolidated Gas Works, of New York. Gen. McIvor is very favorably impressed with the appearance of our "drab" town, and from his world-wide experience he is in a better position to give an opinion as is an opinion than those who make Philadelphia an object for the perpetration of jokes upon the rather quiet habits of its residents. Anyhow the General thinks Philadelphia ladies are extremely charming, and unless a war breaks out somewhere shortly I will not be responsible for anything that may occur should he remain much longer.

The London *Stock-Keeper* again throws down the gauntlet to American beagle owners, and challenges any one to send over some specimens to compete against the pick of the English division, to be shown under a hound judge. If any one cares to accept this defi I would suggest that they ask for Mr. Harding Cox to act as judge. Such a suggestion will be in every way satisfactory to the English division, and Mr. Cox is not only a hound man, but a dog man as well and has frequently officiated at leading shows. Such a test would be very interesting and would assist materially in straightening out the question of type in beagles. If we have been going wrong it is time our breeders were advised of their error and set about correcting their mistakes. In case such a match is likely to be made it would be well to place the matter in the hands of a committee with power to select say two couple of the best we have and send them to the care of some person in England to put in competition. There would be some expense attached to all this, but there are surely sufficient fanciers willing to chip in toward a fund of say $100, which would cover all cost of the trip, I think. The dogs could be sent over for $10 each or $80 the round trip, perhaps less if sent and returned by the same line. Count me as a subscriber to the fund if the match is made.

The match between the Pittsburgh owned Russian-what-is-its, generally called wolfhounds, and the Hon. Mrs. Wellesley's Krilutt is in a fair way for decision now. The Pittsburgh dogs have arrived in London from Russia, according to the latest advices.

All dog men know how jealous dogs are, but I was told the other day of a case of a horse showing singular jealousy of a dog. The narrator of the story occasionally indulges in horse-back exercise, and naturally takes with him at such time an Irish setter. The setter, as is the manner of dogs, would run on ahead, and my friend noticed that when it did so the horse began pulling and showing evident desire for a race, so one day, his horse being more demonstrative than usual, he let him go. The dog was then some thirty yards ahead on a straight road, and when the horse started on the run, off went the dog, too. For a time their relative positions were kept, and then the horse gradually began gaining. At last he got past the dog, and as soon as he did so he turned slightly and let fly his heels in the direction of the dog, as much as to say, "There, I beat you," and resumed his usual canter. J. W.

DOG CHAT.

MR. JAMES MORTIMER tells us that he has made up his mind to sell all his fox-terriers, as he finds his time so completely taken up with his duties as superintendent of the W. K. C. that he cannot give the attention and exhibiting at shows they ought to have. There are eighteen altogether, nearly all of which are fit for the bench. Included in this lot are such well known cracks as the smooths Suffolk Risk, Suffolk Rarity, and Suffolks Toby, Settler, and Vixen, wire hairs, altogether such a collection of this breed as has never been offered before in this country.

Here is a pretty little yarn from *Longman's*: "The Newfoundland dog is a particular favorite of mine. He is the most magnanimous fellow in the world, and small dogs may insult him with impunity unless a river happens to be near, when one too venturesome and impudent will sometimes experience an involuntary bath. On one occasion, lately, a particularly fine one was sitting on a wooden bridge discussing a bone, when a predatory mastiff came along, and being unable or unwilling to distinguish between *meum et tuum*, a smart altercation arose. So violent became the debate that both suddenly overbalanced and fell into the stream beneath. The nearest landing place was a hundred yards down, and to it the Newfoundland betook himself without much difficulty, and after a good shake was preparing to depart, when he suddenly became aware that the other dog who was more of a soldier than a sailor, was wildly beating the water, and drowning as fast as he could drown. One look was enough. In went he of the shaggy coat, and seizing the other by the collar, brought his late enemy safe to land. The two dogs then eyed each other with a perfectly indescribable expression for some seconds, then silently and solemnly wagged their caudal appendages, and with dignity departed. Some will, no doubt, say that this was but instinct; and they may be right, but I prefer to give my four-footed friend the benefit of the doubt."

Last week we spoke of the receipt of several Crystal Palace catalogues, and as it is the finest production of the kind we have seen, we have forwarded a copy to each of our principal kennel clubs as a guide for future efforts in this direction. Judging from several letters we have received from well known exhibitors and breeders, they are very much interested in the "Breeders' Competition" and asking us for further particulars, and whether such competitions could not be inaugurated here by our principal clubs. For the benefit of our readers, we give the conditions under which this competition is held:

"The prizes in these classes are awarded to the breeders obtaining the largest number of points with dogs bred by themselves, irrespective of whether the exhibits are their own property or not. The dogs must be entered in their proper classes, and points are awarded as under to those winning prizes or receiving commendation in such classes. In the event of a dog entered in two classes, winning prizes or receiving commendations in both, the highest award only counts toward this competition. Breeders are not required to nominate the dogs bred by them, as this will be ascertained from the catalogue, but it will be to their interest to induce any of their friends owning such dogs to enter them, so that their chance of winning the prize may be increased. Prizes in stud dog and novice classes do not count.

CHALLENGE CLASSES.

First prize	64 points.
Second prize, if there be one, otherwise the reserve	32 points.
Third prize, if there be one, otherwise the reserve	16 points.
Reserve if there be second and third prizes	8 points.

OPEN AND JUNIOR CLASSES.

First prize	64 points.
Second prize	32 points.
Third prize	16 points.
Fourth prize	12 points.
Reserve	8 points.
Vhc	4 points.
Hc	2 points.
Commended	1 point."

The junior classes mentioned above are for dogs not over eighteen months old up to the time the show opens. This is a move in the right direction toward stopping the showing of very young dogs, as there are not many men who will show anything eight or ten months old against practically fully developed dogs, as most breeds are at this limit of age. We sincerely wish our W. K. C. would adopt this measure, for we are pretty well sure any financial loss by a falling off of entries would be compensated by the general health and safety of the other dogs exhibited, they earning at the same time the thanks of the kennel community. Speaking of this reminds us of the letter in another part of this issue calling the attention of the Collie Club to the fact of their having the club stakes held at public shows after the sad experience of some of the members after last year's show at New York. If we are ever to take rank as breeders of winning stock, and of such as we ought to breed with the material our breeders now have in most important breeds, something must be done in this direction. Ottawa got along very well without puppies, and why cannot the larger shows do the same? We did not hear of any distemper after the pleasant little reunion at Rahway last year.

While we are on the subject of this Crystal Palace catalogue we might mention the "team" classes. These consist of three exhibits of any one breed or variety, the property of the same exhibitor; the exhibitor furnishing at the time he makes his entry particulars of the exhibits of which his team is to consist, for which separate forms are supplied. The team, of course, must be composed of dogs already entered in the regular classes. The prizes given are three in number—first, second and third—for teams in sporting dogs and bitches; non-sporting dogs and bitches; terriers, dogs and bitches (Yorkshire and other toy terriers excepted); pugs, Yorkshire and other toy terriers, dogs and bitches. These suggestions are made for the benefit of our three principal shows—W. K. C., Boston and Chicago.

We received a pleasant visit from Mr. Geo. H. Bush, president of the Buffalo Kennel Club, on Tuesday last. He talks mysteriously of two cocker puppies, one especially, by Jersey out of Novel, he calculates upon to lay some of them very "low" next year.

In view of the splendid record made at London by Mr. Blake's whippet Benbow, and the claim for a world's record of 12¾ seconds for 200yds., we have been looking up past records made by these dogs and find on referring to *Canine World* of June 20, that at the monthly whippet spring handicap for stakes of $125, held at Manchester, England, June 14, a dog called Fred, owned by a Mr. A. Fletcher and weighing 11¾lbs., ran the 200yds. in 12¾ seconds, beating 279 opponents. This time was then claimed as a best on record. This shows what a meritorious performance Benbow made. At the same time, before this can be accepted as a record, we would like to have the weight and height of Benbow, as that may have something to do with it according to the rules. A race with 279 entries shows the vast proportions to which this sport has attained in some parts of England. Mr. Mercer, of Ottawa, owns a very fast small greyhound bitch, and although a special prize was put up at the Ottawa show for a race, the presence of this bitch seemed to frighten the others and the race was declared off. Dr. Mill's Elcho being the only other entry. There is talk of getting some jack rabbits up there and having a little coursing. If they wish some hares we believe they can be had from Mr. Allison, of the National Coursing Club, Hutchinson, Kan., at a reasonable figure.

We hear that the two Russian wolfhounds which were purchased by Mr. Rousseau for Mr. Hencke, of Pittsburgh, have at last arrived in England, the bitch being quite heavy in whelp. They are to meet the Hon. Mrs. Wellesley's crack, champion Krilutt, at Crystal Palace on the 28th of this month. At the same time it is reported that Krilutt has skin disease, but it is to be hoped that he will be got in shape for this competition, which has excited the interest of dog men on both continents; for upon this rests a good deal of the question as to what constitutes the proper type of a "Barzoi."

It is stated in one of the English papers that there is a gentleman from Detroit purchasing some dogs for this country. Detroit is becoming quite a doggy town, and among the new fanciers is young Mr. Hendrie, whose fancy seems to turn to terriers of the "wire" persuasion.

In our "Answers to Correspondents" column will be found a query as to the best time for the new Hamilton Kennel Club to hold a show. We appreciate the anxiety of a new club to burn its fingers by holding a show *cote que cote*, but perhaps we can offer a little advice which may enable them to round the point of their first show in safety. During the exhibitions recently held in Canada there were several opinions expressed that Hamilton would be a good *locale* for a show, and the suggestion was made that Canada should have a fall circuit which should include Toronto, London, Hamilton, Ottawa and Montreal. In September the weather in Canada is more agreeable for dog shows than it is as a rule in the States, and for that reason it was suggested that the States' shows should, most of them, be held in the spring, and then with a circuit in Canada in the fall the difficulty of showing dogs in very hot weather would be overcome, for we are sure the weather experienced in Canada during the past month could not have been improved upon. In Ottawa during show week it was positively cold, therefore owners of the big dogs need not have any fear of exhibiting at these places during that month. We say to Hamilton, wait by all means till next fall, and running in your show say after London, you can expect a good entry and a rousing welcome to the fraternity.

In a letter from England we are informed of an important importation of black and tan terriers, which will shortly start for this country. Mr. Comstock, of Providence, R. I., either the Irish terrier owner or his brother, has purchased from Mr. Lacy, Middleton, Eng., his Salisbury, Jasper, Louie and Queen III. Salisbury and Jasper are both good winners, and Queen III., we are told, was bred and raised by the man who bred Queen II., who won for Mr. Lacy $3,000 in money and 33 cups, and this man says she can beat Rosabel, so we shall expect to see something pretty smart, if she only turns out half as good as "old Queen." We are pressed for space this week, but will have more to say about these dogs in our next issue. There is one thing about it, judging from press notices, Mr. Comstock will not be disappointed in the dogs at any rate. Who says black and tan terriers are not the coming breed? "Cheerful Horn" tells us that the King Charles Royal Duke is on his way to this country, having been purchased by a gentleman in Milwaukee, whom he puts down as a Mr. Niemann. The sum paid for this spaniel was $250.

The noted bull bitch Kitty Cole is dead. She died giving birth to a litter of pups, by His Lordship. Kitty Cole was by Don Pedro out of Pansy Lass, and when we say that she had won the Bulldog Club challenge cup four times, it will be inferred that there were not many her superior.

In our report of the London show we made two or three mistakes, but as we took our awards from the secretary's catalogue and judges' books we are hardly to blame. Mr. W. B. Wells's Matane was second in English setters, open dogs, and his Cambriana first in bitches. Blemton Rattler in fox-terriers should read Blemton Brawler, and Mr. Wash-

ington's Irish setter Ruby Gleumore won equal for the special for best Irish setter with Mr. Covert's Dick Swiveler, and as the prize was a pair of slippers each takes one.

Coursing in England opened a fortnight since with the Haydock Park meeting, and it is said the smartest lot of youngsters probably ever seen turned out.

As an outcome of the recent exposures of English Kennel Club rulings, disqualifications, and so on, a meeting of exhibitors was held at Edinburgh show to discuss the advisability of some action on the part of exhibitors at large whereby they can have a say in matters that concern themselves. The sense of the meeting was that the club was too autocratic, too exclusive and not a representative body; and that the subscription should be such as would enable every one in the fancy to become a member. This is a good move and will no doubt bring about some necessary reforms.

We learn that Mr. Geo. E. Peer, of Rochester, N. Y., who is almost as enthusiastic a pug man as he is a buff Cochin breeder, has imported a very good son of champion Loris and champion Stingo Sniffles. As there is no better pug blood than this in the country Mr. Peer is to be congratulated.

We remind our readers who intend entering their dogs in the Central Field Trials All-Aged Stake that it closes Oct. 15, with Mr. C. H. Odell, Mills Building, N. Y.

We hear that Mr. Wilmerding's champion cocker spaniel Doc, who has been in the hands of Mr. Mercer since Ottawa show, will stay there two weeks longer, to give Canadian breeders a chance to avail themselves of his services.

EASTERN FIELD TRIALS.

Editor Forest and Stream:

To handlers and trainers I would say, the Old Dominion S. S. Co. have arranged a very liberal rate from New York city to Amelia Court House, Va., for the benefit of those that wish to avail themselves of this pleasant route to the Eastern F. T. Club's meeting. They will issue tickets for $11.65, including meals and stateroom and railroad fare to Amelia Court House, from New York, over their S. S. line, which is good via West Point or Richmond, Va. They will also pass 3 dogs free, when accompanied by owner or attendant, and 50c. for each additional dog over this number. I am also in communication with Mr. Slaughter, Asst. Comm. of the Southern Pass. Asso., who promises to do all he can in regard to obtaining reduced rates from all points over which they have jurisdiction, issuing certificates entitling the holder to a rebate by paying a first-class fare from starting point to Amelia C. H., Va., on their return. The certificate, if the concessions are granted, can be purchased of the ticket agents at the starting point. Mr. Slaughter has formerly acted most liberally toward our club, and I am satisfied from the kindly expressions in his letter to me that he has lost none of the old-time interest formerly shown. In conclusion I will say that John Bolus, of the Killbuck Kennels, Wooster, Ohio, has most generously donated as special prizes two of his shipping dog crates, value $25 each. He writes: "I will try and send something that will surprise the boys. One is given to each of the absolute winners of the Derby and the All-Aged Stakes." These crates, the creation of John's master hand and experience, form a most valuable addition to the already rich prizes in each stake. I am also in receipt, holding in trust, two checks from Mr. B. L. Clements, one of one hundred and twenty-five dollars and one of seventy-five dollars. "These are," quoting from his letter, "two special prizes given by the Irish Setter Club for the best two Irish setters run in either the Derby or All-Aged Stakes of the E. F. T. Club this year." I would also add to this communication in regard to carrying a number of dogs over the railroad, that the best way and most economical is to crate them well and check them as extra baggage, paying the regular tariff of railways for same. Cut this out of the paper and keep it in your pocket for reference; it may come handy and materially reduce expenses.

WASHINGTON A. COSTER, Sec. and Treas.

A REMEDY FOR HYDRDPHOBIA.

Editor Forest and Stream:

From a work on British India, "Wild Life in Canora and Ganjam," by Gordon S. Forbes, London, 1885, I extract the following:

"In the neighborhood of Berkampur jackals were extremely numerous, and instances of death from hydrophobia occasioned by the bite of a mad jackal sometimes occurred. I was therefore much alarmed when my head servant awoke me one night and announced that three of the stablemen and a valuable dog had been bitten by a mad jackal; he said he had heard of a Brahmin living in Ganjam who had treated many such cases successfully, and a messenger was sent in hot haste to summon him. Excision or cautery of the bites seemed to me impossible from the position of the wounds. I shot the dog in the morning to avoid further risks; but when the Brahmin arrived with his remedy he assured me that he could have saved the dog, as he would surely save the men from hydrophobia. The remedy, which he administered internally, proved to consist of the leaves of the datura or stramonium plants made into a pulp. The patients were warned to expect an attack of delirium and stupor and must eat nothing for twenty-four hours, when the effects of the medicine would pass away.

"These symptoms appeared and passed off in due course, and none of the three men bitten had an attack of hydrophobia, and I have no doubt that the jackal was mad, for these creatures never make such attacks under any other circumstances. I sent an account of the episode of the jackal and the remedy used to *The Times*, but it was not inserted. I also wrote to an eminent London surgeon, detailing the facts of the case, but he replied that was no proof the jackal was mad! The Brahmin who treated my servants assured me that his remedy is efficacious even after hydrophobia has set in."

I have heard and read of many remedies for this mysterious and fatal disease, but never before of this plant used for it—the stramonium, or jimson weed, which is found from Maine to Georgia, and is known as a powerful narcotic internally, and as a healing application when externally used.

Canine madness is fortunately a rare disease, and its existence is doubted by many; no doubt seven-eighths of the dogs killed on suspicion of madness are innocent of the disease, but there seems to be evidence that it exists, and, therefore, all remedies of a plausible character should be tried; and stramonium, from its powerful action on the nervous system, might prove efficacious. S. C. CLARKE.

DANBURY DOG SHOW.

[*Special to Forest and Stream.*]

DANBURY, Conn., Oct. 8.—This show opened this morning with 217 entries, among which are some of the best dogs in the country. Messrs. Lewis and Thomas are here with big strings. Irish setters, St. Bernards, collies, pointers, beagles and Irish terriers are particularly strong. Several of the new St. Bernards Mr. Crowell brought over are entered. The show is held in a nicely decorated building, and is well arranged. Judging commenced at 10:30 and will most likely be finished to-day. In the absence of Mr. Watson, Mr. H. W. Lacy takes all classes. Weather fine and everything points to a success. H. W. L.

NATIONAL BEAGLE CLUB.

RUNNING RULES.

MANAGEMENT.—RULE 1. The management of the meeting shall be under the control of the Field Trial Committee. They shall decide all matters pertaining to the trials not provided for in these rules. The interpretation of these rules lies with them.

Entries.—RULE 2. For all stakes, the names, pedigrees (as far as known), ages, colors and distinguishing marks of the dogs shall be detailed in writing to the secretary of the club at the time of making the entry. Any dog who shall be proven not to correspond with the entry shall be disqualified, and all stake winnings and entry money shall be forfeited to the club. The entrance fee and forfeit money must accompany every nomination. Any objection to an entry must be made in writing and addressed to the Field Trial Committee, whose action shall be final. Dogs afflicted with any contagious disease, or bitches in season, shall not be permitted on the grounds.

Field Trial Committee.—RULE 3. The Field Trial Committee may refuse any entry they may think proper to exclude; shall have power to suspend or debar from handling or entering dogs in any field trials of this club any person who uses abusive language to the judge or officers of the club; and no person who has been found, to the satisfaction of the Field Trial Committee, to have conducted himself improperly in any manner in connection with dogs, dog shows or dog trials, or who is a defaulter for either stakes or forfeits in connection with either thereof, or for money due under an arrangement for divisions of winnings, or for penalties for infraction of rules, or for any payment required by a decision of the club, shall be allowed to compete in any trials that may be held under the auspices of the National Beagle Club.

Drawing and Order of Running.—RULE 4. Dogs shall be drawn by lot and numbered in the order drawn. Each dog shall run in the first series as a brace with the next available dog in that order. After the first series has been run through, the judges shall announce which dogs they wish to see run again and order of running them. Discretion is given the judges to run the dogs as often and in what order they think best, until they are satisfied which are the best dogs; but they may announce the winners any time after the second series, provided the first, second and third prize winners shall have run together. Any dog absent during the first series for more than twenty minutes after his number has been called, shall be disqualified from further competition

RULE 5, Sec. 1. Each brace shall be run thirty (30) minutes, and at the expiration of that time a decision shall be rendered if the judges are satisfied. If not satisfied, they shall be run fifteen (15) minutes and decision made, and so on in intervals of fifteen (15) minutes.

Sec. 2. Dogs can be taken up only at end of periods as above, except as hereinafter provided.

Sec. 3. Immediately after the dogs are drawn, the name of the first brace, together with the place and time of starting, shall be posted by the secretary of the club in a prominent place.

Sec. 4. The secretary shall announce the order of running in the first series, but each subsequent series shall be arranged and announced by the judges before its beginning.

RULE 6. If two (2) dogs owned or handled by the same person should come together in the first or subsequent series, the second dog so owned shall change place with the first dog not so owned or handled. This change shall be made in the order of running if possible. If not possible, then in the reverse order of running. The running together of two such dogs may be permitted when a separation is impossible, but in no other case.

RULE 7. No person shall be allowed to accompany the judges except owners of dogs running in charge of handlers, guides, marshal, and reporters of recognized journals. In case where the reporters or owners expect to handle a dog in the series, they will not be allowed to accompany the judges.

Sec. 2. Gentlemen authorized to accompany the judges under these rules, will not be allowed to converse with the judges on any subject while the dogs are under judgment. The spectators will not be allowed nearer the judges than fifty (50) yards to the rear. The marshal and judges shall strictly enforce this rule.

Sec. 3. The judges shall appoint a spokesman from their number, and all orders or information upon any point concerning the heat shall be given by him in a clear and impartial manner, so that each handler may have full benefit thereof.

RULE 8. No dog can be withdrawn except with the unanimous consent of the judges. Should a dog be withdrawn without such consent, the owner or handler shall be barred from further trials, and all prizes won by such owner or handler in the stake shall be forfeited to the club. If a dog be withdrawn with the consent of the judges from a stake on the field, or at any time during the holding of the trial, its owner or deputy having authority shall notify in writing the secretary or one of the field trial committee. If the dog belongs to either or any of those officials, the notice must be handed to one of the others. When a winner of one or more heats is withdrawn, for other cause other than defeat, the dog or dogs previously beaten by him shall not be deprived of competing for second or third prize if, in the opinion of the judges, they have a chance to win.

RULE 9. No person shall make any remarks within hearing of the judges or handlers, concerning location of game, or give any information whatever calculated to affect the action of the handlers or result of the heat. Any person so offending shall be expelled from the grounds, and points of merit shall not be allowed any dog whose handler acts upon any information imparted by such person, or uses any unfair means whatever. A protest on this point must be made to the judges before the close of the heat, and their decision shall be final.

Sec. 2. If any handler or owner of dogs annoys the judges after having been ordered to desist, the judges may order such dogs as he owns or is handling up and out of the stake, or may impose a fine not exceeding ten (10) dollars.

RULE 10. Owners and handlers are allowed the privilege of asking the judges for information, or for an explanation that has a direct bearing upon any point at issue. Pending such questions the dogs shall not be under judgment.

RULE 11. At the commencement of a heat the handlers in the next heat shall be notified, and be required to keep together until ordered down, and any dog absent more than twenty (20) minutes when called shall be barred at the discretion of the judges, and his competitor subject to Rule 6.

RULE 12. The bye dog in any series shall run with a dog selected by the judges or alone as they may direct.

RULE 13. An owner, his handler or his deputy may hunt a dog, but it must be one or the other; and when dogs are down an owner must not interfere with his dog if he has deputed another person to handle and hunt him.

RULE 14, Sec. 1. Handlers of dogs running shall go together and keep within sight of the judges and each other when possible.

Sec. 2. The dogs shall be handled in all respects as nearly as possible as in an ordinary day's hunting.

Sec. 3. Each dog shall be required to hunt throughout a heat, except only when ordered up by the judges. When so ordered up each dog shall be kept under restraint.

Sec. 4. The handler of a dog shall discharge one barrel of his gun over his dog when hunting when directed by the judges.

Sec. 5. No shooting shall be allowed at any time by any person unless directed by the judges. When so done it shall be considered as irregular, and a dog shall not be penalized in case of irregular shooting. If a dog exhibits signs of gunshyness or unsteady to shot, the fact shall be proven by requiring his handler to discharge both barrels when on the trail.

Sec. 6. Handlers will be required to use blank cartridges. Guns must be carried empty.

Sec. 7. The person handling a dog may speak or whistle to him, or work him in any way that he may deem proper, if not contrary to the rule of this club; but he shall be called to order by the judges for making any unnecessary noise, or for any disorderly conduct calculated to interfere in any way with an opponent's dog. In such cases an appeal should be made to the judges, but, should the handler of the dog interfered with not ask for protection, it shall be the duty of the judges to call the offending party to order, and see that this rule is at all times strictly adhered to.

RULE 15. All protests, when practicable, except as hereinbefore provided, must be made to the secretary of the club, or in case of his absence, to one of the field trial committee, at or before midnight of the date of running the final heat.

Instruction to Judges.—Sec. 1. Should there arrise at any time during the running of the trials, questions not provided for in these rules, the judges are instructed to use their discretion, and so decide the matter as to give to each dog equal opportunities.

Sec. 2. Each heat will be conducted in a manner calculated to give the competitors an opportunity to display the several qualities under judgment.

Sec. 3. The judges shall give each brace in first series at least thirty (30) minutes, and shall order up the dogs as soon thereafter as they have determined which is the better.

Sec. 4. Trailing game other than announced, if the judges deem the same excusable, shall not be considered a demerit.

Sec. 5. The judges shall give a dog ample opportunity to discover whether he is on a true trail.

Sec. 6. The number of times a dog finds shall not necessarily give him the preference, but the judges shall consider the quality of the performance rather than the frequency of the occurrence.

Sec. 7. In order to prevent the handlers rushing or unduly exciting the dogs, discretion is given the judges to try each dog of a brace separately on game, the competing dog being kept under restraint.

Sec. 8. The judges are requested to give greater credit to the dog that maintains the most effective range throughout.

Sec. 9. The judges are requested to give greater credit to the dog that shows the greatest hunting sense. Hunting sense is shown in a dog by his desire to hunt for game, his selection of likely places to hunt in, his method of hunting the places, his industry in staying out at his work, and his skill in handling and trailing the game after he finds it.

Sec. 10. The judges are instructed not to place undue credit on speed, it being the desire of the club that accuracy in trailing, voice, gun-shyness, endurance, and style, together with a moderate speed maintained throughout the trial, be the principal points of merit, but that nothing in the foregoing shall excuse a dog when pottering.

To Owners and Handlers.—The club has these principles which it wishes to express, namely:

Sec. 1. That each and every trial is simply a trial in the true sense of the word, and not a competition in which the number of points made by either dog will necessarily count in his favor. The club desires handlers competing at their trials to show their dogs to the best advantage, assuring them that each dog will be given a thorough test, both as to finding and hunting qualities.

Sec. 2. That the judges will give greater credit to the dogs showing the best natural qualities, it being the desire of the club to have the best dogs placed to the front, irrespective of the luck which is supposed to attend competitions of this nature. The judges will be requested to give more attention to a dog's natural qualities, and the time saved by weeding out the poorer dogs in the first series will enable them to thoroughly test the best dogs in each stake.

Order of Running.—Tuesday, Nov. 4, 1890.—First.—Race for dogs 13in. and under. Entrance fee and forfeit $5. Each heat run $1 additional. Second.—Race for bitches 13in. and under. Entrance fee and forfeit $5. Each heat run $1 additional. Third.—Race for dogs 15in. and under. Entrance fee and forfeit $5. Each heat run $1 additional. Fourth.—Race for bitches 15in. or under. Entrance fee and forfeit $5. Each heat run $1 additional. Fifth.—Race for puppies under 15 months (dogs or bitches) at time of closing of entries. Entrance fee and forfeit $5. Each heat run $1 additional. Prizes in all classes.—First $25, second $15, third $10. No class to be run unless at least six entries are secured

Field Trial Committee.—O. W. Brooking, Pres.; W. F. Rutter, Jr., 1st Vice-Pres.; W. A. Power, 2d Vice-Pres.; W. S. Clark, 3d Vice-Pres.; F. W. Chapman, Sec'y and Treas.; Geo. P. Berry, E. C. Barrett, H. V. Jamieson, A. Parry, C. F. Wixom, W. Stewart Diffenderffer, Wm. Ledyard.

TALL MASTIFFS.—Hulton, Pa., Sept. 30.—*Editor Forest and Stream:* I must ask J. W. to qualify his remark that Presto is the largest mastiff he ever heard of in this country, and suggest to him recalling the New York show of 1884, where he and I measured a puppy, entered by Mr. G. L. Thomas of Albany, New York, and found him 33¼in. high at the shoulder, in a vertical line, good, honest measurement. It may help his memory to recall that there was another "Jim" present (whose name I cannot recall) who drew our attention to the puppy, and as I find I have this puppy noted as 8 months old, which does not appear on the catalogue, it is my impression that this "Jim" knew of the dog. I remember that I wrote Mr. Watson about buying this puppy just as "a big dog", and Mr. Watson wrote about getting "Jim" after him. For all the puppy's great length of legs, he had plenty of bone, good body, and not a very, very bad head, certainly better than the winner in the dog class, Harry Hill's Dan, when Ilford Cromwell was nowhere. In spite of fifteen editorial measurements, Mr. Watson will agree with me, that measuring a mastiff to the one-eighth part of an inch is drawing it a bit fine, as I made this puppy nearly a half-inch more than Mr. Watson did. Does anybody know of Mr. Thomas, this puppy, and its after history? —W. WADE. P. S.—At Mr. Watson's suggestion, I have looked up the catalogue of the National Breeders' show (Oct. 1884) and find that Mr. G. L. Thomas entered a mastiff "Senator, fawn, date of birth 1883, by Buff out of Nina; breeder Mr. Ogden." This is doubtless the puppy noted above and there is now an indistinct recollection in my mind that I saw some notice of a mastiff of this name, distinguished for great size.—W.

BENDIGO'S PEDIGREE.—New Haven, Conn., Sept. 30. *Editor Forest and Stream:* Several parties to whom I have sold Bendigo puppies claimed that the pedigree which I gave, did not correspond with the one given in the English Kennel Club stud book. Inclosed find Mr. Hinks's letter on the subject, which will explain itself.—FRANK F. DOLE. "Birmingham, Eng., Sept. 17. Dear Mr. Dole: Respecting your remarks about the dog Bendigo you purchased from me, I beg to say that the pedigree you have is quite correct, as the Kennel Club here is wrong in putting the dog registered as Bendigo (15,637) as sire of the dogs winning by the Bendigo you have. The Bendigo (15,637) is not the father of any prize winners, and no doubt the way the English Kennel Club have fallen into the error, is that the Bendigo you have has not been registered, and was simply kept by me as a stud dog, in which capacity he has no rival since the demise of my old dog Dutch (13,813). The Bendigo you have is the dog mentioned in all the catalogues, and is sire of many winners, among which are Jubilee, Queen Bendigo, Oakhill, Rose, Miss Bendigo, King Patrick, Goldsecker, King Bendigo, Moseley, Topper, Principo, Visnomy, Vesper Bell, and many others too numerous to mention. I wrote last year to our kennel club here and they promised to put the matter right, but they must have overlooked it. You are at liberty to publish this letter. Yours respectfully, FREDERICK HINKS."

THE COLLIE CLUB STAKES, 1891.—*Editor Forest and Stream:* The Collie Club has issued a list of stakes for puppies, to be competed for at the Westminster Kennel Club Show, 1891. Why does the Collie Club thus encourage the showing of the best puppies that have been raised during the past year? Has the lesson taught at the last New York show been forgotten? What was wrong with Rahway '89? In regard to the stud dog stakes, why limit the number and pedigree of progeny, and why bar the winning pair from further competition for this prize of honor? If it is the wish of the club for the best sire to win, these restrictions are unnecessary.—THE SQUIRE.

PUG IMPORTATION.—We learn that Mr. George E. Peer of Rochester, N. Y., has recently brought out a grandly bred pug. The dog was selected and brought over for Mr. Peer, by Mr. George Eldridge of Boston. He is a son of champion Loris and out of a daughter of champion Stingo Sniffles. Mr Eldridge it is said offered a big sum for another crack on the other side for Mr. Peer, but the owner refused to part with her pet.

EASTERN FIELD TRIALS CLUB MEETING.—There will be a meeting of the board of governors of the Eastern Field Trials Club at the office of Mr. F. R. Hitchcock, 44 Broadway, New York, on Tuesday, Oct. 14, at 3 P. M. A full attendance is requested, as business of importance will come up before the meeting.

ENGLISH DOGS FOR AMERICAN FIELD TRIALS.—We learn that Mr. Brailsford, the well-known English trainer, has arrived with the string of dogs entered for the field trials here by Mr. A. P. Heywood-Lonsdale, Salop, Eng. The dogs are reported to be a very fine-looking lot.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Walmgate Bar. By R. H. McLusky, East Orange, N. J., for fawn greyhound dog, whelped April 7, 1890, by champion Balkis (Clyto—Primrose) out of Van Hoesen's imported blue bitch.

Falco and Nautilus. By F. S. Webster, Washington, D. C., for liver and white pointer dog and bitch, whelped Aug. 2, 1890, by Robert le Diable (Croxteth—Spinaway) out of Lassie Bang (Bang Bang—Tellie Doe).

BRED.

☞ **Prepared Blanks sent free on application.**

Barneby Nell—Premier IV. C. H. Kobicke's (San Francisco, Cal.) bloodhound bitch Barneby Nell (champion Barneby—Ripple Buxom) to his Premier IV. (Premier III.—Duchess of Rippie), Sept. 28.

Vic—Rajah. G. H. Gill's (New Haven, Conn.) St. Bernard bitch Vic (Bruno—Juliet) to F. L. Morse's Rajah (Valentine—Venus), July 30.

Corrinne—Cherry Boy. S. W. Margerum's (Trenton, N. J.) cocker spaniel bitch Corrinne (champion Doc—Hebe) to C. G. Browning's Cherry Boy, Sept. 16.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Flora. C. F. Hathaway's (Chelsea, Mich.) beagle bitch Flora (Percival's Dandy—Beauty), June 15, six (three dogs), by John Bross's Prince (Dodge's Ringwood—Dodge's Roxy).

Aurore. St. Cloud Kennels' (Tremont, N. Y.) Irish setter bitch Aurore (Royal Ruby—Zylla), Sept. 27, ten (four dogs), by their Minstrel (Elcho, Jr.—Bessie Glencho).

Rhoda. H. B. Tallman's (Oak Lawn, R. I.) cocker spaniel bitch Rhoda (Nick—Carlotta), Oct. 3, seven (four dogs), by C. G. Browning's Cherry Boy.

Molly McGinty. J. M. O'Brien's (Worcester, Mass.) cocker spaniel bitch Molly McGinty (Black Duck—High Rock Jet), Sept. 22, five (three dogs), by C. G. Browning's Cherry Boy (Ebony—Fanchon).

Flossie T. G. L. V. Tyler's (West Newton, Mass.) cocker spaniel bitch Flossie T., Sept. 10, four (three dogs), by C. G. Browning's Cherry Boy.

SALES.

☞ **Prepared Blanks sent free on application.**

Prince—Flora whelp. White, black and tan beagle dog, whelped June 15, 1890, by C. F. Hathaway, Chelsea, Mich., to L. W. Howe, Dearborn, Mich.

Rob Roy. Liver and white pointer dog, whelped Aug. 2, 1890, by Robert le Diable out of Lassie Bang, by F. S. Webster, Washington, D. C., to Dr. E. K. Goldsborough, same place.

Bella Donna. Blue belton English setter bitch, whelped April 4, 1890, by Rockingham out of Douna, by Rosecroft Kennels, Birmingham, Conn., to W. H. Case, Lockport, N. Y.

Kelso II.—Julia whelp. Red Irish setter dog, whelped April 29, 1890, by St. Cloud Kennels, Tremont, N. Y., to Michael Mallon, High Bridge, N. Y.

Julia. Red Irish setter bitch, whelped Aug. 18, 1888, by Duke II. out of Peg II., by St. Cloud Kennels, Tremont, N. Y., to G. G. Davis, Philadelphia, Pa.

Cherry Boy—Duck's Baby whelps. Black cocker spaniels, whelped June 30, 1890, by J. M. O'Brien, Worcester, Mass., a dog to Wm. Orrell, Glendale, R. I., and a bitch to Walter Johnson, Providence, R. I.

Cherry Boy, Jr. Red cocker spaniel dog, whelped June 30, 1890, by Cherry Boy out of Duck's Baby, by C. G. Browning, Worcester, Mass., to H. S. Green, same place.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

E. C., Point au Pic, Murray Bay, P. Q.—Please inform me the proper age to cut a cocker's tail. Is the Handsome Brook Kennel a good place to get a pure-bred cocker? I want a dog for work, not for show. Ans. Any time after they are a fortnight old, the earlier the better. Better take too little than too much off. We assume that they are reliable.

C. L. B., Denver, Colo.—My St. Bernard bitch, 18 months old, is cowardly about the house. Also when out with her and another dog comes up, manifesting hostile intent, she slinks to me for protection. What can I do to correct this fault? I do not want her quarrelsome, but to take her own part at least, and guard well the premises. She is well bred, healthy, and obedient; has never been in a fight. Ans. Natural timidity is hard to overcome. All that you can do is to take her out as much as possible and accustom her to the sight of other dogs. Kindly treatment will go a long way in overcoming her shyness.

M. F. T., Troy, N. Y.—My St. Bernard puppy is 8mos. old and weighs 21lbs., but does not gain in weight as would be expected of him, because of his poor and dainty appetite. Though he has never known the taste of meat, he refuses to take such food as potatoes, bread and milk, meal and other vegetables and cereals, such as are given to dogs. He is apparently healthy and playful, and has not had worms. Ans. You had better put your puppy on a meat diet at once; feed good soups, in which soak stale bread, mixing the meat in if as well, also feed chopped raw meat two or three times a week. A little bone meal, say a dessertspoonful every other day mixed in his food, will be found to be beneficial. Give plenty of exercise.

H. D. B., Vicksburg, Mich.—This summer there has been raging among dogs in this section the most severe cases of distemper I ever saw. I have lost two. I have a young foxhound one year old that has partly recovered, but the disease has left his nerves in a condition that I have not found any help for. His body and all the muscles seem to jerk and twitch continually, and he does not gain flesh. Ans. Your dog has chorea, a very obstinate complaint to cure. Take one ounce Fowler's solution of arsenic and one-half an ounce of the ferri et ammonia citratis, mix, and give three drops twice daily, increasing the dose gradually to ten drops. Then discontinue for say a couple of weeks, and begin again if the dog is not cured. Feed nourishing food and exercise gently every day.

J. F. E., Williamsport, Pa.—I have a litter of five English beagle pups, whelped July 13, that are in bad shape and I am at a loss to know what ails them. They are strong and hearty, but have what I first supposed was the eczema or mange. Have treated them for both but they get no better. Their skin resembles a hog's skin more than anything I can compare them to, covered with something like dandruff, which will appear in two or three days after washing and scale off in scabs half the size of a pea. They don't seem to be sore, and eat well, but scratch continually. Have given them 2 to 4 drops Fowler's solution daily for ten days, then increased to twice daily for two weeks, and applied zinc oxide ointment, arnica oil, and lard and sulphur to the skin. Gave also one teaspoonful syrup of buckthorn (German) daily for two weeks. The mother was in the country all summer, and I have learned that she escaped several times and ran rabbits all night—about two or three weeks before she whelped—and was taken on the mountain the evening she had her pups and had to be carried into the kennel. I have concluded that she became overheated and that that is the cause of the condition of the puppies. They have very little hair on their back and sides. If I am right in my conclusions can you advise me what to do for them? Ans. Wash the dogs with warm water and castile soap, dry thoroughly and then rub the affected parts with balsam of Peru. In two days repeat the treatment. Another good mixture is to take 1 quart of lard oil, ¼lb. of antimony and ¼lb. of sulphur lac. Rub well all over with the mixture, muzzling the dogs after treatment, as licking it off will most likely make them nauseous, though a little of it will do them no harm. Wash off after three or four days. We have found this last mixture efficacious when everything else had failed. Let us know how they get on.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

Rifle and Trap Shooting.

RANGE AND GALLERY.

ST. LOUIS, Mo., Oct. 3.—The last shoot of the St. Louis Pistol Club was favored with the largest crowd of members that has been present during the tourney. Summerfield and Dorman tied on 89, but on the shoot-off the former made the top score and won. All shooting is at a 12½yds. standard American target. The score:

M Summerfield	8	9	10	10	10	10	7	7	8	10—89
Sam Dorman	8	9	9	8	10	9	9	8	8	10—89
W Bauer	6	9	10	6	6	10	10	9	10	10—86
G W Alexander	10	8	9	10	7	10	4	10	6	8—85
M Billmeyer	5	9	9	10	9	10	7	8	9	8—84
D Barker	8	9	8	8	9	8	8	10	8	7—83
E Y Bast	9	6	7	10	9	8	10	6	8	6—79
Jay J Schaefer	6	7	7	8	8	10	10	8	7	6—77
E Mohrstadt	6	7	7	7	8	10	7	7	10	8—77
A E Bengel	7	7	6	7	9	10	6	9	10	7—76
A McBean	10	9	5	6	8	6	10	9	7	6—76
J A Lee	4	9	6	5	6	10	9	9	9	7—74
W C Mackwitz	7	8	6	7	7	10	8	7	7	6—73
J S Chase	8	9	6	7	7	7	7	4	7	6	6—67

UNSER FRITZ.

BOSTON, Oct. 4.—The regular weekly shoot of the Massachusetts Rifle Association was held at its range to-day with a good attendance of riflemen, including a large delegation of the Boston Press Rifle Association. The shooting conditions were not very good, and the scores ran rather low. Following are the best scores made to-day, 200yds., standard American target:

(R) All-Comers' Rest Match.

W P Thompson	111	F W Chester	104	I B Thomas	97
F Daniels	110	A Montgomery	101	F S Hamlin	83
S Wilder	107	M T Day	100	J French	92
M R Barter	106	A S Hunt	97	W Gill	88

(R) All-Comers' Off-Hand Match.

J J Lindsay	75	A S Hunt	69	J B Hobbs	63
S C Sydney	74	I B Thomas	67	M Underwood	61
D Bayley	72	A King	66	S D Martin	60
M T Day	71	M R Barter	65		

(R) Pistol Practice Match, 50yds.

W C Johnston, Jr.	88	A G Stevens	80	A S Hunt	79
W G Hussey	88	S C Sydney	79	M R Barter	75
M T Day	87				

(R) Re-entries allowed.

THE RING TARGET RECORD.—Jersey City, Oct. 3.—In your issue of Oct. 2 I notice an account of Mr. Lyon's making a score of 74 out of a possible of 75 points on the 25-ring target, I suppose at 200yds., and that Mr. Merriman states that it is the first time it was ever made at a public prize shoot. Mr. L. P. Hansen, captain of the Excelsior Club, of this city, states that Mr. Zettler, of New York, made the same record at Schutzen Park, Union Hill, N. J., two years ago. I personally saw Mr. John Coppersmith, of the Lakeside Club, Newark, N. J., perform the same feat on Labor Day in a prize shoot given by the Marion Rifle Club, at Marion, N. J.—F. G. KITTREDGE.

NEW MILFORD, Conn.—The fourth annual prize shoot of the New Milford Rifle Club will take place on Oct. 15 and 16. Two matches will run through the two days. Each match is 5 shots to a score and open to all. The off-hand match will be decided by the best three scores and the rest match by the best four scores.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

Oct. 14.—Catskill, N. Y. Tolley's Tournament. Kingbirds, Keystone system. A. S. A. rules. Address Geo. F. Tolley.

Oct. 14-16.—First Annual Tournament of the Boiling Spring Fishing and Gunning Club, at Rutherford, N. J. Sweepstake purses. Address P. A. Jeanneret.

Oct. 23.—Second Annual Tournament of the Maplewood Gun Club, at Maplewood, N. J. Open to all. Bluerocks, three sets of traps. C. W. Brown, President, Maplewood, N. J.

HARRISBURG.

HARRISBURG, Pa., Sept. 27.—The annual fall tournament of the Harrisburg Shooting Association closed to-night, and was quite as successful as any of the previous ones. Even the bad weather of Friday failed to stop the shooting, and the programme was shot out with several extra events added. The attendance was better than the management had looked for, considering the complaints of slim attendance at recent tournaments; but a good many shooters from other States besides our own are beginning to find out they can always depend on having a good shoot here; and this place is rapidly taking front rank as a shooting point, and there is no reason why it should not. The grounds are virtually in the city, but a few minutes' ride in street cars from the depots. The hotel accommodations are good, and, what is better, within a stone's throw of the score; and mine host Grove has made lots of friends by his attention to the shooters from other cities. The visitors, without exception, declared themselves well pleased with the shoot; such a thing as a kick or growl is never heard here.

The rapid-firing system was used in all target matches, and we hardly think it will be done away with very soon, for shooters want to be shooting all the time, and not waiting ten minutes to half an hour between each shot. To be sure, the cracks were here in force, but that did not debar the local shooters from participating. We had as visitors the Wolstencroft brothers and Enoch Miller, of course; you can't keep them away from here. Jersey also sent Mahlon Rupell, of Milford, whom we all want to come again; and I guess he will. Genial Courtney, of the Lefevre Arms Company, added dignity and solidity to the shoot, but unfortunately he had not quite recovered his breath from the Williamsport walking match, where he had so distinguished himself early in the week, and was not quite up to his usual form. W. Fred Quimby struck here in the rain and shot bravely through it; but I think he should be ruled off the "course" at all respectable matches, for he was the only disturbing element here. His wild assaults on poor Courtney and Jim Elliott made the onlookers think it was a political meeting or a prize fight they had come to see, and the police only refrained from rushing in and "pulling" the whole crowd out of the respect they had for his manifest display of muscle. And then he would insist on singing a song about a girl of his called "Annie Rooney" whom no one else had ever heard of.

J. A. R. Elliott, of Kansas City, came in the tent Saturday and asked if it was too late for him to go in the sweep, and as "Doc Gains" he stepped to the score, but before he had a chance to shoot he was seized and introduced to the crowd by Quimby under his proper name. It was a shame to give him away so badly, and I think Quimby had to soothe his injured feelings by presenting him with one of Thurman's shooting jerseys, which, by the way, are becoming quite a feature at tournaments, and are certainly very comfortable and convenient. Dr. Christy and Mr. Clark, of Altoona, were inviting all the boys to come there Oct. 7 and 8, "Franklin," Buckley, Heflin and Malone came from Baltimore, Milt. Lindsley and Captain Money from New York, Krueger from York county; and shooters from near-by towns made up a good crowd of good-natured good shots. A 50-target race on Friday, between a half-dozen who thought they could "do" each other, was won by Will Wolstencroft with 48; and the feature on Friday was the tie shooting between Quimby and Elliott, which was carried through three matches and finally won by Elliott in the fourth, Quimby hitting his bird, a hard driver, which fell dead just out of bounds; but he took his hard luck good-naturedly, as he also did when he undertook to match quarters with Jack Rabbit and couldn't understand why he invariably lost.

Taken altogether the shoot was a success without a drawback, except the weather, which prevents about a dozen shooters from near-by towns coming in; and the managers hope to repeat it in the spring, and take this method of thanking the Hunter Arms Co., American Wood Powder Co., and Standard Cartridge Co. for their kindness.

First Day.

Fourth Day, Friday, Oct. 3.

At 9 o'clock, the hour announced for the calling of the big event, the outlook was a gloomy one. There were but few shooters on the grounds, and the storm of the night before had literally drenched the birds that were confined in the large coop on the grounds. At 10 o'clock the clouds broke and the event was started by mutual consent, the entry list was held open until the 13th round; at that time 21 had entered, the storm undoubtedly keeping at least a dozen entries away. The birds for the first five rounds were a poor lot of flyers, out of the first 175 fired at not a bird being missed. As the sun dried them off they began to improve and the balance proved to be good strong flyers. The ties for fourth money on scores of 22 was decided by a pretty shoot off between Canon, the brilliant one-armed shot, and the veteran Billy Sigler, and resulted in Canon's winning the money by killing 11 birds. But for a singular and lucky gather of Sigler's ninth bird Canon would have won in that round. As Sigler pulled on the bird, a fast incomer, he found his safety was not up. Without taking the gun from the shoulder he shoved it forward and fired, just wringing the bird, which careened and struck him as he stood on the score. As the 30yds. mark was the dead line the referee was of course compelled to score him the bird. The tie for fifth money was shot off at strings of 3 birds, and was finally won by Peacock.

A sweepstake at 50 birds, $100 entrance, had been partially arranged to take place on Saturday. Elliott, Kleinz and Class had posted their entry, but as there was every probability of the day being stormy and as no more entries could be obtained, the event was called off. If it could have been brought about, it would have been a great race, as the committee were reserving a grand lot of birds. Elliott came on for the express purpose of arranging some matches with Eastern shots. Class and Kleinz expressed a willingness to shoot for $100 or $200, but Elliott was looking for bigger money. Word was sent here that Edgar Murphy would shoot him for $1,000, and the articles are to be signed and the match take place at an early date.

Event No. 21, grand $300, guaranteed by W. F. Quimby & Co., sweepstakes, 25 live birds, open to the world, all surplus added, entrance $25, money divided 40, 27½, 17½, 10 and 5 per cent., if less than 20 entries, 40, 30, 20 and 10 per cent.:

The last column is of the tie scores.

SOUTHERN ILLINOIS.

St. Louis, Mo., Sept. 27.—The tenth annual tournament of the Southern Illinois Sportsmen's Association took place at Winkleman's Park, Belleville, Sept. 26 and 27. The weather during the two days was cloudy and quite chilly, which was undoubtedly responsible for the small crowd of shooters. The Spencer family, which has become a terror in the land at inanimate targets, attended the shoot, but as the scores will show did not prove a dangerous element by any means. Mr. Joseph Victor, of Belleville, managed the shoot to the entire satisfaction of all. Standard targets, A. S. A. rules:

No. 1, 10 singles: Wheeler 5, C. Spencer 9, R. McMillan 3, J. A. Gray 4, H. Wagoner 5, Dr. Spencer 10; Craig 5, D. Smith 4, W. Wilson 3, T. McFarland 4, W. Spencer 7, A. Harris 9;

No. 2, 15 singles: G. Crosby 11, McMillan 6, Gray 10, Wagoner 9, Roy 13, W. Spencer 11, Dr. Spencer 10, Harris 12, Wheeler 8, C. Spencer 12, Craig 8, Smith 7, Wilson 7.

No. 3, 10 singles: Wheeler 5, Wilson 4, Wagoner 5, Gray 6, Roy 10, Dr. Spencer 8, C. Spencer 9, Craig 6, Crosby 6, Harris 9, Smith 8, McFarland 8.

No. 4, 20 singles; Harris 14, C. Spencer 18, Craig 11, Gray 11, Smith 9, Wilson 7, Crosby 14, Wheeler 12, Westfield 15, Roy 12, Dr. Spencer 16.

No. 5, 10 singles: Westfield 9, Wheeler 4, Wilson 5, Harris 6, Roy 9, Scott 4, G. Crosby 8, McMillan 4, Dr. Spencer 9, C. Spencer 9, Craig 4, Smith 8, McFarland 5, Wagner 6.

No. 6, 10 singles: Gray 4, Wilson 5, Dr. Spencer 7, Crosby 5, Roy 10, Scott 5, Wheeler 6, Smith 6, Craig 4, C. Spencer 7, Westfield 7, Harris 6.

No. 7, 15 singles: Craig 8, Roy 12, Westfield 14, Crosby 11, Dr. Spencer 10, S. Kuhn 10, Gray 7, C. Spencer 14, Smith 11, Harris 7, Wheeler 11, McFarland 11.

No. 8, 15 singles: McMilian 10, Crosby 10, Wagner 9, Wheeler 9, Gray 8, Smith 10, Roy 10, Harris 8, Kuhn 8, Dr. Spencer 13, C. Spencer 15, Westfield 14, Craig 4.

Second Day.—No. 1, 20 singles: McMilla 14, D. Smith 12, Wheeler 6, Roy 14, Wagner 10, Geo. Crosby 17, Wilson 11, C. Spencer 19, Westfield 13, Harris 15, Craig 6, Dr. Spencer 15.

No. 2, 10 singles: Mead 10, C. Spencer 9, Smith 9, Craig 5, Ross 6, Gray 5, Dr. Spencer 7, Scotty 5, Winters 5.

No. 3, 10 singles: Mead 9, Craig 4, C. Kuhn 7, W. Spencer 7, C. Spencer 10, D. Smith 8, Dr. Spencer 8, Wagner 5.

No. 5, 10 singles: Mead 9, C. Spencer 9, Westfield 5, J. Hagerty 9, Dr. Spencer 5, Kuhn 8, Ross 7, Roy 8, Gray 7, Smith 7, Winters 4, W. Spencer 6, Craig 2, Wheeler 7.

No. 5, 10 singles: Mead 9, Roy 9, Kuhn 5, Dick Hut 7, Smith 9, Hagerty 7, Westfield 7, C. Spencer 9, Dr. Spencer 7, Crosby 9, Victor 7.

No. 6, 10 singles: Westfield 9, Roy 9, Craig 4, Wheeler 3, Ross 4, Smith 7, Hut 8, C. Spencer 8, Mead 10, Winters 8, Kuhn 8, Crosby 7, Dr. Spencer 8.

No. 7, 15 singles: Mead 15, Roy 11, C. Spencer 13, Hunt 10, Westfield 11, Crosby 13, Winters 10, Kuhn 6, Smith 13, Dr. Spencer 10.

Unser Fritz.

CALIFORNIA SPORTSMEN'S ASSOCIATION.—The ninth annual meeting of the California State Sportsmen's Association is now in progress at Sacramento.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

LONG BRANCH.

Long Branch, Sept. 30.—There was a great shoot here to-day and fine shooting marked the event. It is admitted to have been the biggest live-pigeon shoot ever known in the sporting history of New Jersey. It was the invitation tournament of the Central Gun Club, of Long Branch, held in a meadow on a bank of the south branch of the Shrewsbury River, at Pleasure Bay. The teams of the Glenmore Rod and Gun Club, the Parkway Gun Club, the Coney Island Rod and Gun Club, the Fountain Gun Club and the home club contested for a massive solid silver loving cup offered by the members of the Central Gun Club.

Three tents, including a large one for ladies, had been erected by the home club on the grounds. A special train over the Central Railroad brought down a large number of the members of the Fountain Gun Club and their friends. This merry delegation included: President and Mrs. Abel Crook, Samuel Crook, Isaac Mason, H. W. Blattmacher, Miss Blattmacher, T. Van Name, Mr. and Mrs. Robt. Wells, Mr. and Mrs. Wm. Curriar, Lewis T. Davenport, Mr. and Mrs. Vincent, Chas. S. Carlos, W. R. Selover, Jas. D. Van Riper, H. McLaughlin, Chas. B. Fisher, Chas. E. Siddon, Mr. and Mrs. Peter Kelly, Captain and Mrs. Benj. W. West, Mr. and Mrs. John A. Carney, Miss West, John C. Blauvelt, Miss McDougall, Mr. and Mrs. Chas. Wingart, Miss Wingart, Edward Wingart, Miss Compt, Dr. Wynn, Mr. and Mrs. Thos. Blankley, Mr. and Mrs. Seibert, Miss Seibert, Samuel Giglio, Miss Giglio, A. W. Phelps, Mr. and Miss Eddy, Mr. and Mrs. Hugh Goodwin, Miss Goodwin, and Mr. and Mrs. Berchman.

Among the others present were Arthur L. Sewell, Ferdinand G. Loeb, John S. Hoey, William G. Brokaw, Jacob Pentz, J. L. Bright, Henry B. Wallack, Colonel E. Shade Green, ex-Sheriff Geo. W. Brown, Edward Throckmorton, Coroner Fred M. Vanderveer, Miss Price, Mrs. Wm. C. Price and James P. Thompson.

Hugh Goodwin, of Brooklyn, who is an active member of both the Coney Island and the Fountain clubs, was selected for referee. John A. Carney, of the Fountain club, was made the scorer and Henry P. Donnelly, of the Coney Island Rod and Gun Club, took charge of the traps. The conditions under which the cup was shot for were as follows:

Each team to consist of 10 men, each man to shoot at 10 birds, at 25yds. rise and 80yds. boundary; use of both barrels allowed, 5 traps.

The shoot was called promptly at 11 o'clock, when nearly every available foot of standing ground on the outside of the ropes was filled with spectators. The cup was won by the Fountain Club, killing 93 out of a possible 100 birds. The scores follow:

Fountain Gun Club of Brooklyn.

ST. LOUIS, Mo., Oct. 3.—The event in trap-shooting circles here this season was the second annual shoot for the Rawling Bros.' championship trophy which took place last Monday on the grounds of the Compton Hill Gun Club. Last year's trophy was a gold medal and was won by Jule Siemiuskie with a score of 84. The trophy is patterned after a bluerock target, with a solitaire diamond in the center, is intended for a watch charm and cost $50. Although the day was bright, a strong wind directly from the shooter gave the targets an extra impetus and was largely responsible for the low scores. Only residents of this city and county were permitted to compete. Fifty singles and 25 pairs bluerock targets per man, all persons taking part to use shells loaded by the donors. A. S. A. rules governed:

WALNUT HILL.—The small but jolly party of shotgun men, who journeyed out to the range of the Massachusetts Rifle Association on Oct. 1, found awaiting them weather conditions which were absolutely perfect. In consequence, the day's sport was of the finest, and at the close of the shooting the scorers exhibited some very high aggregates. The interest of the meeting centered upon the two prize contests, but the minor contests were hotly fought. Diamond pin match. Eleventh competition, 20 keystone targets, squad system, and 5 pairs of standard targets.

On alternate Wednesdays, viz.: Oct. 15 and 29; Nov. 12 and 26; Dec. 10 and 24, the Massachusetts Rifle Association will in addition to the current matches, offer for competition of all trap shots, an elegant gold watch chain ornament, unique in design and of intrinsic worth, donated by the Keystone Target Co. Conditions: 100 Keystone targets, Keystone system to be shot in scores of 20 each day, on any five of the seven days named above; 100 being the possible. Competitors will be handicapped by the Association trap shooting committee. Contestants making equal scores, including their handicap, will tie. Ties will be shot off at 100 birds, on the basis of the match; 10-gauge guns, 18yds; 12-gauge, 16yds, National Association rules. Shooting to begin at 10:30 A. M. The match will be shot at 1:30 P. M. Birds, 2½ cents each to non-members. Dinner served, and loaded shells for sale at the range. Yourself and friends are cordially invited to attend.—H. S. Harris, (Equitable Building, Boston).

WATSON'S PARK.—Burnside, Ill., Oct. 2.—Following are the scores made here to-day by the Fort Dearborn Gun Club for club medal at 15 live pigeons, 20yds. rise, 80yds. boundary, Illinois State rules:

M. J. Eich is not a member of the club.—Ravelridge.

TOWANDA, Pa., Oct. 4.—Friday, Oct. 3, found the shooting members of Our Own Gun Club on hand to commence the monthly shoot for county and club badges. The scores, except those made by the winners, were not very good. Snider with a Lefever gun won the county trophy, while Rittenbury with a Colt hammer gun won the club trophy, the handsomest of the two badges. All enjoyed the sport, however, as it was a glorious October afternoon. First event, 25 single targets, for club badge, Keystone rules:

Dittrich.....,1101111000101000010101—13
Snider.....1011011011111111111101—21
Montanye.....1011011101110010111011—17
Rittenbury.....1111011111101100111l—21

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

UNDER WAY.

ROCKING gently on the bosom of an undulating sea,
With the ozone-laden breezes coyly dancing over me;
Blue above and blue beneath me, peace and stillness all around—
Grateful is my wearied spirit for the rest and comfort found.

Stretched at length within the cockpit, a soft cushion under head,
Lazily I watch the topmast with its fluttering bit of red,
As it sways with easy motion, tracing pictures on the sky—
Many a time that bit of bunting led the fleet in days gone by.

And I listen to the slatting of the halliards 'gainst the mast,
To the creaking of the rudder as the water eddies past;
To the breeze's merry piping as it twangs the cordage taut,
And the laughter of the waters as along the sides they sport.

O'er my head the stout oak tiller wags a promise of rare sport—
And the ensign struggles bravely to retain the breezes caught
E'en the sails press hard the gaskets, striving vainly to be free,
And the pennant flaps defiance—all's in readiness but me.

Loath to break the peaceful quiet, still I lie and gaze aloft—
O'er my senses steals a rapture that to no man cometh oft;
Visions come and visions vanish—many a glorious sail of yore
Memory yields up from her treasures, till my soul can bear no mor e

Up I spring and loose the gaskets, cast them from the snowy cloth,
Soon 'tis spread to summer breezes—to the tune the blocks creak forth;
Jib is hoisted, anchor catted, and with easy list to port
Trips she o'er, in merry measure, waves that spray her decks in sport.

Prancing, dancing o'er the wave crests, merrily we romp along,
While upon the cool sea breezes floats my joyous sailor song:
"Heave, oh heave the halliard, comrade, we will sail the open sea
You shall see God's wonders, comrade, if you'll come and sail with me."

A. H. Tompkins.

New York.

NEW YACHTS.

"NINETY-FOOTER" is in the air just now, and a number of the leading yachtsmen of Boston have been accused of an intention to lower the colors of the Volunteer.

Ex-Com. J. Malcom Forbes is the most likely builder of a 90-foot sloop, though he has not decided upon building as yet. One great trouble in a boat of this length is to get a suitable skipper. The really first-class racing skippers of 90-foot sloops in the country can be counted on the fingers of one hand. Dr. Bryant has a hold on Capt. Crocker, and Gen. Paine still keeps Capt. Haff in his employ. If Capt. Haff were obtainable, it might have some influence in determining Com. Forbes to build.

Henry Bryant, the clever amateur designer of the Thetis and Alert, has also been mentioned as a builder of a 90-footer. If Mr. Bryant should build it goes without saying that he would draw the lines himself. Mr. Bryant has just returned from a shooting trip to British Columbia, and says that he has no intention of building anything big this winter. He says that the cost of building and running a big yacht is so great that they "are not worth their keep."

Some of the younger Boston yachtsmen are talking of a syndicate to build a Burgess 70-foot sloop. It seems to be accepted in Boston at least that the Carroll Brothers will build the 70-footer, the lines of which are now in the office of William Gardner of New York. The Burgess boat is talked of to head off the New Yorker, and if she is built, a couple of Boston's leading young amateurs will be given sole charge of her management.

It is to be hoped that New York will build some boats from lines by its own designers this winter. Much of the interest in the racing in Great Britain comes from the fact that the yachts are the work of rival designers. In this country there is no doubt that the fact that most of the racing boats come from the hands of the same designer tends to cool the interest in the sport.

Boston has held the supremacy in yachting over her sister city too long without a struggle. In Cary Smith the metropolis has a designer who has turned out some very creditable vessels, and William Gardner, with the aid of practical experience to help out his theoretical training, should be able to turn out some very fast craft. With a healthy rivalry between New York and Boston, both in yachts and their designers, it is probable that the interest in yacht racing would be revived.

Mr. Burgess would naturally like to build a new 70-footer, but it is a question whether he could beat the Titania. A boat that is worked up to such a fine edge as Mr. Iselin's sloop would be a tough customer to handle, and Mr. Iselin would not relinquish the championship of his class without a hard struggle.

While many new 46-footers are "talked about," the fact remains that those for Mr. Belmont and Mr. Thayer, and the one talked of for Cornelious Vanderbilt, are the only ones which have assumed prominence in the calculations of Mr. Burgess. The midship section and profile of the Belmont 46 are drawn, and thus the first step in the building of the racing fleet of 1891 is begun.

The section of the Belmont cutter, Mineola, for she is so named, shows a harder bilge than the Gossoon, and more curve at the garboards. In this respect she is a concession to the Mariquita model, but in point of beam she is a wide departure from Mr. Belmont's present boat. With the same draft as the Jessica, 10ft. 6in., and about 6in. more beam than the Gossoon, it is evident that while a powerful boat, the Mineola is no "brute." The defeat of the Jessica will probably be a much easier task than that of the Minerva.

It is not likely that any movement toward a change of classification by corrected length will be made this winter. A remark made by Designer Burgess a day or two since, shows that there is no present danger of the building of brutes. He said that he was convinced that the Gossoon could be beaten by a boat of less power, and that if he were to build a 40-footer for next year he would give her less power than the Adams cutter possesses.—*Boston Globe.*

CORINTHIAN NAVY.—On Sept. 30 a meeting was held at the Hotel Marlborough. Sixty-two members were present, and Com. Connolly laid his scheme for the consolidation of the squadrons about New York before the meeting. The navy has been so successful that demands have been made on the administration to start squadrons at Boston, Philadelphia and other distant points. The navy is not inclined to spread, and will adhere to the old constitution and by-laws except so far as the squadrons are concerned. The probable changes will be slight, and will include a new set of officers, the rearrangement of territory and probably raising the limit to 25ft. l.w.l. instead of 23ft. as now. The commodore's report showed that 234 members were on the roll, eighteen port stations established and running in good order, and that seven regattas had been given. All the prizes won during the past season have been awarded, and the treasury still has a good-sized balance on hand. This is not bad for an organization run on $2 a member. Lectures on seamanship and navigation will be given this year, and a school established where members will study, and upon passing the necessary examination will be awarded certificates. Com. Center, of the S. C. Y. C., will deliver the opening lecture late in November. Proposed for membership: W. S. Gilmore, E. D. Hurlburt, Jr., Augustus Gardiner, L. S. Hardin, Frederick Dickens, Wilmore Worthley. Com. Connolly has appointed the following committee to revise the constitution and by-laws: Vice-Com. Thos. Clapham, Vice-Com. T. F. Day, Capt. Frank B. Jones, Thos. T. Taber and Capt. J. C. Summers. The committee will meet on Oct. 9 and will report at a special meeting to be held this month.

LAUNCH OF THE ST. GEORGE.—On Aug. 30, Messrs Ramage & Ferguson launched at Leith a very large composite auxiliary steam yacht, named The St. George, built to the order of Mr. Ernest J. Wythes, of the Royal Yacht Squadron, designed by Mr. W. C. Storey. The inner skin and framework are of iron much above Lloyd's requirements, sheathed outside entirely with teak, and coppered to above the water-line. The extreme length of the yacht is nearly 200ft., breadth outside of planking 32ft., and depth moulded 18ft. 9in., while her tonnage is about 830 Y.M. She has triple expansion engines, having cylinders 20in., 30½in., and 51in. diameter, 30in. stroke, with two steel boilers working up to 160lbs. The propeller is two-bladed of gunmetal. She is three masted, with yards and studding sails on the foremast. A beautiful figurehead, representing St. George with sword in hand flanked by carved dragons on the trail boards, gives the bow of the yacht a characteristic appearance. The sleeping accommodation is aft, and connected by a passage with the dining saloon; and other apartments forward. A large deck saloon and chartroom are handsomely furnished on deck, and built entirely of teak. Electric lighting is everywhere fitted, and a powerful search light is fitted.—*London Field.*

MIRAMICHI Y. C.—The Miramichi yachting season was closed on Sept. 25 by a race for the McLimont flag. There was a bowling sou'wester blowing, with frequent squalls out of the hollow and off the hills, and all reefed before the start from Chatham except the cabin cutter Kittoch. She got a terrific knockdown the first time she tacked, and did not recover until Com. Miller's Kilbride had a good lead. A half-decker would have filled and sunk in the same situation. Kilbride couldn't stand the puffs, and had to haul up for the purpose of tying down another reef. The cutter got a long lead and increased it to the finish. Off Bushville, three miles from the start, Vice-Com. Stewart's Fedora broke her rudder and had to run back under her jib. This is Kittoch's third club victory this season, and her owner, Mr. James Miller, is greatly pleased with her improved sailing powers. The official time is as follows:

	Start.	Turn.	Finish.	Elapsed.
Kittoch	2 17 03	3 38 35	4 17 38	2 00 35
Kilbride	2 17 07	4 01 15	4 39 01	2 21 54
Fedora	2 18 29	Disabled.		

The course was 10 miles, half of it windward work.

ATALANTA.—Belleville, Ont., Oct. 3.—The well-known sloop yacht Atalanta was yesterday purchased by Mr. D. R. Leavens, of this city, on behalf of a local syndicate, who will have her put in thorough repair during the winter and will race her next year. One of the first efforts of her new owners will be to recover the Fisher champion cup, which her then proprietors forfeited to the Norah in 1885. It will be no easy task, however, to beat Norah, which in 1886 defeated Atalanta by nearly 20 minutes, exclusive of time allowance, and since then was rebuilt and lengthened under the superintendence of the late Capt. Cuthbert. She is now faster than ever, and an effort will be made to further improve her by putting four tons of lead on her keel. In Atalanta and Norah the R. Q. Y. C. has once more the two largest centerboard sloops on fresh water, and they are as well the fastest craft of any rig on the lakes in any wind short of a very heavy gale. The rivalry between them will revive the yachting spirit here, which had almost died out.—PORT TACK.

A NEW CAPE CAT.—Mr. Hanley, of Monument Beach, Cape Cod, the builder of Harbinger and Almira, has an order from Mr. T. J. Young, owner of Almira, for a new boat for the 30ft. class. Though a racer, she will have 6ft. headroom in a cabin in which will be four berths besides a stateroom.

CHIQUITA.—This cutter, the first of the deep centerboard 40-footers, built in 1888, will be converted into a keel boat, the work being done by Lawley. She now draws about 7ft. 6in. as a centerboard boat. She will be used only for cruising.

YACHT RACING IN EARNEST.—The achievement of the owner of the Velzie, competing in forty-eight matches out of the fifty sailed by the 20-raters, beats the performance of the 10-tonner Florence in 1878, when Mr. Henry Little sailed her himself in forty matches out of a possible forty-four. In 1876 he sailed thirty-two matches on the Iona, and eleven in other yachts, making a total of forty-three. Last year Mr. Hodgens sailed forty-one matches in the Vreda whilst in 1888 the Marjorie competed in forty-one matches, and in 1887 Mr. Nottage sailed forty-one matches in the Foxhound. We do not think anything of the "historical" yachtman—Mr. Weld for instance—sailed as many as fifty matches thoroughout the whole of their career, and here we have one gentleman performing such a feat in a single year. Sailing forty-eight matches in a 20-rater is by no means an enterprise which can be accomplished without trouble and a great deal of devotion, not to say industry, in pursuit of the end. For instance, Velzie, to sail her in forty-eight matches had 105 days, excluding Sundays; so she had fifty-seven days for making passages and enjoying the luxury of rest from the bustle and racket of match sailing. The passages extended from the Isle of Wight to the Thames, then to Dover, back to the Thames, to Harwich, Isle of Wight, round to the Menai Straits, Liverpool, the Clyde, Belfast, Kingston, Falmouth, Isle of Wight, Plymouth, and back to the Isle of Wight, about 2150 miles in all. It can be gathered from this alone, that sailing a 20-rater in the way Velzie, Chiquita, and Dragon were this year is anything but the sleepy operation yacht sailing is sometimes supposed to be; and to win twenty-three first prizes, as Dragon has done in the teeth of such opposition as she met with from the other two prize winners, is evidence of the excellence of the craft and the skill of her skipper, Ben Parker.—*Field.*

CLARA AND MINERVA.—Clara is now laid up at the Corinthian Basin, at Staten Island. Minerva was out at Wintringham's last week, where her lines were taken by Mr. Hyslop for the Seawanhaka C. Y. C. She then sailed for Beverly, where she will be laid up. Captain John Barr, of Clara, with his brother, Captain Charles Barr, of Minerva, is now living at Marblehead. The two will buy a small schooner and spend the winter herring fishing.

WILD DUCK.—This name has been chosen for the new 125ft. steel steamer for Mr. J. M. Forbes.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1889-90.

Commodore: WALTER U. LAWSON, Boston, Mass.
Secretary-Treasurer: RALPH F. BRAZER, 47 Central street, Lowell, Mass.

	Vice-Com.	*Rear-Com.*	*Purser.*
Central Div.	Geo. A. Warder	E. L. French	J. K. Bakewell, 110 Diamond street, Pittsburgh, Pa.
Eastern Div.	Dr. J. A. Gage	A. S. Putnam	Ralph F. Brazer, Lowell, Mass.
N'thern Div.	W. J. White	W. J. Read	C. M. Whitlaw, Montreal, Can.
Atlantic Div.	M. V. Brokaw	I. V. Dorland	W. R. Rowland, Yonkers, N. Y.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Secy-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—D. H. Crane, Chicago, Ill.
Vice-Commodore—N. B. Cook, Chicago, Ill.
Rear-Commodore—O. A. Woodruff, Dayton, O.
Secretary-Treasurer—J. H. Ware, 130 Rialto Building, Chicago, Ill.

Applications for membership should be made to the Sec.-Treas., on blanks which may be obtained from him, and should be accompanied by $2 as initiation fee and dues for the current year.

A RIVER CRUISE IN A FOLDING BOAT.

[*Concluded from Page 220.*]

THE next morning, after exhibiting our novelties to a number who desired to inspect our outfit, we launched for new adventures, and having run down a mile anchored our craft at the exact point in the river where the States of Pennsylvania, West Virginia and Ohio join, so that the Wanderer's 12ft. of length then actually rested in three States at once, an experience which so small a boat seldom has. S., from the stern, asked, "W., how goes the time in West Virginia and Ohio?" W., with right hand dipped in the waters of Ohio and his left in those of West Virginia, responded, "Oh, quite good, how is it in Pennsylvania?" S. rejoined, "It's confounded hot here, but think it will be cooler when I get over there."

We then meandered on, and finding a pleasant, cool-looking spot, a mile or two down the river on the West Virginia shore, near the base of a mountain range, where the primeval forest was unbroken and no habitation near, we decided to inspect and if desirable go into camp for a few days, until the weather became somewhat more enjoyable. A delicious spring was found, also wood convenient, and the tent pitched on a level shady plateau, fully 100ft. back from the river and 40ft. above it, with the bluff rising abruptly within 50ft. at the rear, covered with dense forest growth and an island of some extent in the middle of the river shut out a view of civilization in that direction. This reminds W. of Adirondack scenes and he begins to fell quite at home. Wood is gathered, a rude table constructed, beds, etc., arranged, ere enjoying a late dinner. Then the hammocks are swung and the afternoon whiled away ere we are aware. Then a neat campfire arranged at a locality favorable for cheer and light, without too much heat, and after supper, music and "seven-up" fill in the hours until time to turn in.

An amusing incident, at least to W., occurred as the duffle was being transferred from the boat to the camp ground. S., a strong vigorous bicyclist, slung the pack-basket on his back, and taking the tent grip in one hand and the Winchester in the other started up the bank; but as the river had been at a high stage and the water was receding the ground was somewhat uncertain in that immediate vicinity and his feet slipped backward, resulting in a header into the sand with the pack on top, which W. was obliged to remove ere his companion could arise.

We remained in camp here for three days, and were only cognizant of the extreme heat when obliged to take the boat and go out for supplies. S. took one trip up the river, and found the current near the head of the island very strong at the then low stage of water, and he was uncertain at one period whether he would make it or not. He succeeded, however, and on his return trip fairly came back flying. At this point several steamers that were on up trips were obliged to turn back. Squirrels were plentiful, and W. bagged a number with the rifle. Perch and bass could be easily obtained when wanted. On the evening of the third day, as we were having a game of "seven-up" near the camp fire, the silence was broken by the crunching of bones some twenty-five feet below the plateau, where the refuse of the camp had been thrown. W. said "There is a fox or a hedgehog, get the camp lantern and shine his eyes, and I'll get the rifle and drop him." It was quickly done, but the "ki yi" that followed the shot announced the fact that the intruder was a canine instead of a beast of the forest, and W. regretted the act, as he believes others as attached to their pet dogs as is he to his. The next day prior to breaking camp, a card was tacked up on a tree, and a request made that should the owner of a wounded dog find such card he could communicate with the address given. Just as we were packing up a native put in an appearance, and asked if we had heard a shot fired the night before; that some one had shot his dog, and he didn't know whether it would live or not. W. manfully said that he was the fellow, and explained the circumstances and offered to pay him a fair remuneration. The owner said that under like conditions he would have done the same, and refused compensation, but W. insisted on his taking a fiver, that his conscience might be easier, and everybody was made happier.

The run to Wellsville was a charming one, and soon made, and as it was part of the programme to stop over here for a day and visit friends who had extended a warm invitation, and were expecting us, we portaged boat and baggage up to the express office, and became quite famous, judging from the numbers of sportsmen, and others interested, who called to examine our outfit.

The term of S.'s vacation being limited, it was decided to ship camp equipage and thereafter occupy the full day in getting over the proposed route, and make a hotel or farmhouse our quarters when night came on.

The next afternoon we bade our kind friends adieu and started down the river, passing Yellow Creek, McCoys and Elliottville, through an interesting section of the country, and the views presented were fascinating. When between New Cumberland and Toronto, nearly opposite Garlick's extensive pottery works, we passed the greatest natural (or unnatural) curiosity of the trip, which at a distance seemed to be the river on fire. A natural gas main crosses the river, and had either burst or in other way been injured, so that a large volume of gas escaped in mid river, and some one with an eye to the phenomenal had applied the match, and an immense column of fire 15 to 20ft. in height arose from the surface of the water which was hissing and apparently boiling up to the extent of 3 or 4ft., and falling in jets of spray with the pillar of fire rising from the midst. It was a sight worth going miles to see, strange and weird, and would have been adored by the ancient fireworshippers as a god. We reached Toronto on the Ohio side at 6 P. M., having made fourteen miles in three and one-half hours, and with great ease. One can pull the Allen boy-facers with but little exertion, and an occasional change off from oars to paddle or vice versa was more by way of variety than necessity. At Toronto we found good accommodations at the Hotel Brady, with storage for boat and baggage in a convenient livery barn adjacent to the high bank, up which we were obliged to make a carry in order to get within city limits. After supper we strolled about the town, which is a thriving one with extensive pottery works, and bears evidence of prosperity.

We did not get away until 9 o'clock the next morning, but ran to Steubenville in two hours, reaching the wharf just in time to avoid a heavy thunder storm that broke within a few minutes after we had sheltered boat and baggage. After a thirty minutes pouring rain the clouds pass away and we go up town and register for dinner at the excellent United States Hotel, and then go out for a look at the town, which is new to S. and which W. has not seen for 25 years. We noticed that the town was posted for an exhibition by Pawnee Bill's Wild West Show during the afternoon. A dodger, announcing the fact of a slight delay on account of missing railroad connection, had been profusely scattered over the streets, and the city was full of people on the *qui vive* of expectancy. As we promenaded the principal streets in our tourist costume of flannel shirts, and faces browned in the sun and reflection from the water to something near that of baked missionaries, we were taken for the advance guard of the show, and commanded considerable attention. In fact, one fellow was so well assured that, pointing to W. in his wide-brimmed felt Stetson, announced to his companions, "that's Pawnee Bill himself."

After an excellent dinner we start away at 1 o'clock The usual crowd of admirers and curious from hotel and vicinity came down to the wharf to see the "Walk-up-the-Creek" start off, and we pulled out against a strong head wind, and in due time passed Yorkville, Caruthers, Warrensville and numerous small towns on either bank. The wind blew strong and gave us a harder day's work than any yet experienced in good water, but we were in excellent condition and spirits, and made fair headway. At 6 o'clock we stopped at Wellsburg for refreshments. We learned that the next favorable stopping place would be Martin's Ferry, opposite Wheeling, and 14 miles distant, and as the wind had somewhat abated, we concluded to make the run, and did so without incident worthy of mention, reaching the wharf boat at 8 P. M., having made 35 miles in 8½ hours. Darkness had set in, but we were fortunate in meeting Mr. Terrell of the ferry boat, who kindly permitted us to use his boat for storage purposes, and directed us to a hostelry. At the Hotel May we found good accommodations.

The next morning the landlord introduced us to a number of gentlemen, among them the redoubtable Col. Sharon, brother of the bonanza king, and quite a character himself, being genial and entertaining. As usual we were escorted to the river, and there exhibited the peculiarities of our craft before taking our departure over veritable bounding billows in the face of a strong wind that seemed blowing up the river, no matter what direction the channel turned. We passed the city of Wheeling, then Bridgeport, Benton, Bellaire and McGee without a halt, except in mid-river for a few moments at the latter named place to permit examinations of our oars by a curious riverman, who said he had "been rowing a boat on the Ohio for twenty-five years and never had seen a rigging like that before," and for that reason had pulled out to see it. After inspection he pronounced it "about the checker," and having ascertained where procurable, he thanked us and returned to shore. We reached Moundsville, W.Va., at 1:30 P. M., having accomplished but 14 miles in four and a half hours, owing to the heavy sea. On our way we passed numerous gangs of coal wreckers in various stages of nakedness, working about the rapids and bars, in the vicinity of which quite a number of coal barges had been stove to pieces.

We carried boat and baggage up to the B. & O. railroad depot, bidding good-bye to the old Ohio, who had been our bosom friend for just one week. It is a notable fact that the scenery thus far has been grand, and none can fully appreciate it until passing over the route by boat. At the depot we took Wanderer apart and packed her for transportation as sportsman's extra baggage, then went up to the Mountain City Hotel, and after supper visited the noted Indian mound in an inclosure in the heart of the town. It is about 75ft. in height, 200ft. in diameter at the base and 50ft. across at the top. A shaft goes in from the base on the north to the center, meeting a perpendicular shaft sunk from the top that is about 10ft. in diameter. It is a great curiosity, and the outlook from the top being very fine, it is visited by many. Numerous skeletons, battle axes, spears, pottery, etc., apparently belonging to the pre-historic race, have been taken from the mound.

At 6 P. M. we board the train for Fairmont, W. Va., on the headwaters of the Monongahela, and our route on the B. & O. R. R. is a winding one, through a mountainous region and full of charming views, but dissolving ones, owing to the rapidity with which the train is whirled over the sinuous road. There are numerous tunnels, and beside the road we noticed the famous Roseby Rock, where the laying of track was completed in 1853. It is a large boulder nearly 30ft. in diameter, bearing the inscription: "Roseby Rock, track closed Christmas, 1853."

We reached Fairmont at 7:30 P. M., and found excellent quarters at the Hough House, near the suspension bridge. Next morning we sauntered about the town and were well pleased. It was our good fortune to be recognized as "men and brothers" by some of the leading citizens, who introduced us to others, and our sojourn made quite pleasant. We here saw quite a curiosity that had just been discovered and attracted a large number. Some workmen in making an excavation for a new business block exhumed the petrified body of an old colored woman that had been buried in that locality forty-two years before, and was so well preserved as to be recognized. At noon we continued by rail to Rowlesburg, on the Cheat River. It was our intention to launch our boat and run down the Cheat to its confluence with the Monongahela, as the scenery has the reputation of being remarkably fine. We found the water at a low stage, and the rapids (that extend nearly fourteen miles) swift, rocky and dangerous, especially in low water, and running through the Cheat Mountain range that loomed up from 500 to 1,000ft. in that vicinity; and further, that for a large stretch there was no human habitation in the vicinity of the river, and we should have to rough it were we successful in getting through. We also found many old heads who advised us not to make the attempt, and cited the fact that no less than eight persons who had started out to run the Cheat River rapids had lost their lives in the attempt. Under the circumstances we decided to take the back track to Fairmont and then go down the Monongahela.

At Rowlesburg we met a number of old hunters, and got into their good graces by giving them an opportunity to use the Lyman sights, and learned much of the locality. It appeared to be quite a sportsman's paradise. Deer are quite plenty in the near vicinity, speckled trout abundant and partridges without number. We were told of a covey of almost perfectly white partridges (or ruffed grouse) that an old hunter had frequently seen and knew their haunts. This might have been a white lie, but was given with apparent sincerity. Thus we whiled away a few hours until arrival of train, which we boarded and reached Fairmont in the evening.

Next morning we start down the Monongahela. The water being at a low stage we were obliged to lighter over some of the rifts, but in the main had good running, and through interesting scenery, and reached Morgantown that day, and called a halt until morning. We did not leave Morgantown until 11 o'clock A. M., and then were soon in fine water. After a two-mile run we were overtaken by a passing shower and pulled up under a projecting tree, where we rested until the storm was over, and then bent to the oars and made up lost time. We soon reach U. S. No. 9, nine miles from Morgantown, which we portage around and then run the Cowles riffle on the State line, and find ourselves once more in Pennsylvania territory.

We passed Point Marion, at the mouth of the Cheat, and then pulled up the Cheat River for a short distance on a tour of observation. The waters of the Cheat are of a peculiar dark color, and it is asserted that the color makes it quite deceptive in estimating the depth, and that it was from this fact that the name was given to the river. On returning and reaching the junction with the Monongala we passed quite a rapids, in which and for a long distance below the distinctive color of the two rivers was plainly seen, and after a final blending the water was quite changed in appearance. It is presumed that the color is taken from the roots of the mountain laurel, as well as from mineral through which it

passes, but as we made no chemical analysis, we give no professional opinion and leave it for the experts to determine.

At an inviting spot under a rocky ledge we cook our late dinner, S., going to a convenient farmhouse to procure milk, is astonished to find the entire family barefoot, although surrounded with indications of wealth. The pedal extremities of three young ladies especially attracted his attention.

We were again soon on our way, and passed U. S. lock No. 8, in process of erection, three miles above Greensborough. The river scenery of the Monongahela proved attractive throughout, but the prettiest gem of all we found at sundown that evening as we came in sight of Geneva. The river passing through high romantic bluffs, and the town high on the sloping bank at a bend directly ahead, and bathed in glowing sunlight, while we were in the cooling shade, formed a picture ever to be remembered, and a study such as would delight an artist. Opposite Geneva, but around the abrupt bend, we found the quiet town of Greensborough, where we expected mail, and found accommodations for ourselves and storage for our boat, and took quarters at the Monongahela House and were well taken care of.

On Wednesday morning, June 27, we bade adieu to Greensborough, and arrived at U. S. Lock No. 7 in just thirty-five minutes, passing through a fine farming country, and each bend of the river presenting a new and beautiful scene. We made the portage around the dam with but little difficulty, and soon after met the steam packet Adam Jacobs, which makes regular trips between Pittsburgh and Greensborough. She had a large party of campers on board, who disembarked within a mile of the lock and commenced to take their supplies up the bank to the camp site. We inventoried 20 kegs of beer and several demijohns, but the traditional loaf of bread failed to come within range of our observation. We had bread but no beer, but as no desire for barter was manifested, we reluctantly passed on. On our way down the river we noticed within the next 15 miles a number of handsome locations where tents had been pitched, showing that the beauty of the river had attracted many from the heat and dust of the city. We had some pleasant gossip with a few whom we found either rowing or fishing, and had a most enjoyable morning's run, until at 11:30 it began to sprinkle, just as we were in the vicinity of a deserted camping spot, as indicated by tent stakes, and a pole and board camp table, near a wide-spreading honey locust tree.

Here we concluded to pull up until after dinner and the expected shower. The boat was turned over the baggage, a fire soon built and dinner prepared, when it commenced to rain in downright earnest. The thick foliage of the locust afforded shelter, however, until the dinner was disposed of; but the constant deluge pouring upon it soon found its way through and began to trickle down upon us, and with choice signs of letting up. We then donned our waterproofs, chaffed each other, sang, danced, made rhymes and stump speeches, and finally inaugurated an Indian war dance about the remains of the camp fire then nearly extinguished, being determined to keep our spirits up despite the rain, which soon poured down in torrents and necessitated sticking closer to the trunk of our protecting tree, fast failing to protect us.

Both agreed that it was raining, and might continue thus for some time. So in order to pass away the time it was determined to bring up the Wanderer and place her bottom up across the camp table, put the baggage and ourselves beneath its sheltering roof and then play "seven up," which was a cordingly done. It was a study for an artist, but no artist or any one else came along and the game was uninterrupted until 6 P. M., when it ceased raining, and we started down the river in search of a boarding house, being fully 20 miles from any town with a comfortable hotel.

We had our usual good luck, and just before darkness came we found a fine brick mansion on the left bank, at what is known as Jacob's Ferry, and W. went ashore to make inquiries and succeeded in obtaining accommodations with Mr. Jacobs, who proves to be the son of Adam Jacobs, one of the wealthiest and best known individuals of that region, and from whom the river packet took its name. We had an excellent supper and a pleasant chat before retiring at 9 P. M., thanking our lucky stars that we were not compelled to lie out on such a rainy night as it proved to be.

The next morning we get an early start, and having fair weather pull out in good earnest to make up for lost time, and found splendid boating, fine scenery, and make excellent time, passing Brownsville twenty miles below at 11 A. M., where we stop for supplies, and then run on a few miles before dining, and then push on through a succession of mining hamlets, with here and there a fine town, such as Belle Vernon, McKeesport and Monongahela City, at which latter place we pull up for the night.

It would but be a waste of time and space to record the numerous towns that line the river between Brownsville and Pittsburg. Suffice it to say that it is almost a continuous city for miles, and the scenery consequently not so interesting to the tourist. It is the center of the soft coal district, and mining shafts and coal barges are seen on every side. When we consider that in each of the barges we see coal sufficient to load a train of from forty to sixty cars, we realize the vast amount shipped from these mines. The Monongahela is controlled by a system of dams and locks in order to make navigation sure at all stages of water. Between Morgantown and Pittsburg are nine locks and dams, through which steamers with their tows are locked in their passage up or down. This is a historical section of country. The iron bridge over a small tributary at Brownsville is the first iron bridge in the U. S. Near the center of this town a cousin of Washington was buried. Braddock's mound is near, and on the bank of a small stream just below is where Washington camped prior to Braddock's defeat. On our way down we passed the confluence of the Youghiogheny River, and are told that between that point and Connellsville there are no less than 4,400 coke ovens, with a mine in operation for every set of ovens. Natural gas we found burning in every direction. The vast iron interests of Pittsburg line the river banks for miles above, and excited wonder at their numbers and magnitude.

We reached Pittsburgh at 11 A. M., and after a ramble and late dinner concluded to make the run to Beaver. Soon after starting, and while yet in Monongahela water, we entered a narrow channel left for the passage of steamboats between immense fleets of coal barges anchored on each side. The passage way was not over 60ft. wide, and when we had gone nearly through it we noticed a steamer with barges coming down and to our dismay soon after saw another swing into the channel just below and making up the river. We were just at the point where they would pass, and only about 15ft. of space remained for our frail vessel between the up-bound steamer and the fleet of coal barges, and it looked as though in the lively churning up of the water from two stern wheelers and the swells breaking against the barges, that a picnic was in store for us. The situation was taken in at a glance, and W. directed S. to drop the oars, and take a paddle and keep off from the barges, while he with paddle in hand at the bow would endeavor to keep the craft in the best position to ride the waves. For a few moments it was exciting, but we managed our craft expertly and she danced over the choppy seas without any more serious damage than having shipped about a bucket of water, and we passed the ordeal with flying colors, amid the cheers of passengers and crew, who witnessed our efforts, but evidently anticipated seeing us swamped.

We ran on for half a mile and then went ashore and emptied out the surplus of water and then resumed our journey. We pass the dam at Davis Island by an easy portage, and then strike into a swift current that, combined with our exertions and the easy running characteristic of the Wanderer, quickly takes us past pretty villages and handsome scenery on either hard. We had the misfortune to lose our flag on this, the last afternoon of our trip and regretted it exceedingly. It had floated from the stern of our little craft over different waters for nearly four weeks, and S. had devoted leisure time in carving upon the unique staff names, dates, etc., intending to retain it as a souvenir of the trip. We discovered its loss soon after having run quite a stretch of rapids, and time was too precious to permit retracing our course and undertake what would probably have proved a fruitless search. We reached Beaver in six hours after leaving Pittsburgh, and landed near the identical spot where we ate our camp dinner three weeks prior. Since then we had made a grand circuit by boat of nearly 600 miles, with but 65 miles of transfer by railroad. It was with reluctance that we took the Wanderer from the water and packed her and our baggage for transportation by rail to the place whence we came. She served us well through 700 miles of river navigation and proved her capability. It was truly a memorable trip, and hardened our muscles like iron, and browned our cheeks. E. S. W.

GARRETTSVILLE, O.

RED DRAGON C. C.—The fall regatta of the Red Dragon C. C. will be held on Oct. 11. All members of the A. C. A. are invited to enter and compete. The events will be: I. Unlimited sailing, 3 miles. II. Class IV. paddling, ½ mile. III. Tandem paddling, ½ mile. There will also be a race between a canoe and one of the local catboats over the triangular course.

NEW OFFICERS.—On the first of the present month the new commodore of the A. C. A., Mr. Walter U. Lawson, of Boston, entered upon his duties, assisted by Mr. R. E. Brazer, the retiring purser of the Eastern Division, who is now Secretary-Treasurer of the A. C. A. His address is 47 Central street, Lowell, Mass.

CANOE YACHTS.

Editor Forest and Stream:

The sketch of a "canoe" in your issue of Sept. 25 very naturally suggests that members of the A. C. A. should exchange opinions concerning such a radical departure from the heretofore accepted idea as to what a canoe is, and for what uses she is intended.

Some time since I excited the animosity of several racing canoeists by hinting that an addition of say 6in. to the beam of a 30in. canoe would render her a safer, speedier and more useful boat. And forthwith these gentlemen attempted to squash me utterly. But while they repudiated with indignation the call for a slight increase of beam, they practically admitted its necessity by adopting the sliding seat, which every one knows has the same effect as making the boat wider, so far as carrying more sail is concerned, without in any way adding to comfort, handiness or safety, but rather lessening these valuable items. And now the proposition is made in your columns to change the canoe into what would really be a small yacht with a comparatively deep keel. So far as could be seen the objections offered to making the A. C. A. recognize canoes of 36in. beam were that such craft could not easily be paddled and carried overland. These objections were proved to have no foundation in fact. What have the combined paddlers and sailers to say now about the proposed new craft, which needs but a cabin to become a complete toy yacht? Can such a boat be "effectively paddled?" Could she shoot a rapid and dodge the rocks, or be hauled ashore for sleeping purposes? In short, does she bear any resemblance at all to a canoe?

THOMAS CLAPHAM.

[If Mr. Clapham has followed our argument for several weeks past he must understand that we do not favor any such perversion of the canoe from its original purpose as the "cutter canoe" would be; our end is merely to point out the possibilities of further evasions and abuses of existing rules. We at one time shared Mr. Clapham's opinion of the deck seat, but experience has shown very clearly that a sliding seat of moderate size makes canoe sailing easier, drier and safer work than it was a few years since. At the same time there is no doubt that the length of the sliding seat can be, and is, carried to an extreme.

ROCHESTER C. C. FALL REGATTA, SEPT. 24.

THE fifth and last race for the Wilson cup was called in a fresh breeze from the north and promised to be a fast and exciting contest, as there were three canoes very close for second place and a possibility for one of them to win first, but the wind fell gradually from the start, and the last mile was gone over in almost a dead calm. Marie held the wind to the last and won by a long lead in time and a quarter of a mile in distance.

The second race called was the tandem hand paddling, which was won by the Moodys with ease.

There being no wind the sailing maneuvering race was declared off, and a tandem paddling race substituted. There were four entries and the race was the most closely contested of the day. Oneonto secured a long lead, and on nearing the line her crew slackened speed. Tom spurted and rapidly overhauled her, and would have won at the line had she not fouled.

The upset paddling race called out two entries and was won by Marie in good style.

First event, sailing, Wilson cup race, 3 miles:

	Start.	1st round.	2d round.	Time.	Points
Marie, Stewart	3 25 00	27 00	38 00	1 05 00	6
Surprise, McVean	3 35 00	31 00	49 30	1 20 30	5
Massawippi, Martin	3 25 00	34 30	49 30	1 24 40	4
Polly Wiggle, Smith	3 25 00	35 00	49 30	1 25 00	3
Midget, H. S. Moody	3 25 00	41 00	Withdrew.		
Louise, C. H. Moody	3 25 00	Withdrew.			

Second event, tandem hand paddling, 100yds:

Louise, Moody and Moody	0 00 30
Dalinda, Stewart and W. S. Smith	0 00 45
Tom, F. L. Smith and Seward	0 01 00
Oneonto, McVean and Dodge	Withdrew.

Third event, tandem paddling, one-third mile:

Oneonto, Dodge and McVean	02 02
Tom, F. L. Smith and Seward	02 00
Dalinda, French and W. S. Smith	02 10
The Ark, Moody and Moody	02 15

Oneonto won on Tom's foul.

Fourth event, upset paddling 100yds.:

Marie, Stewart	0 01 00
Midget, H. S. Moody	1 00 05

Result of the series for the Wilson Cup:

Marie, H. M. Stewart	4	6	8	9	6—33
Massawippa, W. H. Martin	5	0	9	6	4—24
Surprise, H. D. McVean	0	4	5	8	5—22
Polly Wiggle, F. L. Smith	2	5	7	4	3—21
Hero, G. W. Ruggles	.	.	4	7	.—11
Prudence, H. J. Wilson	.	.	6	3	.—9
Midget, H. S. Moody	3	3	.	0	—6
Toodles, A. B. Dodge	0	0	2	.	—2
Louise, C. H. Moody	.	0	0	0	—0

Marie wins the cup, and Massawippa the trophy for second place.

After the races a large clam pit was opened, and about two hundred guests of the club enjoyed the clams, lobsters and chicken prepared for them. The last order was, all up stairs for a dance. The club house was closed at 10:30, when every one took special steamers and train for home.

CHANGES IN THE SAILING RULES.

Editor Forest and Stream:

When Providence turned up about fifteen inches of my anatomy for feet, I was not quite sure whether I was intended for a walker or a kicker, but the annual re-occurrence of a desire to waste ink about this season of the year, leads me to think they were intended for the latter purpose.

In the fall of '87 I was among those who started the crusade against standing sails, and the general tendency of the powers that were and had been to let the canoe degenerate into a fleet of machines good for nothing but match sailing, without in any way trying to change things to try to bring about a different result. I was promptly walked upon by quite a number of my friends, including yourself, who on Jan. 7, '88, wrote the following: "Mr. Mackendrick condemns all sails that cannot be lowered by a halliard, and would rule them out, but what reason has he for so doing? Mr. Barney claims that he can carry his outfit of five sails within his canoe, shifting them at will so as to set some thirty or forty feet in two sails for a snug cruising rig, or one hundred feet in three sails for racing. If this can be done, is not Pecowsic, so far as rig is concerned, the best fitted all-round canoe yet devised?" I then maintained that the standing sail was bad for general-purpose canoes, and that in practice the changing while under way was never done; and I was right. I gave that same rig a mighty hot time of it that winter, and the justice of my case was such that ninety-five per cent of A. C. A. men thought it would be ruled out, and consequently nearly all procured lowering rigs. For some reason a small majority of the executive did not then see fit to legislate against it, and possibly have had time now to see where they failed to do the A. C. A. a good turn; then was the time when such a step could have been taken without doing injustice to any one, while the same cannot be maintained for the hasty and, what I consider, ill-advised action of the executive committee at Jessup's Neck.

This is an age of rapid advancement, and what two years ago was an unsafe sail is now, when used on our present racing articles, by no means so conspicuously dangerous. The average racing canoe that now carries standing sails has only a few feet of cockpit, and an upset or forty upsets can do no harm. Wherein, then, does the danger consist? The most the sail can do is to upset the user, for which they are all prepared. Standing sails were not ruled out when they should have been, and canoes have since been built to suit standing sails.

To say that I am surprised at the action of the executive committee in summarily wiping Rule XXII. off the books without the recommendation of the regatta committee or without in any way giving notice, is to put it mildly. I think it was acting with great discourtesy to that committee, who, like all previous regatta committees, were appointed on account of their special fitness and knowledge of regatta work. I have always looked upon that expunged clause as the one safeguard against hasty changing of rules by the executive committee, who are not elected for their special knowledge of the sailing regulations, and who, in my opinion, should not tinker with them unless they are advised by the regatta committee or give notice through the official organs of their intention to make certain changes.

I was always of the opinion that the regatta committee had to advise changes in the sailing regulations, but if the executive committee at present have power to bowl out any of our regulations on five minutes' notice, I beg to suggest the advisability of having a clause inserted at our next meeting limiting that arbitrary power by compelling them to give a few weeks' notice of such proposed change in the official organ, as there are others besides the executive committee who take a little interest in these matters. With the number, and their name is legion, of standing sails now in use, and the style of lifeboat that has been built to suit them, I do not think that it would be such a wise step to disqualify them, certainly not without discussion of the question under its altered circumstances.

I am glad to see you, Mr. Editor, facing the fact that we must do something to encourage a better class of canoe; that is, a more useful class than our modern racers. I lean to the opinion that the canoe of the future for open water is a well-designed 16x30 with a cockpit unincumbered with centerboard trunks, leaving room for two to sail or paddle comfortably, with bulkheads at either end and along the sides, held up to windward by those ideal bilge boards and fitted with a single suit of lowering sails. Did you say what pattern? Well, a leg-of-mutton with about 18in. of the new patent draft in them would be the best—for the other fellow—to get.

Such a canoe would do well in our races and would be well suited for all kinds of legitimate canoeing, and if she was not a complete success as a racer she could still be sold for a fair figure, whereas the average racer who wants to get a new canoe has to almost give the old one away as they are hardly good for anything.

The above class of craft or something similar restricted to the use of one suit of sails and a hiker not extending past the sides of canoe when closed, should in my opinion have the most of our races at the meet given to them, while the machine men, like myself, should be limited to the A. C. A. Trophy and Pecowsic cups.

If a "combined" trophy were added to the list of A. C. A. mugs, and entries restricted to a certain length of clear cockpit, etc., I think inside of two years nine-tenths of the racers would be sailing what could be properly called cruisable canoes, and the machine class would be so small as to die a natural death as class A did.

I hope this matter of encouraging a reasonably roomy class of craft, suitable for something besides match sailing, will receive the attention that it should from all well-wishers of the canoe.

WILL G. MACKENDRICK.

TORONTO, Oct. 2.

NEW YORK C. C.—The twice postponed regatta of the New York C. C. was held on Saturday off the club house, a number of guests being present. There was a strong N.W. breeze during the afternoon, but it fell toward the latter part of the programme. The first event was the unlimited sailing, with six starters: Lieda, Schuyler Schieffelin; Guenn, Wm. Whitlock; Pterodactyl, Com. Nadal; Bat, L. B. Palmer; Toltec, W. W. Howard; Vagabond, C. J. Stevens. Vagabond broke down shortly after the start and withdrew. At the end of the first round Guenn was ahead, and Lieda and Toltec came to the buoy together, Toltec was inside and fouled the buoy, withdrawing from the race. Bat had a small suit of sails, and could not keep up with the fleet. After a close finish Lieda beat Guenn. The maneuvering race was won by Lieda, and the standing race, sailed with the men standing on their deck seats, as well as the upset sailing race, was won by Gueen. The unclassified race had two entries—Polly, Walter Taylor, and Wraith, W. J. Stewart. The latter part of the race was very slow, the wind having fallen. Wraith finally won. There was no attempt at any paddling races. The most interesting event was the bailing out of a large kettle of clam chowder, which concluded the day's sport.

A. C. A. MEMBERSHIP.—Eastern Division: Edward T. Brigham, Stillman Shaw, Edward F. Wyer, Woburn, Mass. Central Division: H. W. Bailey, Buffalo, N. Y.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

E. L. B., Phœnixville, Pa.—The open season for quail in your State runs from Nov. 1 to Dec. 15.

J. H. H., Schuyler's Lake.—The eye has probably received an injury, consult an oculist or your family physician.

ENGLISH SETTER, Homer, Ohio.—I have a fine puppy 11 months old that is gunshy. Will you please inform me how I can break him? Ans. Read "Training vs. Breaking", for sale at this office price $1.

S. T., Philadelphia.—A resident of Pennsylvania needs no license to shoot on Long Island nor in New Jersey except in the counties of Camden, Gloucester, Atlantic, Salem, Cumberland, Cape May, which are controlled by the West Jersey Game Protective Society, whose office is at No. 416 Royden street, Camden. Secretary, Chas. H. Barnard. Fee for license, $5.

MUZZLE-LOADER.—1. What is the proper charge for a 15-bore muzzle-loading shotgun? 2. What is the best powder to use—should it be fine or coarse grained? 3. Is it correct to ram the wads over the powder till ramrod jumps out of the gun? 4. What wads and of what kind should be used over powder and shot? 5. Which is the best way to clean a muzzle-loader? 6. Do you sell a book called "American Pistol and Revolver?" Ans. 1. Load with 2½drs. powder, 1oz. shot, No. 8 for grouse, No. 9 for squirrels and rabbits. 2. Use fine powder. 3. Such was the custom in our muzzle-loading days. 4. Put two wads over powder and one over shot. 5. With a flannel cloth and cleaning rod, saturating the cloth with hot soap suds, and drying thoroughly, then apply benzine or kerosene. 6. Yes.

L. L., Denison, Texas.—Would you prefer a greenheart or split bamboo rod for Colorado trout, the prices being about the same? What sizes of hooks or flies should be used? Ans. 1. Bamboo is considered the best material for fly rods. 2. Sizes of hooks will depend upon the size of the trout and range all the way from No. 7 to No. 3 Sproat. The Superintendent of the Yellowstone Park recommends nothing smaller than No. 6 nor larger than No. 4. Successful flies include; brown and gray hackles, Alexandra, black prince, coachman, dark-coachman, royal-coachman, professor, brown-palmer, yellow, cinnamon-al, alder, Lord's, Imbrie, brown-hen and grizzy-king. The size of flies must vary also according to the high and low stage of the water, its clearness or muddiness, as well as with the time of day.

C. L. R., Providence, R. I.—Mr. Thos. McGough imported an English bull bitch, by Baron out of Hesper, he by champion Gamester out of Favorite; Hesper by Grabber out of Ida. The pedigree I received runs back no further, and as I wish to get her registered in the stud book would like to know the sire and dam of the last four dogs mentioned. Can you give it to me? Ans. Gamester(10,770), by Crib out of Berrie's Rose, by V. Shaw's Sepoy out of Berrie's Nell; Sepoy by Crib. Favorite is not registered, but was owned by Mr. F. W. Frank, Udney Park, Teddington, Eng., from whom you can no doubt get the information you want. Grabber (13030), by Reeves's Crib out of Zulu, by Ogden's Cure out of Allen's Gipsy Queen; Crib by Raper's Tiger out of Reeves's Queen Mab. Ida (10,795), by Faust out of Dorrit.

A. D. S., Hamilton, Ont.—1. Where will the next dog shows be held in the following cities: Buffalo, Syracuse and Rochester? 2. Should our dogs show be held in the spring or in the fall? the idea being of course to get as many American exhibitors as possible. 3. Is there any book on dogs by Charles H. Mason? If so, where can it be had and at what price? Ans. 1. It is uncertain whether a dog show will be held next year in Buffalo or not. If the Agricultural Fair is held there next fall it is the intention of the club to try and give a show in connection therewith. Syracuse is out of the line altogether. Rochester may hold a show next spring, but owing to their loss this year we are told it is very unlikely. 2. See our paragraph in "Dog Chat" this week. 3. Yes, "Our Prize Dogs," published at this office, price $5.

H. J. A., Montana.—When I located my ranch here, five years ago, all the timber surrounding this lake was alive (excepting a few scattering trees, such as are found dead in all bodies of timber), adding by its greenness much beauty to the scenery. Since then a large part of it has died. This is more noticeable in those locations that were most exposed to the prevailing winds, which are severe during the first months of winter and late fall. A year ago last summer there appeared, suddenly and apparently without cause, a strip about 200yds. wide, half-way up the mountain side, where all the timber turned brown and seemed to be dying, although a portion of the trees have come to life again. This strip extended parallel with the mountain range, jumping across cañons and striking the next mountain at the same elevation, being about 1,000ft. above the surface of the lake and about 7,000ft. above sea level. The timber is mostly pine, but there is considerable fir. Will you kindly give me your opinion as to the probable cause for so much of the timber dying? The winter of 1886-87 was unusually severe, and of longer duration than is usual with us, which may account in part for the dead and dying timber. I suppose, of course, there can be no remedy where there is such a large area; but we must let it take its course. The brown strip attracted the attention of many visitors, not any of whom were able to account for it. Ans. The damage may be due to any one of many causes. Trees, like animals, are liable to disease, properly so-called, engendered by climatic influences; but more commonly the malady is due to the attack of insects or of vegetable spores. If the whole forest becomes diseased, and you cannot utilize the timber, your best course will be to fire it to give the young growth a chance.

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

BY G. TRUMBULL.

Contains the local names in popular use, and eighty-nine illustrations, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

To all dwellers by the water and in the country and especially all who shoot, the book will supply a great need, and every one who is interested in birds will be interested in it.—*Boston Evening Traveller.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

There is a delightful dearth of dead languages in this book. The sportsman who looks between the covers for a description of some game bird—a description which will enable him to identify the creature should he meet it in the woods or on the water—is not compelled to shut the book, drop a bad word or two upon it and go in search of some Greek and Latin dictionaries to find out what the description means.—*New York Herald.*

WILD INDIAN LIFE.

PAWNEE

HERO STORIES AND FOLK-TALES.

With Notes on the Origin, Customs and Character of the Pawnee People.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages. Illustrated. Price $2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parellel to the East Indian mango feat. . . . Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—*N. Y. Tribune.*

The Forest Waters the Farm;
OR,
The Value of Woodlands as Reservoirs.

Being the Les Études de Maitre Pierre sur L'Agriculture et les Forets.

PAR M. ANTONIN ROUSSET.

Translated by
REV. S. W. POWELL.

The introduction reviews the extraordinary movement of torrent taming in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.

Price in cloth, 75 cts.; paper, 50 cts.

Forest and Stream Publishing Co.
39 Park Row, New York.
London: DAVIES & CO., 1 Finch Lane.

ANSWERS TO CORRESPONDENTS.

A NAME ON A POSTAL.

If you have a friend, who might be interested in the FOREST AND STREAM, but does not know the paper, send us his address on a postal card. It will be esteemed a favor by us; and it may be so regarded by him.

THE COON HUNTERS.

HAVE the coon hunters been idle or unsuccessful, that they make no report of their adventures during the season of the sport, which is now drawing toward a close?

It is a distinctively American sport, concerning whose method of pursuit there can be no dispute. Concerning fox hunting there may be endless wrangling between those who hold that it is only sportsmanlike when the hunter rides to the hounds in good old English fashion, and those who as stoutly maintain that hunting on foot with the gun is made as sportsmanlike by the conditions which render the other method impracticable.

But there is but one way of hunting the coon. Hunted only at night, to follow him, the boldest rider must dismount, yet he who risks neck and limbs, or melts or freezes for sport's sake, and deems no sport manly that has not a spice of danger or discomfort in it, must not despise this humble pastime for such reason.

On leaving the highway that leads nearest to the hunting ground, the way of the coon hunters takes them, in darkness or feeble lantern light, over rough and uncertain footing, till the cornfield's edge is reached and the dogs cast off. Away go the hounds, their course only indicated by the rustling of the corn leaves, as they range through the field, until one old truth-teller gives tongue on the trail of Br'er Coon, who perhaps has brought his whole family out on a nocturnal picnic. The hounds sweep straight away, in full cry, on the hot scent to hill or swamp, where their steadfast baying proclaims that the game is treed.

Then follows a pell-mell scramble toward the musical uproar. Stones, cradle knolls, logs, stumps, mud holes, brambles and all the inanimate enemies that lie in wait for man when he hastens in the dark, combine to trap, bump, bruise, sprain, scratch and bemire the hurrying hunters.

Then when all have gathered at the center of attraction, where the excited hounds are raving about the boll of some great tree, the best and boldest climber volunteers to go aloft into the upper darkness and shake the quarry down or shoot him if may be. If he succeeds in accomplishing the difficult task, what a melee ensues when the coon crashes through the branches to the ground and becomes the erratic center of the wild huddle of dogs and men.

Fewer voices never broke the stillness of night with sounds more unearthly than the medley of raging, yelping and growling, cheering and vociferous orders given forth by dogs, coon and hunters, while hillside and woodland toss to and fro a more discordant badinage of echo.

The coon is not a great beast, but a tough and sharp-toothed one, who carries beneath his gray coat and fat ribs a stout heart and wonderful vitality; and a tussle with a veteran of the tribe of cornfield robbers tests the pluck of dogs and the coolness of men.

If the coon takes refuge in a tree too tall and limbless for his pursuers to climb, there is nothing for them but to keep watch and ward till daylight discovers him crouched in his lofty perch.

A huge fire enlivens the long hours of guard-keeping. A foraging party repairs to the nearest cornfield for roasting ears, and the hunters shorten the slow night tide with munching scorched corn, sauced by joke and song and tales of the coon hunts of by-gone years.

The waning moon throbs into view above a serrated hill-crest, then climbs the sky, while the shadows draw eastward, then pales in the dawn, and when it is a blotch of white cloud in the zenith, a sunrise gun welcomes day and brings the coon tumbling to earth. Or, perhaps, not a coon, but some vagrant house cat is the poor reward of the long watch. Then the weary hunters plod homeward to breakfast and the nailing of their trophies to the barn door.

When the sweet acorns, dropping in the frosty night, tempt the coon to a later feast, there is as good sport and primer peltry. In any of the nights wherein this sport may be pursued, the man of lazy mold and contemplative mind loves best the hunt deemed unsuccessful by the more ardent hunters, when the hounds strike the trail of a wandering fox and carry a tide of wild music, flooding and ebbing over valley and hill-top, while the indolent hunter reclines at ease, smoking his pipe and listening, content to let more ambitious hunters stumble over ledges and wallow through swamps in pursuit of the elusive coon.

Send in reports of nights with coons, nights when this little brother of the bear blended his querulous call with the crickets and August pipers, nights of frost, when the cricket's note was stilled and voices of coons and owls alone thrilled the autumnal gloom till the hounds' portentous music awed both to silence.

SNAP SHOTS.

IN repeated instances which might be named, enterprises designed to advance the fishing interests of poorly stocked or depleted waters have been set in operation and continued in the face of stubborn local indifference or opposition. And in repeated instances, too, the sequel has been that by the successful results of the enterprise this narrow and mistaken disfavor has at last been overcome and converted to active cooperation. When the Lake George (N. Y.) Association began, six years ago, the work of restocking that magnificent body of water, their greatest obstacle was the contrariness of the residents, who, of all persons under the sun, were the most to be benefited by the association's liberality and public spirit. Notwithstanding this untoward attitude of the lake-dwellers, the work has been carried on, yearly plantings of fish have been made, laws were secured to provide needed protection, and to-day, as Gen. Robert Lenox Banks reports, not only is the fishing in Lake George yielding goodly returns for the effort expended, but local sentiment has undergone a decided change and now favors the enforcement of the laws.

Is there not a profitable field for telling work in just this one direction—to show the public that protective game and fish laws are founded on common sense and are in their operation effective for the good of the entire people?

Hudson River salmon fishing appears to be assured. At the annual meeting of the New York Commissioners last Tuesday it was reported that there are now more and larger salmon in the Hudson than ever before, one 35lbs. specimen having been taken this year. A stock of 25,000 yearlings will be put into this river. The Legislature will be asked to compel owners of dams to provide suitable fishways. When considered from the standpoint of common sense, it does appear foolish for the people of this State to spend money on stocking streams when the mill dams shut out the fish from what would be their spawning grounds. The mill dam nuisance is tremendously expensive to the people, but it is a difficult one to remedy. The system of damming streams for mills and tanneries was in full force long before people thought much about the fish supply. It is only within a recent period that the dams have begun to be popularly recognized in their true light as obstructive nuisances. There is a great work of education to be wrought in this country before our rivers and creeks and brooks are restored to a condition when they can have their highest usefulness and greatest value as productive sources of food supply.

The ardor of the hunter and angler is rivalled by that of the amateur photographer; and when one individual is possessed of enthusiasm in all these three branches, it is astonishing what an amount of exertion and fatigue he will undergo. Mr. W. A. Brooks, whose account of a Moose River, Me., expedition is now appearing in our columns, writes of a climb to the summit of Ktaadn with a camera, thought to be the first one ever taken to the top. The Indian guide, Soclexis, who figures in the Moose River trip, accompanied him; and they had a tremendous pull, six miles up hill and down, over a blazed trail, and then the ascent up the track of a great avalanch, through loose sand, slide rock and a chaotic mass of boulders, at an average angle of 40°.

The Boston *Transcript* "supposes a case," and suggests that under the new tariff sportsmen may be required to pay a duty on the game they have bagged in Canada. "A club has its camp in the United States, roams and shoots at random over its broad acres, some of which lie in Victoria's realm. A member, on crossing the line with a well filled bag, is stopped by an official and his luggage examined. The game is pronounced dutiable. 'But this is not going off our land, only to camp.' 'Yet it is coming into the United States,' the officer replies, and a bond or cash is required and given." This is jocular. But does the *Transcript* know that by the laws of Canada the exportation of game is absolutely forbidden?

The law protecting Vermont deer—the deer were imported by the Rutland Club—will expire Nov. 1; but Fish and Game Commissioner Brainerd, in his report to the Legislature now in session, has advised that the protection be extended for five years more; and it is more than probable that a law to that effect will be enacted before November shall come around. The Vermont hunters who have been loading for deer must defer their projected campaigns.

By the way, can any of our New Jersey readers report as to the deer supply in that State after the years of protection?

Under the old tariff the uniform duty on shotguns was 35 per cent. ad valorem. The new schedule is as follows On all doublebarreled sporting breechloading shotguns, valued at not more than $6 each, a duty of $1.50 each; the same, valued at more than $6 and not more than $12 each, $4 each; valued at more than $12 each, $6 each; and in addition thereto on all the above 35 per cent. ad valorem. On singlebarreled breechloading shotguns, $1 and 35 per cent. ad valorem.

Mr. W. O. Blaisdell, of Illinois, tells us that he proposes to import some live partridges from India to put out in that State.

The Sportsman Tourist.

SLIDE ROCK FROM MANY MOUNTAINS.

XI.—AT LAST.

FEW long lanes are without some turning, and our long lane of scanty or evil fortune took a sudden bend. The autumn of our discontent was changed to an Indian summer of late but grateful glory.

The chief sheep grounds of the Smilkameen lie up a small river called the Ashnola, fed by numerous tributary creeks. Facing the creeks and the river the mountains are steep, often precipitous. Further up lie miles of "bull pines" and other miles of down timber, with now and then a grassy slope, while the sheep, except in winter, live still above among the bare peaks and jagged ravines of the summit. To reach this highest country, one must either know the old trails or discover new ones, for unless the greatest care be exercised one will soon get into ground that is utterly impassable, and the road is hard at best.

Certain natives named Ashnola John, Ashnola Pierre and Ashnola Tom (whom I hereby consign to infamy), relying upon their knowledge of the geography, and sure that any foreign hunters must come to them for aid, had not only tried to extort absurdly large sums from us for guidance, but had done this evil with a manner so insolent as to excite indignation.

Ashnola Tom is said indeed to be a good Indian, but as he promised to join us and deceived us, influenced by fear of the superior villain, Ashnola John, I class him with the others on account of his weak mendacity. We were therefore guideless, but (with the exception of one man who wailed a little now and then) all the party were determined to find the way alone.

Dick, an unrivaled woodsman, had, along with my friend, discovered the secret of one cherished and hidden resort, and blazed a trail to it for the good of posterity.

Dick and I had also penetrated another nook where black-tails were too numerous to be exciting. One incident that happened at that place is worthy of note. As we were riding near some scattering timber we startled a band of deer and amused ourselves by seeing how many of them offered good shots. I was just looking at one half-tame creature about a hundred yards off when Dick called my attention to a doe sleeping not thirty paces distant from me. Her head, turned back on her flank, pointed the other way. I dismounted and walked carefully forward. When I was fifteen feet away from her (I stepped the distance afterward) some subtle aroma or faint rustling aroused her. She raised her great ears and looked in the opposite direction. Then, slowly turning her head, she stared at me for fully a quarter of a minute before she jumped up. Never had I seen a deer so gentle.

Up to the last moment, however, we had seen no rams and the only ewe we had got had been bagged by my friend, who, to the sorrow of us all, was now kept in camp by illness.

One day Johnny, Batiste and I started, with horses lightly packed, to look for the "Twin Buttes," the last resource of the despairing ram-hunter. At first we tried to go up the creek near its channel, but that path was soon blocked. Then we started up a trail unspeakably steep and got into timber at once. For a distance of perhaps three miles we found blazed trees to go by. Then the blazes occasionally ran out. We would make a voyage of discovery, and in several instances we found new lines of spots and followed them until they vanished.

Whoever it was that had marked the path he had a singular method. Where the trail was plain the spots were frequent. Where the route was doubtful the blazes were rare. When the ground became very bad they stopped. Either the trail was laid out by somebody who had lost his way or it was meant for a snare.

About 3 o'clock in the afternoon we found ourselves in a mass of down timber from which there seemed no issue. We cast about for a way out with no success. We were without water and without grass, and had only too much wood. I decided to turn back and try to reach our main camp by night. Johnny, who was full of cheerful pluck, was ready for any effort, but thought my plan wisest; and by rapid work we managed to get through.

A few days later, Dick, Batiste and I renewed the search for the Twin Buttes; and it is of this trip that I write the history.

We saved a good deal of time by starting on the right road. We followed the old blazes first, and then traced out the connecting links that Johnny had marked in our previous endeavor; so that by 11 o'clock we had already reached our former sticking point. Here a long and careful scout was made, and we succeeded in finding evidences of chopping through the down timber made by earlier hands. A little further on we came to a path cut through the bull pines, and, blazing as we went, at times striking the tracks of our predecessors, at times catching glimpses of the surrounding mountains, and at times feeling our way by a general sense of the direction as shown by the position of the sun and the slope of the country, we came, about 3 o'clock, into view of the Twin Buttes and the promised land. One more wide and intricate patch of windfalls was conquered, and the traveling became easy. We had been told that there was water at but one place. This turned out to be a mistake. At all events, we found a level spot with the prime necessities of wood, water and grass, and we went into camp with the first difficulties handsomely overcome.

The next morning we breakfasted with the earliest birds, though on more savory diet, and Dick and I set out on foot.

We saw deer. We saw antique foot-prints of sheep, but nothing fresh.

A gale, of happy omen to hunters, was blowing in our faces when we skirted a bold ravine with rocky sides, heading in the neighboring peaks. In the bottom was timber and swampy land with little ponds at intervals. Above stretched the stony, grassy slopes of the highest ridge—an ideal spot for big-horn. We scanned every little hollow before and after we passed, that no sheep might lurk unobserved in any hidden cranny, and at last, after a rest and a smoke, ascending a little "swale," Dick caught sight of the back of a ram. For a moment I thought the beast a deer and refused to fire, but an imperative whisper and a second glance righted my error. I fired. The shot broke a hind leg and ranged forward, stopping the ram and inflicting a mortal wound; and in a few moments the prey was ours. Beautiful unscarred horns swept around in almost a perfect spiral. My joy was great. Some of us bear misfortune with an equal mind when the bad luck is well past; but in my belief the sternest philosopher loves victory; and in that I am as one with the sternest philosopher.

The morning was yet young. We wandered on. Far up on a snow bank that crowned the opposing wall of the gorge Dick made out with the glass an object that he took to be another ram.

It was an appalling climb up there, but we decided to try it. Only, as "good medicine" in the Indian sense, we first rested again and smoked. The medicine worked. We had hardly risen and passed over a little swell when Dick called my attention to a ram lying down within shot. I did not see that one clearly, but I did see one standing near him and hit my ram. Three or four sheep (we are not yet certain of the number, they twinkled past each other so fast among the trees), including the disabled one, sprang down the bluff. Dick broke two hind feet of one creature, while I finished both the wounded. Two more perfect heads! with all the pleasing kitchen supplies that go with them—ribs and hams, livers and tid-bits, from the fattest and choicest of mountain game. A day to be marked with a white stone!

The night before, I confess, I had been inclined to compromise with fate and take one ram as my share of booty. But I had hardened my heart and insisted inwardly on at least four victims, and clearly my determined attitude had effected a reasonably good settlement with a frowning destiny. I will say, too, in passing that the next day I added the fourth pair of horns to my list.

And now, tired and content, we made our way back to camp in the mellow glow of sunset, in the cool dim purple of early starlight, while breeze, stream and tree soothed us with inarticulate murmurs.

And, above the churning rush of the waters, shriller and more brassy than the rustling drone of the wind in the treetops was a certain Æolian music, coming sometimes in single notes, sometimes in phrases like the playing of some far, far off orchestra, whose faint strains are caught now and then from down the wind when the gale half lulls. Perhaps the elusive tones came from fading revelries of the mystic worship of gods, unthroned indeed, but sadly, patiently waiting the restoring of their ancient honors in the fullness of the revenge of time—the neglected spirits of the three great powers of unfettered nature.

Three is the number of the Graces and of the Fates. A triad also is that dreadful company moulded by a master-hand from the poppy's dream-fumes, the Mother of Tears, the Mother of Sighs and the Mother of Despair.

Three other spirits are there, born at one birth, fast knit by bonds closer than those of kindred, ruling over federated dominions with united sway, young with the freshness of perpetual change, old as the secrets of forgotten mysteries—Powers of wonder that gloomed through the fogs, shrouding the dawn of humanity; Powers of wonder that will reign over the untenanted globe, when the last offspring of our withered races shall have been sunk to his lonely grave.

Spirits of Rivers and Forests and Mountains! worshipped by the skin-clad savage; Spirits whose realms, studied by the brain of science ever open further vistas of interminable territory as each new advance is gained; Spirits, tamed for the moment to the daily uses of our toil, yet breaking out in swift, short spasms of revolt by flood and fire and earthquake, as foretaste of final triumph over your sometime lords: Spirits more lasting than the ever-turning cycle of life! you I approach, not as a fearful worshipper shuddering at your blind, your resistless force, not as a suppliant seeking unmerited favor, not as a student prying into the recesses of your life, but as a humble, a loving friend, thankful for the kind sympathy and consolation you have so often given; thankful even for the harsh and tonic medicine dispensed in your fiercer moods.

Spirit of Rivers! though you feed the sea by a thousand historic channels; though by Nile and Ganges you roll fertilizing waters, enriching fields that have nurtured nations, though by petty Thames or shrunken Tiber you have floated navies to the capitals of the old and modern worlds, not there is found your refreshing power, your breathing grace.

Among the scents of the infinite wilderness, trickling from immemorial ice banks, spreading prismatic arches over the dark walls that break your currents' rapid flow, there where you dwell hand in hand with your sisters, there I seek you; there I ask to be sprinkled with your spray; to catch the wild or joyous music of your voice; to watch the rush of your tumultuous march, and know your beauty at its fountain head.

Spirit of Forests! your temples are falling on plain and lowland, razed by eager hands intent on gain. The pioneers of destruction have advanced even to your loftier levels, and the ring of axe and the hum of sawmill are invading your more sacred retreats.

Driven from the sunny groves which tell of winter by their fallen leaves, you have fled indignant to the eternal green of the upper ridges and more Alpine slopes. There I seek you, not to mar the living columns of your shrines, but to hear those messages that speak without words in the wind-swayed branches, to see you darkening the currents of your sister of the rivers with quivering gloom, to be stunned by the crash of the dead pines felled by the tempest.

Spirit of Mountains! last and greatest, your domain rises even above your sisters' kingdoms.

On those more aspiring heights all is stern and strong on nearer view. But grant me power to toil up those rough shoulders, to see encircling me the glittering snow-clad summits that rise above the dark green of the swelling range, to mark the birth place of infant glacier, the spring head of infant stream, to feel my face buffeted by winds whose might is not broken by any barrier and my heart warmed by rays filtered only through purest air, to wind down through the bouldered mass of old moraines, through bushy swamp, through juniper and tamarack, down to the pines and the streamlet, where, in the kind embrace of the inseparable sisters, I find my rest.

H. G. Dulog.

WET MATCHES.—When you are in camp, wet and cold, and the damp match won't light, rub it gently in your hair and it will go all right.—Good Luck.

MOOSE RIVER AND THE WEST BRANCH.

IV.

SOME weeks after the time of my visit to Francis my two companions and myself set out from Boston for the rendezvous at Moose River Bridge, 300 miles distant. Two-thirds of the journey was by rail to the pretty village of Skowhegan, situated at the falls of the Kennebec and the terminus of the railway.

We left Boston in the morning and early in the afternoon had our first view of the Kennebec, whose banks we skirted for several hours till our arrival at our destination. All along the river were indications of activity in two great industries of Maine, the ice business and the lumber interest. Huge ice houses stand on the banks, at which vessels were taking in their crystal cargo, while other vessels rode at anchor in the stream; some light and with decks high out of water as they awaited their turn to load; others heavily laden and ready for the bustling and unfortunate little tug which would tow them to the open sea.

At Gardiner are the first piers and booms of the lumbermen and the last ice houses. Men were busily at work rafting the logs, and moored beside the booms were several flatboats on which were houses for them to live in. Above Gardiner the river was full of logs, and they were coming over the dam at Augusta. In one place, where a boom held them back, they had collected in immense numbers till they formed a solid mass between the two banks for a mile. These logs had come from the far headwaters of the river, the Dead River and Moosehead regions, to which we were going.

Just beyond the confluence of the Sebasticook River and the Kennebec we saw the ancient log block house, Fort Halifax, which is a relic of the old Indian wars, erected in 1754. The banks of the Kennebec are for the most part abrupt and steep, and the current is broken by numerous falls and rapids. Below the falls, at Skowhegan, the channel is through a rocky gorge with precipitous walls, between which the river rushes, swift and foaming, for half a mile.

V.

The next morning, after a good breakfast at the hotel, where we spent the night, we started on the second stage of our journey.

A double-seated wagon drawn by a pair of fine-looking horses was brought to the door, and after stowing our luggage under the seats we rolled merrily on our way.

We each had a pair of gray blankets, a rubber blanket, rubber coat and boots and a change of underclothing, with a few small articles of toilet and emergency use. Our rods and fishing tackle and three cameras, with a supply of dry-plates, completed the list of our impedimenta. The bulkier portion of the luggage—the tents, provisions and camp utensils—the guides were to bring with the canoes to the bridge at Moose River.

An important rule to be observed in preparing for a trip to the backwoods is to reduce the luggage to a minimum. It does not add to the enjoyment to have a lot of useless or superfluous articles about, for such things have a tormenting way of increasing in weight the more they are lifted and the further they are transported. Except in the fall shooting season a gun is a useless incumbrance. Therefore we traveled as light as possible. Our cameras were a 5×8, a 6½×8½ and a "detective." The last named was a small affair with a round tin case something like a canteen, and it gave us much amusement independently of its legitimate use, for more than one thirsty citizen of the Prohibition State thought it was a receptacle for liquid enthusiasm.

Once out of Skowhegan we rode through a beautiful rolling country with a charmingly diversified landscape of green fields, sunny slopes and wooded hills, with glimpses of distant mountains. We were on the Canada road, which stretches away through the wilderness to Quebec, and follows pretty nearly the course taken by Arnold's expedition of 1775.

Between us and the Canada line, one hundred miles distant, were only two villages, the first fifteen miles from our starting point, and the second eight miles further on. Beyond that a few isolated farms and two or three small settlements were all we should see of civilization. Yet the Canada road is well traveled, a stage carries the mails between the settlements and the railroad; the lumbermen use it to reach the scenes of their operations, and at certain seasons of the year it is alive with French Canadians.

As the season for the hay harvest in the States draws nigh, the French laborer, with an eye for earning a few dollars which are a scarce article with him at home, makes his preparations for a journey across the line. He may go alone and on foot, with his staff in one hand and his bundle in the other, or he may travel with several companions. If he is a man of family he will likely transport his whole household to the land of promise, and many a ramshackle, antique vehicle, drawn by some poor old rack of a horse, goes rattling along the Canada road loaded down with a whole family, even to the infant in arms. They camp by the road side in true gypsy fashion, wherever night overtakes them, and appear to enjoy this nomadic mode of living. When the haying is over the procession returns whence it came.

The morning was hot when we started, but a fresh cool breeze came up which made riding a pleasure and brought to our nostrils the scent of the wild roses which were blossoming by the fences. From the summit of a hill five miles on our way we saw in the valley below the placid surface of Hayden Lake, and a rugged range of mountains began to show on the northern horizon, which, as we drew toward them, became more and more defined, Mount Bigelow being the most prominent, with its rocky sides scarred and torn. After a while we saw again the water of the Kennebec and the road then followed its banks all the way to the Forks, fifty miles from Skowhegan. We walked a mile down an old road to the falls of Carratunk, where we exposed a number of plates.

We dined at the tavern in the little village of Bingham, a quiet, sleepy place, where the only excitement is the arrival at noon of the two stage coaches which stop for dinner. In the afternoon, as the shadows of the trees began to lengthen across the road, we drew rein at the door of a wayside inn, where "accommodations for man and beast" were to be had. We had traveled leisurely, halting now and again to use the cameras. In the morning we continued on the river road for a few miles, and then turned to the right into another road which leads to Pleasant Pond. We had a steady up hill pull for three

miles, but the great forest trees arched overhead, and a foaming, noisy brook kept us company by the road side. The bed of this mountain stream was filled with stones and boulders of all shapes and sizes, and occasionally the fallen trunk of a tree bridged it over. It was a genuine mountain trout brook, and its gurgling and splashing as it rushed and tumbled down the rocky channel in its haste to reach the river, was nature's welcome to us on our entrance to her domain. What music it was to ears which for a year had listened only to the sounds of the stream of humanity flowing in a city's streets. How cool and shady and pleasant under the great trees, as the rustling branches added their voice to the song of the brook.

On the northern shore of Pleasant Pond, half hidden by the trees under which it is built, is a log camp, and here we found a resting place. The limpid water laves the shore a few steps from the door, and stretches away in long blue reaches around wooded points and into quiet coves, toward the range of high, rugged mountains which guard it on the east.

The water of this pond is remarkably translucent, and the eye can penetrate its depths to a distance of twenty-five or thirty feet and plainly distinguish objects on the bottom. On this day, as the sun's rays were reflected from the calm surface, it was like a huge plate mirror, and as we rowed over its shimmering expanse and gazed down into the pure clear element, it seemed almost like floating through space.

The trout which swim in Pleasant Pond are as beautiful as its waters, and I have never seen their like elsewhere. Like its water they are silver, and shine and glisten, rivaling the white metal, as if they caught and retained some of the sunlight which penetrates their haunts. In shape they are like other trout, but the spots, which sparkle and add beauty to other trout, are nearly invisible. The spots as well as the lateral line show but faintly on their silver sides. They are invariably of a length of ten or twelve inches, none being caught much larger or smaller. Their flesh is of a reddish-golden color, of a deeper shade than that of other trout.

We had fished this pond before but with indifferent success, and we did no better this time. The beauty of the place, however, was compensation, and the sky and the water, the woods and the mountains, were a continual pleasure.

VI.

One fine morning we drove back down the road to the river. In the valley the fog was lifting as the sunlight shot through it, and as we turned into the river road, wraiths of gray mist were curling from the surface of the water, and the hills on the other side were dim and hazy. Not far from the junction of the roads is the Great Carrying Place, where, in the olden time, the red men made the portage from the Kennebec across to Dead River. Arnold's expedition crossed at the same place.

The road followed the windings of the river and wound around the curves, now through the woods where only the sound of the rushing water told of its proximity, and again through "dugways" in the steep banks, where in places we hung over the flood, and the only course was straight ahead.

The hills flanked the river on both sides, and rose abruptly from the current which flowed at their feet. At last we saw the forks of the river, where waters of Dead River mingle with those of the East Branch, a forest-covered point thrusting itself between them, as if to indicate the direction in which they should henceforth flow together. A quarter of a mile beyond the "meeting of the waters" is the Forks Hotel, and after a night at this hostelry, whose excellence is a surprise to the traveler who visits this out of the way place for the first time, we set out on foot to walk four miles through the woods to Moxie Stream and the fall of the same name. We had been over the road, which is nothing but a logging path, before, and so went alone, carrying our rods and one camera and having no doubt of our ability to find the way; but we came to a field where there was a number of diverging paths none of which were well defined. We took one which seemed to be the right one, and kept on for a mile or more, till it disappeared entirely in the forest. We had thought before we came to the end of it that we were wrong; it bore away too much to the right, and too far up the side of the mountain, and we had missed several landmarks which we expected to see. The day was very hot and we sat down on a log to rest and consult as to the best way out of our difficulty. A team had been engaged to convey us to Moose River that afternoon and our time was limited; we wanted to go to Moxie and we did *not* want to return to the hotel and confess our inability to find the way. It would consume too much time and require too much extra exertion to return to the place where paths diverged; so we had two alternatives—to return to the Forks and not go to Moxie, or take a short cut through the woods to the right road. After cooling off in a measure and consulting our compass, we laid our course and plunged into the bushes and down the hill for the other path.

The sun by this time was beating fiercely down. The underbrush was so thick we could hardly force our way through, and we could only see a short distance in advance.

We pushed along as rapidly as we could, clambering over fallen timber and thrusting aside the branches which impeded our progress, all the while descending toward the valley of the East Branch. But the woods seemed to grow more dense and there was no sign of the path we sought.

It did not seem possible that we had gotten so far up the mountain side, and several times we stopped to examine the compass and make sure that we were going on the right course toward where the trail ought to be. We were not lost, for there, far below us, was the East Branch, and we could see the hills rising from the other side of the valley, across the green foliage which surrounded us; but there was no sign of a trail, and the forest was as unbroken as if man had never been there before. Down again we plunged still further, and came suddenly upon an old corduroy wood road, almost obliterated by the vegetation which had sprung up among the decaying logs. It was not the path, but anything in the shape of a road was a welcome sight to us just then, and we stepped gingerly along the rickety and slippery way till we saw what appeared to be a break in the forest ahead of us.

In a moment more we stepped through the bushes into a well-defined tote road, which we recognized at once as the one that leads to Moxie Fall. We had become pretty well fatigued, but the fact that we were now on the right road gave us new life, and we resumed our walk with renewed vigor.

It was a rough winter road, but was much better than no road at all, and at last we were rewarded by the sound of the water and soon afterward saw the rapids of Moxie Stream flashing in the sun. Moxie is a wild, rocky stream which flows over innumerable rapids and falls, which churn its dark wine-colored water into a foaming, seething mass, over which the forest trees cast their shadows.

On our previous visit in the autumn the water had been so low that we waded across where there was now a boiling torrent. We adjusted our tackle and fished down, stopping to expose a few plates, till we came to the fall, over which the stream drops 95ft. into an amphitheatre of great granite cliffs and then struggles on three miles to the East Branch. Below the fall the banks are over 100ft. high and almost perpendicular. We took a picture of the fall from the top of the cliff directly over the chasm and then climbed down over the bank a few rods below.

We had to slide part of the way, and secure a grasp and foothold wherever we could, but presently we found ourselves at the bottom looking up at the fall, which had the appearance of dropping directly from the sky. The water falls into a basin of rock, from which it flows over another fall of some 20ft.

We were below this second fall. The great stone walls towered above us and everything was wet with spray. Delicate ferns and grasses nodded from crevices where a little soil had collected, and the place was deliciously cool and inviting after our tramp through the woods. We reclined luxuriously on a mossy bank, the great precipice above us with its fringe of pines and birches, and the swift water at our feet, and appreciated in full "the shadow of a great rock in a weary land."

We caught a few fish and exposed two more plates, and then looked up at the steep bank and sighed, as we thought that the only way out was up the same path by which we had descended.

The ascent was much more difficult, but by passing the rods and camera from one to another, and lending one another a helping hand, we arrived safely at the top and struck into an almost imperceptible trail, which led us to the road and back to the hotel.

WILLIAM AUSTIN BROOKS.

Natural History.

DOWN THE CREEK.

WHATEVER the season, it is a place of delight. The creek itself is no sluggish stream crawling betwixt muddy banks. In winter it is a bold blue torrent, brawling rarely over pebbles and around boulders. Spring makes of it almost a river, swirling and boiling from hill to hill. Heats of August shrink it to a bare thread of bright water, stealing in long runnels through the water-worn grooves in its limestone bed. Sometimes they take most curious shapes. Here is a capital W written in limpid wavelets upon a stretch of solid stone. Where the channel falls it is no trouble to step across it. About every half mile comes a "lake," where gravel beds, fallen timber and dead leaves have built an alluvial dam and spread a long bright pool, wherein frogs and fish and muskrats disport themselves the summer through.

Oddly enough, when the woodbirds go bathing, they prefer the dancing ripples to the still shining of the pools. Instinct, perhaps, tells them of the greedy fish and big hungry turtles that lie in wait in the depths. See that pair of woodducks wheedling and chattering about the half-dead sycamore that bends over the stream. Mrs. Duck made her nest in the soft rotten wood at top of it. She has just hatched out a dozen balls of yellow down and is setting about getting them down to the water. Once there, they will swim like ducks indeed. But flying is as yet beyond them, and the nest is 20ft. in air. Look close and you will see the mother bird poised with half-spread wings just outside the nest. Slowly, cautiously, with low cautious cries her mate pushes one of the ducklings quite upon the middle of her back, gives a sharp satisfied quack; and at once she sails down, settles herself in mid-stream, dives gently and leaves her baby sitting on the water without in the least knowing how he got there. With a shake of the wings and a quack that says "Take care!" she is off to the nest, and keeps it up till all her little ones are launched. As she brings the last a cruel thing happens. Right below her flock there is a swift up-swirling of water. Something brown and unwieldy comes almost to the surface, then sinks like lead and takes with it the plumpest, downiest of all the yellow darlings. Inside a minute another is dragged down, and another, and still another. The snapping turtle, which, once he has taken hold, "never lets go until it thunders," is greedy to day. Anyway he has a weakness for ducklings. He would eat the whole dozen of them if the distracted parents did not hurry them ashore.

There they will not be in very much better case. Foxes live in the caves all along the bluffs. Minks, too, and weasels and coons. Any night you may hear them splashing about in the water for mussels, crayfish and such small deer. Master Fox is no fisherman, but in many ways an antic fellow. It delights him no little to find a safe sunny rock overhanging a glassy pool, where he can bask in broad daylight or stand on tiptoe and play with his tail, nod his head, and seem to laugh outright when his image in the water repeats each motion. He is dainty in his drinking, will cross the creek a dozen times to lap and lave him in its coolest spring. As each lake has its bluff, each bluff has its spring. If its waters gather in plow-land they are apt to be warm and still. If they drain grass or woodland and come out under 50ft. of rock they will be cool and sweet as moonlight over snow. Here is the Fox Spring *par excellence*. It gathers in the big South wood, whose edge you see fringing the top of the bluff.

The bluff faces north—a sheer wall of blue limestone, seamed and broken into huge ledges. In the cleft of one a young hickory has got root, and springs straight and tall six feet beyond the top. All manner of wild vines grow in other clefts; grape vines, wild ivy, poison oak, trail down almost into the water. The glory of it, though, is its ferns. The trailing rock-fern runs all over the face of it; each seam and cleft is a thick fringe of maiden hair, knee high wherever it gets good root. At the foot it springs into a veritable fairy forest, gemmed here and there with the coral of Indian turnip and Solomon's seal.

All the rocks about the spring that sunshine never touches are beset with lichens and liverworts, green and gray. Twenty feet away, in a mass of mould that was once a fallen tree, is a blackberry clump, bent to earth with rich fruit. Eat your fill of it, and carry home a good few. What if you have no basket? Berries like these grow only where dew and fairies are plenty; and here are sycamore leaves as wide as your two hands. Pin a mat of them together with their own leaf stalks, bend a willow twig about the edge, and heap it with berries half as long as your finger and meltingly sweet. Then wreath the basket about with yellow love vine and feathery grasses, set it out in the dew to-night, and morning will show you that the day of miracles is not wholly past.

Drink of the Fox Spring before you leave it. There is no such water in three counties. You may use the ancient gourd that hangs on the root above it. If you are wise, though, you will lie all along the cool brink of it, and let the living water lave your lips; or else kneel, gather it in your scooped palms, and drink and drink the nectar of the wood sprites.

The stream is delightfully vagrant. It bends, turns and doubles upon itself in each half mile. The bluffs alternate with curious regularity. The next one faces south-by-east. There you find always the first hepaticas. All winter its big red-brown leaves curl and cling to each clefted rock to break in late January or by St. Valentine's at latest, into wreathy stars, white, paly pink or blue or purple.

The bluff itself is low, a bare ten feet with big rocks standing out all over the sheer face of it. A big hill crowns it and goes up to the level of the plateau behind. There the water-nymphs have their flower garden. Anemones grow there, daisies, violets, the wild cowslips, with flower like the hot-house cyclamen, sweet williams, blue-flag, columbine purple and scarlet, sweet brier and bramble rose, and white August lilies. Beside them a great multitude of nameless delicately beautiful things. There is one trailer whose leaf recalls the mimosa and whose white blossom seems a cluster of sweet peas made for fairy wearing. Another hangs out a fringe of white cups shaped like the lily of the valley, and still another shakes long yellow, gold-dusty tassels in each sweet spring wind. The chiefest of them though is a vine, a woody climber, with handsome dark green leaves and flowers of true wall-flower yellow, but in shape and size like a nasturtium. The root of it loves water, and the richness of crumbling rock. It grows at the water side, and clambers up the rocky face to fling down torrents of trailing bloom. The native purple wistaria has much the same habit. Its pale, pendulous clusters make the creekside throughout April a long dream of bloom. In May there is the flash of scarlet Virginia creeper, beloved alike of butterfly and humming bird. Master ruby-throat often builds his wee nest in its shelter, and always draws from its deep cup his choicest sweets.

In the pebbly reaches that spring floods cover yearly you find pink and purple larkspur, the curious root known locally as "Adam and Eve," Jack in the pulpit, yellow celandine and yellow wild mimosa. Wherever there is a bit of fine earth, blue grass springs spontaneously, starred with a million dandelions. Countless May apples burst up through it, too—there is apt to be a paw paw thicket—and if the earthy bank abuts upon the water a fringe of green stiff rushes.

After the first frost go down the creek for chestnuts and scaly-barks. You will walk through a glory of yellow leaves, with the smell of new-fallen ones coming sweet from under foot. Grassland is green as in May. Only weeds and stubble lie sere in the low sun rays. The winds breathe, rather than blow, yet the ripe nuts patter, patter, at each sigh of them. Gather good store, but leave plenty for the squirrels. Winter is at hand and they are rightful heirs to nature's bounty.

When it does come, the few days of bitter cold about the winter solstice, there is fairyland all down the creek. The lakes skim over with clear commonplace ice. In the swift runs there is ice only along the edges. But ice of such clear shining, such wonderful shapes, as freezes nowhere else. Each leaf is armored in lace of diamond, each twig and grass-spear has its pendant pearl moss, and lichen is transfigured stone and pebble made harmonies of frost.

All the shelving bluffs, whence waters drip so cool through summer days, are hung with huge icicles, points of fluted pearl. They grow upward as well as downward. If the frost holds a week they meet in hour-glass fashion and stand white ghosts of fair water, that only the south wind can make again alive.

He is not slow in rescue. He comes at night with a roar and rush of rain. In a day the ice is broken up, and a turbid torrent full of drift and silt goes racing to the river valley, to rest at last in the sea. M. A. W.

THE LOGGERHEAD SHRIKE.—Mr. Robert Ridgway, Curator, Department of Birds, U. S. National Museum at Washington, has called our attention to a highly interesting group of loggerhead shrikes or butcher birds (*Lanius ludovicianus*), representing a pair of old birds with their nest, full of young, in osage orange hedge. The female is shown in the act of feeding her young, which are about half grown, while the male sits on a tree near by reconnoitering. Impaled on thorns are a black-throated bunting, a field mouse, grasshopper, etc. The reason for the birds impaling their victims on thorns is not known with certainty, since they very often make no further use of them. When this is the case it is probable that the birds find food to their liking abundant and so leave the impaled prey untouched. Some persons say that the birds have this habit from the fact, that unlike the hawks, owls, and other true birds of prey, they do not have talons to hold flesh while in the act of feeding, and that the thorns take the place of talons. The group was prepared by Mr. C. F. Adams, of Champaign, Illinois, who studied the habits of the birds and obtained the materials near that place.

IF YOU HAVE A FRIEND interested in natural history, send his address for a copy of FOREST AND STREAM.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

Game Bag and Gun.

DUCKING IN IOWA.

THE members of our club met to discuss the subject of going to Goose Lake for a few days' outing. Bright and early Thursday morning our boat and sporting equipments were loaded into a lumber wagon and we were off at half-past seven, the most jovial party in existence. We enjoyed a cool drive in the frosty October morning air, but nevertheless all were so filled with a spirit of the occasion that none could complain.

The first incident of the trip was a bit of discouraging sport with a very wild and timid flock of golden plover. While proceeding on the highway a flock of these fine birds was sighted feeding in a pasture near by. Three of us made an attempt to secure some of them for dinner, but after firing a few shots at long range and not getting any of the birds we returned to the wagon and drove on. No sooner were the bluffs of Coon River reached than our two dogs, Dash and Nick (two good retrievers), started three rabbits. Again three of us dashed forward to secure meat for dinner. We succeeded in getting a few poor shots in among the dense hazel brush, but to no avail. Somewhat disgusted we went back to the wagon and drove on.

Driving on a mile or so we sighted a large bevy of prairie chickens in a cornfield near by. Soon four of us were treading lightly through the corn. The birds flushed at a good 60yds., but at the report of my gun one of them set its wings and sailed into a large patch of rushes fully 200yds. distant. After making a thorough search it was given up as lost, and we returned to the wagon again much disgusted at our morning work. A mile further on another large bevy of chickens were sighted in a stubble field near the road. The boys made what is called a sneak on them and secured three of them. Greatly elated with our success at the chickens this time, and feeling that we were to have fried chicken for dinner, we went on our way rejoicing. We arrived at Hardin Creek at half-past nine, and three of us crossed a field to the creek to a point opposite the road, while the others drove out to a field further down where we were to meet them. The first thing sighted as we neared the creek were a lot of crows, which flushed so close to us that George (not stopping to think that there might be some ducks in the creek) fired and killed the nearest crow; but imagine if you can our anguish when at the report of the gun a nice flock of bluewing teal rose from behind a straight bank of the creek at 100yds. from us. The worthless crow was picked up, but the ducks were gone.

Nothing worth noting occurred until we reached the lake, about half past eleven, and many were the enthusiastic expressions as we sighted great flocks of mallards, redheads and blue and green-winged teal flying to and fro on the lake. A place for putting up our tent was located and soon all hands were at work unloading camping goods. George, Will and Bert put the tent up and proceeded to make everything ready for a three days' camp, while Warren and myself went to a neighboring farmer to secure a stall for our horses. After talking a while with a good-natured man by the name of Heller we were fortunate enough to get possession of a stall and plenty of hay for feed. Much pleased at this turn of affairs we returned to camp. We found them with the tents set up and ready for dinner. After dinner was over all hands made ready for a duck hunt on the lake. There being several boats on the lake besides our own, all could hunt as they pleased. As it was a very fine afternoon we all took to the water, and a pretty good afternoon's sport was had, as several bags of mallards and redheads attested. As the twilight began to fall the boys gathered into camp. While the cook was preparing supper we sat around the camp fire relating incidents of the afternoon. Soon the cook called supper, and we, equal to the occasion, responded to the fried prairie chicken. One thing greatly regretted was that we did not go prepared to fish. Mr. Heller (the genial farmer who had made room in his barn for our team) and his son Frank came into our camp just at dusk. They informed us that they were going on the lake to fish. They took with them a big light, and said that with this they could blind the fish and row up to it and take it with a four-pronged spear. They returned from the lake at half-past ten o'clock, and great was our indignation while we stood looking into Mr. Heller's boat upon the mass of beautiful black bass and pickerel. Some of the black bass weighed as much as 4lbs. and some of the pickerel 8lbs. Only after seeing Mr. Heller load his fish upon a wagon (for he had too many to transfer otherwise) and drive away in the darkness did we return to our bunks. We then and there vowed we would never again come to Goose Lake without a fisherman's outfit.

We were all astir at 4 o'clock in the morning, and to our disgust found it was raining, with a cold northeast wind blowing; but being determined to make the best of it we all set forth to take the ducks before breakfast. Hunting was of course very disagreeable, but we succeeded in making some good bags and returned to camp at 9 o'clock for breakfast. We had a cold lunch, and the rain continuing to fall we remained in camp. Wrapped in the blankets to keep warm and telling stories of the good sporting days gone by, we whiled the forenoon away. Again eating a cold lunch for dinner (for it was too wet to start a fire), and the rain having ceased, we went out for a few shots at jack-snipe; but as these prize birds were very scarce and wild we did not get many. The afternoon was very wet and foggy; we did not do much until toward evening, when George, Warren and myself went north about two miles to Bush Lake, where we found very good duck shooting. We kept up a lively fire among them until it got dark and secured heavy bags of mallards. We returned to camp at about 8 o'clock.

Again numerous fishing parties were on the lake, and the lights could be seen floating to and fro. About 9 we pulled the canvas door of our tents to and rolled into our blankets. At midnight we were awaked by a terrible racket that our dogs were making over a party of fishermen who were landing near our camp. Next morning we were astir early, and after a hasty lunch Warren, George and myself retired to Rush Lake, where we again had splendid sport with the mallards for an hour or so, when we returned to camp loaded with the spoils of our morning's work. When we got to camp we found that Will and Bert had gone on the lake and were shooting fish. We were not long in following their example and were soon on the lake popping the pickerel at every sight. We succeeded in getting a fine lot of pickerel and a few more ducks. At noon we returned to camp and began preparations for our return home. We stopped at Hardin Creek and made some successful shots at the ducks there, securing some fine mallard and bluewing teal. We reached home at 7 o'clock in the evening, the last hour of our ride being in the rain. We retired feeling that we had made a success of our tour and will make more such trips in the future. E. E. F.

Scranton, Iowa.

RIFLE TWIST AND CALIBER.

SAN FRANCISCO, Sept. 15.—*Editor Forest and Stream:* Several years ago I did some experimenting on rifling, and sent East to the different gun factories to have barrels cut with fast twist, but it seemed that they had experimented, and found that a rifle barrel should be cut with one turn in 18in. It did not matter whether you ordered a .22cal. or a .50cal. rifle, or what length of projectile you wished to shoot, it was all the same. But I thought differently, and finally got some cut with one turn in 12in. and one turn in 16in. This was the fastest turn in rifling that they had ever cut up to that time. I commenced from one in 12in., and cut barrels down to one turn in 4in; for I believed that the projectiles of any two calibers (when their lengths are the same in proportion to their diameter) should have the same travel around their axis, in their rotary motion, to keep them right end to and make them steady in their flight.

Take the circumference of the projectile and multiply by the number of turns in a certain distance, the result will give the travel around its axis.

The distance traveled by both calibers should be the same.

I will explain this in another way: .44cal. one turn in rifling in 18in., projectile three diameters of bore in length, 1.32in.; .22cal. one turn in rifling in 9in., length of projectile, three diameters of bore, .66in.

The lengths of projectiles are just alike, in proportion to the diameter of the gun they are to be shot from, the one turn in 9in. for the .22cal. will turn the projectile around on its axis twice in 18in., so that twice around the .22cal. will go once around the .44cal., and the distance that the surface of each projectile travels around its axis is the same; and it did not take me long so find that it was true that the distance a projectile travels around on its axis to keep it right end to, would be the same in any other caliber under the same conditions.

The next thing to find out was what length of turn in rifling would keep any length of projectile right end to. After finding that the rotary motion of a projectile increased in proportion to the distance it was shot, it revolved on its axis more times in the second hundred yards than it did in the first hundred, and so on each hundred yards it turns more during its entire flight. This may seem strange at first, so I will have to explain.

The resistance of the atmosphere on a projectile lessens its flight about one-fourth the first second and one-fourth of the remainder of its speed the next second, and so on; at the end of the third second more than one-half of its speed through the atmosphere is lost.

The friction of the atmosphere does not lessen the rotary motion as fast in proportion to the distance it is shot as it does its flight through the atmosphere.

A projectile shot from a .45cal. long-range rifle, 550grs. of lead and shot at 1,000yds., will have about one turn in 11in. It takes more than twice as long for the projectile to travel 18in. at 1,000yds. as it did at the muzzle of the rifle, and the rotary motion has not lessened in proportion to the loss of speed. I experimented on four different guns in 1883 84, but did not finish the tests, as I left for the Arctic at this time and was gone for two years, and upon my return did not finish my experiments; but I have some projectiles that I have shot at different distances. A .45cal. 1½in. long, one turn in 12in. and one turn in 18in., shot at 1,000yds., and shot through soft boards and dry, loose sand, the marks of the boards on the projectiles are a much sharper angle than the rifling.

A .38cal. projectile 1¼in. in length, turn in rifling 1 in 9, shot at 2,000yds., 90grs. of powder, marks of boards on projectile about twice the angle of marks of rifling. A .10cal., length of projectile 2 diameters $\frac{20}{100}$, turn in rifling 1 in 4in., charge of powder, 1gr., shot through bars of white castile soap. In this it was easy to measure the turn of ball, as it would rifle the hole in the soap just as perfect as the barrel was rifled, and by cutting the soap in thin strips with hole in center of strip, then holding it to the light, it was easy to measure the turn of rifling. In this the turn in ball increased as I increased the distance. The accuracy of this little gun was something that would surprise the oldest rifleman.

I also made a .22cal., one turn in 12in., and chambered for .22 short, and shot it with a telescope at 50, 100 and 200yds., and then chambered it for .22 long, .22 extra long and then for 10grs. of powder. I then made three lengths of projectiles, 48, 60 and 80grs.; then increasing the charge of powder 10, 15, 20, 25 and 30grs., found that with 25grs. of Hazard FFG powder and 48grs. of hardened lead with one-tenth tin, that fifty 8in. bullseyes could be made at 200yds. with rest. The rise of this projectile at 109yds. (shooting at 200yds.) was about 6¾in.

After trying a number of different twists in different calibers, I found that the rule I was working on gave good results for getting the length of projectile, for it gave me the best results after experimenting with longer and shorter projectiles.

I would end at about the length of projectile that this rule will give: Take the caliber (or diameter) of the bore of your rifle in hundredths of inches and multiply by 3, then multiply the result by itself; then take the length of one turn in rifling in inches in your rifle and multiply that by 7, divide the first sum by the result of this and it will give the length of projectile in hundredths of inches that can be shot from that rifle.

If you have a certain length of projectile and you wish to know the length of turn in rifling to shoot this projectile and keep it right end to, take the length of projectile in hundredths of inches and multiply by 7, then take the caliber (or diameter) of barrel of rifle it is to be shot from, multiply by 3 and the result by itself, and divide by the result of the projectile; this will give the turn in number of inches (cut off the fractions and leave it even inches). In small calibers with shallow grooves a little longer projectile can be used, for the weight has not been cut away on the surface.

Hollow bases must be cut down flat before measuring.

In measuring length of shells for larger guns the weight of metal cut out for charge must be added to their length except weight of explosive.

Example—Caliber .32: .32×3=.96×.96=.9216.

Rifling .16in.—.16×7=.112.

.9216 + .112=.8328, or discarding the extended decimals .82, the length of projectile. Howard H. Carr.

BAY SNIPE AT CURRITUCK.

ON Sunday morning, Sept. 21, as the Carolina steamed up to the Bay Line wharf in Norfolk, we beheld on her upper deck the happy faces of our genial friends, whom we will call Tommie, Ned and Pike. They stepped ashore and were given a welcome handshake by Worthey, Theodorick and the writer, who on all future trips of this kind (for reasons we are too modest to mention) will be known as Duck. This comprised the party, and a happier six fellows than were we a few hours later you never saw.

The Comfort, with all her bright colors fluttering in the breeze, and shining brass ornaments glittering in the morning sun, lay on the other side of the wharf waiting to convey us to our happy hunting grounds beyond the Great Dismal Swamp.

At 9:15 we cast off and steamed down the southern branch of the beautiful Elizabeth River. A mile on our way we came to the Navy Yard. On our left looms up the receiving ship Franklin, which had the honor of transporting Boss Tweed from flowery beds of English rose to Ludlow street jail. On our right may be seen the skeletons of cruiser No. 8 and the war ship that is to be some day. Then came the Ossipee, Brooklyn, Richmond and others.

Leaving the Navy Yard there is little to be seen until we reach the mouth of the old Dismal Swamp Canal. The canal is about 22 miles in length and was planned by George Washington; it is a navigable stream for wild ducks and leads into the lakes of the Dismal Swamp.

We are soon in sight of the locks of the Chesapeake and Albemarle canal. At length we enter the canal, and what scenery we beheld. No words of mine can describe it. There had been a heavy dew the night before and now all nature was at its fairest. The junipers wore their most beautiful green.

Leaving the canal we enter the North Landing River, and pass Starvation Plantation. A few miles more of winding rivers and we enter Currituck Sound. It is truly a beautiful sheet of water, and certainly the greatest place for wildfowl on the American coast. What you shoot at Currituck you may depend upon as good to eat.

At 4 P. M. we drop anchor half-way between Knott's Island and Church's Island. We were soon boarded by our keeper, who showed us a fine pair of curlew which he had shot from the porch of our club an hour before. He told us game was abundant and "easy to shoot." The last three words made every soul of us happy. At 6 P. M. we had dinner, and three hours later were sleeping too soundly even to dream.

Monday morning, the 22d, at 4 A. M., we are aroused from our slumbers by Capt. Dorney, who always sleeps with one eye open. Although we have spent many happy days yachting with different friends on different yachts, we have never seen his equal. 4:15 finds us seated in the comfortable dining room.

Breakfast over, we step into our small boats. We have refrigerator baskets in each blind, and the birds can be kept in perfect condition until we all return to the house or on shipboard, when they are repacked in large freezers, which will keep them two weeks certainly. The teams to drive us to our blinds are soon ready when we land, and off we go with hearts as light as cork. Ned reaches his blind first, and while Leon is placing out his decoys, two or three bunches of winter yellowlegs swoop down and are bagged in full view of the whole party.

The next blind reached is Worthey's. I had the pleasure of staking out his decoys for him; they were a handsome stool of golden plover. We were not 50yds. from him, when a golden plover came down to his decoys. There was a great noise and three of his decoys were knocked into splithereens, but so was the bird. By this time Ned was popping away as fast as he could load and shoot, and soon after every blind was heard from.

Some sportsmen (generally those who haven't tried it) say they are not fond of bay snipe shooting. But we think if any one could have one day of just such sport as we have had this season and many past seasons here, their conversion would be sure and quick.

When a sportsman can leave his club house just at dawn on a pleasant spring or autumn morning, drive one mile to his blind, and return to a 9 o'clock breakfast with a bag of 75 to 100 birds or perhaps more—golden plover, yellowlegs, graybacks (dowitches), grass plover, deo birds and perhaps a dozen English snipe—he would have to be made of peculiar stuff if he were not happy.

We are aware that the graybacks, curlew, willets and yellowlegs, in fact all kinds of bay birds shot at Cobb's Island, Fisherman's Inlet, Long Island and Cape God are very fishy and poor eating. Not so with our birds at Currituck. One cannot tell our grayback, grass plover or yellowlegs from an English snipe, when properly prepared. But what makes our hunts more enjoyable, we save every bird shot, freeze, and take them home to our friends. It all depends on the food, of course, whether any game is good or not, and there is no fish for our bay birds at Currituck.

Well, this 22d day of September was not a bad day for snipe, and the score was as follows: Worthey 115, Ned 126, Tommie 136, Duck 124, Theodorick 114, Captain D. 135, Picus 118; total 868.

The next morning at 7 A. M. we were on our shooting grounds. The day was a little warm, and at 10 o'clock we met by appointment neath the shade of a live oak tree on the banks of a stream where our boats were moored. We counted up our bag for the morning and it was 592. Among them, shot by Theodorick, was a nice little bunch of English snipe, which had just begun to come in. This made a bag of 1,460 bay snipe in less than one day and a half's shooting to seven guns.

We returned to the Comfort at noon. Our trip back through the canal was a very pleasant one, indeed.

Duck.

Gentlemen who desire to join a club located thirty miles from New York and owning several thousand acres of good quail, grouse and woodcock grounds and five miles of excellent trout streams, can learn particulars by addressing Wm. C. Harris, P. O. Box 25, New York City.—*Adv.*

WAYS OF THE RUFFED GROUSE.

THE ruffed grouse is essentially a ground bird. When he flies into a tree it is almost solely for the purpose of escaping from a persistent pursuer, or for the purpose of feeding on buds or grapes, whose vines depend from its branches. When the occasion has passed he returns immediately to the earth.

He sleeps on the ground, as is well known by every observant sportsman, and can be easily proved. When the grouse is feeding among the grape vines he instantly drops to the ground on the approach of footsteps.

He has also a trick to escape from his enemy; when two are together, as they frequently are late in the fall, one will fly and the other will lie flat on the bare ground till the person has passed, when they will again join each other.

The gait of the grouse is curious. Ordinarily he walks, turning himself to the right and left, in a sort of waltzing manner, so as to take in every point of the compass. If at the time he is startled by danger, the exact character and location of which he has not made out, he frequently utters a low clucking noise, walking slowly and looking around. This is entirely distinct from the cluck of the female with young. One other noise also he makes, and I believe one only (the whirring soar always excepted), a sort of faint shrill peeping. He does this when much alarmed, just before and when taking wing.

When the grouse wishes to go a little faster than a walk he runs and sometimes swiftly, too; but his best pace is made by jumps. I do not think he uses his wings (as the ostrich does) to aid him in his locomotion, although of this I will not be positive. Once, while I was hunting in the gorges among the Glewill Hills, a grouse started and flew up ahead of me and lit near the top of a hill. I followed after, but not caring to walk up the hill, kept along the base. After I had passed the bird he started on a keen jump back along the ridge. I had a fair view of him for 40 or 50yds. I have observed the same gait several times since.

The grouse in full flight cannot alight on the ground without first circling or sweeping around unless he chucks down into a pile of leaves or some other soft material. On one occasion in the month of December I saw a grouse attempt to do so on the bare frozen ground while in full flight. I was walking in the woods, when the bird, started by another hunter, passed me from behind at a tremendous speed. When about 35yds. from me he struck the hard bare ground, but not being able to stop himself went over it for about 20ft. on his toes, as it looked to me; he then left the ground and flew a half mile and lit on an open meadow. I followed this bird after I had marked him down and shot him. He allowed me to get up to about 25ft. of him before he flew.

DORP.

IN MILL BAYOU.

IT was some time in the month of October, 1878, that I received a note from John Belk stating that he and his brother Jim would be at my house to go on a camp hunt, and that I must be ready to go with them. I was always willing for a hunt, so I had enough provisions prepared to last us several days. The day after receiving the note I concluded to go down Mill Bayou to some licks that the deer visited every fall in great numbers, to see if they had commenced using there. In the afternoon I took Jake, a negro boy, and started. The first lick was just below the crossing on the bayou, but as the deer did not use there so much I did not get off my horse to look, but rode on; and as I was about half-way across the bayou Jake called my attention, and said he thought he saw a deer at the lick. I slipped from my horse and waded to the opposite side of the bayou, then took advantage of some willows and got within 75yds. of the lick, and on looking saw two deer. I fired at one, which fell; the other still standing there. I threw another cartridge into my rifle and fired. At the crack of the gun the deer jumped up the bank of the bayou. I saw that it was hit. Jake brought my horse to me and we went to where the dead deer was, and found that the bullet had broken its neck. I also saw blood where the other one had gone off, and told Jake to dress the one I had killed and I would follow the trail of the wounded one. The trail was easily followed, as the deer was bleeding very freely. I had followed it about 200yds., keeping a sharp lookout, when I saw a small bear feeding under a persimmon tree, about 50yds. from me. As the bear had not seen me, and was walking about picking up persimmons, to make it stop I gave a sharp whistle. The bear stood upon its hindlegs with its back to me, looking for the noise it had heard. I drew a full bead between the shoulders and fired. Down Cuffy went, and on examining I found I had broken its neck. I returned to the deer's trail, and did not go far before I found it dead. I had hit it behind the shoulder. I went back to Jake and helped him to get the first deer up the bank of the bayou and hung it up. Then we dressed the other deer and bear, hung them up and started on down the bayou to the other licks. I told Jake to go to the middle ones and I would go to the lower or last one and we would meet, he hunting down and I up the bayou. Before I got to my lick I heard Jake's rifle. I knew he had found deer, and probably had killed one, as he was a good shot. I was then about half a mile from the lick to which I was going. When near I got off, hitched my horse, stole up to the bank of the bayou and looked into the lick, but saw no deer.

I knew that the deer used that lick more than any of the others, so I concluded to remain and let Jake hunt the other. I cut some palmettoes and made a screen. I had not long to wait before I saw a deer coming around a bend in the bayou toward the lick. It must have winded me, as it stopped when it got within 100yds. of me, threw up its head and began to stamp its foot and whistle. I was afraid to wait longer, as the sun was getting low and the deer might run off, so I concluded to try a shot. The deer was standing with its breast to me, which is not a very desirable mark, distant 100yds. and shooting from a high bank down at it. I drew a careful bead and fired. At the crack of the gun the deer started off up the bank and I saw it was badly shot.

Just as I got up to go after the deer, some turkeys began flying up into the trees all around me. I dropped two, when Jake opened fire, and between us we got six. After gathering our turkeys we went after the deer, and soon found it dead. I had hit it in the hock joint and I suppose the shock had killed it, as that was the only place I could see that had been struck. Jake had killed his deer and left it up the bayou. We got the one I had just killed across the bayou on to my horse, with part of the turkeys, and started to where Jake had left his horse and deer. Got that on his horse, and then went on to where we had left the first dear and bear. When we reached them it was so dark that we concluded to stay there until morning. The night was quite cold, but we soon had a roaring fire and spent the night very pleasantly. We were not hungry, as we had eaten our dinners before leaving home, but Jake broiled some of the liver, though as we had no salt it did not taste very good. By the time it was light enough to see next morning we saddled our horses, loaded them with the two deer and the turkeys and started for home, arriving there about 10 o'clock. Jake took two boys and went back after the other two deer and the bear. The deer were all does, but in fine condition. The bear was not fat, but the turkeys were just prime. I sent two of the young gobblers to my sweetheart. She is now Mrs. M. (M. stands for my name), with three little Ms.

John and Jim came that evening. I will tell you about the camp hunt next time. HUNTER.

POINT PLEASANT, Louisiana.

SPORTING TRIPS FROM THE HUB.

STILL the gunners go, and still they have more or less of success. But oh, the glory of those autumn days! The foliage is simply wonderful. The weather has been fine, or a good deal of it. Who can speak the charms of an October day in the woods, when not a leaf is stirring, when the sun is bright? Such has been the weather for one or two days since October came in, and these days, some of the more fortunate sportsmen have enjoyed. No very heavy bags of game are reported, but the outing has more than paid. Partridge are not plenty in the back woods of Maine, or at least they have not been found as plentiful as last year. One guide suggests that they have not yet left the thick woods. His theory is that when the mountain ash and other berries native to the old woods are plenty, as they are plenty this year, that the grouse are slow about coming to the lumber roads and other open places, and that the best bags are not made till after the early snows. In Massachusetts the gunners report the partridges fairly plenty, but very hard to get. E. M. Gillam, commercial editor of the Boston *Advertiser*, went over to Reading gunning on Saturday, and scared up nearly a dozen grouse, but though accompanied by a good dog, he secured but one. He describes the birds as unusually wild.

J. H. Jones, salesman with J. M. Emery, in the fresh fish market, starts on his gunning and vacation trip on Tuesday. He is a native of Buckfield, Me., and is a great lover of the rod and gun. This time he has put off his vacation till late, in order to secure "a deer and a bear." He will go to Byron in that State, going up Swift River from Mexico, and visit the new gold diggings, as well as hunt. He will not be satisfied without a bear this time, and bears are plenty in that section. His fellows in the store declare that he will be afraid of a bear, and they suggest that he learn to say his prayers before he gets into the woods, as did an old Mr. Record, a bear hunter of former years, in the same town where Jones was born. Record was a brave hunter, in his own ideas, though many knew him to be a great coward. His bears were all taken in steel traps or deadfalls, the latter of which he was very skillful in setting. But it was seldom that he ever visited his traps alone. He always wanted a neighbor or a neighbor's boy to go with him; not that he was afraid of bears. Oh, no! Then if a bear should happen to kill him, it would be pleasant to have some one to tell the story. On one occasion a bear began to come into a neighbor's clearing at night to destroy the green corn, just in the milk. The tracks showed that he was a big one, and Record was self-appointed to set a trap for him. He concluded that a big deadfall, just at the edge of the corn, would be the thing. This he proceeded to construct, with the help of his neighbors. It was duly set, so that the old bear in crossing a certain line, which he would be sure to cross in approaching the corn from the woods, would spring the deadfall and be buried under a flood of logs and stones. The trap was to be visited the next morning. Record loaded his old flintlock, and, taking a neighbor's boy with him, he started for the trap. They came pretty near. The deadfall was down. Record stepped back, suggesting that they would not go up too fast, for possibly the bear might not be secured. He crawled with his gun cocked and at his shoulder. There was a rustling among the corn leaves. There was a crunching sound and more rustling. Record's hair stood on end. He cautioned the boy to be ready to run in case his shot should not stop the bear. Another rustling followed, and the glimpse of a black animal appeared in the corn. Record rose from his crawling position to his knees. He was not a man of many prayers, but now he was thoroughly frightened. The corn rustled again. "Gad'l mighty!" he began, "save my soul, before I shoot this charge." The corn rustled again, and nearer. A big black animal hove in sight. "Gad'l mighty!" and Record up and ran like a scared colt, dropping his gun and leaving the boy to his fate. Almost cleared from the cornfield, he turned to see the boy torn and eaten; when behold the boy and a big Newfoundland dog coming toward him. Record was known as "Gad'l mighty" ever after. The bear was not under the deadfall; it had fallen of its own weight.

The gunners are having some good sport with the shore birds in the vicinity of Boston, though it is as yet too early for the flight of coot and other ducks. The heavy storms of late in October and in November are expected to bring the birds into Essex River and off Anisquam. At Brant Rock is another favorite shooting station. Frank S. Raybold is something of a gunner for a boy, and he likes it, following his grandfather. On Saturday, with a companion, they went gunning off the Point of Pines and secured a bag of a handsome dozen birds. They took a dinner with them and made camp in good style.

There is something peculiar about the flight of "doughbirds," as the local gunners term them. It is said that they bring $1 apiece in the Boston market. Messrs. Gordon and Albert Plummer, already mentioned in the FOREST AND STREAM, seem to have run into strange luck in seeing these birds on their way from their recent shooting excursion to Nantucket. They explain to a Boston *Record* reporter that they saw the birds after their shells were all boxed and on the team for Boston. Three splendid flocks lit in the very roadway before them. Their guns were empty. They drove on a little further, when another fine flock came circling around them and settled not far away. In sheer desperation they left the team standing and rushed to a house in the distance for shells, starting another flock of these splendid birds. Their inquiry for shells brought out a lot of 14 gauge; the hunters' guns were both 10 gauge. The keeper of the cabin told them that the doughbirds had been flying nearly all day; he had never seen a flight so heavy before. The hunters had to take the next boat for Boston. SPECIAL.

ADIRONDACK DEER.

Editor Forest and Stream:

I am pleased to think that the sentiment against hounding deer in the Adirondacks is becoming more prevalent among sportsmen. It is hard to imagine that any sportsman in the true sense of the word can take any pleasure in thus killing a deer, struggling for its life in the water, deprived of all means of escape.

We brand with the stigma of disgrace the pot hunter who, after a long tramp on snowshoes, murders the floundering deer in the snow crust. But how much worse to employ the hound to drive the deer into the water, where it is reduced to the same condition as the deer in the snow crust. Wherein, then, is the difference? One (be it to the shame of the State of New York) has the sanction of the law, the other has not. The abominations committed at Chateaugay Lake and those cited by your correspondent "J. W. B.," of Southboro, are being committed all over the Adirondacks during the hounding season, and will continue to be perpetrated so long as the law makes it possible for the self-styled sportsman and pot-hunter to gratify their brutish instincts. An employé of the Smith Lake Hotel told me that he saw a fawn butchered in the water a few days ago by the same magnate that sank a dozen or more deer in Bog Lake a few years since. Yet no dissenting voice is raised for fear of losing guests at the hotel. It makes me sick at heart to go through the Adirondacks now and see the slaughter of deer that it going on to-day. You will find at every lake and pond a pack of hounds and hunters, and the ground strewn with the débris of slaughtered deer. Loads of mutilated deer pass here almost every day. Seventy-five is a small estimate of the number of deer that are being killed each day now, and the number will increase as it gets later, as deer take to water sooner when pursued by dogs. At least twenty-five deer daily are fed to dogs during the hounding season.

Reformation is needed, and if the present state of affairs continues, a few years will witness the extinction of all the big game of the Adirondacks. MUSSET.

NUMBER FOUR, Oct. 8.

Editor Forest and Stream:

It is all well enough for your correspondents who don't believe in deer hounding to argue against it, if they want to, but would it not be as well for them to stick to facts and reason. There was a writer in your paper, the other day, who talked about being kept awake at night by the baying of the hounds. But they don't hound deer in the night time in any part of the Adirondacks I know anything about. What did "J. W. B." mean?

Again it was foretold a few years ago that if hounding were to be permitted there would be no deer left in five years. From my own observation, and from what I am told, I judge that deer are more plenty in the North Woods to-day than they have been for twenty-five years before. What have the anti-hounders to say to that?

HUBERT.

UTICA, N. Y.

Editor Forest and Stream:

Two days ago a man sat on the shore of Beaver Lake, waiting for the hound to drive a deer into the water. He had not long to wait, for soon a deer with panting breath pounced into the water and with a sense of security struck out for the middle of the lake. The hunter waited until the deer got well out into the lake, and then rowed his boat up to it. He had his gun with him, but in this case he thought the club the most sure weapon, and attempted to strike the deer on the head; but in the act he upset his boat, dumping himself, gun and club all into the lake. He clung to the boat and drifted about the lake for over half an hour; and when he was nearly exhausted and chilled to death, another man by pure accident came on to the lake and towed him ashore more dead than alive. A few hours after he expressed a desire to join an anti-hounding club. The deer escaped, and the gun is still on the bottom of the lake, where it will doubtless forever remain. SOSO.

ADIRONDACKS, Oct. 8.

Editor Forest and Stream:

One of our party at Middle Branch, North Lake, in the Adirondacks, killed on Oct. 1 a buck which dressed 320lbs. He looked like an ordinary deer, but had remarkable antlers, which arched in the form of a heart, the tips nearly touching. At the tips the horns were flat and measured 7¾in. straight across the flat part. One side had eight prongs, the other six. C. T. S.

WHITESBORO, N. Y.

GEORGIA GAME.—Augusta, Ga., Oct. 8.—Last week we had very fine snipe and woodcock shooting. A cold spell from the northwest brought the snipe, and the high waters ran the woodcock from the swamps, which made good highland shooting on these birds. Parties have made bags of nearly a hundred birds. The past season has been an unusually good one for breeding quail (Bob White). Within a radius of two miles of the outskirts of this city, I have spotted nine coveys, and there are perhaps more. The majority of birds are half grown, but some are full grown. We anticipate good sport, as birds are reported plentiful everywhere.—J. M. W.

ADIRONDACK BEARS.—Number Four, Oct. 8.—Two large bears have been caught at Number Four during the past week. They were both caught within less than eighty rods of the Fenton House. Twenty-six ladies, guests of the house, joined in following the trail until the bear was found about one-fourth of a mile from where the trap was set.—MUSSET.

CHICAGO AND THE WEST.

CHICAGO, Oct. 9.—Nothing very stirring has been happening among the wildfowl in this vicinity as yet this fall. Some few marsh ducks are reported in at Fox Lake the last few days, but not many have been killed there so far. No very big reports come in from the Illinois River as yet, though the northern birds are scarcely due there yet. A party including Messrs. McFarland, Gammon, Davis, Walser and others go down to Hennepin club grounds this week and we may hear something from them.

On the Kankakee a singular state of affairs has prevailed all fall. None of the club marshes have any water to amount to anything except the Mak saw-ba, where the marsh is now and has been in very good shape. Messrs. Sharp, Watson, Mussey, Dicks, Cox, Kinney, Organ, Brown, Crane, Holden, Buechner, and others have been down at Mak saw-ba lately and have had very fair average luck at snipe, and have killed a good many woodducks and teal. The first ducks that seemed to be travelers, however, are reported on this marsh for last week.

The Little Calumet is not high this fall, and Tolleston marsh is reported too dry for shooting. The weather has been too warm and fair to expect any shooting on the Grand Calumet, which only looms up during cold and windy weather.

The little party mentioned earlier is back from Horicon marsh, Wisconsin. Ben Dicks reports 34 snipe, Percy Stone 12 snipe and 15 ducks, Fred Donald 23 ducks and W. W. McFarland 14 snipe and 8 ducks. It seems that the ducks are not even at Horicon.

Snipe shooting has been generally good this fall. Duck shooting will probably not be very good. Upland shooting, at prairie chickens and quail, has been exceptionally good all over the State of Illinois this season. Quail have never been more abundant of late years. For instance, Dick Turtle and Hetfield killed 100 quail in two days last week around Saybrook and Harpster, of this State. They also killed about a dozen chickens. These two have killed about 150 chickens this fall, but they made their first hunt shortly after Sept. 1, and a week or more before the legal season opened. A great many shooters availed themselves of the flimsy excuse that the clerical error which made the date Sept. 15 was not the will of the people, who intended it to be Sept. 1. I do not quite understand a reasoning like this. I said a good many shooters availed themselves of it. I should qualify that by saying I heard a good deal of talk of that sort down in the central part of the State, where the law was openly violated; but this is the only case in which I know of a Chicago sportsman who shot before the 15th. It was unquestionably a wrong thing to do, altogether wrong. In case of doubt, the only thing to do is to give the birds and the law the benefit of the doubt, and this I believe the Chicago boys have very generally done. It is the country shooters who most generally violate the law, although they do not shoot so steadily as the market shooters. The men of this city can not afford to fall in with such practices, or to condone them, or to lend their own example to them. No one man's wish ought to make the law, or does make it. If there is doubt in that one man's mind, he should consider it the more sportsmanlike to give the birds, and not himself, the benefit of the doubt.

There is on foot here a plan to make up a shooting party to take a cabin-boat trip down the Mississippi to New Orleans, starting in the latter part of this month, and stopping as the shooting suggests. The party is not yet made up.

Indiana quail season opens Wednesday, a week from yesterday. The birds are unusually abundant along the Kankakee and the Tippecanoe, and, in fact all over the northern part of the State. Upland shooting is having a great vogue out here now.

Oct. 10.—The following, from the Whatcom *Reveille* (Wash.), is reprinted to-day in a city paper here: "Frank Denehie says that in the Olympic Mountains are a hundred hunters waiting for the snow to drive the elk down from the high peaks. They are working for a Denver firm, which pays $60 for every elk head with antlers. One hunter has 800 bullets ready for the noble game. The elk are gone from the creek bottoms of Dakota. There are but a few places in Montana and Idaho where they can be found, so that the hunters have come from all over the West to be in at the extermination on the Olympic peninsula. The carcasses will be left to rot on the ground. This ought to be stopped. Common carriers should be prevented from receiving elk heads for transportation under a heavy penalty. Doubtless the late Legislature would have attended to the matter had it been apprised of the meditated slaughter. With proper game laws this peninsula will be the Adirondack region of the West."

Let the next Legislature attend to it. It will have a hard enough time to prevent that region from becoming like the Adirondacks.

Oct. 11.—Things are running along smoothly here, but with no very startling news in the way of game this week. Next Wednesday the quail season opens in Indiana. A great many quail have been killed along the Kankakee, out of season, for the past couple of weeks. The birds are plentiful in northern Indiana, as has been stated earlier. One farmer near Mak-saw-ba Club says he has ten bevies located.

Mr. Geo. T. Farmer does not find wild geese numerous on Cumberland marsh this fall, and will go with a party of friends to North Dakota after the honkers. Mr. Farmer will do well to take his flock of tamed wild geese and half-breeds along with him. With these for decoys he might have considerable sport.

Dr. J. W. Hutchinson, familiarly known as "Doc Hutch," will also be among the fowl shooters who try Dakota this fall. There will be a wave of high pressure barometer strike Dakota about when Doc Hutch gets there.

Mr. "Slick" Sharp is working for a position as star in the snipe-shooting act. Last Saturday he bagged forty-eight jack snipe at Mak saw-ba marsh. This is beside the bag of thirty three credited to him earlier. Dr. Buechner got twenty-three jacks last Saturday, and I believe I have mentioned the twenty-one that Billy Mussey got one day the week before. The birds are in fine condition.

It's all Mak-saw-ba news now, for they've got all the water. But while near Mak saw-ba it would not do not to mention Dr. Buechner's big wall-eyed pike, which he caught on a spoon and handline while floating down the river in his duck boat. The fish was a large one, over seven pounds. Billy Mussey was on the river that day, and when he saw the Doctor's fish he said, "He must have made an awful fight for you, didn't he, Doc?"

"Oh, no," replied the worthy Doctor, "he didn't fight none. He choost come ow-et."

"When I looked at that spoon and line," says Billy, "I didn't doubt a minute that he did 'choost come ow-et.'"

Ed. Howard was down from Fox Lake yesterday. He said thousands of bluebills were in, but nobody could work them. They were out in shallow water, over a bog where one could neither wade, walk nor push. Plenty of snipe also, but in equally bad country. The water is too low, the lowest for years.

It is surmised that the dryness on Cumberland marsh is caused by the ditching operations below there during the past year. E. HOUGH.

GAME LICENSE.—The Wyalusing, Pa., *Rocket* comes out with this proposition: "Farmers who have suffered greatly from the invasion of an army of hunters upon their premises each and every season have long been looking for some certain remedy to diminish their number. All day long during the season and often out of it the crack of the shotgun is heard, until it has become a positive nuisance; all large game has become extinct and small game will soon follow suit unless speedy relief is furnished. By the time a farmer has his fall work finished the fellow who does no work has killed and marketed what little game was on his land, and should the farmer fancy a game dinner the chances of his getting it are very slim. The *Rocket* wishes to propose a remedy which we believe would be certain in its effects. It is to license the hunter and in this manner: Let a special law be made for this county requiring the authorities of each township to charge each person hunting in its limits a certain sum (say $5 or $10 per year) for the privilege, and let the proceeds go to the school fund of the township, making the proviso that owners could hunt upon their own premises. Upon the payment of such license give the party a permit to hunt for the year, which he would be required to exhibit to any of a certain number of persons, to be called game wardens, appointed to look after the license system in different parts of the township. If any person was caught hunting without a license certificate, let the fine double the license fee—one-half to go to the warden for making the arrest and one-half to the school fund. Daily or weekly permits might also be issued at a figure that would pay the school district to strangers coming in for a short hunt or to others. It is our purpose to endeavor to get a law to this effect introduced and passed at the next session of the State Legislature for a trial in this county. Under such a law our game birds would multiply, once more become plentiful, and those who hunted would be willing to pay for the privilege, and the school treasuries of the different townships would receive a very substantial benefit. Of course it would bear down on the chap who is too lazy to work and wishes to make his living off his neighbors—and as for the ones who hunt for fun, let them pay for it.

THE MASSACHUSETTS FISH AND GAME PROTECTIVE ASSOCIATION held its regular monthly meeting and dinner at the American House, Boston, Tuesday evening, Oct. 9, 125 members being present. The Committee on Game Importation reported favorable progress in their work of stocking the State with game. They have ordered 300 sharptail grouse, 30 dozen California mountain quail, and 30 dozen valley quail as the first consignment of birds to be let loose. Large numbers of birds are to be planted on Naushon and Great islands, also in the public park in the city of Lynn, which promises to make special legislation to protect them. It was voted to hold the next annual dinner of the Association on Thursday evening, Dec. 11, thereby giving an opportunity to have a regular game dinner, before the close season begins in this State. Mr. John M. Forbes was elected an honorary member and the following gentlemen members of the Association: Myron J. Ferren, Henry W Clarke, Robert Woodman and C. A. Coolidge. Fourteen were proposed for membership, to be acted on at the next meeting.—RICHARD O. HARDING, Sec'y.

NEBRASKA QUAIL.—I am now in Adams county, Neb., and I am happy to say that I find quail shooting here much better than the chicken shooting in Iowa. This has been a great year here for quail. The season has been long, dry and free from storms, and as a consequence they have bred well, many pairs bringing forth two broods. My brother and I were out this morning looking over the ground, and got up two bevies of fifteen to twenty each. On our way home we could hear them calling in all directions. They say chickens used to be quite plenty here; now, one could not be found, I believe, in a half day's hunt with a good dog. Why is it? In my opinion the market slaughterer and the chicken hog had something to do with it; and still you talk with some of these same men and they will deny it. I may get time to write up a day's shoot, which may be of interest to your readers.—WM. H. STEELE.

CONNECTICUT SNARING.—"Coll" Richardson, of Square Pond, in Ellington, was brought before Justice of the Peace R. J. Leonard recently, at Ellington, charged with violating the game laws. The case was worked up by one of W. C. Fielding's detectives for the Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish, of Hartford. The detective captured Richardson setting snares and taking partridges from his snares the day before the game law was off. Attorney Charter defended Richardson, while President A. C. Collins, of the Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish, appeared for the State. Justice Leonard found Richardson guilty and imposed fines on three counts, making the "circus" cost Richardson about $40.

A CHICAGO LION.—Chicago, Oct. 8.—The male lion of the pair presented to Lincoln Park last year, by a Chicago street car magnate, died to-day. The lion was popularly supposed to be a job lot, and died from sheer old age. He had been in a stupor for days, only rousing himself at meal times, and no one knows just when his sleep became death. The lioness, which was his mate, shows signs of great grief and uneasiness.—H.

BIRCH BARK FOR CAMP-FIRES.—Chicago, Ill.—Let me, through your paper, say a word to the fraternity of sportsmen in connection with the subject of camp-fires. Nothing in the whole range of camp vexations is so vexatious as the oft-repeated failure to start a fire with damp wood or leaves, or in a rain. We have tried it and speak feelingly. During the past summer our camp was in a locality where birch bark is to be found, and this solved the problem. No more "blue air" ejaculations are necessary in the early dewy mornings, when the stock of matches is decreasing daily by the score. Birch bark, whether old and water-soaked or new and fresh from a standing tree, if torn into shreds and used as kindling will start a cheerful fire in high wind and heavy rain, provided the match is kept dry till the flame touches the birch bark. Our experience with birch bark last summer was most happy, and we desire to give our fellow sportsmen the benefit of the discovery, but do not claim it as original. It is an Indian practice, but never before the summer of 1890 did we see it in use; and we think it deserves wider application.—H. H., JR.

SNIPE AND BAY BIRDS.—Norfolk, Va., Oct. 12.—A telegram from our club at Currituck on Saturday tells us that golden plover and yellowlegs are still plentiful there, a large bag having been made on Friday last. An old gunner from the sound yesterday told me that he had never seen more ducks and geese at Currituck in his life than he saw Saturday at this season of the year. We expect good shooting this fall, as the food is very plentiful. Our bags of bay birds have been truly wonderful this season. Six of our members went down yesterday for bay birds and English snipe. Will let you know what they do. Our duck season opens Nov. 10. Quail are abundant this season almost everywhere in Virginia and Carolina.—J. B. WHITE.

ST. LOUIS COON DOGS.—St. Louis, Mo., Oct. 10.—During the full of the moon, the latter part of this month, a grand coon hunt will be given by the King's Lake Club, in the vicinity of its preserve in Lincoln county. Major Dave Caruth, president of the club, is now busily engaged making preparations for the affair; and all who know him know that nothing will be left undone. The night-prowlers are said to be plentiful around about King's Lake, and there is every prospect that the hunt will result satisfactorily.—UNSER FRITZ.

MASSACHUSETTS.—Nashua, N. H.—Let your Boston correspondent who wants Thanksgiving shooting go to Needham, where he will find fair supply of quail, grouse and rabbits. Let him leave the cars at Newton Upper Falls, then follow the track over the river, then strike in to the left. There is poor shooting about Nashua.—J.S.J.

Sea and River Fishing.

WHEN THE BASS BITE BEST.

WHEN the north is breezy and cool and clear,
Lifting the low blue hills in sight;
When the waters are dimpled beyond the pier
And clouds sail idly over the mere,
Oh, that is the time for the bass to bite.

When boughs grow bare and apples fall
With every flaw from the windy west,
When the frost is white on the orchard wall
And the lake frowns blue at the passing squall,
Oh, that is the time when the bass bite best.

When paths are blind with a drift of leaves
And nuts lie thick in the yellow grass,
When barns are bursting with garnered sheaves
"*Ruperunt horrea*"—full to the eaves,
Oh, that is the time for the wary bass.

With a silver shiner far below
Tugging away at a silken thread,
In a cove where quiet currents flow
And purple shadows come and go,
And a bit of a blue sky overhead,

Too soon the western hills grow black
With lone pines looming above their crest
In silhouette—too soon alack!
Do far lights glimmer to guide us back,
For that is the time when the bass bite best.

WATKINS, N. Y., Sept. 20. M. M. CASS, JR.

HALF-HOURS IN THE SIERRA NEVADA.

I.—A TUSSLE IN THE DARK.

THE locality of the incidents noted in these jottings is in the vicinity of the summit, where the old Washoe grade crosses the Sierra. The road crosses at an elevation of 8,000ft. above sea level. Directly west of the pass, and about one and a half miles distant, lies Echo Lake, three and a half miles long and one mile wide. West of this again, about 200yds., and connected with Echo by a small stream, lies Upper Echo. This little gem of a lake is about one-half the size of its neighbor, and is studded with small islands, covered with more or less timber. On one of these islands the scribe has in half-ownership with a friend a log cabin with a complete housekeeping outfit for three men, and two good boats.

Here for a few happy weeks each summer, "the world forgetting, by the world forgot," my friend and I turn ourselves loose and become boys again; and the old youthful zest for innocent outdoor pleasure permeates every fibre of our beings. Here little things, unnoted in the daily walks of life, acquire an air of interest to our rejuvenated minds. Some few of these little things I intend to recall in these papers, and hope to enlist the reader's sympathy with my love of nature and her ways.

This California Alpine basin lies over 200ft. higher than Lake Tahoe and about six or seven miles south of that body of water. It was scooped out of the mountain's brow by the irresistible force of the glacier's mighty flow in the silent ages of the past. And to-day its granite sides glisten with the polish left by the impact of that mighty instrument. The terminal moraine of this dead giant lies at the outlet of the lower lake, and the greater portion of it has been carried into Lake Valley, 1,500ft. below. Huge boulders can there be seen, smooth as

marbles, and still showing the scratches where they were ground along between the upper millstone of the glacier and the nether of the mountain's breast.

One and a half miles northwest, and about 500ft. higher, lies another small lake, nearly circular in shape and three-fourths of a mile in diameter. This little sheet of water was unnamed until the year 1886, when my friend B. and myself agreed to call it Lake Nanon, in remembrance of B.'s little seven-year-old daughter. Nanon it is, therefore, and B. and I congratulate ourselves that it was still left to us to name one lake in this world of ours before they were all used up—even if ours is a little one.

The scenery is wild and awe-inspiring, and were it not for the deep blue waters of the lake, that lend a softness to the view, would be stern and forbidding in the extreme.

The waters of the two lower lakes are filled with as fine trout as were ever caught by fishermen. Animal life is not plentiful. Of small birds there are a few chippies and two or three others of the sparrow tribe, which I never identified; some few robins and chickadees, blue grouse and mountain quail. Among the four-footed animals there are chipmunks, pine squirrels, marmots, woodchucks, porcupines, and now and then a fisher and mink. There are also large numbers of the little chief hare (*Lagomys princeps*), colonized in an extensive talus at the foot of some great cliffs, 800ft. above the lake. But of these, anon.

No deer or bear are ever seen, so that the hunter for large game must choose other grounds. Neither are there any rattlesnakes, which pleaseth well the scribe. Among birds I forgot to mention in my list Clarke's crow (*Corvus columbiana*), two or three species of woodpecker, nighthawks and bank swallows. I believe the foregoing constitute the fauna of the region.

The fishing is very uncertain. Now and then a glorious day's sport repays the angler who possesses his soul in patience. And again, days may elapse when not a fish can be caught. This is owing to the situation of the basin in which the lakes lie. Almost upon the summit of the range, and with an east and west direction, the winds have tremendous power, and for days at a time the water is too rough for fishing. For this reason the spot will never be a favorite to the man who goes solely for fish. But to the lover of nature it is a feast of fat things. I have seen the fishing so good that nearly every cast brought a return of a trout to every fly on the leader; and again, the most persistent casting would not raise a fish for days together. For be it known to the reader, that both B. and myself are almost cranks on the fly question, and it is only when starvation stares us in the face that we resort to other methods.

On a lovely July evening in the summer of '89, B. and I were just debating the question of a return to camp. We had been fishing for a couple of hours with fair success, and, as the sun had just dipped behind the summit, we thought it late enough for supper. The trout had not been rising for the last half hour, and I had reeled up my line and given the boatman orders for a return, when B. had a splendid rise and hooked a 3 pounder. I watched the fight, which was a sharp one, and as the struggle ended and the net encompassed the exhausted fish, I let out my line for another cast. In two or three efforts I had it out, and in another instant was fast to a fine trout. He broke water once, but it was getting too dark to see his size fairly; but I did not think him at all extraordinary. At this same instant there was a tremendous tug at my line, so sudden and so fierce that I was satisfied another trout had hooked himself—and a fine one, too. I announced the fact to B., but both he and the boatman said it was but one trout, but a large one. It has always been the invariable custom of B. and me to fish out of the same boat, he occupying the bow and I the stern, and when one is fast to a large trout the other reels up until the circus is over. Well, my trout started, and the weight upon the rod was irresistible. The reel screamed like a mad thing, and I viewed with dismay the rapidly diminishing bulk of the line upon the spindle. I gave him the butt, but to no purpose, and I yelled to the boatman to row for dear life. As he swung the boat around to obey me, the last turns of the line seemed going, and I could see the metal showing through the coils on the spindle. At last he got headway upon the boat and the strain lessened, so that I had a chance to reel up. By this time it was getting dark, and I was in a "concatenation of circumstances," so to speak. There were no more mad rushes, but with all my efforts I could not bring the fish out of the depths of the lake. He would bore down to the bottom, which fortunately was free of brush at that part; and strain as I would, I could not raise him. It became pitch dark at last and I could not see the line, and could only tell by the feeling the situation of the fish. I dreaded his getting under the boat and smashing the tip, and told B. to cut the line if he could reach it and let the brute go. He flatly refused, and I was glad of it, as I suggested it more because he was getting cold and hungry than from fear of my rod. Time passed, and still I had never succeeded in reeling up the obstinate creature to within 30ft. of the boat. Then B. began to burn matches to help me out, and as the night was perfectly calm it helped me in the fight. I hooked the fish about 7:30 P. M. and at 9 succeeded for the first time in getting a glance at the trout. I had a fair view by matchlight, and saw that it was a good trout and thoroughly exhausted, but still there was that terrible tug and strain at the line. Then I knew there was another fish on my tail fly, and a monster. The fight went on in this manner for another half hour, and my arms were almost paralyzed with the strain. At last a gleam of two white bellies showed at the boatside, and B., with one dexterous scoop, netted both fish and landed them safely in the boat. Then didn't the mountains ring with our united shout of triumph? I sank back upon the seat thoroughly exhausted after the long and anxious strain, and B. began to examine the catch. "Why, great Scott, Arefar!" said he, "these are not such very large trout. There must have been another, and you lost him."

"Well," I replied, "I am glad he's gone, and good luck go with him; for he hast left me hungry and tired."

Again did B. utter an exclamation, and the cat was out of the bag. In searching for the flies to unhook them, he found the tail fly embedded in the larger fish, just behind the adipose fin. No wonder the brute pulled; and I have a strong feeling of pride to this day to think I saved these trout under such adverse circumstances. On our arrival at camp B. weighed the trout. The smaller one weighed 2¼lbs. and the larger one 3¾lbs.—so he said—but I declared they weighed a ton—while in the water.

If any of my readers have ever hooked a large trout by the tail, he will understand the task that my little rod accomplished that evening; and if they never did, let me give them a word of advice. Never do it just at dusk, and with your favorite rod. If you do, you will have an anxious quarter of an hour. Had it not been for the efforts of the smaller fish, partially counteracting those of the larger, I would have lost my leader or smashed the rod. AREFAR.

AUBURN, California.

[TO BE CONTINUED.]

A NIGHT AT THE HERRING FISHERY.

BERWICK BAY is an irregular indentation on the east coast of Great Britain. Its general form is that of an elliptical segment having a cord extending from Holy Island Head in England to St. Abb's Head in Scotland, a distance of about twenty miles, by a width of nine miles at the central part where it receives the River Tweed. Lying for the most part on a shallow bottom, it is much frequented by herring and other fish for the purpose of depositing their spawn. This fact, joined to the advantages of regular communication with the markets of the world by water carriage, and free access to the interior of the country by the railways, which run west, north and south, and the rapid diffusion of intelligence by the telegraph, renders Berwick harbor a place of rendezvous during the herring season, *i. e.*, from July till September, not only for the fishermen of the vicinity, but even of others from such remote points as Cuthness in the extreme south of Scotland, and from Penzance near the southwest extremity of England, and intermediate ports.

The local boats used in this fishery are open yawls, from 20 to 35 tons, lugger rigged and carrying two masts, manned generally by four men and a boy. The nets used are gill-nets, made of light but strong twine, and as well as the sails are tanned in a decoction of oak bark. A single net is 60yds. long and about 10yds. deep when extended; from twenty to thirty of these nets fastened together longitudinally used then to make a "fleet," the extent of which would be from 1,200yds. to 1,800yds., say a mile in length, but the size of the boats and the number of nets have nearly doubled since the time of which I write (45 years ago), a fleet of nets now reaching a length of over two miles. The nets are suspended in the water by buoys composed of inflated bladders, tarred and painted black, attached to the top rope by "tows," strong cords of some 12ft. long, tied so as to be easily removed or re-attached. The buoys are placed some 6yds. apart, and in the intervals the top rope has corks attached to prevent it sagging with the weight of the net. The bottom is kept down by several strands of stout cordage, which is much more pliable and easily handled than a solid rope of the same weight. The nets are generally set so as to have from 6 to 9ft. of water above the top rope, and the bottom about 40ft. from the surface.

In the month of August, 1843, I accepted the kind invitation of Mr. James Watson, fisherman and pilot, to accompany him to the herring fishing. So one fine evening I boarded the Jenny, about 8 o'clock, and sailed for the fishing ground, which we reached after an hour and a half's pleasant sail before a light westerly breeze. By 9:30 we arrived at our destination, when the yard was lowered to within six feet from the gunwale, and at 9:45 the first buoy was thrown over the stern. By 10:30 the last buoy went overboard, the hawser was made fast to the stem and to the top rope of the net, for the boat to ride by, and the lantern lighted and hoisted to the masthead, when we sat down to smoke and to discuss the probabilities of the "catch," the outlook for prices, etc. About 10:30 our skipper, in order to ascertain whether the fish were there or not, took a stone from the ballast and threw it overboard; as it splashed in the water numerous flashes and streaks of light shot out, radiating from the spot where it fell, showing both that we were among the herring and that they were swimming near the surface. On this Watson remarked that he wished that they had shortened "tows" to thirty inches or two feet, and predicted that the main part of the catch would be in the upper half of the net. The watch was then set, and the rest of the crew turned in for a snooze. I found a snug berth in the lee of the sail, between two of its folds, where I lay, "rocked in the cradle of the deep," until the fresh sea air and the gentle rhythmical motion of the boat lulled me to sleep.

At 3 o'clock in the morning the word was passed for all hands to take in the net. The boat was put about, the hawser cast off from the stem and brought round to the stern, the top rope was then hauled in, and the net began to come in over the port quarter, the crew meanwhile disposing themselves in line so as to carry the net forward and lay it down in regular folds, while the skipper took his place in the sternsheet to lay the buoys and their "tows" in order, so as not to tangle in shaking the nets. Not more than a couple of fathoms had been drawn in when the herring began to show themselves, and soon came aboard pretty fast, and mostly at the top of the net as our skipper had predicted. At the same time other fish came to claim their share of the spoils of the ocean. Dogfish (a small species of shark), cod, hake and pollock hurried to plunder the nets. The dogfish swam quietly up and bit off the herring close behind the gills, leaving the heads sticking in the meshes, while the cod and other sorts either tore the fish out entirely or stripped off the flesh, leaving the head and back-bone in the net.

As soon as the morning twilight rendered objects dimly visible the gulls made their appearance, floating along on noiseless wing, gray and ghostly, like the spirits of the birds of a former world, now soaring aloft and now circling down to the water to pick up a fish or fragment of a fish which had dropped from the net or had escaped from the mouths of the fish of prey. I took up my gun and knocked down two of the largest, but as we were hauling up to windward they floated off to sea and could not be retrieved, so that I desisted from such unprofitable slaughter. As soon as the upward rays of the rising sun began to fringe the clouds with gold the solan geese began to come along in companies of five or six, generally two old ones in their white plumage and black wing-tips and three or four young ones in their gray coats, sweeping along in vigorous flight, with their long necks and massive heads stretched out straight in front (whence their local name of "poker-necks"), and keeping at an altitude of some twenty feet. Suddenly one of them makes a wheel, and, checking his flight for a second, plunges head foremost, throwing up a shower of spray as he disappears beneath the surface, whence he shortly emerges with a fish across his bill, which he throws up in the air and receives head foremost, when a single gulp puts it out of sight.

While I, the only idler on board, was making these observations, the work of hauling in the nets went merrily on, and at half-past 5 o'clock the last of the buoys came on board. The foresail was hoisted, the sheet brought aft and made fast, the skipper took the helm, and after a pleasant sail with a five knot breeze about two points abaft the beam, during which the crew pushed on the work of shaking the nets clear of the fish and passing them over the main boom, which was laid in the crotch for that purpose, we made the river mouth, and gliding along by the face of the pier we reached the dock just as the last of the nets was cleared of its fish. The fruit of the night's labor was seventeen barrels of herrings, worth at the morning's price of 18 shillings per barrel, £15.6 sterling, or $75.

Bidding adieu to the kind skipper and his crew, and taking with me a dozen of the sparkling and luscious fish with which he presented me, I went home to breakfast after passing through one of the most interesting and instructive adventures it has been my lot to enjoy.

J. T. B.

ANGLING NOTES.

SOME of the papers are urging the authorities to add to our supply of food fish by increased artificial hatching and restocking. This of course is an excellent plan in its way, but why not do something toward getting the immense supply of fish we have into the markets at a lower price? This season fish have gone a begging along the coast, even within a few miles of the city, at 2 cents per lb., while in the markets the retail consumer had to pay from 10 to 15 cents. And rather than break the price agreed upon thousands of pounds of fish have been wasted. It is awfully provoking to see fish selling so cheap when one happens to be down on the beach, and a few days after have to listen to the long rigmarole of the fish dealer in market, who is trying to excuse the advance of six to eight hundred per cent.

As to the streams and ponds that the State stocks so liberally, increased protection is needed rather than increased stocking. The wise law respecting fingerlings under 6in. should be enforced, and a reasonable limit put on the day's catch. Though the better way to regulate that would be to limit the size of trout to 7in. instead of 6.

A law should also be passed forbidding people to fish with more than one rod or line at a time. Not long ago we went down to a noted Long Island trout stream to indulge in a little trout fishing; to our disgust we found the banks of the stream lined with rods planted in the ground, while the owners sat on the grass playing cards and drinking beer. When one of the rods showed that a fish was on the owner would rush for it, land the fish, rebait it, and return to his game.

Then there is the set-line nuisance so generally indulged in. After dark, when the streams and ponds are deserted by the patient angler, the innocent countryman sallies forth with his long set-line equipped with a few hundred hooks and well baited. This is put out where it will do the most good and either left until early dawn or overhauled every few hours while the party, well supplied with applejack, make a night of it before a blazing fire on the shore. The patient angler wonders next day why he has such poor luck when he knows the waters have been so thoroughly stocked.

If it is not the set line it is the spear or net or giant powder cartridge. Once in a while we hear of an arrest, but owing to the difficulty of getting evidence it is comparatively rare, though we are glad to hear the Oneida Lake netters have again come to grief. Last week they had some $2,000 worth of nets destroyed.

Mr. Geo. B. Taylor, of the New York *Times*, has devised a rig for striped bass which he uses in trolling around Hell Gate, and which he says works splendidly. It is composed of the usual worm gang with a bit of scarlet-ibis feather above the hook. A few inches above that a mottled pearl spoon revolves. SCARLET-IBIS.

CHANNEL BASS OF ANGLESEA.

PHILADELPHIA, Pa., Oct. 13.—In response to the invitation of your paper inviting communications on the subject to which its pages are devoted, I send you a brief account of an outing enjoyed by myself and two friends, angling for channel bass or red drum. We left Philadelphia for Anglesea, Cape May county, N. J., on Saturday, Oct. 4, in the 4 P. M. train, arriving about 6:30 o'clock. We went direct to the Blakemore Cottage, where we were received and entertained in the usual royal manner by our hostess, Mrs. Blakemore. We fished on Monday and Tuesday, each day on the last half of the ebb and first half of the flood tide. On Monday we had the wind from the east and on Tuesday from the northwest. Sailing out of Hereford Inlet we fished on the outer edge of the bar, and 1½ miles from the shore. Bait, menhaden.

Our party consisted of Cyrus S. Detre, of Philadelphia, William Brumaker, of Trenton, N. J., and the writer. The following is our score:

H. W. Quick, 3 channel bass, weight 32lbs., 27¾lbs. and 33¼lbs.; total 93lbs.

C. S. Detre, 2 channel bass, weight 31lbs. and 39¼lbs.: total 60¼lbs.

Wm. Brumaker, 1 channel bass, weight 37lbs.

Grand total, 6 channel bass, weight 200¼lbs.

While fishing for the above we also caught a number of bluefish, aggregating in weight 96lbs., and running from 3 to 8lbs. each, also a number of fluke, aggregating in weight 127lbs., running from 2 to 7 lbs. each.

All the above were caught with rod and reel. Mr. Detre used a plain bamboo 10oz. rod, Mr. Brumaker same kind of rod, while the writer, who is partial to a more flexible rod, used on this occasion a snakewood rod. We had an enjoyable and succesful trip. HARRY W. QUICK.

LAKE SUPERIOR.—Escanaba, Mich.—I had excellent trout fishing at Lake Superior. Caught only one trout of less than 1½lbs., the others running from that up to 3¾lbs. weight.

CHICAGO AND THE WEST.

CHICAGO, Ill., Oct. 11.—In an earlier letter mention was made of great loss of fish life in the Fox River through pollution of the stream by the refuse of a glucose mill. To-day I saw Mr. Longworthy, of this city, who was just starting for Aurora on a little fishing trip, and he told me the facts. The mill is located at Geneva, Ill., on the Fox River, and the destruction of fish was so fearful and outrageous that the mill owners are now under prosecution for the offense. Mr. Loeb, of this city, is informed by friends that five wagon loads of fish were taken out dead below the mill. How many more were killed and not taken out no one knows. A wagon load of eels was taken out and buried, and among the fish was one pickerel that weighed 22lbs. Such slaughter of public property deserves indictment by the grand jury.

A great many pickerel have been taken in the Fox lately, and one Aurora gentleman caught ten one day last week whose weight was 47lbs.

City postmaster Jas. G Sexton and Dr. Matter are down on the Kankakee this week after bass and things.

Mr. J. M. Clark and Mr. Charles Porter tried the Deep River, at Liverpool, Indiana, last week. The river was rising and was literally swarming with dogfish, which had the other fish just about terrorized. Besides their dogfish, the anglers got half a dozen pickerel and bass. Mr. Porter avers that he was for a few brief moments entangled with a St. Bernard dogfish as large as a yearling heifer.

Mr. E. W. Brooks last week caught in Green Lake, Wis., a splendid specimen of the genuine red-eyed smallmouth black bass, as clean and shapely a specimen as ever was seen. The fish measured over 20in. and will be mounted. I am promised by the taxidermist who does this job a list of all the large specimens he has put up this summer.

Mr. Geo. W. S.—perhaps I would better not give his full name, for he is a journalistic laborer of this city—is absent in Montana after trout, large trout. Mr. S. is known to fame as the originator and publisher of the tack-hammer method of killing mascallonge. In an article describing the pursuit and capture of that fish, Mr. S. advised every mascallonge fisher to have in his outfit a tack-hammer, neat and portable, with which to knock the mascallonge in the head after he was brought alongside the boat. The tack-hammer system of gaffing a mascallonge has never attained popularity in this region, but perhaps its apostle can introduce it successfully among the trout fishers of Montana. E. HOUGH.

A LIVE ASSOCIATION.

THE following review of the work accomplished by the Anglers' Association of the St. Lawrence River is taken from the forthcoming report to the members by Vice-President Chandler:

To the Members of the Anglers' Association of the St. Lawrence River:

The annual meeting of your Association was held at Clayton on the 6th of August, 1890, and was one of the largest and most enthusiastic annual meetings the Association has ever held. Mr. W. H. Thompson, secretary of the Association, read his annual report, which was of necessity very long, but of great interest. As many of the members of the Association were unable from force of circumstances to attend the annual meeting, the undersigned was requested to prepare for their instruction the following facts, taken mainly from the report of the secretary:

During the year the membership of the Association was increased by the addition of twenty-four new members, making the total membership 280. This membership is composed, first, of anglers who resort to the river for fishing almost exclusively; second, of summer residents, some of whom fish and some who do not, and, third, of persons who are interested in the protection of fish and game and who visit the river at intervals.

During the year ending Aug. 6, 1890, the officers of the Association have not been idle; in fact, I do not recall any year during the life of the Association when so much practical work has been done in raiding netters as during the years 1889-1890. The total result of the raids made under the officers of the Association, aided by State Game Protector Daniel Starring, have been that 845 rods of gillnets have been captured, 94 hoop nets, 11 trap nets, 1 pound net and 1 seine. The total value of these nets, as near as could be estimated, was not less than $3,000. These nets, when captured, contained a large amount of game fish, consisting of muscalonge, black bass, pike and wall-eyed pike. In one case the owners of a net valued at $1,500 (a hoop net four rods square, 22ft. deep, with a leader one-half mile long) proposed to resist its capture by use of firearms, but the arms and the owners were captured without great difficulty.

The suit of Laughton vs. Steele, in which the decisions of the lower courts were confirmed by the Court of Appeals last winter, was carried to the United States Court by the appellants. Funds have been contributed by some of the game associations of the State for prosecuting this suit to the end. There is no question in the minds of many of the ablest attorneys in the State that the result will be, as it has been in the past, in favor of the Association.

The committee on the codification of the game laws of the State of New York visited the river in the early summer, and were met by a committee of the Association, who, through the courtesy of President H. H. Warner, who loaned his steam yacht Siesta for the occasion, took them to different points on the river and explained to them fully the situation. The committee were thus enabled to see for themselves the state of affairs as they actually exist, and it is confidently hoped that they were impressed with the necessity of prohibiting netting in the St. Lawrence River.

Suits have been brought during the year against persons for netting in the St. Lawrence River and adjoining waters, and fines have been collected. On the 20th of May, 1890, Wm. M. Steele, for many years State Game Protector, located at Clayton, was arrested for illegal netting, and tried and sentenced to pay a fine of $50 or fifty days in jail. The same vigilance will be maintained during the present year by the officers of the Association as during the past, and every effort will be made to rid the river of unlawful netting.

The universal testimony of the members present at the annual meeting was that the fishing in the St. Lawrence was continually improving, and that the present year it was better than it had been in many years preceding. A committee was appointed to confer with the Canadian authorities to secure, if possible, their co-operation in protecting the river.

President H. H. Warner made a proposition to the Association that he would contribute $500 whenever the Association felt able to contribute a similar sum for the purpose of stocking the river with black bass, and he would continue to contribute $500 as often as the Association would contribute a like amount.

The treasurer reported that the receipts during the year were $1,061.38 and the disbursements $448.10, leaving cash on hand $613.28.

The annual excursion of the Association was given on Aug. 19, and was as usual one of very great pleasure to the participants and benefit to the Association. Two hundred and thirty-six persons availed themselves of the opportunity offered and joined in the excursion.

The members of the Association are earnestly urged to personally see that the membership of the Association is at least doubled during the coming year. This can be easily accomplished by every individual member sending in to the secretary the name of a new member. It is believed that every present member of the Association can do this, and the result will be that the funds of the Association will be so largely increased that very much more and better work can be done not only in protecting the river, but in stocking the same. It is requested that every individual member of the Association will take this as a personal request to himself and act upon it promptly.

THE IDAHO REDFISH.—In reference to "G. H. W.'s" communication upon the fishes of Idaho I might say, that so far as my observation has gone the female redfish or salmon of the rivers of Idaho takes on a very deep coloring of red as the time for spawning approaches, and when she is about to deposit her eggs very little of the blue back is to be seen. This is one of the best fishes found in the State when prime, but there is no angling for it. I doubt whether any one has ever seen the redfish bite at anything else but one another. Their formidable jaws seem only to be used to tear and mutilate each other. In the narrow streams they can be driven like sheep; unlike the trout, which can be seen darting in and out among and under the salmon in their naturally wild manner, and waiting for the feast of redfish eggs. The fishing is done by means of gaff hooks, the fisherman brings the hook up suddenly under the belly of a fish and jerks it out upon the bank.—NEMO.

VERMONT TROUT BROOKS.—A Boston gentleman is authority for the statement that most excellent fishing for brook trout was found at Northfield, Vt., during the past season. He had an abundance of fine fish and enjoyed rare sport. Northfield is reached from Boston by the Lowell Railroad, Fare for the round trip, ticket good for the season, is $9.25. Board and lodging about $6 per week. Sandusky and Waterbury are also good places, reached by the same road. Moretown and Watesfield (Lowell R. R. to Middlesex and thence by stage) are other starting points for other excellent trout streams. The killing bait was the common earth worm. Artificial flies were not tried because the ruling passion was so plainly expressed.

A FISHLESS STREAM.—Lost River, Alturas county, Idaho, has no fish of any account except the common little whitefish, resembling a herring in shape and size. There is no angling in the river. Lost River Valley people are upward of fifty miles from any fishing, and a rod or line is not to be found in any house or cabin in this region. Little Lost River seems to have nothing in it but a little tadpole-like fish. The people living on and near these streams are very anxious to have them stocked with good fishes. The larger river is about fifty miles long and the little river nearly forty miles. They are both natural trout streams. Lost River runs into the lava beds, and, as the name implies, is lost underground. —NEMO.

MR. BECRAFT, of the firm of Devine & Becraft, fishing rod manufacturers of Utica, N. Y., has been advised by his physician to seek another climate for his health, and the firm has been dissolved; Mr. Divine continuing the business in his own name. Mr. Divine writes expressing much regret at being thus compelled to separate from his partner. The many friends of Mr. Becraft will hope that in his new home he may find hoped for benefit.

BLACK BASS FISHING IN THE FALL.—Mr. Cass, whose verses are presented in another column, tells us that they are true of bass fishing in Seneca Lake, however it may be in other waters.

Fisheulture.

WORK OF THE FISH COMMISSION.

COMMISSIONER MCDONALD has returned to Washington after an absence of several weeks, during which time he visited the Maine stations of the Commission. The work of rearing salmon for distribution has been considerably extended during the past year, and additional facilities for the prosecution of the work are being provided. The output of the present year will be about 100,000 Penobscot salmon and 30,000 landlocked salmon, and 20,000 Loch Leven trout; 25,000 of the yearling Penobscot salmon will be sent to the headwaters of the Hudson River, and the rest will be placed in the tributaries of the Penobscot. 5,000 of the yearling landlocked salmon will be sent to Vermont waters, and the balance will be placed in Green Lake. In this lake also and in other lakes in the vicinity the Loch Leven trout will be planted.

Commissioner McDonald made a careful examination of the grounds of the new station at Green Lake. Preliminary arrangements have been made to acquire title, which will give the Commission absolute control over the waters of the Great Brook. This being the principal spawning ground of the landlocked salmon of Green Lake, it makes the entire run of the fish there available for the purpose of obtaining eggs, the take of which will be very much greater this year than last. It is expected that the Green Lake station will furnish all the landlocked salmon needed for the purposes of the Commission. The racks for intercepting the salmon had all been put into position and five fine fish were already within the inclosure at the time of the Commissioner's visit. These were of the advance guard, of course, the regular run not having commenced. Congress having made an appropriation for the purchase of land and buildings as soon as the title to the ground is perfect, the work of construction will be pushed and provision made the coming season so that the work of rearing the salmon on the ground can be accomplished instead of transferring them to Bucksport as heretofore.

The work at Northville is now confined to the rearing of trout, the following species of which are handled: Loch Leven, lake, Von Behr and Eastern brook trout. Congress has appropriated $25,000 for the purchase and extension of this station, which will make possible the erection of additional buildings and the laying out of ponds suitable for the increased work here.

The whitefish station at Put-in-Bay, Lake Erie, is completed and equipped, arrangements have been made to cover the whole field of the whitefish fisheries in Lake Erie and the output should be very large. Of course the number of eggs taken will depend on the condition of the weather during the spawning period, and this cannot be forecast. A tug is hired for the purpose of collecting the eggs, but Congress has appropriated $10,000 for the purchase of a steam launch, which will be used as a tender to the station during the whitefish work, and at other seasons will be used for the collection of statistics and other work connected with the fisheries.

FIXTURES.

DOG SHOWS.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 13 to 17.—Third Annual Dog Show of the South Carolina Poultry and Pet Stock Association, at Charleston, S. C. Benj. McInness, Jr., Secretary.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1658.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.

March 3 to 6.—Second Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderffer, Secretary.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

FIELD TRIALS.

November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 3.—Fourth Annual Field Trials of the Indiana Kennel Club, at Carlisle, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 3.—Second Annual Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Toronto, Ont., Secretary.

Nov. 4 to 8.—First Beagle Field Trials of the National Beagle Club, at Hyannis, Mass. F. W. Chapman, Secretary, 364 Washington street, Boston, Mass.

Nov. 7.—Ninth Annual Field Trials of the Robins Island Club. W. L. Wellington, Secretary, Brooklyn, N. Y.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

COURSING.

Oct. 21 to 25.—Fifth Annual Meet of the American Coursing Club, at Great Bend, Kan. I. D. Brougher, Secretary.

DANBURY DOG SHOW.

ONE of the most enjoyable fall shows we have attended for some time was brought to a close Friday, Oct. 10, at the pretty town of Danbury, Conn. Commencing on Wednesday morning, this only required a three days' attendance at the show on the part of the dog men. The dogs were benched in rows, one on top of the other, in a well-lighted and ventilated frame building, and the stalls and ceiling being gaily decorated made quite a pleasing effect. Admission to the dog department was free, unfortunately, and consequently the crush at times was unbearable and impeded the judging to some extent, as it was almost impossible to get the dogs into the judging ring, which was fenced off in an adjoining large tent; an arrangement that could not have been improved upon for light and convenience.

It has never been my good fortune to attend a Danbury show before, and I was certainly much astonished at the quality of the animals I met with. When one comes to think of it, why should not such a show meet with liberal patronage? Charging no entry fee and giving $5 and $3 in every class, with a positively reckless disposition to provide challenge classes for everything or anything that could boast of the necessary qualifications, and being only a three-days' show, allowing plenty of time to get there and to return, I see no reason why such gatherings should not rank among our second-class $10 shows. With a properly arranged premium list and catalogue there is no reason why the Danbury people should not be accorded a bumping entry.

The want of a catalogue and judge's book was much felt, for it is not quite the thing for a judge to get his numbers from the secretary's entry book. A little more careful arranging of the benches and numbers would lessen considerably the difficulty of finding the dogs when wanted in the ring. The feeding was "homemade," boiled milk and stale bread, and not many dogs will refuse such fare. Among the dog men we noticed on hand were Messrs. Hyland, owner of Pomeroy Sec, Ossining, etc., Maxfield; B. F. Sawyer, of bulldog fame; A. R. Kyle, the collie man, and his rival, he of the Lothian Kennels, Dr. Hair, one of Connecticut's doggy enthusiasts; and lastly the smiling faces of Ben Lewis and George Thomas, lending additional interest to the occasion, making one feel at once that he was at a dog show. Mr. Ritter was also on hand with his camera. The able superintendent, Mr. Seers, was all attention to the wants of the visitors and dogs, and ever ready to do all in his power to make the show a success and make the boys feel they were among friends. Dr. Knox, a host in himself, made an efficient steward of the ring and it was under his protecting wing the judge was placed by Mr. Lynes, the hard-working secretary of the association, whose numerous duties precluded his giving the attention to the dog show he would doubtless wish to do. I am averse to "taffy" as a rule, but there are some occasions when you cannot help it, and this is one of them. Mr. H. W. Lacy judged all classes, and as he experienced no kicking—either way—the presumption is that the awards were satisfactory. The judging opened with mastiffs.

MASTIFFS.

Three mastiffs turned up in the open dog class, but the winner was not far to seek in Leo, who, though far from good class, beat his opponent, Royal Max, in body, head, ears and bone. In bitches an old face, in Mead's Aydah, scored easily over Ethel, who is beaten in head—long and narrow—and far away in depth of body and mastiff quality. Ruby, hc., has little to recommend her, faulty in ear, front and muzzle; Torfrida is also a very moderate one. In puppies, Jack's Monarch was given a blue ribbon, the judge being in a generous mood, and the same may be said of his

sister in the bitch class, they will, I am afraid, never be heard of away from their native heath. The special for best in show went easily to Mr. Mead's Aydah, her only opponent being Leo.

ST. BERNARDS—(ROUGHS).

At first glance at the entries I expected a nice show, as about six of those Mr. Crowell brought over were entered, but failed to put in an appearance. In open dogs Roland had little difficulty in scoring another ribbon. He is looking very well just now, and has filled out in head considerably lately. The others in this class were not deemed worthy of a mention. Bitches saw two quite nice ones in the ring, the verdict eventually going in favor of the smaller bitch, Wagner's Luie, whose better-shaped head, good legs and feet, and straight coat, just pulled her through; Lady Stella coming in second, she is too straight in face. In smooth dogs Alpine Guide was the only entry, he is too light and shelly-looking, and Wagner's Thisbe, well known, was almost alone in her class. Puppies saw Colonel, too light in color and snipy-muzzled, but possessing good bone, the winner. Roland took the special for best in show.

Deerhounds had no entries.

GREYHOUNDS.

There was a very fair show of this breed, though of course champion Balkis was head and shoulers over his opponents, he winning in the open class, with Ten Broeck, too long and flat in back and hardly good enough in front, second. In bitches, Rialto Spice, quite a nicely made one, though a trifle small, was the winner over Flash, who was shown too fat; also loses a bit in front; the Lady Belle, securing vhc., losing in head and front.

NEWFOUNDLANDS.

Reed's Carlo, a very moderate one—in fact, only a big black dog, with a massive enough head, but too long—secured the prize; only entry.

POINTERS.

Some very nice pointers turned up in the several classes, an old friend in Ossining taking the prize in dogs over Dr. Hair's General Mead, who loses in head, ribs and style to the winner. In bitches the stylish-looking and nice-bodied Galena won with something to spare over Laverack Elsa, faulty in head, legs and feet. Juno A., third, a puppy, looks quite promising; plenty of bone, and has a well-shaped head and body. Juno, reserve, is a coarse bitch; too big. Queen Bang, vhc., another puppy of Dr. Hair's, loses in body and head to its sister, Juno A. In puppy dogs, Littleton, a nicely grown one, won over McGinty through the latter's lack of condition. Bitches—Juno A. and Queen Bang, mentioned in the open class, were placed first and second. Special for best in show was given to W. H. Hyland's Ossining.

ENGLISH SETTERS.

Quite a nice setter, Locksley, rather on the Kent II. order, won somewhat easily over Tip Gladstone, too bitch-headed and small, but a nicely made one. Spot, vhc., is coarse. In bitches, Nell secured the ribbon by her better head, ribs and legs than Lady Romp, second. Topsey, hc., has not much quality. Denna was the only entry in puppies.

IRISH SETTERS.

In challenge class, the well-known Blarney, looking pretty fit, had things to himself. In open dogs, the well-known Chief S. was an easy winner over Bravo, thick in head and coarse throughout; also too light in color. The St. Cloud entries were absent. In bitches, the well-known and handsome Leda Glencho was alone and looking in splendid form. Puppies had one entry—Sport—only a fair one.

GORDON SETTERS.

Challenge classes were made for Dr. Dixon's Leo B. and W. Hammett's Rose, both looking well. In open dogs only two poor ones faced the judge, the winner with a little grooming would make a passable Gordon, and was given the prize, but the other is a bad one, no markings on legs and little on muzzle, bad coat as well, therefore could not expect any mention. There were no bitches entered, and in puppies two lathy-looking specimens in Victoria Woodhall and Lady Fenwick were given the prizes. Their markings were fairly good and showed a pretty fair quantity of the necessary percentage. The special for best setter in show, all breeds, was given to Blarney.

FIELD SPANIELS.

In dogs Black Diamond won easily over a black and white dog, Dash, transferred from cocker class, too long on leg, but fairly good in head and body, one of the working sort no doubt. No entries in bitch class, but in puppies quite a nice liver was shown in Miss Lynes's Fidele, very good body, legs and feet, and fair head. Cocker dogs had the winner in Dick, good in body, but loses in front and head to a good one. Second was withheld from a too bad one. In bitches Jip was alone; she is only moderate, coat curly; three other entries absent. In the puppy class three unnamed small ones were given the prizes, the first prize black one being quite promising.

FOXHOUNDS.

In dogs, Frank proved an easy winner over his kennel mate Johnnie, being much straighter in front and better in head. A very fair bitch was shown in the next class, good bone and head, beating a slim one, Dinah Robeldo, of the ultra American type, far too light in bone and body, but still a very pretty hound. Some nice puppies were shown, but were too young and even, to make distinction possible.

BEAGLES.

Some nice beagles were on hand. Challenge classes were made for Little Duke, Racer, Jr. and Twinkle. Little Duke and Racer, Jr., had a good struggle for honors in the dog division, the former winning in coat, ribs and legs, while Racer, Jr. beats him in head, muzzle especially. Quite a nice beagle, Don, was the only one left in the open dogs, a little coarse in head though. The others were over 15in. and were sent out. In bitches Whimsey and Betty, of the same kennel, were the money winners, and were quite nice type. Some promising puppies were shown, a bit snipy muzzled, but otherwise good. Rockland King in dogs, and Belle of Rockland and Blue Bess in bitches were placed as named, the latter bitch losing to the former in front, ribs and head. Special for best beagle went to Little Duke.

FOX-TERRIERS.

Only three very ordinary dogs of this persuasion appeared in the open class. One was nearly as big as a pointer, but boasting good legs and feet was given a c. The other two having more pretensions to type were given the money, Reynolds's Jip beating Hubner's Tim in almost every point. I sincerely hope they will now retire on their laurels, and not flaunt their records too much or they may get the judge into trouble. There were no bitches entered, and the only puppy, Racket, will never make a flyer.

COLLIES.

These were the best-filled classes in the show, and though there was nothing calculated to fill the breast of a Harrison with envy, still they were a very fair class of dogs. Clipper, an old stager, was entered not for competition; but as the judge under whom he was originally entered was not officiating, a challenge class was made for him. In open dogs, Royal Monarch, a bit short and thick in face, won over his kennel mate, Metchley Wonder, by the aid of his better condition and coat. The second winner boasts a nice long head, but is a bit light in body yet, being only a pup. Ladlie, third, must also thank his condition and coat for the ace, being a bit faulty in head, but he neither moves well hind nor carries his ears as he should do; too much *à la* fox-terrier. In the vhc. division, Son of the Rock has a good coat, but is short and thick in head, and Lothian Guard is a bit out in front; Lord Fauntleroy also lacks quality and fineness of head, but wears a fairly good coat, though pretty open. Victor Hugo, given c., has only his coat to boast of. In bitches, quite a nice one turned up in Ch. Kelly's Adela's Wonder, nice clean head, and though small-sized, beats Lothian Maid in skull and front. Hebe of Nesseldown, third, was in bad shape and is blind in one eye. Fannie Brown, c., is a poor one. In dog puppies, the second in the open dog class was the winner, beating Pride of Lee as before, and Carlyle Wonder, third, a fairly well made one in body, is very faulty in brow and might be better in front. Roxie, the winner in bitches, only beats Mavis Wonder in ears, the latter carrying them straight up.

BULLDOGS.

With Harper in challenge class, Carisbrooke was alone in open dogs. This dog is coming on wonderfully, his head filling out very much the last six months. He would make a good bid for the Woodiweiss-Ellis cup. In bitches Dolly Tester won easily over her kennel mate Jessica, in head and body. This was the first appearance of these dogs under Mr. Dole's ownership. Harper won the special for best in show.

BULL-TERRIERS.

Mr. Dole showed a nice even team in these classes. His Prince Bendigo, though showing the effects of his recent sickness, easily beat his Spotless Duke in head and tail. Though several were entered in the bitch class, only Frank Dole's two, White Gipsy and Miss Gladstone, turned up to claim the prizes. The former beats the latter in head and front, Miss Gladstone also having a small patch on one eye. This was a nice show of quality.

SKYE TERRIERS.

The old campaigner, Sir Stafford, looking none the worse for his travels lately, was the only entry that was judged, the other being transferred to the Yorkshire class.

BLACK AND TAN TERRIERS.

The only entry in dogs was the now well-known Dr. Foote's The Senator, looking a little too light in flesh. This little dog will stand a little extra doing and show better. In bitches Rochelle Nadjy easily disposed of her opponent Rats, rather a suggestive name for one of this breed. She is too thick and short in head and light in tan. The other entry was not worth a mention.

TOY TERRIERS.

Only two bitches faced the judge in this breed. Bessie, though a little larger than the other, Cosette, was better in shape of head and in forelegs, Cosette having had one leg broken at one time or other.

YORKSHIRE TERRIERS.

With the Symouds dogs on hand there was little show for the others. Challenge classes were made for Toon's Royal and Daisy, which left Fishpool Gem the winner in the open dogs, followed by Trot, transferred from Skyes; he is one of the sort we used to have at our shows a year or two since. In bitches Venus was easily ahead of Lady R., too dark in coat and faulty in head. The special for best in show was taken by Daisy.

PUGS.

The plums were captured by Dr. Cryer's dogs. Bob Ivy and Bessie in the challenge classes, and in open dogs Climax had everything his own way. In the bitch class there was some little competition between Cassina and Lothia, though the latter loses in squareness of muzzle and skull, though better in body, she did not show her curl as well as Cassina. The other entries were absent. The very boisterous rainy weather in which the fair opened no doubt kept many of the pet dogs from coming. Three little puppies were shown and were placed according to promise, but were not numbered. The special went to Bob Ivy, who never looked in better shape, Bessie being all out and hardly recognizable, just off the circuit and puppies accounting for it, I suppose.

IRISH TERRIERS.

One of the best classes in the show. Burnside retired to the challenge class, left Breda Bill a clever winner in open dogs over Barney's Brother, who is a bit too sharp in face, though standing a trifle better in front than the winner, he loses in spring of ribs and coat; he is a nice one, however. Breda Bill is improving. In bitches Sissy just beats Biddy Malone in coat and ribs, both faulty in head; Erin, too shelly and short of coat and long in body, third.

DANDIE DINMONTS.

A class was made for Maxfield's Punch, who, though wrong in ear, was more of a Dandie in every respect than a Scotch terrier, as he was entered.

TOY SPANIELS.

In the dog class there was only a Ruby for the money, Bobbie by name, who needs docking. In bitches a King Charles and a Blenheim competed, the former, Pansy, better in coat, muzzle and skull, secured the blue over Pearl; the special for best in both classes falling to Pansy.

POODLES.

Though entered in the miscellaneous class, in fact, all the last three mentioned breeds were taken from that division; these dogs had somehow four classes made for the four dogs, Purbeck's Dexter and Nell being the winners in Russian poodles, and Kava and Cora in the French style of dog; rather generous treatment on the part of the association. With all these dogs out of the miscellaneous lot the class was divided by weight, 30lbs., over and under. In the heavy brigade the immortal Patsey O'Conner scored, followed by a very fair Pomeranian, though shown too fat; and a rough and tumble sort of a drop-eared Skye, yclept a Russian terrier, was given third. In the light-weights Gill, the dachshund, and a fairish Mexican hairless, divided the honors equally, thus bringing to a close a not very arduous judging task.

H. W. L.

AWARDS.

MASTIFFS.—*Dogs:* 1st, George E. Seers's Leo; 2d, George C. Maxfield's Royal Max. *Bitches:* 1st, Herbert Mead's Aydah; 2d, B. F. Lewis's (agt.) Ethel. High com., H. W. Vanseiner's Ruby and Herbert Mead's Torfrida. PUPPIES—*Dogs:* 1st, John B. Heyter's Jack's Monarch. *Bitches:* 1st, John B. Heyter's Queen Salva.

ST. BERNARDS.—ROUGH—*Dogs:* 1st, F. Emker's Roland; other prizes withheld. *Bitches:* 1st, C. Wagner's Luie; 2d, John B. Hyam's Lady Stella (Nun Nicer, La Pucelle, Prudence and Republican Belle absent). SMOOTHS—*Dogs:* 1st, C. Wagner's Alpine Guide (only entry). *Bitches:* 1st, C. Wagner's Wagner's Thisbe. *Puppies:* 1st, M. Hyam's Colonel (others absent).

DEERHOUNDS.—No entries.

GREYHOUNDS.—*Dogs:* 1st, H. W. Huntington's ch. Balkis; 2d, George Henderson's Ten Broeck. *Bitches:* 1st, W. J. Middleton's Rialto Spice; 2d, Dr. Jas. E. Hair's Flash. Very high com., W. J. Middleton's The Lady Belle.

NEWFOUNDLANDS.—1st, Lewis Reed's Carlo (only entry).

BLOODHOUNDS.—No entries.

POINTERS.—*Dogs:* 1st, W. H. Hyland's Ossining; 2d, Dr. Jas. E. Hair's General Meade. *Bitches:* 1st, B. F. Lewis's (agt.) Galena; 2d, W. H. Hyland's Laverack Elsa; 3d, Dr. Jas. E. Hair's Juno A. Reserve, Dr. Jas. E. Hair's Juno. Very high com., Dr. J. E. Hair's Queen Bang.—PUPPIES—*Dogs:* 1st, Dr. J. E. Hair's Littleton; 2d, W. H. Hyland's McGinty. *Bitches:* 1st, Dr. J. E. Hair's Juno A.; 2d, Dr. Hair's Queen Bang. Special for best in show, W. H. Hyland's Ossining.

ENGLISH SETTERS.—*Dogs:* 1st, Wild Crow Kennels' Locksley; 2d, B. F. Lewis's (agt.) Miss Gladstone. Very high com., Allison Fue's Spot. *Bitches:* 1st, Dr. Jas. E. Hair's Nell; 2d, Wild Crow Kennels' Lady Romp. High com., Allison Fue's Topsey. *Puppies:* 1st, G. W. Hallock's Denna I. (Others absent.)

IRISH SETTERS.—CHALLENGE—*Dogs:* 1st, E. W. Clark Jr.'s Blarney.—OPEN—*Dogs:* 1st, A. W. Stevenson's Chief S.; 2d, River View Kennels' Bravo. *Bitches:* 1st, W. W. Kendall's Leda Glencho. (Others absent.) *Puppies:* 1st, G. W. Mead, Jr.'s Sport.

GORDON SETTERS.—CHALLENGE.—*Dogs:* 1st, Dr. Dixon's Leo B. *Bitches:* 1st, W. S. Hammett's Rose.—OPEN—*Dogs:* 1st, T. H. Bradley's Dan; others withheld. *Bitches:* All entries absent. *Puppies:* 1st, C. C. Morris's Victoria Woodhall; 2d, Smith Bros.' Lady Fenwick.

FIELD SPANIELS.—*Dogs:* 1st, B. F. Lewis's Black Diamond; 2d, C. M. Kemp's Dash. *Bitches:* No entries. *Puppies:* 1st, Miss Lizzie Lyne's Fideles.

COCKER SPANIELS.—*Dogs:* 1st, W. G. Brooks's Dick S.; 2d, withheld. *Bitches:* 1st, J. F. Lancaster's Jip. *Puppies:* Prizes awarded to three small ones, unnamed.

FOXHOUNDS.—*Dogs:* 1st and 2d, T. H. Bradley's Frank and Johnnie. *Bitches:* 1st, T. H. Bradley's Slim; 2d, C. E. Morris's Dinah Robeldo.

BEAGLES.—CHALLENGE—*Dogs:* 1st, C. F. Judson's Little Duke; H. L. Krender's Racer, Jr. *Bitches:* 1st, C. F. Judson's Twinkle. —OPEN—*Dogs:* 1st, S. M. Cate, Jr.'s Don.—OVER 15IN. *Bitches:* 1st and 2d, H. L. Krender's Whimsey and Betty.—PUPPIES—*Dogs:* 1st, H. L. Krender's Rockland King. *Bitches:* 1st, H. L. Krender's Belle of Rockland; 2d, M. A. Goodell's Blue Bess.

FOX-TERRIERS.—*Dogs:* 1st, Mills Reynolds's Jip; 2d, C. H Hechners's Tim. Com., C. E. Hubner's Tom. *Bitches:* No entries. *Puppies:* 1st, A. H. Norton's Racket.

COLLIES.—CHALLENGE—1st, C. G. Hinckley's Clipper.—OPEN—*Dogs:* 1st and 2d, Chas. Kelly's Royal Monarch and Metchley Wonder; 3d, H. M. Clark's Laddie. Reserve, C. G. Hinckley's Pride of Lee. Very high com., Thos. G. Halkett's Son of the Rock and Lothian Kennels' Lothian Guard. High com., C. G. Hinckley's Lord Fauntleroy. Com., J. C. Warner's Victor Hugo. *Bitches:* 1st and 3d, Chas. Kelly's Adela's Wonder and Hebe of Nesseldown; 2d, Lothian Kennels' Lothian Maid. Com., C. G. Hinckley's Fannie Brown.—PUPPIES—*Dogs:* 1st and 3d, Chas. Kelly's Metchley Wonder and Carlyle Wonder; 2d, C. G. Hinckley's Pride of Lee. *Bitches:* 1st, C. G. Hinckley's Roxie; 3d, Chas. Kelly's Mavis Wonder.

BULLDOGS.—CHALLENGE—1st, F. F. Dole's Harper.—OPEN—*Dogs:* 1st, F. F. Dole's Carisbrooke. *Bitches:* 1st and 2d, F. F. Dole's Dolly Tester and Jessica.

BULL-TERRIERS—*Dogs:* 1st and 2d, F. F. Dole's Prince Bendigo and Spotless Duke. *Bitches:* 1st and 2d, F. F. Dole's White Gypsy and Miss Gladstone.

SKYE TERRIERS.—1st, C. A. Shinn's Sir Stafford.

BLACK AND TAN TERRIERS.—*Dogs:* 1st, Rochelle Kennels' The Senator. *Bitches:* 1st, Rochelle Kennels' Rochelle Madge; 2d, J. C. Ellsworth's Rats.

TOY TERRIERS.—*Dogs:* No entries. *Bitches:* 1st, River View Kennels' Bessie; 2d, Mrs. B. C. Lynes's Cosette.

YORKSHIRE TERRIERS.—CHALLENGE—*Dogs:* 1st, Northfield Kennels' Toon's Royal. *Bitches:* 1st, Northfield Kennels' Daisy. —OPEN—*Dogs:* 1st, Northfield Kennels' Fishpool Gem; 2d, Mrs. C. B. Mason's Trot. *Bitches:* 1st, Northfield Kennels' Venus; 2d, Central Kennels' Lady R.

PUGS.—CHALLENGE—*Dogs:* 1st, Dr. Cryer's Bob Ivy. *Bitches* 1st, Dr. Cryer's Bessie.—OPEN—*Dogs:* 1st, Dr. Cryer's Climax. *Bitches:* 1st, Dr. Cryer's Cassina; 2d, Lothian Kennels' Lothia. (Several other entries absent.) *Puppies:* J. E. Smith awarded the prizes (not numbered). Best in show, Dr. Cryer's Bob Ivy.

IRISH TERRIERS.—CHALLENGE—1st, Lewis & Jarrett's Burnside.—OPEN—*Dogs:* 1st, Northfield Kennels' Breda Bill; 2d, Frank F. Dole's Barney's Brother. *Bitches:* 1st, Northfield Kennels' Sissy; 2d, Frank Dole's Biddy Mahone; 3d, Capt. Clifford's Erin.

DANDIE DINMONTS.—1st, Geo. C. Maxfield's Punch.

TOY SPANIELS.—*Dogs:* 1st, Central Kennels' Bobbie. *Bitches:* 1st, Central Kennels' Pansy; 2d, C. Knott's Pearl.

POODLES.—RUSSIAN—*Dogs:* 1st, A. W. Purbeck's Dexter. *Bitches:* 1st, A. W. Purbeck's Nell.—FRENCH—*Dogs:* 1st, A. W. Purbeck's Kava; 2d, A. W. Purbeck's Cora.

MISCELLANEOUS.—OVER 30LBS.—1st, B. F. Lewis's Patsy O'Connor; 2d, J. Charter's Jack (Pomeranian); 3d, same owner's Russian terrier Si.—UNDER 30LBS.—Equal 1st, B. F. Lewis's Gill (Dachshund) and Mrs. —— (Mexican hairless).

GORDON SETTER FIELD TRIALS.

Editor Forest and Stream:

Continued interest is shown in the Gordon Setter Special Stakes to be run for at the Central Field Trials Club meeting at Lexington, N. C., in December. I have applications for entry blanks from various quarters, and owners of Gordons appear to be awakening to the advantages of this opportunity to show the field qualities of their dogs. A member of the Gordon Setter Club has just added a silver cup, valued at $25, to the list of prizes already offered. It is much to be desired that those intending to enter dogs and contribute to the prize fund, send in their applications for entry blanks and subscriptions as soon as possible. The more the entries and subscriptions, the larger the stakes.

JOHN H. MEYER.

NEW YORK, Oct. 13.

Editor Forest and Stream:

The Central Field Trials, having announced through the press that they have made a special stake to be run for by Gordon or black and tan setters, should spur all the owners of this breed of dogs to do everything in their power to make this, their first trial, a success, especially in the matter of entries.

The public as well as the owners of other breeds engaged in this sport will not be unreasonable in their expectations for the first few years. That the Gordon setter is a good field dog has been often asserted and often denied. The Field Trials Association has now offered the owners an opportunity to demonstrate the matter and the opportunity should not be disregarded.

I can recall partially a discussion that took place last year in reference to this matter through the press, in which the attempted trial then proved a failure. Thus far no attempt has been made this year by officers of the Gordon Setter Club to make this meeting a success, which leads an outsider to believe that the officers are mere ornaments or figureheads. For practical benefit to the breed of dogs and the club which they represent they are useless. Therefore it seems that a complete change should be made. It is to be earnestly hoped that the efforts now being made by those immediately interested should be heartily seconded by every lover and owner of the Gordon setter.

ENGLISH SETTER.

NEW YORK, Oct. 9.

SOUTH CAROLINA KENNEL ASSOCIATION.

Editor Forest and Stream:

The South Carolina Kennel Association has just been formed, with headquarters at Greenville. The object of the association is to hold dog shows and to further the improvement of and interest in the breeding of dogs. The officers of the association are: President, Dr. S T. Lea; First Vice-President, Dr. G. L. Connor; Second Vice-President, Benj. F. Perry; Secretary and Treasurer, F. F. Capers.

We have forwarded our letter of application to the A. K. C. for active membership, and will probably hold our inaugural show in January next, 27th to 31st, inclusive. At this show we will unite with the S. C. Poultry and Pet Stock Association and have the best display of thoroughbred poultry and dogs, that an attractive premium list, the best of judges, prizes paid promptly in cash, and the earnest invitation of a hospitable people can give. We want everybody to come and bring their dogs. Our premium list will be published next month, and any information as to the poultry show will be cheerfully furnished by the secretary, Mr. A. H. Holm, Prosperity, S. C. For information as to the dog show, address the undersigned at Greenville, S. C.

F. F. CAPERS.

GREENVILLE, S. C., Oct. 10.

EASTERN FIELD TRIALS ENTRIES.

ENGLISH SETTERS.

PAUL BO (T. M. Brumby), black, white and tan dog, June, 1889 (Paul Gladstone—Bohemian Girl).

ORLANDO (Jno. Simpkins), black, white and tan dog, June, 1887 (Roderigo—Bo Peep).

MISS MONARCH (Chas. C. Gray), black and white bitch, 3yrs. (Roy Monarch—Flossie).

GENE (Chas. C. Gray), black, white and tan dog, 5yrs. (Druid—Ruby).

KING'S MARK (B. Ridgeway), black, white and tan dog, April, 1887 (King Noble—Belle Belton).

DAISY HUNTER (Jno. A. & Jos. H. Hunter), orange and white bitch, April, 1887 (Gath's Hope—Daisy F.).

ROD'S BELLE (P. Henry O'Bannon), black, white and tan bitch, May, 1889 (Roderigo—Belle of Piedmont).

MISS NELLIE Y. (P. Henry O'Bannon), black, white and tan bitch, July, 1887 (Gath's Hope—Lady May).

REVERDY (P. Henry O'Bannon), orange and white dog, Aug., 1888 (Gath's Mark—Rosa).

PRINCE LUCIFER (J. I. Case, Jr.), black, white and tan dog, 2½yrs. (King Noble—Elsie Belton).

LADY RAPIER (J. I. Case, Jr.), black, white and tan bitch, 2½yrs. (Count Rapier—Donna J.).

CLAUD (C. P. Fox), black, white and tan dog, May, 1886 (Roderigo—Lillian).

ANNIE F. (Francis R. Hitchcock), black and white bitch, Jan., 1888 (Roderigo—Juno A.).

TORY LIEUTENANT (Francis R. Hitchcock), black and white dog, Jan., 1889 (Jean Val Jean—Princess Helen).

BETTY S. (Highland Kennels), black, white and tan bitch, 4yrs. (Roderigo—Bo Peep).

FORWARD (Pierre Lorillard, Jr.), black, white and tan dog, August, 1888 (Count Noble—Lavalette).

DILL (Pierre Lorillard, Jr.), black, white and tan dog, April, 1889 (Toledo Blade—Dashing Lady).

HARRY C. (Elmwood Kennels), black, white and tan dog, 3yrs. (Roderigo—Countess House).

KING'S DAN (Elmwood Kennels), black ticked dog, July, 1885 (King Noble—Elsie Belton).

EDITH (Elmwood Kennels), black, white and tan bitch, April, 1889 (Roderigo—Sue Gladstone).

WHITEY (Herbert Merriam), lemon and white dog, 4yrs. (Gus Bondhu—Royal Myrtle).

SAM WELLER (W. T. Hunter), black, white and tan dog, 21mos. (Roderigo—Dixie).

LILLY BURGESS (Frank T. Richards), orange and white bitch, June, 1888 (Gath's Mark—Esther).

BANDANNA (Will Wilson), black, white and tan dog, January, 1888 (May Dawn—Doc).

JIM PHELAN (D. A. Goodwin, Jr.), orange and white dog, June, 1888 (Bob Gates—Nannie Gladstone).

ROI D'OR (O.W. Donner), black, white and tan dog, June, 1887 (Roderigo—Bo Peep).

EDGE MARK (Francis S. Brown), black, white and tan dog, February, 1888 (Skidmore—Flo Maclin).

DONOVAN (W. R. Holliday) black, white and tan dog, 27mos. (Bob Gates—Nannie Gladstone).

FANNIE M. (H. Hulman, Jr.), black, white and tan bitch, March, 1888 (Gladstone's Boy—Flame).

IGHTFIELD RANGER (R. P. Lonsdale), black, white and tan dog, February, 1888 (Dick Wind 'em—Peep Bo).

IGHTFIELD ROSA (R. P. Lonsdale), white and liver bitch, February, 1888 (Ross—Pitti Sing).

IGHTFIELD PHOENESS (R. P. Lonsdale), black and white dog, 18 months (Woodhull Bruce—Lucy).

FRA TUMER DOM (Emporia Kennels), black, white and tan dog, 3 years (Gath's Mark—Lufra).

BABE GLADSTONE (Emporia Kennels), lemon and white bitch, 4 years (Paul Gladstone—Bessie A.).

ORANGE DON (Meares & Strudwick), black, white and tan dog, 2 years (Decatur—Juliet).

DAISY'S HOPE (W. W. Titus), orange and white bitch, 3 years (Gath's Hope—Daisy F.).

SAM R. (W. W. Titus), black and white dog, 1½ years (Dash Bryson—Daisy's Hope).

NATALIE II. (Bert Crane), black, white and tan bitch, August, 1888 (King Noble—Natalie).

LITTLE GIFT (Bert Crane), black, white and tan bitch, May, 1886 (Roderigo—Queen Bess).

U. S. DAN (J. M. Avent), black, white and tan dog, January, 1888 (Roderigo—Juno A.).

ANTOINE (J. M. Avent), black, white and tan dog, December, 1886 (Roderigo—Bo-Peep).

HATTIE (J. M. Avent), black, white and tan bitch, August, 1888 (Roderigo—Juno A.).

CASSIO (J. M. Avent), black, white and tan dog, 5 years (Count Noble—Lizzie Hopkins).

EL RIO REY (R. M. Hutchings), black, white and tan dog, August, 1888 (Gath's Mark—Blue Chiqua). Forty-four entries.

POINTERS.

BARKER'S GROUSE (Stephen T. Barker), liver and white dog, February, 1888 (Mainspring—Swain's Fly).

DUKE OF HESSEN (Hempstead Kennels), liver and white dog, May, 1885 (Luck of Hessen—Blarney).

DEVONSHIRE DON (Dr. H. J. Thomas), liver and white dog, 2yrs. 8mos. (Molton Barron—Village Star).

MOONSHINE (Field Trial Kennels), liver and white bitch, May, 1888 (King of Kent—Hops).

TAPSTER (Field Trials Kennels), liver and white dog, May, 1889 (King of Kent—Hops).

MAID OF KENT (Field Trial Kennels), liver and white ticked bitch, May, 1889 (King of Kent—Hops).

SHOT (Meares and Brown), lemon and white dog, July, 1889 (Heno—Vic).

FRED (Bayard Thayer), liver and white dog, 3yrs. (Robert le Diable—Tuck).

IGHTFIELD DICK (R. P. Lonsdale), liver and white ticked dog, May, 1887 (Dick III.—Belle of Bow).

IGHTFIELD GUELPH (R. P. Lonsdale), liver and white bitch, March, 1887 (Bang's Boy—Linda).

IGHTFIELD DEUCE (R. P. Lonsdale), liver and white bitch, April, 1886 (Wynnstay—Dainty). Eleven entries.

IRISH SETTERS.

TILLIE BORU (Geo. E. Gray), red bitch, 2yrs. (Brian Boru, Jr.—Biddy).

ROCKWOOD (Chas. T. Thompson), red dog, October, 1888 (Desmond II.—Luray III.).

SARSFIELD (W. L. Washington), red dog, 6¾yrs. (Garryowen—Currier Belle II.)

SEDAN (Glendyne Kennels), red bitch, 2yrs. (Chester D. Hearald—Maney).

VIDA (St. Cloud Kennels), red bitch, 26mos. (Jack—Della).

INCHIQUIRM (Jno. J. Scanlan), red dog, 20mos. (Shandon II.—Iona).

DARRAH PAT (Hudson River Kennels), red dog, 3yrs. (Chief—Lassie). Seven entries.

CHAMPION STAKE.

ENGLISH SETTERS.

GATH'S MARK (H. Hulman, Jr.), black, white and tan dog, May, 1884 (Gath—Gem)

ROWDY ROD (Elmwood Kennels), black and white dog, January, 1888 (Roderigo—Juno A.).

PITTI SING (Thos. Johnson), white and liver bitch, 1886 (Baron Devoridge—Nora).

CHANCE (J. M. Avent), black, white and tan dog, 1885 (Roderigo—Bo-Peep).

POINTERS.

RIP RAP (Field Trial Kennels), black and white ticked dog, May, 1888 (King of Kent—Hops).

SPRING (R. M. Hutchings), liver and white dog, June, 1885 (Mainspring—Curfew).

DEXTER (Bayard Thayer), liver and white ticked dog, 4½yrs. (Nip—Tuck). Seven entries.

WASHINGTON A. COSTER, Sec'y and Treas.

SARATOGA SPRINGS, N. Y.

WHIPPET RACING.

Editor Forest and Stream:

Whippet racing came to the front again in connection with the shows recently held at Detroit and London, and the record of Mr. Blake's Benbow, 12¾ seconds for 200yds., is mentioned as a best on record. The kennel editor of FOREST AND STREAM very pertinently asks for the weight of Benbow, so as to compare it with the English crack Fred, who recently made a similar record. That is a good point to make and another would be to know who were the timers and how Benbow's race was timed, whether from the report or flash of the pistol. I have had some experience as a watch holder, and I speak with authority when I say that unless the Benbow race was timed by experts accustomed to holding a watch on dogs or men, the record is very questionable.

Persons who occasionally time trotting races are not quick enough in starting their watches to be considered experts in timing sprints or dog races. To show to what a nicety the work is required to be done in dog racing, a watch is used in England which beats twelfths of a second, and there is even one which marks twentieths. In the former there is a large hand which travels the circuit of the dial in one minute, and has a sunk dial for the twelfths, the circuit of this dial being marked for two seconds from top to bottom, being numbered 1 to 12, and the same on the other half of the dial. The still faster beating watch has a long hand which travels so quickly that it hardly shows the beats.

I have one of the watches which beats twelfths, made by the patentee, William Williams, of Bury, Lancashire, and I occasionally have it split between the twelfths, thus making a twenty-fourth of a second. I formerly had an eighth of a second timer, and that I could start and stop on each beat, but with my present watch I find it runs too fast for that, and only once have I ever succeeded in starting and stopping it on the one beat, two beats being necessary for that. They are not independents or fly-backs, so every time they have to be used they must be set at zero, and in doing this it is necessary to push the stop while the hand is on the move, between 10 and 11, when it will be caught at the even second. Now, when we have such watches held by men such as use them in England, we have a much higher standard of training there than is to be found here outside of the experts of the athletic world. I fancy that if such a timer as Mr. Geo. D. Avery, of New York, had held his watch on Benbow's race at London, it would have shown considerably slower time than was there recorded.

It may be interesting to know that cycling races in England are required to be timed with a watch which has obtained a Kew certificate, so as to guarantee its being a reliable one. This is obtained by leaving it for a certain time, several months I believe, with the officials of Kew observatory, where it is tested in every position and differences of temperature and its variations carefully noted. At the termination of the test a certificate is issued classifying the watch in accordance with its approach to perfect accuracy.

Further than this, there is the question of personal equation, for all men are not equally quick in the hand or finger movement which starts and stops the watch. This variation is guarded against in making astronomical observations, which necessitate the greatest accuracy, by testing the observer. How this is done I do not know, but the result is, that after a thorough test the observer is found to be in the average so far wrong, and this is his "personal equation." Then when he makes an observation involving time calculation, his personal equation is brought into play and a correction made in accordance therewith, and upon that corrected time the calculation is made. When we take into consideration that a dog traveling 200yds. in 12¾ seconds covers within a fraction of 15 7-10yds. per second, it will be at once seen how necessary are a fast-beating watch and a good man to hold it in a trial; for each beat of the watch means 1½yds., and a race can be lost and won by a few inches. Whippet racing is a great sport in the Manchester district, and I have seen handicap cards with over sixty heats of four dogs each for decision on a Saturday afternoon. The most peculiar thing of all in connection with the sport is, that every man who owns a whippet is seemingly bound to bring it to the grounds, whether it is entered or not in the handicap. When the racing is in progress, the men line the fences which inclose the straight 200yds. course with their dogs under their arms, and the moment the pistol is fired every dog in the place starts yelping its loudest—then there is bedlam, if you like. It is not a high-toned sport by any means, and I do not see how it ever can be made so, on account of it surroundings; for the training of the dogs must still be left in the hands of the class of men who train them from puppyhood. The *Stock-Keeper* has tried to boom it and get decent people to take hold of it; but no one with any self-respect could go into it very far without being disgusted with the necessary associations.

Instead of seeking any such venue as whippet racing it would be much better for fanciers to keep in the beaten path where their surroundings have at least the recognition of polite society. Philadelphia was the head center of whippet racing in this country till the present administration came into power, aided and abetted by the Brooks High License law. Licenses were refused for every place that might be called a public resort, and of course such places as Pasture Park, Echo Park and the Lamb Tavern had to join the vast majority of the refused. Soft drinks were too wishy-washy for patrons of the sports held at these places, and without the bar privileges there was but small hope of getting anything like a return of the prize money offered for dog handicaps. There are still a few kept about here and there. No doubt Mr. Parker could be accommodated with a match on the usual handicap terms if he desires to make one.

I noticed in a report of the Detroit show, written by Mr. Mortimer, that he stated he made his awards on whippets at that show in accordance with his views regarding the conformation necessary for speed and endurance. I may not have hit the exact phraseology, but it was, I believe, to that effect. I do not see what endurance has got to do with it at all, for they are never raced over 200yds. I except those used for rabbit coursing, for their number are few. As regards conformation. Whippet breeders prefer hare feet, and they prefer to have the dogs cut in from the hock, holding that such have greater reach in their stride. In the matter of tails it is considered better to have them feathered than smooth like the greyhound, it being held that the dogs can guide themselves better, though I could never understand what good that was in straightaway running.

Whippets are trained from their puppyhood, the first steps being to get them to pull at a cloth, or as it is called, "bait." Almost any puppy will do this, but whippets are encouraged to play in this manner and then to run across the room to catch at the bait. When they have learned this, the distance is gradually increased till all they know is to run to the bait. After which it is simply a question of speed. J. W.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

THE TARIFF AND IMPORTED DOGS.

THERE are parts of the new Tariff Bill which will affect importers to some extent, and for their information we give those sections in which they will be interested:

SEC. 482. Any animal imported specially for breeding purposes shall be admitted free, provided that no such animal shall be admitted free except it be pure-bred of a recognized breed and has been duly registered in the book of record established for that breed; and provided further, that certificate of such record and of the pedigree of such animal shall be produced and submitted to the customs officer, duly authenticated by the proper custodian of such book of record, together with the affidavit of the owner, agent or importer that such animal is the identical animal described in said certificate of record and pedigree. The Secretary of the Treasury may prescribe such additional regulations as may be required for the strict enforcement of this provision.

SEC. 483. Animals brought into the United States temporarily for a period not exceeding six months for the purpose of exhibition or competition for prizes offered by any agricultural or racing association; but a bond shall be given in accordance with regulations prescribed by the Secretary of the Treasury; also teams of animals, including their harness and tackle and the wagons or other vehicles actually owned by persons emigrating from foreign countries to the United States with their families, and in actual use for the purpose of such emigration, under such regulations as the Secretary of the Treasury may prescribe.

AMERICAN SPANIEL CLUB.

THE following are the new classifications as announced by the Spaniel Club after consultation with the leading exhibitors of the States and Canada:

Classification No. 1.—Field spaniels, black, over 28lbs.; challenge class, dogs; challenge class, bitches. Field spaniels, any other color, over 28lbs.; challenge class, dogs and bitches. Field spaniels, black, over 28lbs.; open class, dogs; open class, bitches. Field spaniels, liver, over 28lbs.; open class, dogs and bitches. Field spaniels, any other color, over 28lbs.; open class, dogs and bitches. Cocker spaniels, black, not over 28lbs.; challenge class, dogs; challenge class, bitches. Cocker spaniels, any other color, not over 28lbs.; challenge class, dogs; challenge class, bitches. Cocker spaniels, black, not over 28lbs.; open class, dogs; open class, bitches. Cocker spaniels, any other color, not over 28lbs.; open class, dogs; open class, bitches. Clumber spaniels and Irish water spaniels; challenge class, dogs and bitches. Clumber spaniels; open class, dogs and bitches. Irish water spaniels; open class, dogs and bitches.

Classification No. 2.—Spaniels, all breeds, over 28lbs.; challenge class, dogs; challenge class, bitches. Field spaniels, black, over 28lbs.; open class, dogs: open class, bitches. Field spaniels, any other color, over 28lbs.; open class, dogs; open class, bitches. Cocker spaniels, black, not over 28lbs.; challenge class, dogs; challenge class, bitches. Cocker spaniels, any other color, not over 28lbs.; challenge class, dogs and bitches. Cocker spaniels, black, not over 28lbs.; open class, dogs; open class, bitches. Cocker spaniels, any other color, not over 28lbs.; open class, dogs: open class, bitches. Clumber spaniels and Irish water spaniels; open class, dogs and bitches.

Classification No. 3.—Spaniels, all breeds, over 28lbs.; challenge class, dogs and bitches. Field spaniels, black, over 28lbs.; open class, dogs; open class, bitches. Field spaniels, any other color, over 28lbs.; open class, dogs and bitches. Cocker spaniels, any color, not over 28lbs.; challenge class, dogs and bitches. Cocker spaniels, black, not over 28lbs.; open class, dogs; open class, bitches. Cocker spaniels, any other color, not over 28lbs.; open class, dogs and bitches. Clumber spaniels; open class, dogs and bitches. Irish water spaniels; open class, dogs and bitches.

WINCHELL VS. NATIONAL EXPRESS CO.

IN a late issue we gave the news exclusively that Mr. Winchell was suing the National Express Co. for damages on account of the accident to his mastiff bitch Boss Minnie. We now give an interesting account of the trial, which appeared in the *Vermont Record*:

Rutland County, Vt. J. L. Winchell vs. National Express Co. An action brought to recover damages for injuries to a valuable English mastiff bitch, Boss Minnie.

On Oct. 26, 1889, Mr. J. L. Winchell, proprietor of the Green Mountain Kennels, notified the agent of the National Express company to call at the kennels for a cage containing the valuable dog referred to, which was to be expressed to Huntington, L. I., where it was intended to breed her to Dr. Derby's Pharoah. The express van called at the kennels and the cage containing the animal was loaded into it. In the course of transportation to the railroad station the cage was thrown from the wagon and broken, the dog severely injured in the side and liberated. She was abroad 24 hours and when found she was suffering from her wounds, and also from the exposure. Since that time the animal has never recovered from her injuries; and though up to that time productive, is now barren, although twice having been bred to good dogs.

Notice was at once served on the express company that Mr. Winchell would hold them responsible for the injuries to the bitch, and suit was instituted by Mr. Winchell's attorneys, Messrs. Joyce, Kendall and Preston, and trial was had at the September term of the Rutland county court.

The plaintiff showed that the barrenness of the bitch was a great pecuniary loss to him, it being set up in evidence that from three litters from her, Mr. Winchell had realized over $2,000.

The defendant company plead irresponsibility for the acts or omissions of its local agent; and further that at the time of the accident there had been no delivery of the animal to defendant. It was pleaded that the delivery and collection of express in the village was done by a private arrangement with the local agent, who owned the horse and wagon used for the purpose; and that the defendant company was not responsible for accidents in delivery of collections, claiming not to be responsible as common carriers until the articles were delivered to their agent at the station. The case was ably conducted on both sides, and much evidence of an expert character introduced to establish the nature of the injuries the animal had received. The arguments were exhaustive and citations of decisions which overthrow the defense were quoted by plaintiff's counsel.

Col. Joyce of plaintiff's counsel, made an eloquent and able plea. He defended those dumb creatures which throughout the ages had aided and comforted mankind, and which counsel for defense had referred to as worthless and better dead than living. Col. Joyce argued that the worth or value of an article or animal was based on what it would bring in market, and that these very dogs which defendant represented as worthless were worth many hundreds of dollars. This very animal has produced over $2,000 worth of dogs in two years. Since the accident, aside from the care and medical expense involved by Mr. Winchell, he has suffered great loss otherwise, as the dog was fit neither for show or breeding purposes—the two sources from which her value arose. In regard to the delivery to the company, he argued it was complete when made to the driver of the express wagon, generally known to be in the employ of the company. He further showed the excessive rates Mr. Winchell was compelled to pay the defendant company for transportation of his animals, and that since the accident he has been compelled to sign a release to the company when shipping dogs.

The judge charged the jury at length, advising them as to

the points of law involved. The jury retired and after a short deliberation returned with a verdict for plaintiff in $1,000 damages.

Expert veterinary testimony introduced by both parties to the action agreed as to the fact that the barrenness from which the animal suffers was caused solely by injuries received at the time of the accident; and that the animal might again become productive, though the time which might elapse before productiveness returned was a matter of great uncertainty.

DOG TALK.

"J. W." in a recent note, made the remark that Lord Bute was the best St. Bernard in England, and that the fact was not disputed by the press. Whew! I hope that was a slip of the pen. If not I am afraid my friend will have to acknowledge his mistake. Until the advent of Scottish Prince he was acknowledged to be the tallest; but a glance at the catalogues and show reports and another at the dogs that have beaten him will convince the most skeptical of the mistake in that assertion. I have no desire to injure the dog's reputation, but such reports are misleading, and should some wealthy American purchase him he will find that Donald is a taller dog, and I can name no less than six dogs now in America that can beat him hands down if quality counts for anything. Some of them have already done so. At Windsor, Alton was first, Prince Regent second, Lord Bute third. At Darlington, Scottish Prince first, Aristocrat second, Lord Bute third. Angelo, Sir Bedivere, Prince Battenberg, Hesper and several others will beat him under any judge.

I want to say a word in praise of the National steamship Canada and its genial master, Capt. Robinson. Any one intending crossing the pond with dogs will make a great mistake in taking one of the fast lines. The Canada is a cattle boat, and returning she carries no deck load, thus giving ample exercise ground for the largest dogs. The captain and officers are all dog lovers, and afford the passengers every facility for caring for their stock. Should any of your readers desire to ship a dog across, I can cheerfully recommend Mr. Cottrell, the cook, as a most painstaking man to take charge of same. He is a breeder of terriers, and well known to "Thames Tattler" and others in the fancy in England. The splendid form in which my dogs arrived is sufficient proof of the assertion I have made. NAMQUOIT.

DOGS OF THE DAY.

"NAMQUOIT" asks where on earth I was when the question of admitting the National Beagle Club to the A. K. C. was brought up at the late meeting. To be perfectly accurate I will reply that I was at Gloucester race course. With regard to the merits of the case there are two ways to view it. The National Beagle Club may be looked upon in the same light as a field trial club, and the A. K. C. has such on its roll of members. I can see no more grounds for alleging antagonism between the National Beagle Club and the American Beagle Club than between the Southern Field Trials Club and the setter or pointer clubs. I am not aware that the National Beagle Club has set up any standard, and I further take issue with Mr. Anthony when he made his motion to read that the A. K. C. has acquiesced in the standard of the American Beagle Club. Mr. Anthony will remember the long discussion which took place over the adoption by the A. K. C. of the Chesapeake Bay dog standard, and that the resolution was very carefully worded to avoid adopting a standard. It was simply a recommendation that in the absence of any specialty club for that breed the standard as drawn up be taken for what it was worth. At the next meeting of the A. K. C. the Great Dane Club (I think that was the one) asked the A. K. C. to adopt the standard it had drawn up. I objected, calling attention to the peculiar and definite wording of the Chesapeake Bay dog resolution, and the motion was at once voted down, Mr. Anthony acquiescing in the view expressed.

It has always been my opinion that field trial clubs are out of place in the A. K. C., and I can see no reason to distinguish between them and the National Beagle Club. It is no loss to the club to be debarred from membership, for their wins are not of any importance on the show bench, where appearance takes precedence and is alone recognized. If I had been present at the A. K. C. I should have voted against Mr. Anthony's motion, because of the manner in which it was worded, but if it had been amended to read that it was not advisable to elect a club having only its object in view, I would have voted against its admission.

There was another case which immediately followed that of the Beagle Club, which was properly decided. It was upon the application of the South Carolina Poultry and Pet Stock Association. Dog men may not be aware, perhaps, of the prolonged fight which has been going on in the poultry world over these rival associations, but it has been a subject for discussion and the display of much angry feeling for some time. Mr. Cook's motion of rejection was based upon the fact of there being already a member of the same name, and it was perfectly proper to decline electing the applicant on that ground. We already have a precedent for the election of rival clubs in the same city, in the acceptance of the California Kennel Club when the Pacific Kennel Club, also of San Francisco, was a member of the A. K. C. An election which does not harmonize at all with the resolution on the National Beagle Club application.

I see that Mr. H. H. Briggs, of San Francisco, has relinquished the kennel editorship of the *Breeder and Sportsman*. I shall always look back on the brief association with Mr. Briggs and his fellow members of the Pacific Kennel Club with the most pleasant feeling, and I trust, that in whatever field he may turn his attention to, he may be preeminently successful. A whole-souled fellow is that same H. H. Briggs.

Mr. Mayhew has had a little fling at Uncle Dick anent his judging and reception at the Kingston dog show. But the sage of Hornellsville has got square with the "brash Britisher." His comment to me is, "Mr. Mayhew forgets to blow the froth off his beer and it gets into his writing." Dick, that is very cruel, but Mayhew will forgive you, for the joke is too good.

Mr. Vredenburgh is going to propose some amendments to the A. K. C. constitution to be acted upon at the December meeting. I hope he will announce them in the November *Gazette*, so that we may have time to examine them carefully. I have not the slightest idea what these amendments are, but I am very anxious to see them. Another thing we all want to see is a speedy hearing in the case of Vredenburgh versus Peshall. I am certain that there will be no delay encouraged by the first named. Of course I need not say how the case will terminate, at least in my opinion, for I have already expressed my views on the subject of the A. K. C. accounts for 1888. It is much to be regretted that the occasion was ever made which called for the taking of such decisive steps.

Americans have succeeded in putting a heavy handicap on the Louisiana lottery, and it is ticklish work getting up anything in that line nowadays. What then is to be thought of the following in the last issue to hand of the *Stock-Keeper*: "Ormskirk Christopher.—To be drawn for, rough-coated collie pup presented by the celebrated exhibitor, Mr. T. H. Stretch, to the Ormskirk Parish Church Bazaar, to be held Oct. 22 next, age five months; sire Ormskirk Amazement, grandsire the renowned Christopher; tickets 1s. each from Mr. S. Brighouse, 9 Derby street, Ormskirk." A lottery for a collie pup and for the benefit of a church. Playing it pretty low down on the collie, isn't it? J. W.

[Rough on the church as well.]

DOG CHAT.

THE Gordon setter men are evidently waking up to a sense of their duty to the breed. The special stake, which is to be brought off at the Central trials in December, is creating wide interest among lovers of the breed, which will surely redound to its future benefit. We understand that already $175 has been secured toward the prize money, and more is certainly expected. The winner of the stake will also come in for valuable special prizes, which in after days will incite the lucky owner to further efforts. Mr. Fitzgerald, the sporting editor of the Philadelphia *Item*, shows his love for the Gordon by donating a piece of plate, valued at $100, to go to the winner of the stake. Mr. Van Zandt, though an Irish setter man and one of the owners of the Hudson River Kennels, sets up a $25 silver cup for the same lucky dog. Is this not inducement enough for the Gordon men to come out with their best, and even if they have not got a "best" enter a Gordon to swell the list and show those bloated aristocrats, the English setter and pointer men, that the boasted powers of the Gordon do not lay altogether on paper. Seven entries are already secured from some of our best known Gordon men, but we fail to find the names of such men as Doctors Whitaker and Dixon and Mr. Malcolm. Friends of the Gordon, as they are, they will surely not let this opportunity pass. Let it once be known among men that the Gordon men are running their dogs, the breed will take on a boom, just as coursing has given the necessary fillip to the greyhounds.

The Irish setter men are quieting down a little and attending more to business, as will be seen by the returns of the entries for the Eastern Field Trials. The Irish Setter Club have taken care of the money inducement for owners to run their dogs, and it is to be hoped the members will rally to the call.

Mr. Washington called upon us, while in the city this week, and told us that he had just sold champion Laura B., the well-known Irish setter, to Mr. C. G. Dickson, Sparta, Ga., for the sum of $2,000. Judging from his letter, Mr. Dickson is so pleased with her that, had Mr. Washington asked it he would have paid double that amount. Would that this gentleman lived in the North, we want a few more enthusiasts like this in the breed. Speaking of Mr. Washington, we hear that he was so disgusted with his new importation, Tore, that he has given him away to a farmer, not deeming him worth keeping. This is rather severe on a third-prize winner at Manchester, England.

We understand that the Duquesne Kennel Club of Pittsburg has claimed dates for their long expected show. The show will be held early in March next, and will no doubt be well supported by the fraternity, for Pittsburg has always been a good dog show town when well managed. We hear there is good, active young blood in the new club, men willing to back their venture with solid cash, so hereafter we hope to find Pittsburg numbered among the regular fixtures.

Mr. Mercer, of Ottawa, tells us that he has presented the Airedale terrier Weaver to Mr. W. P. Pugsley, of that city. Weaver scored a blue ribbon at their show last month, securing a favorable comment in our report. This is the last of Mr. Mercer's team of six Airedales; some of them were poisoned and others died a natural death. This gentleman evidently thinks Clumbers are the dogs after all, for he writes us he has just purchased from Messrs. Bate and Geddes the noted spaniels Boss III. and Bromine, which with Snow, if she pulls through, and Quester, will make a team hard to beat. By the way, it is said that Bromine and Snow would never have been allowed to leave England or be sold if it was known they could breed. Bromine has just whelped eleven pups to Boss III., and as Snow had a litter just lately in England, though they did not live, it looks as if the Ottawa men had the pull of it in this case.

Here is a joke of Uncle Dick's while judging cockers at Kingston. A noted dog was brought before him for inspection, when it is said he turned to a bystander, saying in his inimitable style: "Ottawa and London both on same week, eh!—ugh!—cut him in two and send half to each show, he'll win sure!" Those who know Uncle's dread of being "long" on cockers will understand the joke.

Mr. Bush, of Buffalo, writes us that he has purchased that good young cocker bitch Idea, from Geo. Bell, of Toronto. It will be remembered that she won second to Novel in the open class of 25 bitches and first in novice and puppy classes at Toronto, and three firsts and a special at Ottawa last month. With those he already has, Mr. Bush will make a strong showing for any team prizes that may be put up at New York.

There is no more enthusiastic pug man than Mr. Eberhart, of Cincinnati. He has just built a kennel especially suitable for pugs, at a cost of $500. He has already 23 in his kennel and has room for 50 more. Pugs evidently take well out West.

A correspondent from Hamilton, Ont., writes us deploring the fact that in their dealings with American breeders many Canadians have, in the language of the street, "been badly left," in spite of very fair letter writing and apparent good faith. He asks: "Is there no remedy?" The only one we can suggest is for the buyer to come down and choose for himself, if he has not a trustworthy friend on the spot to do it for him. Our large breeders of dogs are most of them reputable men, men whom our Canadian friend will find to be entirely reliable in their dealings. All that we can advise in the matter is, for intending purchasers to write us for references before making their bargains. More than this it would be invidious for us to do.

The *Stock-Keeper* (England) calls attention in its current issue to several pictures in the book "House and Pet Dogs," published by the Forest and Stream Publishing Company, which originally appeared in our English contemporary. We are sorry they should have occasion to find fault, but it was an oversight entirely that due acknowledgment was not made, but the mistake will be corrected in the next edition. The pictures were taken at random from a collection of the sketches which have appeared from time to time in the FOREST AND STREAM or *American Kennel Register*, and in every case bear the signature of the English artist who drew them, and acknowledgment was then made of the source from which they were drawn. The FOREST AND STREAM is always willing to give credit to whom credit is due.

The importation of dogs to this country from England has in the past few years assumed such proportions that the extract from the new Tariff Bill, which we publish in another column, will be read with interest on both sides of the pond. It will now be necessary for the importer to prove that the dog is of pure breed by a certificate, stating its registered number and pedigree, signed by the secretary of the stud book of whatever country the dog is imported from. This is a protection for American dog men and is a move in the right direction, as the law also requires an affidavit from the owner or agent that the dog is truly the one so registered.

The warnings repeatedly given our breeders, to leave the dogs alone for awhile and devote more attention to the importation of bitches of known merit, is evidently bearing fruit. Mr. John A. Long, of St. Louis, has just purchased from Mr. W. Houldsworth, of Bradford, England, the collie bitch Airedale Duchess, by champion Charlemagne—Patience. She is the dam of Clifton Crack, who won first and cup at Cambridge, and comes over in whelp to Roderick of Ruthven, who is by Christopher out of Princess Shiela. She was to arrive on the steamship Nevada.

The English doggy papers are much exercised over the aspersions of a writer, in the medical journal *Hospital*, on the bulldog. This nincompoop of a writer is scored unmercifully, and rightly, too, for his misleading statements. This noodle has the effrontery to state that "It is as plain as possible that certain animals which are destitute of what we call intellect have a love of fighting—a savage and determined taste for blood and murder. The bulldog, for example, is not a mere beast of prey, who catches wild creatures because he is hungry; he is a typical example of unmitigated savagery and blood-lust" with a deal more in the same vein. "Vero Shaw" rises in his wrath and writes to the *Stock-Keeper* in the bulldog's defense, stating that "the whole article is a gross calumny, doubtless begotten by Ignorance out of Mortal Funk of the breed." It is well known that no milder-mannerd dog lives than the bulldog, though to people unacquainted with the breed, his ugly mug (?) would lead them to just such conclusions this ignoramus has come to. We are not without men of that ilk in this country, who rush into print about dogs, of which they know nothing whatever; doing more harm in ten lines than a practical man can remedy in a whole page.

The advertised meeting of the Board of Governors of the Eastern Field Trials Club was held on Oct. 14, in Mr. F. R. Hitchcock's office, at 44 Broadway, New York. Those present were Messrs. O. W. Donner, F. R. Hitchcock, J. L. Breeze, W. A. Coster, the secretary, and others. Messrs. A. D. Lewis and H. Hullman, Jr., were elected members. A motion was carried to ask Mr. Thos. Johnson, of Winnipeg, Manitoba, to be one of the judges at the coming trials.

ST. BERNARDS AT LONDON.—Sarnia, Ont., Oct. 8.—*Editor Forest and Stream:* In answer to the query, "What is fame?" somebody is reported to have replied, "To have one's name misspelled in the daily papers." Fame at a bench show consists in having dogs' names misspelled and their form misrepresented in kennel journal reports. At least that is the sort of fame my dogs at London achieved in the columns of FOREST AND STREAM. My St. Bernard dog Barnie, winner of second, is credited in your report to the Pottersburg Kennels. My dog Brian, awarded third, is said to have "his good bone and front to recommend him;" whereas Brian lacks in bone and front, though a fairly good dog in other respects. The possessor of the "good bone and front" is Barnie, who, if equally strong in other respects, would be a hard dog to beat except in the best of company. My smooth-coat bitch puppy Iola is entered in your report as Lola. She is more than "a fairly good youngster," as any competent judge will say who has seen her. The smooth-coat bitch called Brundle in your report, should be Brunelle, and her description is as faulty as the name you imposed upon her. I am aware that your reporter, owing to an engagement at Ottawa, had only a limited opportunity of seeing the dogs, and could not, therefore, be expected to be able to criticise their points intelligently. His chief source of information and inspiration was a marked catalogue, supplied him by the manager-secretary, with perhaps a few pointers on the merits of the dogs from the same obliging and not entirely uninterested official. Reports compiled under such circumstances are valueless as a guide or for reference, and an injustice to those whose dogs were left to the criticisms of their competitors.—H. GORMAN.

[At the first glance the above letter seemed a fit occupant for the waste basket, but as we find that an error was made in crediting the dog Barnie to Pottersburg Kennels we print the letter. We do not know Mr. Gorman or of him in St. Bernard ranks, but for his information and others who may be prejudiced by his statements, we may remark that we spent two days at London, and further, examined the St. Bernards carefully. To St. Bernard men we will only say that the fact of Bruce, vhc. at Toronto, being first here carries out our criticism as to the quality of the dogs under him. In speaking of Brian we said, "has only his good bone and front to recommend him; his long head and faulty muzzle will always place him back." This puts a different light on it. The St. Bernards were so mixed in their numbers that we had to appeal to Mr. Glass as to which dog was which, and may possibly have got the criticism on to the wrong dog, but we don't think so. Perhaps Mr. Gorman has not seen a catalogue of this show, if not we advise him to, where he will find Barnie spelt Burnie, and catalogue number was 25, but tag number was 13; then his Brian was numbered 26, but tag number 14. Brunelle and Iola were spelt in the report as they are in the catalogue. Before rushing into print Mr. Gorman had better acquaint himself with the facts of his case and see a few more good St. Bernards. Let him come down to the New York show next spring, and we shall take pleasure in showing him where and how we derive an "intelligent" knowledge of St. Bernard points.]

COLLIE CLUB STAKES.—Orange, N. J., Oct. 8.—*Editor Forest and Stream:* Referring to the communication signed "The Squire" in FOREST AND STREAM Oct. 9, the Collie Club has not issued a list of stakes for puppies. On the contrary, it has extended the date of birth so as to include collies from 9 to 18mos. old, and therefore no man with common sense would think of entering a young puppy for competition. As to the stud dog stakes, I fail to see the objection. There is nothing said as to pedigree, place of birth or age; the stud dog is to be judged by two of his get out of different bitches. The prize being confined to collie dogs at public stud in the United States and Canada, the winning progeny to be barred from future competion. The object of these stakes is to incite competition; they are not arranged for the benefit of any breeder; therefore we have made them virtually novice stakes, as winners are barred in all of them. —J. D. SHOTWELL, Sec'y Collie Club.

DANBURY SHOW.—Danbury, Ct., Oct 10.—*Editor Forest and Stream:* We, the undersigned exhibitors at the twenty-second annual Danbury Agricultural Society's Fair and Bench Show, desire to express our thanks to Messrs. H. W. Lacy, Seers, Reed, Lynes, Knox, Barnum and Lewis, for the kind and courteous treatment we received at their hands. Signed: B. F. Lewis, Philadelphia, Pa.; Frank Dole, New Haven, Ct.; Thos. Fenton, New Haven, Ct.; John B. Hefter, N. Y. city; N. H. Thiman, N. Y. city; H. W. Van Scriver, Rahway, Ct.; Central Kennels, Jersey City, N. J.; Ravenswood Kennels, L. I. City; Riverview Kennels, N. Y. city; Warwick Kennels, Conn.; R. Thurman, Mass.

MR. PENTZ'S MISTAKE.—Red Bank, Oct. 6.—*Editor Forest and Stream:* Seeing an article in the FOREST AND STREAM where Mr. Stanton W. Pentz asserts that I claim that his pointer dog served my pointer bitch Marguerite II., I claim that he asserts what is not true, for I never have claimed that I ever used his dog nor do I wish to use him. But I do claim my puppies are by the very same dog that they were advertised to be. The dog that my puppies are by is owned by a gentleman living near Red Bank by the name of Mr. C. W. Chapen, and if Mr. Pentz will take the trouble to look and see when I bred my bitch, he will find that she was bred to Mr. C. W. Chapen's pointer dog, which he calls Brake, and a very fine one too. There was a mistake in the number, and Mr. Pentz and myself had some correspondence over it, and I thought that it was settled until I saw his letter in the paper. I wish it understood that I don't claim my puppies are by Pentz's dog, but I do claim they are by Chapen's Brake, by which name he is known, and I cannot understand Mr. Pentz publishing such an assertion when he knows it is not so.—JOHN H. DEY.

KENNEL NOTES.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Silver Queen. By A. E. Pitts, Columbus, O., for silver fawn pug bitch, whelped Aug. 7, 1890, by champion Kash (Bradford Ruby—Lady Cloudy) out of Rustic Queen (Rustic—What's That).

Rex G. By Eberhart Pug Kennels, Cincinnati, O., for silver fawn pug dog, whelped Aug. 5, 1890, by Spokane (champion Kash—Lady Thora) out of Lady Verne (Joe II.—Maudie).

Rockaway Joe and Crusoe: By Robt. A. A. Johnson, Ottawa, Can., for black cocker spaniel dogs, whelped July 10, by Kildare (champion Brant—Bonita) out of Jill (Doctor—Lucy).

BRED.

☞ **Prepared Blanks sent free on application.**

Cromar's Vic—Portswood Tiger. J. H. Matthews's (New York) bull bitch Cromar's Vic (Guillermo—champion Carmen) to his champion Portswood Tiger, Sept. 29.

Juno—Portswood Tiger. Dr. S. H. Blodgett's (Cambridge, Mass.) bull bitch champion Juno to J. H. Matthews's champion Portswood Tiger, Sept. 16.

Beatrice—Portswood Tiger. J. H. Matthews's (New York) bull bitch Beatrice (Rustic King—Soudan) to his champion Portswood Tiger, Sept. 9.

Rose—Portswood Tiger. Wm. Hickey's (New York) bull bitch Rose to J. H. Matthews' champion Portswood Tiger, Sept. 3.

Grit—Portswood Tiger. J. H. Matthews' (New York) bull bitch Grit (Morgan's Crib—Morgan's Kittie) to his champion Portswood Tiger, Aug. 23.

Loue—Tammany Boy. Charles Grather's (Bridgeport, Conn.) pointer bitch Loue (Springbock—Composition) to H. Wooster's Tammany Boy (Tammany—Juno), June 15.

Erminie—Lord Clover. M. E. Bradley's (Columbus, Ind.) pug bitch Erminie (Kash—Daisy) to Thos. I. Ballantine's Lord Clover (champion Loris—Goulding's Nellie).

Queen Anna—Kash. M. M. Murphy's (Ripley, O.) pug bitch Queen Anna to A. E. Pitts's champion Kash, Oct. 8.

Trixy—Kash. Adam Flaitz's (Shelbyville, Ind.) pug bitch Trixy to A. E. Pitts's champion Kash, Oct. 7.

Daisy—Kash. Seminole Kennels' (Philadelphia, Pa.) pug bitch Daisy to A. E. Pitts's champion Kash, Oct. 6.

Vixen—Kash. M. M. Murphy's (Ripley, O.) pug bitch Vixen to A. E. Pitts's champion Kash, Oct. 3.

Teresa—Kash. Adam Flaitz's (Shelbyville, Ind.) pug bitch Teresa to A. E. Pitts's champion Kash, Sept. 9.

Topsy—Bradford Ruby II. H. J. Bramlage's (Cincinnati, O.) pug bitch Topsy to Eberhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby—Puss B.), Oct. 7.

Flossie II.—Eberhart's Cashier. C. V. Griffith's (Anderson, Ind.) pug bitch Flossie II. (champion Bradford Ruby—Daisy) to Eberhart Pug Kennels' Eberhart's Cashier (champion Kash—Lady Thora), Oct. 2.

Dill—Colonel. Geo. C. Jones's (Emporia, Kan.) cocker spaniel bitch Dilly (Prince Oho III.—Black Beauty) to his Colonel (Capt. Stubbs—Maud S. II.), Aug. 10.

Bell—Bradford Harry. F. E. McGuire's (Bangor, Me.) Yorkshire terrier bitch Bell (champion Bradford Harry—Old Bell) to P. H. Coombs's champion Bradford Harry (Crawshaw's Bruce—Beal's Lady), Aug. 15.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Emma L. Wm. H. Wild's (Jersey City, N. J.) pointer bitch Emma L. (Sachem—Daisy of Naso), Oct. 6, nine (three dogs), by Hemnstead Farm Kennels' Robert le Diable (Croxteth—Spinaway).

Lucil H. Tell Kennels' (Worcester, Mass.) pointer bitch Lucil H. (Harris's Grafton—Ethel Beaufort), Sept. 2, ten (six dogs), by their Daregq (Harris's Mikado—Gypsy K.).

Maygo. Tell Kennels' (Worcester, Mass.) pointer bitch Maygo (Mikado—Gypsy K.), Sept. 28, ten (six dogs), by Currier's Prince (Waters's Max—Currier's Bell III.).

Vera Bang. R. L. Hooper's (Athens, O.) pointer bitch Vera Bang (Bang Bang—Christmas Vic), Oct. 2, eight (five dogs), by Field Trial Kennels' King of Kent.

Ballymony. North Fields Yorkshire Kennels' (Salem, Mass.) Irish terrier bitch Ballymony (Benedict—Jameson's Argus), Oct. 12, seven (three dogs), by J. W. Taylor's champion Breadenhill.

SALES.

☞ **Prepared Blanks sent free on application.**

Golden. Silver fawn, black points, pug bitch, whelped Jan. 22, 1890, by champion Kash out of Peggie II., by A. E. Pitts, Columbus, O., to Fred E. Hookway, Wooster, O.

Hustler. Silver fawn pug dog, whelped Aug. 5, 1890, by Spokane out of Lady Verne, by Eberhart Pug Kennels, Cincinnati, O., to Wm. Smith, same place.

Rex G. Silver fawn pug dog, whelped Aug. 5, 1890, by Spokane out of Lady Verne, by Eberhart Pug Kennels, Cincinnati, O., to Wm. J. Gerly, New Orleans, La.

Duke. Silver fawn pug dog, age and pedigree not given, by Eberhart Pug Kennels, Cincinnati, O., to Mrs. J. J. Farrell, Rochester, N. Y.

Smuggler. Pug dog, whelped April 2, 1890, by Lord Clover out of Midget Bell, by Thos. I. Ballantine, Peoria, Ill., to J. H. Jackson, St. Paul, Minn.

Buffalo Bob. Black and tan terrier dog, whelped Aug. 6, 1890, by champion Buffalo General out of Buffalo Lass, by A. W. Smith, Buffalo, N. Y., to Geo. Hermann, Jr., Davenport, Ia.

O'Donovan Rossa—Sedan whelps Red Irish setters, by Glendyne Kennels, Bristol, R. I., bitch Winnie Davis to J. O. Le Gendre, Charleston, S. C. Dogs—Leddie Rossa to C. F. Herreshoff, Bristol, R. I.; Pat Rossa to Wm. Willie, Fort Niobara, Neb.; Grip W. to F. E. Nose, Duncannon, Pa.; Thurman to M. L. Oppenheimer, New York; Lismore to A. B. Watson, Batesburg, S. C.; Frank Hurd to John Porter, Bristol, R. I.; Clonmel to Allan Dodge, Washington, D. C.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

J. J., Brooklyn, N. Y.—I have a King Charles spaniel, 8 years old, had two litters of pups. Has continual itching, mostly on the back and neck. I do not feed very heavy, mostly meat and, as she has very few teeth, cut it fine. She is confined most of time. Would like you to advise me in next issue what to do for her. Ans. Rub affected parts with balsam of Peru; after a few days wash off with warm water and castile soap. Give more exercise.

A. M., New York.—I have a small pug, six weeks old, who has been constipated since it has been taken from its mother, which is about a week ago. From constant straining she has a small lump protruding from the anus, which looks as though it might be falling of the rectum. Will you please tell what to do for her in your next issue? Ans. Press the lump gently back in its place. Then roll a piece of paper to a point, whenever the puppy is constipated, and dipping the paper in olive oil insert it a short distance into the rectum, when a passage will shortly follow. It would be well to put a little powdered charcoal, say as much as will lay on a dime, in its food once a day. Feed soups, with stale bread, avoiding rice, boiled milk and such foods.

A MAP OF THE UNITED STATES.—A large, handsome map of the United States and showing North and South Dakota, mounted and suitable for office or home use and issued by the Burlington route, will be furnished responsible parties free on application to the undersigned. Playing cards for 15 cents in postage. You can obtain a pack of best quality playing cards on application to the undersigned.—P. S. Eustis, General Passenger and Ticket Agent C., B. & Q. R. R., Chicago, Ill.—*Adv.*

Rifle and Trap Shooting.

RANGE AND GALLERY.

RENSSELAERWYCK.

ALBANY, Oct. 3.—The fall meeting of the Third Brigade Rifle Association at Rensselaerwyck, concluded to-day. The conditions were favorable, and some excellent scores were made. Stephen Schreiber distinguished himself by taking first place in two matches, in one of which he made a clean score. The full scores follow:

Match No 1, short range continuous military match of 5 shots, all comers, 200yds., two scores to count, any military rifle.

J G Boden-tein	24	24—48	A H Rennie	21	21—42
Col W E Fitch	24	24—48	C H Hitchcock	21	21—42
S Schreiber	24	23—47	J E Roach	22	20—42
Wm Turner	23	23—46	C M Underwood	22	20—42
W C Gomph	23	21—44	A L Bevier	21	20—41
E S Hoag	22	22—44	J L'Amoreaux	21	20—41
G H Charles	22	22—44	C S Byington	22	19—41
T M Congden	22	22—44	W W Stowe	20	20—40
A Donner	22	21—43	C Chinman	20	19—39
J Murphy	22	21—43			

Match No. 2, standard American target re-entry match, all comers, 200yds., any rifle, best three scores to count:

W C Gomph	45	43	42—130	J B Taylor	43	41	40—124
Dr Mayberry	45	43	41—129	J G Newberry	43	40	40—123
B C Andrews	43	41	41—125	A Sidney	41	36	33—110

Match No. 3, mid-range continuous military match, all comers, 500yds., unlimited re-entries allowed, the aggregate of the best three scores to count:

S Schreiber	25	25	25—75	W C Gomph	24	22—46
Col W E Fitch	25	25	24—74	G Rommel	23	23—46
A H Rennie	24	24	25—72	C Hinman	22	21—43
E S Hoag	25	24—49		J L'Amoreaux	22	20—42
Wm Turner	24	24—48		Lieut C H Hitchcock	21	21—46
G H Charles	24	23—47		J Murphy	21	20—41
C M Underwood	24	22—46		T M Congden	20	20—40
W W Stowe	25	21—46		J E Roach	20	20—40

Match No. 4, rest match, all comers, standard American targets, aggregate of best three scores of 5 shots to count:

S Schreiber	57	56	56—169	J G Newberry	50	47—97
G H Charles	57	57	54—168	W C Gomph	50	46—96
Wm Turner	54	54	54—162	A H Rennie	49	44—93
A Sidney	53	52—105		E Allen	47	43—90
A Donner	54	50—104				

Match No. 5, Colt's target revolver match, all comers, and to revolvers only, 30yds. on the standard American target reduced, number of shots five, unlimited re-entries allowed, aggregate of the best three shots to count:

H G Charles	130	J G Newberry	125	James H Price	124
Buel C Andrews	129	E L Strong	125	E L Hinman	124
H A Parsons	127				

Match No. 6, Third Brigade team match, open to teams of six commissioned officers or regularly enlisted soldiers from any battalion or separate company of infantry in the Third Brigade, 200 and 500yds.:

Binghamton Team.	20th Sep. Co. 200yds.	500yds.	Tenth Battalion Team.	200yds.	500yds.
C W Hinman	19	20—39	C Underwood	20	18—38
C W Hitchcock	19	21—40	J E Roach	11	21—32
F W L'Amoreaux	17	18—35	C S Byington	12	14—26
John Murphy	16	17—33	A H Rennie	21	20—41
T M Congdon	21	18—39	W E Fitch	22	19—41
E S Hoag	21	19—49	G Rommel	14	21—35
	113	113 226		100	113 213

EPHRATA, Pa., Oct. 10.—It having rained on several of our practice days the members of the North End Rifle Club were forced to forego their pleasure of target shooting. To-day was a beautiful day, with little wind, and nine of our boys were on the range near Ephrata, at an early hour, prepared with abundant ammunition to make up for lost time. The following scores resulted as the best out of several scores of 10 shots each to each man. Distance 200yds., off-hand, standard American target:

W M Carpenter	8	7	6	7	10	6	6	7	7	6	—70
C S Wenger	6	6	8	10	6	10	8	10	10	6	—80
L M Weist	9	7	10	8	6	4	5	6	5	4	—64
J A Stober	6	6	5	5	6	10	3	9	5	5	—60
J M Sheaffer	7	5	5	8	7	6	3	3	8	7	—59
M Kafroth	3	0	8	4	8	5	3	5	7	5	—48
D B Lefever	3	6	4	3	0	7	3	7	9	3	—45
W D Winters	4	0	0	7	3	8	9	4	4	4	—43
C Konigmacher	4	0	3	4	5	6	3	3	4	8	—40

The team meets on Friday afternoon, Oct. 17, for practice.—D. B. LEFEVER, Sec'y.

ST. LOUIS, Mo., Oct. 10.—But nine members of the St. Louis Pistol Club attended the shoot held last Wednesday; 12½yds. target. The score:

Sam Dorman	9	8	8	8	10	9	10	10	10	—92
W Bauer	8	10	10	10	10	8	8	10	7	—90
G Alexander	9	6	7	8	10	9	10	10	10	—88
M Summerfield	9	9	10	10	9	10	6	8	10	—88
J H Chase	8	9	10	10	6	8	7	8	7	—81
A McBean	9	7	9	6	5	10	9	10	9	—80
M Billmeyer	5	7	7	6	10	9	10	8	8	—80
H Stussell	8	7	8	7	7	8	8	7	8	—78
W C Mackwitz	10	8	9	6	7	9	7	8	3	—72

A YANKEE GIFFARD.—Norwich, Conn., Oct. 12.—William T. Chamberlain, the inventor of this city, has thought out a great many new things, for some of which the Government has sent him patents. Lately he put his mind on the trail of a possible gun that should out-shoot anything in firearms in the world, and walked the streets every night for hours dreaming about his purpose. The ice he thought he had holed the possible gun in his imagination. He invented an air gun that would shoot projectiles ten miles, and a powder gun that would throw dynamite safely. Then he wheeled about in his thinking and made a loaded projectile that would fire itself out of any gun two or three miles; but none of the inventions quite satisfied him. So he has thought out a new gun that is to darken, as calls it the "electric hydrogen gun." It may be fired in three ways. First, Mr. Chamberlain says he sends the projectile out of the gun with 37,000 "atmospheres" chasing it; second, he says he puts 148,000 atmospheres behind the shot; third, he easily and quickly transforms the weapon into an air gun, with a pressure behind the projectile of 1,500 or 2,000 pounds. The gun is very simple and very powerful, and it costs almost nothing to fire it. It sends a shot traveling faster and further, Mr. Chamberlain says, than any other weapon. He thinks he sees $200,000 in it.

ZETTLER CLUB, Oct. 12.—The light to-day was anything but favorable for rifle practice, but nevertheless those members of the Zettler Rifle Club who assembled at the Cypress Hill Park range managed to put up some good scores, especially J. A. Boyken, who as usual had the highest average, 215.41, on 100 shots. During the contest B. Zettler and V. Steinbach shot a good old-fashioned 100-shot match, such as in former times contributed so much to the interest taken in rifle shooting, and which has fallen in abeyance for some time. As the match was not for blood, Dr. Beyken was allowed to enter, but had to give his two opponents 125 points each. Nevertheless the man from Harlem came out on top, while Zettler held the middle and Steinbach had to pay for the fun. The score 100-shot match, no restriction to rifle, but no holder allowed, 200yds., German 25-ring target: J. A. Boyken 2,181, B. Zettler 2,113, V. Steinbach 2,035. Regular club shoot, strings of 10, possible 250 points: V. Steinbach 2,934, average 195.50; J. A. Boyken 2,181, average 218.10; B. Zettler 1,938, average 193.80 Dressler 1,066, average 167.67; Kohlmetz 174.

THE GIFFARD GUN.—London, Oct. 11.—Mr. Giffard, the inventor of the wonderful gun in which liquefied gas serves as a substitute for powder, is now in London. Speaking of his invention the other day he said: "I won't tell you of the experiments I have been making at the Paris Gas Company for nearly twenty years for the compression of steam and air and the liquefaction of gas, but the Giffard gun is the outcome. The French government has bought the rights for the rifle as a weapon of war, and the Colts have bought the American rights in the patents for £200,000."

TOURNAMENT AT NEWARK.—Thanksgiving week the Newark Gun Club of Newark proposes to hold at its grounds, Erb's Park, Newark, N. J., a four days' shooting tournament, Tuesday and Wednesday to be devoted to target breaking, Thursday, Thanksgiving day and Friday to be given up to live bird shooting. An attractive programme is being arranged. As soon as the printer is through with it, it will be sent out. In all probability the cracks at inanimates, those who have acquired a national reputation both in the East and the West will be debarred from the target contests. This will give the amateurs a better chance in the various events of this character.—JACOB PENTZ.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

Oct. 23.—Second Annual Tournament of the Maplewood Gun Club, at Maplewood, N. J. Open to all. Bluerocks, three sets of traps. C. W. Brown, President, Maplewood, N. J.

Nov. 18-19.—Open-to-All Tournament of the Woodside Gun Club, Woodside, N. J. Carl Von Lengerke, Sec'y, 843 Broad street, Newark.

ELLIOT VS. MURPHY.

ONE of the greatest pigeon matches that I have ever had the pleasure of witnessing was that which took place on the grounds of the Carteret Gun Club, at Bergen Point, N. J., on the afternoon of Oct. 8. The principals, J. A. R. Elliot, of Kansas City, and Edgar G. Murphy, of Long Branch, are both well known in the shooting world. Mr. Murphy for years has been regarded as one of the best of our amateurs, and with the exception probably of Mr. Macalister, has no superior to-day. Mr. Elliot, or plain every day Jim Elliot, has been recorded so often of late in these columns as a winner that he is known to all. This, he declared, was one of the hardest matches he had ever shot, and he fully sustained his reputation as a game and nervy single-handed shot. The conditions of the match were 100 birds each for $1,000 a side, 30yds. rise, 21yds. boundary, gun below the armpit. These were the rules of the Carteret Club, and as the grounds and surroundings were strangers to Elliot, his victory is all the more creditable, and his score of 94 should go on record. The afternoon of the contest was a delightful one, a brisk northwest wind favoring the birds. The audience, among which were several ladies, was a select one, being composed of well-known club men and lovers of the sport. Among those present were Chas. Willard and J. N. Robbins, of Chicago; E. W. Dayton, Cincinnati; Mr. Henry and Capt. Money, of England; C. W. Dimick and Geo. Pushee, of Boston; Irving Schulize and M. F. Lindsley, W. Fred Quimby, W. S. Cannon, Justus Von Lengerke, Chas. Parker, W. L. Colville, H. Folsom, Frank Rogers, Peter Morris, Geo. de Forrest Grant, W. and C. Floyd-Jones, J. Heber Brientnall, Fred Hoey, Dr. Knapp, Fred K. Sands, James Bryer, C. Smith, J. Pentz, C. M. Hedden, H. White, Miles Johnson, W. L. Force, Geo. Wallace McGrath and E. Collins. The match was refereed by James Bryer, of Brooklyn, C. Floyd-Jones advising and handling Mr. Murphy, Elliot "going it alone." At 2:25 P. M. Elliot flipped up a coin in the air, and winning the toss, he decided to go first to the score, or to use his own expression, "to open the german." His first bird, a rattling left quartering towerer, was hit hard by both barrels and fell dead inside the 50yds. mark, but of course was scored lost. Mr. Murphy followed suit, his bird being exactly similar in flight, but if anything a trifle faster. He feathered him with his first barrel, but he sailed on and out. After losing his first, Elliot did not miss again until his 15th bird, when a right quarterer got away with a clean skin. He followed with another goose egg on his 16th, and then settled down to work and made the magnificent run of 34, losing his 51st dead out of bounds, another one dead out of bounds on his 59th, and again a cipher on his 70th. He then started in and finished strong with a run of 30. A total of 94 scored; only 6 lost out of 100, 2 of which were killed within the 50yds. mark and 3 within 30yds. boundary. Mr. Murphy, after his first miss, killed 12 straight, the 13th being an unlucky number, for he lost, dead out of bounds, a right quartering incomer, that he should have saved. He then killed 15 straight and lost his 30th, a right quarterer that was a "screamer." Hit with both loads, the bird went out and fell stone dead 40yds. away. His next, another of the same flight, was stopped in great style. This was one of the neatest of the many pretty kills made by both contestants. Mr. Murphy then made a run of 14 straight, losing his 45th, a right quarterer. He then killed 2, and lost the 48th, a right quartering driver, dead out of bounds; scored another lost in his 63d, a rattling strightaway, and then made his longest run of the match, 22, stopping up on his 86th bird. From this out he killed straight, not shooting at his last bird. Both men shot in magnificent form, and at any stage of the match it was anybody's race. This state of affairs kept the spectators in breathless suspense, and the winner, upon killing his last bird, was greeted with a hearty round of applause. Mr. Murphy's birds were gathered by the liver pointer Phil, Billy Mills, of Dexter Park, gathering for Mr. Elliot. The birds, every one of which was dark in color, were an excellent lot, and only five of them could be classed as duffers, and these were called. The different style of the shooters was marked. Elliot, very deliberate, depending most on the first barrel, but getting the second in when necessary, in quick time. Murphy snapping the first, the second invariably following as one shot. Score:

○ Dead out of bounds.

Recapitulation.

Elliott had 19 straight drivers, 19 right-quartering drivers, 11 left quartering drivers, 15 right-quarterers, 8 left-quarterers, 15 straight incomers, 6 right-quartering incomers and 7 left-quartering incomers. He shot a Greener gun 7½lbs., shells for both barrels loaded with 45grs. of E. C. powder, 1⅛oz. No. 7 chilled shot; same load for both barrels.

Murphy had 18 straight drivers, 21 right-quartering drivers, 14 left-quartering drivers, 12 right-quarterers, 13 left-quarterers, 11 straight incomers, 4 right-quartering incomers and 6 left-quartering incomers. His gun was a Stephen Grant, 7¼lbs., shells for both barrels loaded with 45grs. Schultze powder, 1⅛oz. No. 7½ shot.

The second match between Elliot and Murphy, if match it can be called, was arranged late Wednesday evening, following the grand contest of that afternoon, and took place on the grounds of the Carteret Gun Club, at Bergen Point, on Friday afternoon following. The conditions, to say the least, were unique, and if the affair had been known to the public, a large gathering of sportsmen would have been on hand to witness it, for never in the history of pigeon shooting had such novel conditions governed a shooting contest. The friends of Mr. Murphy were desirous of arranging another match under the same conditions as the first. Upon the broad shoulders of Elliot is all responsibility shifted for the novel conditions of this match. It was his match, with the exception of the 5yds. boundary clause; this was inserted by Murphy. If the match had been shot at 21yds. boundary it would, notwithstanding the other outlandish conditions, have born some resemblance to a shooting contest, and not the game of chance it really was. The conditions were as follows: The stake $1,000 a side, each to shoot at 100 birds from 5 ground traps, use of one barrel, 30yds. rise—15ds. to the left and the same distance to the right of the original 30yds. score—small stakes had been driven at intervals of 1rd., these being numbered 1 to 30. Starting at the command of the referee from stake No. 1 at the left and walking parallel with the traps, the shooter was expected to pace exactly 1rd., no more nor less, the gun being carried squarely upon the shoulder. Upon reaching the mark designated by a numbered ball drawn from the pocket of the referee the trap was instantly pulled. The bird, to be scored, had then to be gathered within 5yds. of the trap sprung from. If more difficult or really idiotic rules were ever known to govern a pigeon contest I have failed to hear of them. What was gained outside of the stake money and the settlement of side bets was nought. It was not a test of skill, for a majority of the birds were out of bounds with a flap of the wing long before the gun could be brought from the shoulder.

The match was a monotonous one to witness, and if it had not been for the grotesque positions of the contestants at the score and the comical expressions of countenance, the affair would have been unbearable. Elliot, much shorter of stature than his opponent, labored at a great disadvantage in length of arm and stride, and was set back a number of times for not stepping the requisite yard. His position, carrying the gun upon his left shoulder, the left arm crossing just beneath his eyes and the hand grasping the barrel at the foreend, was a comical one. Murphy's position was not near so strained; over 6ft. tall and long of reach, he had no difficulty in pacing the yard or of grasping the gun with the left hand. For the first 17 birds he walked jauntily along, like a soldier on guard, the left arm carried at the side, but soon seeing the advantages he assumed Elliot's position of grasping the barrel of the gun with the left hand. The birds were fairly strong flyers, few of them lingering at the trap; but even when the trap was known a kill seldom followed, a dead out of bounds or clean miss, in the anxiety to get on them quickly, invariably following. Captain Money, of England, was the referee, assisted by Mr. J. Von Lengerke as pace judge. Wally Murphy gathered the birds for his brother, John Riggott, of Rockaway, N. J., gathering for Mr. Elliot. The scores below, giving the number of bird and trap, dis-

tance walked, direction of flight and distance at which each bird was killed, tell the story.

On Monday afternoon the private shooting ground of Mr. John Hoey, at Hollywood, N. J., was the scene of action of the third, and by far the most interesting match of the series of three, that has been concluded between Murphy and Elliot. The party leaving New York on the 11:15 A. M. train of the Central Railroad consisted of the following gentlemen: Dr. G. Knapp, Frank Rogers, E. Schultze, Capt. Money, Nat Sinkins, Dave Johnson, W. S. Cannon, M. W. Mulford, T. Murphy, Jacob Pentz and Assemblyman Wm. D. Campbell, of New Jersey. The party was met on the arrival of the train at Hollywood by Fred Hoey, Walter Murphy, John S. Hoey, Edgar Murphy, Arthur Sewell, Phil Daly, Jr., and other equally as well known sportsmen. Upon invitation of Manager Fred Hoey, all hands proceeded to the Hollywood Hotel), where lunch was served. After appetites had been appeased the party were shown through the lovely little hotel, and then proceeded to the shooting grounds. These shooting grounds are of capital order. Owing to the lay of the land the boundary allowed is but 21yds. The Westminster Club grounds for years have been recognized as the fastest grounds for the flight of the birds in the vicinity of New York. They must, however, in the matter of speed, yield the palm to the new grounds at Hollywood. The arrangements are perfect for trap-shooting. The traps are pulled automatically, the trapper not knowing which trap he pulls. The birds for this occasion were a grand lot of flyers. Of all the 200 shot at, but six refused a flight when the traps were pulled, and there were but two birds called during the race. At 2 P. M., the hour named for the calling of the match, a large party had assembled. Among the lady visitors were Mrs. John Hoey, Mrs. John S. Hoey, Miss Murphy, Miss Dougherty and Miss Wallack. In addition to the gentlemen previously mentioned were noticed Col. E. Shade Green, Harry Cooper, C. Linwood Shepard, Wm. C. Peterson, the yacht builder; Gus Wood, J. H. Robbins, Charles Parker, Wm. Hughes, Al Heritage, R. V. Disbrow, E. C. Jones, C. Parks, Len Huggins and J. Moore.

At 2:05 the referee, Mr. John S. Hoey, called the men to the score, Elliot leading off. The first 50 were shot in 23m.; the second 50 in 27m., the third 50 in 26m. and the last 50 in just half an hour, the whole match lasting but one hour and forty-six minutes. Never has been seen a more gentlemanly race, not a jar occurring to mar the harmony of the proceedings. Elliot shot in most magnificent form, and centered his birds, whether easy or hard, with seemingly the greatest of ease. In the use of his first barrel he was much quicker than his opponent, and to this fact, without doubt, does he owe his victory. His form in this match was a great surprise to the friends of Mr. Murphy. At the first match at Bergen Point he gave those that witnessed the contest the impression that he was slow in the use of the second barrel. The way he cut down his birds to the right and left was a perfect revelation. Murphy was not in his usual form, owing, no doubt, as he stated, to a slight indisposition, which had kept him awake almost all of the night previous. Nevertheless, his score was a good one, more especially as he had a number of birds scored lost that were but a few feet over the boundary line. In the form that Elliot was shooting there was no man living that had any license to beat him. At the conclusion of the match Mr. Elliot thanked the sportsmen of New York for their kind treatment during his visit, and promised, if any matches could be arranged, to come East in the spring. As an instance of the confidence with which Elliot shot, it may be mentioned that just before the match he made a side bet of $250 that he would kill 90 or over, which, of course, he won handily.

Match at 100 birds, Hurlingham rules. 21yds. boundary, $1,000 a side. Capt. Money, scorer; Assemblyman W. D. Campbell, trap puller:

Recapitulation.

Of 100 birds shot at by Elliot, 16 were right quartering drivers, 28 right quarterers, 15 left quartering drivers. 12 left quarterers. 13 straight drivers. 7 right quartering incomers. 6 left quartering incomers, 4 straight incomers, and 1 hoverer. His birds scored lost were the 47th, a towering right quarterer; 53d, a twisting right quartering driver; 86th, a right quartering driver; 88th, another of the same flight; 90th, a left quarterer; 96th, an easy right quartering incomer, and 97th, a fast straightaway. His gun was a 7½lb. Greener, shells loaded with 45gr. of E C powder and 1⅛oz. chilled 7½ shot.

The flights of Murphy's birds were 23 right quartering drivers, 20 right quarterers, 18 left quartering drivers. 7 left quarterers, 13 straight drivers, 10 right quartering incomers, 4 left quartering incomers, and 5 straight incomers. His birds lost were the 1st, a left quartering towerer; 18th, a fast straightaway; 26th, a left quartering driver; 28th, a twisting straightaway; 47th, a driver to the right; 49th, a right quarterer; 52d, a driving right quarterer; 60th, a right quarterer; 64th, another right quarterer; 80th, a fast driver toward the right; 83d, a straightaway, and 95th, a fast straight driver. He shot a 7½lb. gun made by Stephen Grant, using 45gr. of Schultze powder and 1⅛oz. of chilled 7 shot in both barrels.

TEE KAY.

ALTOONA SHOOTING ASSOCIATION.

MONDAY morning Oct. 6 gave us the first "dampener" in all our preparations for our tournament. We had advertised to shoot rain or shine and the rain was pouring down in torrents. Noon came and plenty of rain with it. Would anybody come? Well, we will go to the depot and see. In rolls "day express" and the first man we meet is Mr. F. F. Davison, of Allegheny, with a good delegation from his city, and the next we meet is our jolly friend A. C. Courtney of Lefever Arms Co. fame. After dinner we took our guests out to the grounds and received their praise for the beautiful surroundings. We indulged in a little practice and enjoyed seeing the cloud-break and a beautiful rainbow span the autumnal mountains. On the evening trains came several squads of new arrivals, noted among whom were J. A. Penn, of Wheeling, W. Va., Geo. Cochran, Gill Hall, Pa., I. N. Crable, East Liverpool, Ohio, Tim Mack, Larimer, Pa., Crosby of Braddock, Pa., N. A. Hughes and S. C. Steuber of Williamsport, Pa.

Tuesday morning the bright sunshine cheers every one. Even the hills and valleys seem to rejoice with us. A host of new arrivals greet us. W. H. Wolstencroft and James Wolstencroft of Philadelphia, Harry Thurman of Germantown, A. C. Krueger of Wrightsville, Pa., E. D. Miller of Springfield, N. J., and others too numerous to mention are here with guns and all other paraphernalia for a big day's shooting. By half-past 9 the ball began to roll, and continued till night without a jar. All moneys were divided 40, 30, 20 and 10 per cent. All ties were divided. Targets were charged extra in each event. The scores follow:

Event 1, 10 singles, entrance 75 cents:

W Wolstencroft	1111111111—10
E D Miller	1111111111—10
A C Courtney	1011111111— 9
A C Krueger	1011110110— 7
J White	1111101111— 9
Cochran	1111111111—10
Penn	1111100111— 8
Mack	1011110110— 7
Crosby	1101011011— 8

Event 2, 15 singles, entrance $1:

Wickles	100011010101001— 8
J White	011111111111011—13
Cochran	111111111110110—13
Courtney	111111111110101—13
Hughes	111111011011110—12
Steuber	100011101111111—11
Christy	011010101100101— 8
E D Miller	111111111111115—15
Krueger	111101111011113—13
Thurman	010111111011113—12
Clark	001111110011010—10
Mack	111111111011110—13

Event 3, 10 singles and 3 pairs, entrance $1.25:

P. Miller	0111111101 00 00 01— 9
Clark	1101001011 10 00 00— 7

Our programme called for more live bird events, but owing to the warm sultry day the birds were too slow to make the sport interesting.

A number of our guests desired to go grouse shooting on Thursday and although some of the party, for whom all arrangements

had been made, suddenly disappeared, we had an exceedingly pleasant time among these wary residents of the forest.

NOTES.

Harry Thurman is a good wing-shot, but he cannot hit a bird when it is perching.

Mr. F. F. Davison helped us in the management and a more cool-headed and efficient gentleman for this purpose cannot be found anywhere.

Harry Thurman's shooting blouses were very numerous. The boys all like them.

Brother Courtney is not only a good shot but a hustler as well. If the Lefever Arms Company don't sell guns on his route it is not his fault.

Harrisburg's delegation was conspicuous by their absence.

We won't use live birds at our next tournament.

Shoot the rapid-firing system. President Clark braced himself over his dog's point Thursday and hollowed "pull." What do you think of this? He then apologizes by saying he was "in fun." Don't believe him.

The number of entries compares very favorably with tournaments all over the country. Next year we will have more.

ALTOONA, Pa., Oct. 11. G. G. ZETH, Sec'y.

CHICAGO.

CHICAGO, Ill., Oct. 11.—Mr. Lew Harrison of Minneapolis passed through here a day or so ago on his way home from the Dunellen shoot. He was with the Kansas City double-geared phenomenon, Jimmy G. A. R. Elliott.

If the Chicago—Kansas City return match is shot at Kansas City early in November as is expected here, Mr. Elliott and Mr. R. B. "Wadsworth" of this city will probably have a 100 birds go on the side for the Championship Cup on that occasion. Mr. "Wadsworth" will probably shoot 100 birds with Mr. Macalester, the noted Eastern amateur, if that gentleman is present as a guest of the Washington Park Club at a date this winter, as it is anticipated he will be.

The gossip here now is that Kansas City will demur to a team of 20 men, and will ask for a team of 10. This, it is thought by the leaders of the team movement here, they can not under the terms of their former written agreement request, and there are whispers of 20 men or nothing. If Kansas City has not so many as 20 pigeon shooters, she ought, as a matter of courtesy and concession, which well become her now, to select at the very lowest number 15 men to meet the Chicago visitors, while it would be unwise to state anything as settled which is not yet so, it is not a risky guess to make that the race, if shot at all, will be with not less than 15 men a side, and perhaps not less than 20.

At the meeting of last week it was thought that some shooters were omitted from the preliminary team who should have been included. At a meeting held at the Sherman House last night, the following were added to the preliminary team: Messrs. J. M. Hutchinson, E. M. Steck, S. M. Booth, V. Hoffman, D. G. Cunningham, W. W. Foss, A. M. Hoffman, A. W. Reeves, J. A. Saxton, F. A. Place, Tony Dominico, Gib Harris, F. Willard, Ed. Price, John Heiland, Joe Card, W. H. Haskell, J. C. Donald, Chas. Kern, F. H. Lord, A. T. Loyd, C. S. Wilcox, W. T. Johnson, Chas. Marriz, J. A. Gardner, W. L. Wells. The board of management was also instructed to add to the list any further names of shooters who may have got away, and it is hoped that after a little everybody will be satisfied, or at least everybody elected. The sifting out of the final team, however, who are to defend the Thermopylæ of Chicago and come back victorious or on a shutter, will be left to the wisdom of the 30 men first elected. A practice shoot at 15 birds is ordered for next Wednesday at which 50 or 60 or so of the team are expected to be present. Kansas City may not have over 10 shooters, but Chicago has, so to speak, shooters to throw at the birds. There are plenty of men here who are panting to get a back at the wicked and lightninglike "Kansas City driver." E. HOUGH

WATSON'S PARK.

BURNSIDE, Ill., Oct. 7.—The following is the score made here to-day by the Chicago Gun Club, at 12 live pigeons, 30yds. rise, 80yds. boundary, Illinois State rules, for their handicap medal:

G Kleinman	112111211111 12	E Steck	212212012122—11
R B Wadsworth	101121222121—11	A W Reeves	121122110110—10
M J Eich	121212112111—12	J Watson	101211112221—11
H Kleinman	112211011121—11	C H Smith	101021212011— 9
H Ehlers	001121212211—10	W H Skinner	111112121111—12

Tie won by Eich. Mr. Skinner is not a club member.

Same day, at 25 Peoria blackbirds, for medal:

Henry Kleinman	1111111110000101111111—19
R B Wadsworth	1101111111011011111100l—20
M J Eich	000100010w.
Geo Kleinman	1011101001111111011111011—19
Ed Steck	1111011111111111111111111—24
C H Smith	0000100001000100010010000— 7
W H Skinner	1100011011010111011101101—18

Oct. 10.—The following is the score made here to-day by the Gun Club of Chicago, 10 live pigeons, 30yds. rise, Illinois State rules, for club medal:

R B Wadsworth	1221211110—9	J E Phillips	1212121111—10
F Willard	0121110220—7	E Steck	2122211222—10
L Willard	1222001212—8	B Rock	1111001221— 8

On tie Phillips won.

At 20 Peoria blackbirds, same day, for medal:

F Willard	01011111111111111111—18
Wadsw'th	01111101111111111111—18
L Willard	11101111111111101111—18
E Steck	11111111111111111101—19
B Rock	11111111111101010110—17
J Phillips	11010111010101011111 15

Oct. 11.—The following is the score made here to-day by the Pullman Gun Club, of Pullman, at 10 live pigeons, 30yds. rise, 80yds. boundary, Illinois State rules:

C Sleet	2202221220—8	A Schuttler	0201010101—5
C Williams	0221221112—9	McConnell	2011211111—9
Joe Flinn	1002001212—6	F Teeple	0121210021— 7
Jas Flinn	0120220001—5	L Pickett	1201010222—7
J Cull	2021100100—5	W Dallyn	0110111122—8
R Runsten	2212110220—8	Van Delow	2222212001—8
G Fieldhouse	0121121200—7	J Ward	1001021221—7
G Gardner	0112220221—8	W Walpole	2211221101—9

Miss and out on 9: Williams 1, Conuch 0, Walpole 3, and won. On 8: Delow and Runsten 0, Dallyn 4, Sleet 10, Gardner 11, and won. On 7: Pickett and Fieldhouse 0, Ward 2, Teeple 3, and won.

RAVELRIGG.

NEW YORK STATE SHOOT.

UTICA, N. Y., Oct. 13.—*Editor Forest and Stream:* At the last convention of the State Sportsmen's Association, held at Lyons, a committee was appointed to arrange a programme and make rules under which the next meeting will be held. The committee will meet for that purpose in Rome, on Oct. 27, and as one of the members of that committee I shall be only too glad to receive suggestions from sportsmen in regard to the matter. Now brother sportsmen, don't wait until you get to Rome next year and then "kick" on the arrangements, but put your ideas on paper as to how the next shoot should be conducted and send either to the chairman of the committee or to the undersigned, who will see to it that every communication or suggestion is laid before the committee and acted upon. Now brothers Richmond, Hadley and all other "big talkers," come to the front with your ideas and assist the committee. HENRY L. GATES.

ST. LOUIS, Mo., Oct. 10.—A live bird match for $100 a side took place to-day between Ed. Spencer, of Carrollton, Ill., and Jas. E. Hagerty. About 50 enthusiasts were present to witness the battle for supremacy and enjoyed the affair throughout. Spencer was strong in the beginning, but weakened toward the end. Hagerty was just the reverse. He lost his first two birds, and it was generally remarked that Spencer would have a walk-over, but Hagerty pulled himself together in the latter part of the match and shot strong. 100 live birds. Hurlingham rules:

Hagerty	2121112211111011202121212122121212122121210121
	2121112022221222211212121112122121121211211211211211211122—93
Spencer	1111212211112121111022201001111121211010121111211
	1102121221121012112112211221102012201222111111—90

UNSER FRITZ.

FREEPORT, Ill., Oct. 8.—There will be a shooting tournament at Freeport, Ill., Nov. 5 and 6, at live birds and inanimate targets. Programmes all ready. The shoot for the diamond badge is open to all. For programmes send to C. E. Cahoon, Freeport, Ill.

MONEY—DALY.—A match has been arranged between Capt. Money, of England, and Phil Daly, Jr., of Long Branch, to take place at Hollywood, on Tuesday, Oct. 21. The conditions will be Hurlingham rules, 21yds. boundary, 50 birds a man, for $250 a side.

CLASS—KLEINZ.—Frank Class, of Pine Brook, N. J., and J. Frank Kleinz, the well known wing-shot of Philadelphia, Pa., are to shoot a 100 bird race at White Plains, N. Y., Thursday afternoon, Oct. 23. The rules governing will be Hurlingham, and is for $250 a side.

CLAREMONT SHOOTING GROUNDS, OCT. 11.—Ten bluerocks, 50 cents entry:

	1	2	3	4	5	6
Sigler	6	8	10	8	9	9
Johnson	8	10	10	9	6	10

Hathaway	2100—2	Hunt	1222—4
Englewood	2111—4	Collins	1202—3

NEWARK, N. J., Oct. 11.—One of the best live bird matches ever seen in Newark took place at John Erb's t. is afternoon between Charles M. Hedden and Robert Schrafft; the conditions being fifty live birds each, under Hurlingham rules, for $50 a side and the birds. The day was good, the wind and crisp air causing the birds to fly lively enough to please the most exacting shooter. Hedden, who belongs to the Newark Gun Club, is one of the most expert as well as one of the oldest trap shots in the State, while Schrafft, who belongs to the Mutual Gun Club, is wholly inexperienced in match shooting, and had never shot a fifty-bird race. He is a cool shot, however, and excels at single-barrel work. The match was called at 3:20, Schrafft leading off with a splendid first-barrel kill, Hedden doing likewise. At the end of the twenty-fifth round Schrafft was two birds behind, and he was unable from that time on to improve his position, though he did some very brilliant shooting. The race was the hottest ever fought by Mr. Hedden. Chris. Reichart officiated as referee and his decisions were not questioned. The full score of the match follows:

Hedden, 30yds	1 1 1 2 2 1 1 0 1 1 1 2 1 1 1 2 2 1 2 1 1 2 1 1 1
	2 1 2 2 2 1 0 2 2 1 1 2 2 1 1 2 2 2 2 1 0 2 2 1 2—47
Schrafft, 28yds	1 0 1 1 1 2 1 1 1 1 1 2 1 1 1 1 1 2 1 1 1 0 1 0 1
	1 1 1 1 1 2 1 2 1 1 1 0 2 1 2 1 1 2 2 0 1 1 0 1—44

Hedden used his second barrel twenty-two times, Schrafft used his second barrel nine times. Each man lost one bird dead out of bounds.

TORONTO, Oct. 8.—The fifth annual shoot of the West Toronto Junction Gun Club was held yesterday at Blea's grounds. The weather was very disagreeable, but the shooting was good, as the score will show. The following is the score at 15 live pigeons each, 26yds. rise, use of both barrels:

First Class.

P Wakefield	15	E Brown	14
C Charles	15	W McDowall	14
W Dodge	15	R Black	13
G H Briggs	14		
J Douglas	13		
J Townson	13		
D Blea	12		

Second Class.

C Hinton	15	W Smith	12
C Kemp	13	E Dollery	11
D C Walton	13		
S Rice	10		
T Boswell	10		

Third Class.

W Blea	14	E Gabel	11
G Oakley	10		

The shoot was continued to-day. The weather was fine and the birds went like rockets. The shoot-off in the first class was one of the finest displays ever seen in the Dominion, Briggs killing 13 straight birds at 32yds. rise In shooting off the ties of 15 in the first class Charles won; ties of 14, Briggs; ties of 13, Douglas. In the second class the results were: C. Hinton first, D. C. Walton second, C. Kemp third. In third class W. Blea, Jr., took first.

PHILADELPHIA, Pa., Oct. 11.—Nicetown Kennel and Gun Club. Weekly club shoot. Shoot at bluerocks, 3 traps, 16yds. rise, shot under the American Shooting Association rules:

Walker	1111010010101010 — 9	David	0101111101101 —12
Pratt	0100001000 — 2	E David	1010011101110010 — 9
Fell	0000000100 — 1	Cummins	1001011010000111 — 8
S Reeves	1100011101101111—10	W Ulary	11110111110 — 9
E David	0101111111010111—12	Sherwood	01101 — 3
Cummings	1111001101010100 — 9	Brey	11111110110 — 9
W Ulary	1101100111111112	Mohr	01110 — 3
Sherwood	0110110011101111—10	Cummins	1011001 — 4
Brey	0010001001111000— 6	Reeves	1110011111 — 8
Mohr	1100100011110110— 8	Sherwood	0111011111111101 —11

Match at 3 single bluerocks: Brey 2, Cummins 2, David 3, Ulary 3. Ulary won tie for first, Brey for second.

CLEVELAND, Oct. 9.—With a mild afternoon, a clear sky, and no breeze, the members of the Cleveland Gun yesterday made one of the worst average scores on record. The clay-birds flew nicely, the traps worked well, and the guns seemed to be all right, but the eyes of the shooters were out of focus. A border of goose eggs encircled the club house and still there were a few left over for another day. The first twenty-five birds was the regular club shoot and W. H. Tamblyn and Fritz tied on 22, the latter winning on the shoot-off. This gave first badge to Fritz and L. O. Jones won the second badge. The score of the gun and club shoot follows, the handicap being added in each instance:

Sweetman	46	W A Tamblyn	41
L O Jones	41	A B Jones	37
Night	40	Baker	37
Fritz	47	Bloom	43
Wherry	53		
Rudolph	43		
Carhan	withdrew		
Martin	withdrew		

PINE IRON WORKS, Pa., Oct. 13.—The long talked of match between Jacksonwal Club and the Pine Gun Club was shot at Erb's on the 4th for a supper. The match was at 10 Keystones. Jacksonwal Club: F. Wentzel 5, J. Gechter 5, A. Adams 5; total 15. Pine Gun Club: J. F. Dierolf 5, S. H. Schaefer 2, T. J. Dierolf 3; total 13. The return match will be shot at Jacksonwal on the 25th of this month, 4 men on a side. Then they shot sweepstake matches, 50 cents entrance, 3 moneys in all matches. Totals for the four matches:

J Dierolf	1 8 7 5	T J Dierolf	4 6 5 5
A Adams	2 3 2 2	W Heister	3 4 4 5
F Wentzel	6 5 7 6	S H Schaeffer	0 4 2
J Gechter	6 4 6 7		

In third match ties of 7, J. Dierolf won. In fourth match ties of 5, T. J. Dierolf won.

BROOKLYN, Oct. 9.—The Unknown Gun Club held its regular monthly shoot at Dexter Park, Long Island, to-day. Fifteen members were present, each shooting at seven birds. I. Hyde and R. Brown were tied for first prize, and in the shoot-off Hyde won. Second prize was divided between Plate and Vaghts. The condition of the shoot was that the bird must be killed with the first barrel. The second barrel is used to count a lost bird. The score: Regular shoot at 7 birds each man: Liemering 5, Rankin 3, Van Staden 2, Boyle 3, Vrooma 4, Knebel, Sr., 3, Vaghts 6, Brown 7, Howard 4, Hyde 7, Schumacher 4, Gilman 4, Bierman 2, Plate 6

RED BANK, N. J., Oct. 10.—The fine weather attracted a large attendance to the weekly shoot of the Riverside Gun Club this afternoon. The summary follows: First event, 10 singles: Ed. Throckmorton and David Belshaw 8, Ed. Cooper, Dr. W. Whitmore and Fred Beale 7, Ivins 6, A. Whymer and John B. Bergen 5, James Cooper 4, D. Slocum 3, Geo. Longstreet and John Cooper 2. Second event, 10 singles: Ed. Throckmorton and Ivins 9, Ed. Cooper 8, Whymer and John Cooper 6, Beale 5, James Cooper and Bergen 4, Longstreet and Whitmore 3. Third event, 10 singles: John Cooper 10, Throckmorton 8, Ivins 7, James and Ed. Cooper and Beale 6, Whymer 5. Final event, 5 pairs: Ed. James and John Cooper 8, Throckmorton 5, Whymer 4.

WORCESTER, Mass., Oct. 8.—Yesterday there was a meet of the Worcester Sportsmen's Club at Coal Mine Brook range. This was the first meet during the open season. The principal event was the continuation of the contest in the merchandise race. Each man had a possible 25 clay-pigeons, the work of each follows: Gilbert J. Rugg 22, E. T. Smith 19, M. D. and A. S. Gilman each 18, W. R. Dean 17, Wm. L. Davis, Geo. Adams, H. D. Jourdan and A. R. Bowdish each 16, Henry W. Webber 15, Chas. Compton 14, E. T. Whittaker 12. E. F. Swan 11, E. S. Knowles 8, C. H. Howe and H. W. Brown each 6.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leflingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

Yachting.

A THOUSAND MILES IN A NAPHTHA LAUNCH.

THE VOYAGE OF THE MIRA FROM FERNANDINA TO KEY WEST, BY CAPTAIN CLARENCE ANDREWS AND CHIEF ENGINEER ELWOOD "BILLY" HOFER.

[Concluded from Page 238.]

APRIL 3.—All is ready. Supplies and gasoline enough for two weeks on board. We carry 185 gallons of the latter with us, which we hope will take us to Miami, a distance of 350 miles. We engage a man named Phelps, who lives at Marco, to pilot us as far as that point. Are off at 11:30; day fair, wind high from S.W. Opposite Sanibel Lighthouse we run into a heavy sea, and find it necessary to stop under the lea of the shore until the wind moderates or changes its direction. At 4 P. M. we try again to gain the opposite shore, and make Matanzas Inlet in one hour, though we had a dangerous crossing and narrow escape from being swamped. We anchor in this quiet pass for the night, praying for an easterly wind. We are much discouraged to find that an open boat is so much at the mercy of the elements. The direction of the wind is a most important factor that we now have to deal with; without a favorable one (from the land) we can do nothing. By much patience and perseverance we made Key West, but it took us two weeks to do what could be done in three or four days were our boat decked over. The soft moonlight would have charmed our distressed spirits, had not the mosquitoes and sand-flies made havoc with our rest in spite of cheese-cloth bars, which bar nothing, although called "Florida lite preservers."

April 4.—The wind seems favorable from where we are anchored and at 7 A. M. we make for the Gulf, but the waves are too high for us, and we have to turn about and scamper back. There is an inside route, however, through Estero Bay and we take that; pass mangrove islands and schools of porpoises, picking our way carefully between sharp oyster beds and sandbars. At 10 A. M. we reach an outlet to the Gulf and try to anchor here, row over to a narrow strip of sand, which forms a breakwater from the heavy sea and breakers, gather some pretty shells and shoot a few shore birds, which the natives dignify by the name of "plover;" small as they are they prove very good and a welcome addition to our larder. The wind is increasing and we decide to remain in this quiet harbor. If we had some millet or fiddlers for bait we might fish. We sail back a little distance and anchor opposite a cabin, pay a visit to the Portugese owner to ask for some; but this devout fisherman informs us that it being Good Friday he would not dare to catch any. He says that some time ago a terrible calamity occurred on this day, that the heavenly laws are unchangeable although here we have different presidents and rulers, "up there" it is always the same. So we are bound to follow his example and drowse away the day in idleness. We catch a marine catfish, however, for supper. A handsome fish and not bad eating.

April 5.—The wind has not shifted and we are here for another day, still within sight of Sanibel light. Our Portugese friend "Agoust" brings some mullet and we row over to a group of mangroves, through which runs a channel. The tide is half flood and the "Silver King" ought to be seeking his customary meal. I cast my bait and retire into the shade about 30yds. off; do not wait long before I have a bite; the reel spins round rapidly, then suddenly ceases, and on rewinding I find bait, hook and snood are gone, probably seized by a jew fish. These fish have a habit of sinking into holes as soon as they feel the hook and remaining there wedged in by rocks on the edges of which the line is cut. The damage repaired, in less than a half hour the reel clicks again, and this time the line tightens out horizontally. I play my fish, until the entire line is exhausted, and myself nearly so. The skiff is being towed against the tide; when my antagonist loosens his grip I wind in as rapidly as possible, but as soon as I can see the silver gleam of the tarpon scales, the line breaks and he is off! Although unsuccessful in my fishing, I can well understand the excitement of the sport, once you have your fish secure at the end of the line, and are being towed out to sea, speculating upon the nature of the monster towing. It may be a shark, a dolphin or a tarpon; if it is the latter you have the additional pleasure of returning home and bragging about your success.

In the afternoon we amuse ourselves picking oysters off the trees. They are very palatable and cluster around the banging branches of the mangrove. They are called "coon" oysters because the coons are supposed to delight in them and keep a stone hidden near the beds in place of an oyster knife.

April 6.—We wake early to find the wind off shore, and hurry through breakfast in order to take advantage of it. Sail through the inlet which is near San Carlos Pass, but not on the map, at 7:45; weather equally, but sea calmer; make for Hickory Pass, due south. At 12 pass Naples, where there is a hotel for winter tourists, a long dock and a sandy beach, but no harbor. Along the coast until 2:45, when we enter the beautiful harbor of Marco, about 35 miles from Estero Bay, and tie up alongside the wharf and store of W. D Collier. Although Sunday, the store is open.

A fine harbor, with many inlets and smaller bays; a good but winding channel, affording an inland passage, staked out as far as Cape Sable. It is now being thoroughly surveyed by Mr. J. Hergesheimer, the author of most of the Florida coast charts, who is here with the U. S. Survey ship Flirt. Captain Collins takes us to visit his large cocoanut grove, one of the handsomest in the State. It extends around the bay to the Gulf along a sand beach. An ideal lovers' walk, and we notice it is properly appreciated by several couples in the moonlight. We also call on Mr. Collins's father, although the Captain will not accompany us; there is a feud between them, and for years they have not spoken nor crossed each other's land. As both have their docks and schooners, they do not seem inconvenienced by their family quarrel. The old gentleman's house is back of his son's, about 200yds. away, and surrounded by an astonishing variety of trees, an incomplete list of which I give: Sapodilla, alligator pear (in great quantities), sugar apple (sweet sop), sour sop, banana, date, mulberry and cocoanut trees, papau, lime, orange, "mammee," oleander, fig, royal punciana, guava. Also many trees familiar to the North.

Mr. Collins *père*, a stalwart man of 70, meets us in his house, a one-story wooden structure with a hall in the center, and four passages radiating from it at right angles, each end open and covered with mosquito bars. He takes great pride in showing us his garden, from which we have a beautiful view of the bay, including his private dock and harbor. Key West is the point to which the settlers send their vegetables, fruit, fish and 'gator skins. They make periodical trips there, many in their own vessels. In the evening Mr. Hergesheimer kindly sends his boat manned by six well-trained negro sailors; they row us swiftly and with graceful precision to the Flirt, which our host calls "the best hotel in Florida," two roomy cabins 20ft. square, a large bathroom, a first rate cook and well-stocked larder make very comfortable bachelor quarters; and as the present occupant has lived there 16 years, surveying these coasts and sounding their waters, they have a most homelike appearance.

April 7.—We hire a boy named Green to show us a good fishing ground; we sail gaily along in a little sloop down Marco bay provided with our luncheon. We anchor about 3 miles from Marco, and having caught some good sized mullet with our cast-net, we take up our position with the skiff at the point of a narrow channel. The tide is at half flood and we expect the tarpon to bite. The inevitable shark and ugly jewfish worry us in succession. My third bite reels off 50yds. of line and a piece of my finger. We have fun for ten minutes. Then the line breaks, and we see a big shark waltzing in the water as if suffering from an attack of indigestion. The loss of a couple of more hooks convince us that the sharks have the best of it, and we return to the Mira. Green professes to know a better fishing place further on; also a good shooting country, and we decide to try him for another day or two. We return to Collins's wharf, make a few purchases, a lot of alligator skins among them, as this is a great market for those shot in the Everglades (Mr. Collins has over a thousand in stock).

At 5 P. M. we take a S.E. course through a narrow inlet of the bay past innumerable mangrove islands, and anchor at sundown about a mile from "Hell's Hole," where we intend to try our luck once more.

April 8.—We row to our fishing ponds. We are going to try grabbing or spearing the fish, for a change. The grains are two barbed prongs fixed to a socket fitting loosely in the end of a pole 12 to 15ft. long; a cord is tied to the grains and held in the right hand together with the pole. The other end of the cord is coiled in the bottom of the boat. Green stands in the bow, his pole poised in both hands, we paddle slowly along the shore in shallow water, where the jew fish abound. The boy's practiced eye soon sees a fish whose muddy color renders it imperceptible to us. He makes a lunge, letting go of the pole and holding on to the cord. The pole falls into the water and the grains are imbedded into the back of the fish near the head. In catching tarpon in this manner you have the excitement and skill of graining, and in addition the pleasure of playing your fish afterward, exactly as do the line fishermen, so that the sport is continuous and more varied. Also, you get the fish you want, and not any that chooses to bite. We catch in this way, besides the jewfish, an ugly animal of a dirty

brown color with protruding eyes and weighing 40 to 50lbs., a couple of good-sized groupers.

At 1:30 we start off in the skiff for a hunt, taking only a few such necessaries as a toothbrush, mosquito bar, hard-boiled eggs and our guns. We take turns rowing up the inlet until the course narrows into a small stream of shallow water with over-hanging trees and foliage. An occasional 'gator or white heron are all that remain of the quantities that were here before the plumage and skin hunters appeared to despoil the land and water of their countless inhabitants. We see a deserted cabin occasionally with patches of once cultivated land; the settlers found it too lonely to remain. Then we pass a natural clearing of meadow-land, on which are three gigantic "royal palms," very rare in Florida.

After rowing 5 miles we land about 12 miles east by south from Marco, tie up our boat and tramp through the cypress wood. We soon, much to our chagrin, come upon a party of hunters who have forestalled us. Mr. Dimmock and friends left Marco two days before, traveling by land with a horse and cart to carry their provisions and game. They have killed three deer, and tell us there are plenty more about, but no turkeys. A 5-mile walk brings us to our camp. We find four poles stuck in the ground about 8ft. apart, on which is spread a roof of dried palmetto boughs, one end of which rests upon the ground, affording ample shelter beneath for three people. Within 30yds. is a beautiful but malarious pond, swarming with 'gators; a short while ago sixty were shot. We see several, but cannot linger here nor elsewhere without continual motion, as the mosquitoes and sandflies sting us into activity. Billy and the captain walk about the surrounding country and see plenty of deer tracks; on our return we build a fire to cheer us and eat our supper standing or rather jumping about, the insects being too voracious to permit of any permanent posture. When we cannot stand them any longer we retire behind our bars. The ground is hard and uneven, but the mosquitoes outside the bars sooth our slumbers. An animated conversation among the owls overhead rudely interrupts the 'gator concert in the swamp.

April 9.—Green said we must be off before "sun up" in order to hunt, but he oversleeps himself and wakes at 5. Not so sanguine this morning about turkey, but thinks well of deer.

We breakfast off a slice of water-melon, walk about for a couple of hours, see tracks but no game, and it is becoming too hot for further tramping, we return to our boat, only to find it gone; borrowed, as we learn from a note left on the bank, by the Dimmock party for the purpose of taking a photo of the royal palms. They return before long, however, and offer us a haunch of venison in return for the loan of the boat. We are appeased, and accepted it with pleasure. Rowing with the tide by noon we are back to our cozy launch; William, the cook, equally delighted to have us back. "It was awful lonesome last night," he says, and his appreciation is shown in the preparation of a sumptuous meal, in which roast venison fills a prominent place. We take a well-earned *siesta* on our comfortable lockers, and the fresh breeze cools our sun-burnt faces. Book and pipe aid our idleness until the skeeters come with the night, and drive us behind the bars.

April 10.—We are off early, bound through the ship channel by Coon Key into the Gulf south of Cape Romano. At the entrance to the Gulf a small boy with a small boat begs to be taken in tow, as he is afraid to venture alone. The wind is high, but favorable from the N.W., and blows us on our course until we come to Horse Key, where a shoal reaching far out into the Gulf causes us to change our course, and we get into the trough of the sea. We ship a couple of barrels of water, turn tail and anchor behind a protecting reef at 12 M. The wind has changed into a regular "norther," so we philosophically go a-fishing, or rather graining, and catch some stingrays.

April 11.—Wind moderated N.E., so we are off early to take advantage of it. Four hours and a half bring us to the entrance of Chokaleski River (where there is a small settlement), and here we meet a Corsican fisherman who has been thirty-five years on this coast. He gives us valuable information, besides two gallons of water, for which he refuses payment. Try to engage him as pilot; wants $3 a day "and doesn't care to go at that; can make more money turtling." We ship some water, but wind gradually shifts to S.E. Pass many islands of pine and cedar trees, and shallow bays with 2 to 3ft. of water. Plenty of good harbors; a fine country to own an island in; many birds, chiefly pelicans. At 1 P. M. pass Seminole Point, sailing entirely by chart. Lost flag overboard during wind. At 3:15 P. M. pass Highland Point, wind is now east and progress slow. Have lost time by hugging shore inside bays to avoid seas. At 5:50 anchor in a little inlet on the north side of White Water Bay (in the railway maps called Ponce de Leon), about 50 miles from Marco in a straight line, but with our winding in and out 60 miles distant.

April 12.—At 7:30, with a northeast wind, we sail across White Water Bay, making for North East Cape. Wind now blowing a gale and veering to southeast, sea heavy. Anchor at 10:30 in open sea off a sand beach and wait for wind to go down. Visit shore and walk about three miles to North East Cape, around a point where the wind and seas appear formidable. Discover raccoon track and then see raccoon. He sees me and we stare at each other, both equally surprised at the unusual sight. I think first it might be a cat, then I decide differently and fire. Raccoon jumps two feet in the air, turns a somersault as he descends and makes off on three legs, before my astonishment at such acrobatics allows me to fire again. We kill some bay birds and catch half a dozen delicious blue crabs for supper. Wind dies out.

April 13.—We start at 5 A. M. before the wind rises. As we round North East Cape we see well-appointed dwellings and out-houses, neatly painted white, a dock, some century plants, and palmettos and thousands of cocoanut palms. At 7:30 in a heavy sea, wind east, we round Cape Sable. Here also are houses and cocoanut groves, close by the surveyor's tripod. Four miles south lies Sand Key, which we should make, but the sea is too heavy and we sail straight on due east for the Oyster Keys, opposite the first of which we anchor in 2ft. of water, about eight miles beyond Cape Sable; average speed six miles an hour, owing to strong winds. We burn nearly a gallon of naphtha per mile in head winds and the Mira's freeboard is so great that she makes but little headway against them. There is a tripod on shore which Billy attempts to climb for an observation, but the structure is too rickety to do so with safety. On the main shore to the west and northeast are several houses, but too distant to visit. There is no chart of these waters yet and we can only guess at our whereabouts. All we have to go by is the more or less correct map of the Okeechobee Land Co. and a few stakes in the ship channel.

April 14.—Day fair and wind moderate E. by N.E. The low tide left us aground in one foot of water, so are not off until the tide rises. At 8 o'clock we try to reach Sand Key to starboard, but soon come to shallow water and shoals. We return and make for Point Sable, whence runs the only southerly channel; near Sand Key we strike into it and pass that island on our port. We steer S.E., wind having shifted in that direction, blowing half a gale; Key West lies in the southwest. We pass Sand Key in the teeth of the wind at 10:30 A.M. and travel ahead slowly. At noon we are out of sight of land, but soon make out islands to the east, which we take to be Center Keys; then we see many keys to the south and southeast (one of which we take to be Long Key) forming a chain running southwest to Key West with a channel on either side: we steer southeast to get help from the wind; water becomes transparent, of a sage green color. Off grassy key we see a house and cocoanut palms.

Then we sail south along a succession of islands, mostly cultivated with groves and vegetable patches, surrounded by small mangroves. We see some sailboats at anchor in a harbor near which is a house on a small bare island, which we afterward learn is "Bamboo Key." We anchor here at 5 P. M., about 30 miles due south of Sand Key; we are welcomed on shore by Anthony Plaut, who is staying here temporarily with his family, engaged in sponging. The island contains about 6 acres, surrounded by coral reefs. The owner is Mr. Crane, who owns also the adjacent larger island to the southwest, Key Vaca. Mr. Plaut is the only "old inhabitant" we have met, the others all hailing from other States. His father was from Miami (on the Atlantic coast) where he owned 900 acres of land, partly a grant from the Government to the soldiers of the Seminole war, the rest a Spanish grant which he bought.

Miami is a growing place with splendid soil and situation. Now it can only be reached by sail boat from Key West, but a railway from Titusville is being talked of, and when that is completed Mr. Plaut will be a wealthy man. Now, however, his wealth is in sponges, and he shows us piles of them bleaching in the sun. They are strung together in spans of four or five sponges each, of various sizes, bringing three or four dollars a span. They can only be caught when the water is clear, so that the bottom can be seen. For this purpose a pail with a glass bottom is used.

In the evening we call at the "shanty" for a chat with Mrs. P. and her pretty daughter. We meet some conch fishermen and enjoy their peculiar accent which might be called 'Cracker Cockney." The ladies complain of the loneliness of their island home when the men are away all day long, and bewail the lack of "society," longing for the gayeties of Key West life. We retire to our couches on board, and are soon fast asleep, dreaming of the fascinations of Key West we have heard so highly praised, when we are awakened by a loud thump against the side of the boat, and the curtains shaking, followed by a loud splash in the water. We jump up thinking a boat had run into us, but peering out we see the disturbance was caused by a large shark who is making away with about 2ft. of heavy sash cord, 4ft. of twisted clothes line wire, to which was attached a tarpon hook and a catfish! We prefer losing all this to having such a bed fellow. In a few hours we are awakened again by yells and the blowing of conch shells. Our friends, the spongers, are starting off on an expedition, and they are calling to their captain on shore to join them.

April 15.—Row ashore in order to get a photograph of the surroundings. Mr. P.'s Couch wife, who with a patch over one eye, reminds us of Wotan, his pretty daughter, and the children consent to pose. I get a few good shots at them, then, adieux being made and hopes expressed of meeting again in Key West, we hoist our square sail, light the engine and are off for that port. At 8:15 we are forced, much to our regret, to abandon the trip to Miami, as so much time has already been taken up. We have sixty miles to make. We sail for the eastern point of Key Vaca (called Waca by the Conch), three miles distant, wind N. veering to E.; turn the point in a rolling sea and sail W.S.W. keeping on the east or inside of the Keys. We pass in succession on our port Knight, Pigeon and Molasses Keys, small and insignificant. On our starboard 3 to 4 miles distant respectively East Bahia Hunda and Cocoanut Keys. We see Sombrero Lighthouse, a fixed white light 188ft. high, visible for 18 miles. At 11:30 we are off Baya Hunda, and, making due S.W. we pass out into the open Gulf. Now the islands are on our starboard.

We pass Pine Key; tide strong and speed slow. Large billows, some 8ft. high, rolling toward the land. In succession come Sunderland, behind which is "Knockemdown" Key, Newfound Harbor, opposite Love Key Beacon, Sugarloaf Key, on which is a cocoanut grove and houses. On our port is American Shoal lighthouse. The water continues beautifully transparent; small fish float on the surface in rainbow colors; peculiar little star-shaped fish skim like disks across the waves. The chart warns us of many rocks opposite Pelican Point; we narrowly miss running into one, are with in five yards of it before it is visible. We put out further from shore to give these sunken rocks a wider berth.

At last we sight the lighthouse behind Key West, and hope to reach it before dark. Fort Taylor, a brick building flanked by earthen works and batteries, draws near. It grows darker, and our side lights are lighted for the first time, as we never before traveled at night. We round the fort and boldly demand its surrender, but get no reply from the hundred 12in. guns looking calmly upon us, nor from the single soldier who acts as guardian within.

At 8 P. M. we steam slowly into the harbor, pass several men-of-war anchored by and heave to near what in the dark appears to be a hotel (later we are told it is the U. S. Marine Hospital). Soon a negro rows by and asks if we "want the doctor," but we answer that we have no use for his services at present. We go ashore and walk for several blocks through a Cuban town; low wooden house open into the streets, and dusky ladies with cigar-box coiffures, clad in old-time fashions, rock within. We ask our way and are answered "*no entiende*." We stop at the Russell House, looking forward to a fresh-water bath as the greatest of luxuries, and it proves one of the rarest, for owing to long drouth we are only spared a bucketful; the cisterns are nearly empty.

April 16.—The Fort Doctor visits us, and we learn that we are liable to a fine for going ashore without being examined, as quarantine is declared. We light our fires for the last time, and steam around into a slip, next to Mr. Philbuck's wharf and near the dock of the Mallory Line, by which Mira is conveyed home a few days later.

AMERICAN AND BRITISH YACHTING.

"AMERICAN yachtsmen have stood by and watched the rapid decline of boats of purely American design; and, excepting the Cape boat, no yacht has been built during the past five years that did not have less American than British in her design, rig and equipment. The shoal boat of the Fanny type has not been built, neither has the duplicate, or an improved Shadow been produced. All that was left of American design seems to have gone, and the British ideas have been substituted. Boats of the Marjorie and Bayadere type, with their egg-shape midsection, originated in Britain. In the rig, sail plan and blocking of the boats there is now no great difference, and there will be more similarity next season than ever before.

"In comparing the hulls of the American and British yachts, except in the centreboard, there is now not much difference, the latest products of both sides being much alike. The double head rig, short mainmast, and the present style of stern, also the rigging and blocks, originated on the other side. The shape of the stern found to-day on nearly all of the latest built boats originated in England, and years ago John Harvey adopted the double head rig and short foremast on the schooner Miranda.

"The two boats which have been before the public the most during the past season are the Minerva and the Gossoon, and on these two boats especially can the question of originality be discussed.

"Taking the Minerva first—is there anything American about her? The boat answers for herself; for she is wholly British, and has not an American element in her. She is original in design and make-up.

"On the other hand, take the Gossoon and examine her from an American standpoint. The old American yachtsmen can find nothing of the old type in her, and she is nothing more or less than a 'whitewashed cutter' in their eyes. The rig, sail plan, blocks, iron work and running gear are British in all their elements, and in the design of foremast hull she is certainly not an American idea.

"The two boats which have been before the public the most during the past season are the Minerva and the Gossoon, and on these two boats especially can the question of originality be discussed.

"Taking the Minerva first—is there anything American about her? The boat answers for herself; for she is wholly British, and has not an American element in her. She is original in design and make-up.

"On the other hand, take the Gossoon and examine her from an American standpoint. The old American yachtsmen can find nothing of the old type in her, and she is nothing more or less than a 'whitewashed cutter' in their eyes. The rig, sail plan, blocks, iron work and running gear are British in all their elements, and in the design of foremast hull she is certainly not an American idea.

"The truth is, and all designers must admit it, that we have taken the original ideas from the other side and improved on them, and thus far we have beaten them on their own inventions. In the future the contests between the yachts of both nations promise to be more fierce than ever, because the fight is growing narrower, coming down, as it has, almost to a question of detail and handling.

"Nobody seems to want to try the American type of boat in its entirety, and this being so, an improved Fanny cannot be looked for next season. Messrs. Burgess and Gardner have orders for new boats, but they have but little in them of the American boat of ten years ago, and it is a fair statement to make under the circumstances that the Fanny type of boat has no great charms for them, and the present outlook is that for some years to come the principal elements of rig and construction of to-day will hold forth on both sides of the water."

We copy the above from the Boston *Herald*, a paper that, so far from any tendency toward Anglo-mania, has always been strongly American in the tone of its yachting department. In the fight which the FOREST AND STREAM has made for over ten years for better principles in design and higher ideals in racing, we have had to contend principally with the charge of a lack of patriotism in condemning much that was distinctively American and commending much that was of foreign origin. That we have been correct in the position taken in 1879 and since successfully held, is conceded by all well informed yachtsmen who recognize the vast superiority of the new fleet over the old: if there are any who still hold a contrary opinion, we commend to them the above statements from an authority whose pro-American leanings cannot be questioned.

It has been a misfortune to American yachting that when the question of the defects of the national type and improvements in yacht designing were first agitated the defenders of the old boats at once based their defense on political rather than technical grounds, obscuring for a long time the actual scientific issues by loud shouting of abusive epithets, and appeals to national prejudices and dislikes. On the other hand, the most promising feature of modern yachting is the liberality which prevails among designers and yachtsmen in regard to all technical matters, the old standard of American or British has passed away, and is replaced by one which recognizes the truths of science as cosmopolitan in the widest sense of the word, the chosen property of no one nation.

Yacht designing in America has touched three successive stages in the past ten years; in the first every feature of American origin was lauded in the highest, and all of foreign birth were condemned; in the second a large number of the latter, such as the lead keel, the deeper hull and the cutter rig, were engrafted on the American craft, and claimed as original inventions; in the third stage, on which we have just entered, all national barriers have disappeared, the details of design are accepted solely on their merits, and with due recognition of their origin. The first course was foolish, the second dishonest, the third is wise, fair and liberal, and should meet a fit reward in the shape of great improvements in the future.

There is nothing for an American to be ashamed of in the fact that American designers are working with British tools to-day in the effort to beat the fastest boats that can be turned out on the other side; on the contrary there is every reason to expect that, starting fairly to-day with the same problems before them, and the same means of solving them, the next five years will show the American designers as far ahead of the British as their fellow-craftsmen are in other branches of industrial progress.

CHART CORRECTIONS.—Notice is given of the discovery of a small ledge off Parsonage Point, in Long Island Sound, 900yds. S. W. ¾W. from Forbes Rock, with 8ft. of water over it and deep water on all sides. The 7ft. spot shown on the chart between Forbes Rock and Transport Rock has been changed to a 3ft. spot.

NEW YORK Y. R. A.

THE first meeting since the regatta of Sept. 1 was held by the New York Y. R. A. on Friday evening last at O'Neill's, Sixth avenue and Twenty-second street, New York. When the meeting was called to order by the president, Com. A. J. Prime, at 8 o'clock, delegates from twelve yacht clubs were present. The minutes of the previous meeting were read and approved. The secretary reported the receipt of various communications, including one from the Cedar Point Y. C. relative to their resignation, and a proposition for membership from the Essex Y. C., of Newark. The treasurer's report showed that the association had a balance a shade less than $500. The executive committee reported the election to membership of the Oceanic Y. C., of Jersey City, N. J.

The regatta committee reported at length on the recent regatta of the association and named the following as winners in their respective classes:

Class C, Dolphin, walkover; Class D, Avalon over Gertrude by 1m. 12^{1}_{2}s.; Class E, Mergus over Nimrod by 22^{2}_{10}s.; Class F, Fotsyth over Pavonia by 3m. 30^{3}_{10}s.; Class G, Christine No. 1 over Theresa by 1m. 20^{1}_{2}s.; Class I, Eagle Wing, Helen not finishing; Class 2, J. A. Cameron over Carrie B. by 27m. 55^{5}_{10}s.; Class 3, H. C. Miner over Leader by 8m. 5^{8}_{10}s.; Class 4, Edna over Lona by 2m. 35s.; Class 5, Ripple over May Bee by 47m. 17^{2}_{10}s.; Class 6, Norah L., Squall not finishing; Class 7, Nadeya over May F. by 38m. 4^{2}_{10}s.; Class 8, Undine over Onéita by 7m. 40^{2}_{10}s.; Class 9, BonTon over Rival by 11m. 50^{1}_{2}s.; Class 10, Gala Water, walkover.

The above were the winners as stated in the FOREST AND STREAM, with the exception of class G. Millie was named as a winner, but was disqualified on protest that she was an open boat. In class 2 the Our Own was named as a winner, but was disqualified for keeping to the westward of the Lower Hospital Island in returning. In class 3 Just Woke Up was named as a winner, but was disqualified because of not carrying a number.

In class 4 Henry Gray was named as a winner, but was disqualified for keeping to the westward of Bank Buoy 15 in going down, and the race was awarded to the Gardner design, Edna. This seems somewhat of a hardship, as Edna was beaten 1h. 1m. and 24s. elapsed and 59m. 39s. corrected time. The committee also reported a net profit of $56, with all expenses paid and 7 clubs yet to be heard from.

Mr. Chas. E. Cameron, the vice-president of the Association and a member of the Newark Y. C., made a long argument in favor of awarding the race prize to Just Woke Up, claiming that it was not within the province of the committee to reverse the decision of the judges, who, he said, instructed her captain to sail over the course without a number and her time would be taken. Mr. Cameron argued that if the rule regarding the carrying of numbers was enforced, why not enforce the rule relating to size, which requires that they shall be 18in. high. Mr. Cameron had a number that was used by a boat in the race, that he claimed was but 12in. high, which he offered as an exhibit.

It has been said that the Just Woke Up could not obtain her numbers from the stakeboat. As a matter of fact, the numbers were at the house of the Pavonia Y. C. from Saturday until early Monday morning, when they were put on board Com. Prime's schooner Edith that acted as stakeboat, and was anchored close to the starting line, where she remained until after the race. The signal to start for the class in which Just Woke Up sailed was not given until 12:22, the handicap time expiring at 12:32, and notwithstanding this late hour she was handicapped. Of seventy-two vessels that started she was the only one without a number. It was claimed that owing to her not carrying a number her class competitors did not know that she was in the race and took no account of her. The matter was referred to the executive committee by the regatta committee, we think, for final decision, after a vote of the sense of the meeting had upheld the committee's decision. The regatta committee's decision disqualifying the yacht under the circumstances was just, inasmuch as an association of the magnitude of this could not afford to establish such a precedent, as its success among yachtsmen will depend on the rules relating to racing being strictly enforced.

Richard V. Freeman, of the Hudson River Y. C., was elected a member of the executive committee in place of D. W. Kolm, Pavonia Y. C., resigned.

Rule 24 of the racing rules was amended by inserting 24 hours in place of 1 hour as the time after a race in which a protest can be made.

The resignation of the Cedar Point Y. C. was taken from the table and accepted.

The sum of $300 was appropriated for the purchase of prizes for the winners in the recent regatta; $50 was also appropriated to purchase medals for the winners of the 1889 race.

A vote of thanks was also tendered to Gov. Leon Abbett of New Jersey for his kindness in placing his steam yacht at the disposal of the president and judges.

A committee of three was appointed by the chair to consider the advisability of having an association banquet. The meeting then adjourned subject to call of the president.

THE NAUTICAL FAIR AT HALIFAX.

THE visit of the British squadron and of Prince George to Halifax has been celebrated by a nautical fair on quite a grand scale, the arrangements of the various booths being especially attractive. The principal ones were the cabin of the captain of the Canada, over the entrance to which were three trophies of sword bayonets, one large and two smaller. Everything was in ship-shape style. The roof had a slight slant to either side and the beams were supported by gold and crimson dragons. The mast, around which was a stack of arms, wheel and binnacle, faced the counter. On one side was the sideboard, and above, the ship's lights. The department was supplied with marble counters, over which the thirsty might purchase refreshing beverages of all kinds—temperate of course; adjoining was the admiral's cabin in H.M.S. Bellerophon. A gangway led to the upper deck, where were to be seen ship's lights and bell, binnacle and wheel, with a Gardiner gun mounted for action. The upper deck was built and furnished under the supervision of Quartermaster Bishop; the gentleman's Japanese ferry boat was a huge craft with a black, gold-striped hull and towering bow. Her cargo consisted of Japanese fans, parasols and other articles from the land of the Jap. At the north end of the building was the ship's saloon, extending across the floor. A refreshment table faced the opening, but entering the visitor found a perfect counterpart of the saloon of a large steamer. There were two large dining tables temptingly spread, and imitation windows, on which were painted marine views, as if seen from the distance. Lunch was served here, while in an apartment to the left were ice cream tables. To the right of the main entrance was a counterpart of "Mammy Tucker's" cottage, a rather famous hostelry at Bermuda. The design was very happily done. The cottage was white in color and cool and inviting looking. The adjacent grounds were covered with mosses and plants, inclosed by pretty lattice fences. One booth represented an old warehouse. The pier was built out in substantial-looking spiles, with green baize representing water beneath; the mooring posts with lines attached standing out prominently. In the rear were the warehouses—a fine representation of a granite building with arches. One section represented the bonded warehouse, in which was stored a choice stock of fancy and useful articles, which were removed to the pier as occasion required. Adjoining the piers was the "fish sale," with the circular stone lighthouse beyond, standing out boldly, and the lantern lighted by electricity. Inside, a young lady industriously attended to the patrons of the "post-office."

Other booths represented a brigantine iced up in the Arctic seas, a gondola, a chart room, the "Anchorage," a building constructed in imitation of white stone, with white shingled roof, with anchors and chains affixed to the front; the stern of the good ship Victoria, whose deck reached across the building, with portholes, masts, rail and real rigging, her name painted on the bow. In the rear was a marine view; on the deck minstrel and other performances were given by man-of-war sailors.

At the big ship's bow was a part of the ship Prince George, showing the rounded stern of the vessel, with wheel and binnacle.

The fair was opened on Oct. 1, in the presence of Admiral Watson and Prince George. The opening march was by a large party of young ladies in nautical costume, marching four abreast and executing many maneuvers.

CORINTHIAN MOSQUITO FLEET.—The following gentlemen have been proposed for membership: J. H. Sterling, F. M. Scott, J. N. Winslow, Chas. A. Stevenson, O. Adams. The fall regatta of the Corinthian Mosquito Fleet was sailed on Oct. 11 off Larchmont. The open race was won by Caro. The open boat race, sailed without rudders, was won by Fidget, sailed by Com. Thornton H. Smith.

A NEW BUILDING FIRM.—Mr. Arthur E. Payne, designer and builder of Decima, Lollypop, Hummiug Bird and many other fast yachts, has lately formed a partnership with Mr. Wm. Summers, of Day, Summers & Co., Northam, under the name of Summers & Payne. The old Payne yards at Belvidere and Millstone Point, will be improved, the buildings destroyed by fire last spring being rebuilt.

HAMILTON Y. C.—At the meeting of the Hamilton Y. C. on Oct. 7 with Vice-Com. Greening in the chair, the prizes won during the season were presented to the successful sailors as follows: White Wings' cup and flag—White Wings, Capt. Brierly. Monck cup and flag—Samoa, Capt. Jarvis. Marguerite cup and flag (for 30-footers)—Maud "B," Capt. Burnside. Dufferin medal and flag (for 25 footers)—Nadjy, Capt. Malcolmson. Championship flag for 35 and 40-footers)—Alert, Capt. Vallance. Championship flag (for 21-footers)—Eclipse, Capt. Dillon. Trotman anchor (for 30-footers)—Echo, Capt. Smith. Sweepstake prize and marine painting, presented by Mr. Wm. Bruce—Samoa—Capt. Jarvis. Messrs. Jarvis, J. F. Monck and Lee were appointed delegates to the annual meeting of the Lake Yacht Racing Association which is to be held in Toronto next month. On Oct. 4, the final race of the season was sailed, the times being:

	Start.	Finish.	Elapsed.	Corrected.
Samoa	2 30	4 51 20	2 21 20	2 16 39
Echo	2 30	4 53 00	2 23 00	2 18 05
Psyche	2 30	4 50 00	2 23 00	2 20 00
Coquette	2 30	not timed.		

CORINTHIAN NAVY.—The committee having the amendments to the constitution and by-laws in hand will report at a special meeting, which Com. Connolly has called for Nov. 7. Mr. Geo. D. Gideon, 17 North Seventh street, Philadelphia, has been authorized to organize the Delaware River Squadron. The Philadelphia small boat owners are coming in, and Mr. Gideon reports that 1891 will see a goodly-sized squadron in this vicinity. It is pretty positive that the navy will extend their limits to 25ft., and will make strong inducements to the owners of the racing twenties to come in and encourage them in their efforts. Proposed for membership, Geo. D. Gideon.

NEW YACHTS.—The only *bona fide* orders yet placed are those of Messrs. Belmont and Thayer for 46-footers, with the Lawley Co., and one for a keel cruiser, designed by Mr. H. J. Gielow for Mr. F. P. Ketchum, to be built by Wintringham. She will be 45ft. 6in. over all, 33ft. l.w.l., 12ft. beam and 6ft. 9in. draft. The contract is ready for a new Gardner cutter for the 25ft. corrected length class, and more of these boats are sure to be built; but there are no signs yet of a 90 or even a 70-footer about New York or Boston.

YACHT BUILDING IN BOSTON.—In a very short time the new corporation of Geo. Lawley & Son, which will succeed the firm of that name, will have in operation a complete plant for steel and composite construction, the present yard at South Boston being enlarged and remodelled. The new concern will have the best of modern appliances for ship building in wood or metal.

HAWES FUND SCHOOL OF DESIGNING.—The sixth season of the Hawes Fund School of Designing was opened on Oct. 6 in the Lincoln school house, Charleston. Prof. Frisbee is in charge, as usual, and there were many new applicants for admission.

MASSACHUSETTS Y. C.—On Oct. 1 the summer quarters of this club at Rowe's Wharf were closed, and the winter quarters, No. 90 Boyleston street, were opened for the winter season.

NORNA, schooner, has been sold by L. H. Smith to Mr. Coleman, who will fit her out at once for a cruise to the West Indies. Capt. Wm. Dennis will be in command.

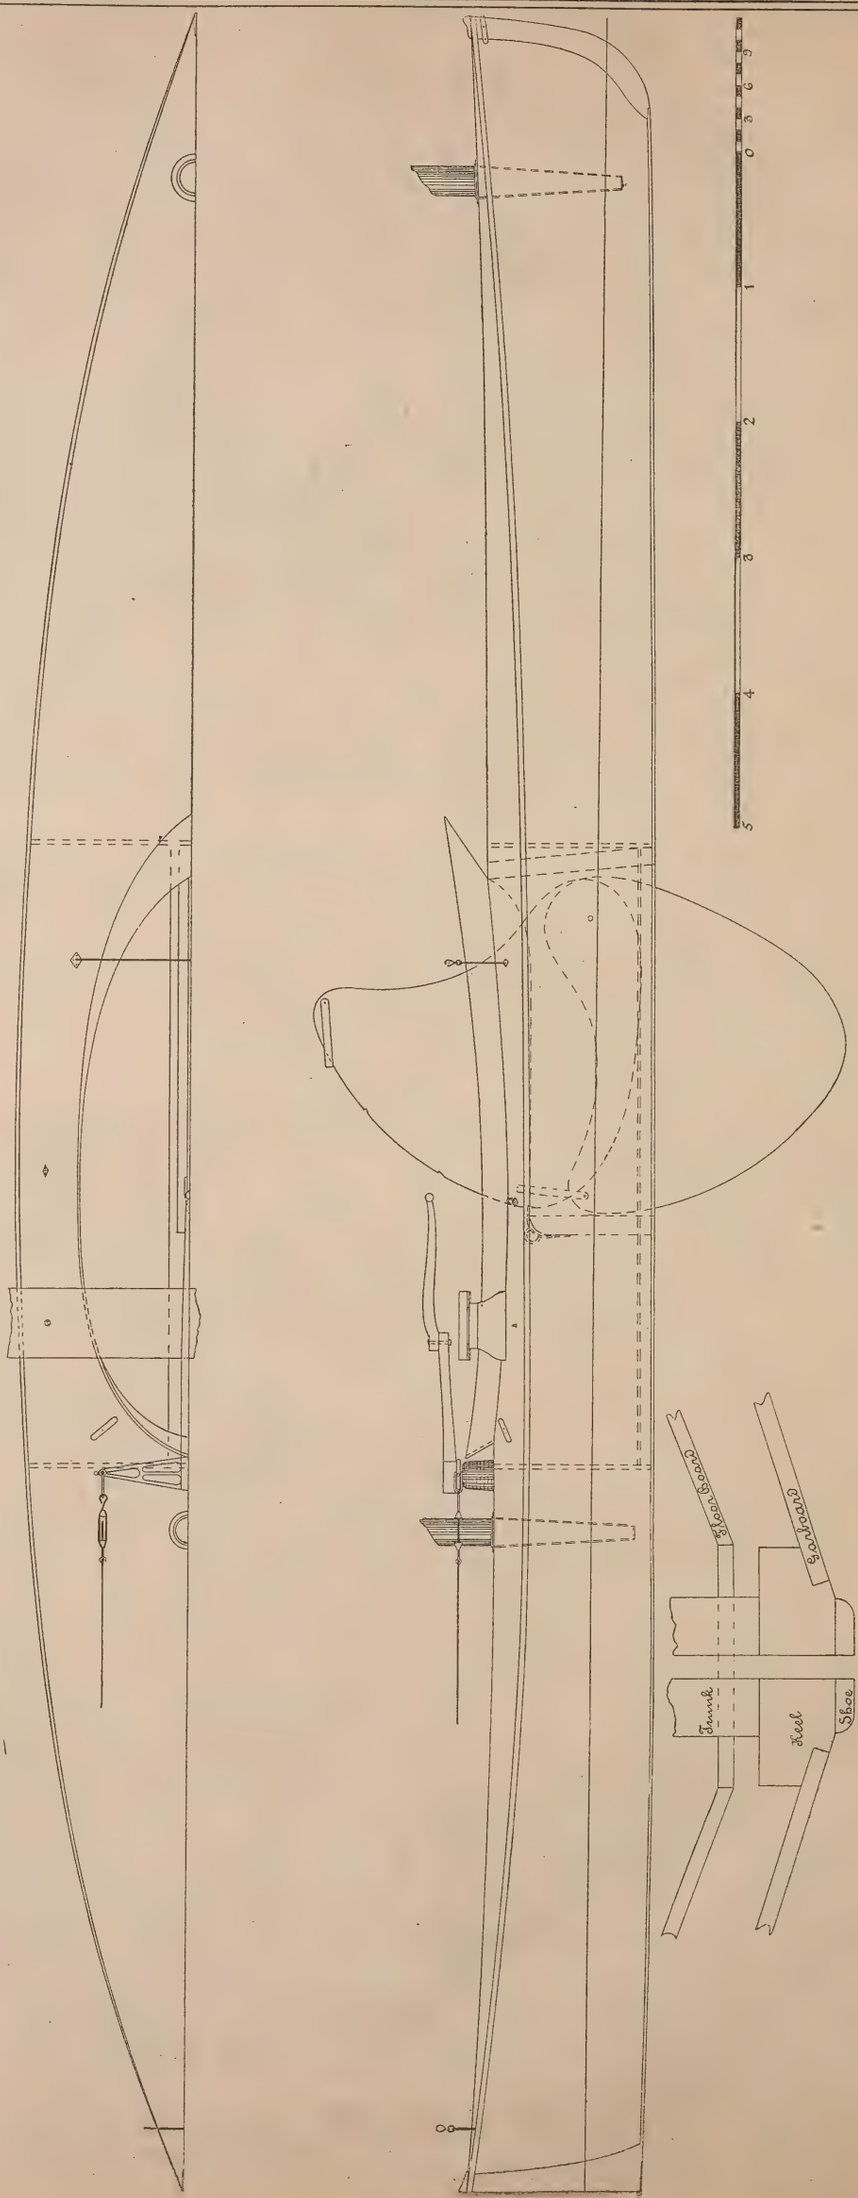
Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

CANUCK.

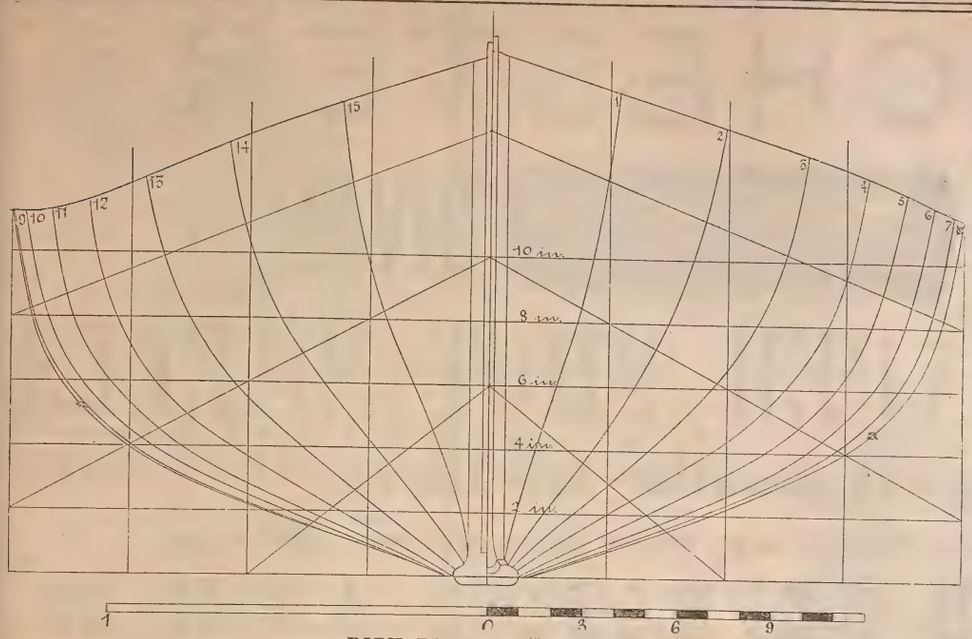
THE accompanying drawings show the arrangement and fittings of the canoe Canuck, whose lines appeared in the FOREST AND STREAM of Sept. 18, together with the dimensions, table of offsets, and enlarged body plan. The canoe is built with a smooth lap, the edges of each strake being tapered, the material being white cedar slightly over ¼in. thick; 6 strakes to a side. The ribs are of oak, ¾×⅝in., spaced 3½in. The keel is of hard pine, of the shape shown in the section, with a $^{5}/_{16}$in. oak shoe under it. It will be noticed that the rabbet is cut a little above the bottom of the keel, the outer line in the half breadth plan representing the half breadth of the bottom of keel, the inner line being the half breadth of the oak shoe. The rabbet is shown in the sheer plan as touching the bottom of keel in the middle of the boat, but it really is a trifle higher, as the large section shows. There is an inwale of pine, ¾×⅝in., and on each side of the well are 3 light pine knees. The canoe was not built for a deck seat, but this year Mr. Jones has used one in all his sailing. The centerboard trunk is very strong and heavy, being built of ⅞in. pine, the fore end carried up to the deck. The slot is ⅜in. wide, the board being ⅛in. thick, but a score is cut on the inside of the trunk to admit the iron handle of the board. The decks are of mahogany. The well has the ordinary pointed oak coaming.

The mast tubes are circular at the deck, 2¾ and 2⅜in. in diameter; but below deck they are square. Everything about the canoe is strong, though unnecessarily heavy in places, but in all her races at the meet and about New York she never broke down in hull, fittings or rig, a point of great advantage in racing. The centerboard is a steel saw-blade, cut to the peculiar dipper-shape shown and hung on a bolt, not being removed when the canoe is housed. On the after end of the trunk is a spring of flat steel, with a loop handle, the end of which engages in the notches shown in the board. When fully lowered the lifting handle drops into the trunk, leaving a loop on the end, by which it may be seized in raising.



Canuck is a very good example of the modern racing canoe, in which the portion of the boat originally used by the canoeist is given up entirely to the board, the well at the same time being greatly shortened. She has, it is true, a rather longer well than many of the racers, but when the deck seat is once bolted fast, as it must be for sailing, the well is made shorter by a foot, and for all purposes for which the boat is used the coaming might better stop at the foreside of the seat. The equipment of the canoe in racing includes a stout pair of paddles, stowed in the well, but they can only be reached by unshipping the deck seat, a matter of some difficulty.

The following calculations were made to the 5in. level line, parallel with the 4 and 6in. lines shown on the sheer and body plans; those marked *, however, were calculated from the actual loadline as measured afloat with crew on board, with a draft of 4¼in. forward and 5¾in. aft, above the base line shown in the sheer plan. The displacement to the 5in. level line, 327lbs., is hardly enough, but the increased immersion aft, as shown by the actual trim, would make up the difference.



This matter, of the actual draft of racing canoes, is one that in spite of its importance has received but little attention, and though the lines of all the leading canoes have been published at one time or another, but little data is available regarding the actual draft, displacement, and center of lateral resistance. Every canoe before she is taken from the stocks should have at least one distinct mark on stem and sternpost by which her draft at any time may be ascertained. In nearly all canoes for many years the rabbet line amidships has been practically parallel to the load line, and it is usually taken as the base line in the design, so that all measurements may for the sake of uniformity be made from the rabbet line. Permanent marks should be placed on stem and sternpost at 3, 4 and 5in. above this base line, then when the canoe is in racing trim her actual draft may be quickly read off. In connection with this the spirit level used a few years since is a good thing, only it should now be placed in a more convenient place than the bottom of the canoe, as on deck or on the side of the trunk. When the canoe is completed this level should be adjusted to show the designed trim, then when the proper trim is found after some sailing a mark can be made on the level for a permanent guide. It very frequently happens that a canoe goes off her trim in a race, from leakage forward or aft or some similar cause, without the crew being aware of the trouble for some time, but a glance at the level now and again will serve not only to call attention to the trim but as a means of keeping it right.

It would be very interesting if the owners of some of the fast canoes would make a few experiments with their boats by measuring the exact draft at each end when in the best sailing trim, and then measuring the exposed area of board and rudder, from which the center of lateral resistance can be calculated, and also the exact sail plan, so as to obtain the center of effort. Of course every canoe undergoes constant changes of canvas and trim in racing one day or another, but the measurements should be taken as she does her best sailing in a good working breeze.

Some years since, when canoes ranged in length from 14 to 16ft., with comparatively few of the longer, we adopted a plan of making all designs to a uniform length of 15ft., the length of the majority, and we have since published a number of designs of this size, in

CANOE "CANUCK."—OWNED BY MR. FORD JONES.

BODY PLAN OF "CANUCK."

most cases giving the full offsets for building to 16ft. as well as 15. The canoes of to-day, however, are all of one length, 16ft., and it is highly improbable that this length will be departed from, as there is no reason for building a racing canoe shorter than the rule, and no prospect of the rule being changed to admit a longer canoe. Such being the case we have made the accompanying drawings of the actual length of the boat, 16ft. The breadth shown in the drawings, 30in., is a little greater than the actual width, the canoe measuring at midships 29⅝in. The sail plan and details of seat and rudder will appear shortly.

THE PADDLING CHAMPIONSHIP.

THE proposed race between Messrs. Mackendrick and Johnston has come to an untimely and most unsatisfactory end, as the following correspondence, from the Toronto *Mail*, shows:

Editor Mail:

I do not like to again trouble you about the race which I have tried to arrange with Mr. Johnston, but in justice to myself I will answer his letter. Mr. Johnston says I have never met any fast men. Well! I do not know what that has to do with the case even were it true, though I went to Montreal and New York this year to meet the best men I could run across. Mr. Johnston wants to know why I did not meet him last year at the Thousand Islands if I wanted a race. This is unkind, to say the least, as he is well aware that I purchased a canoe especially for those events when I unfortunately sprained my ankle and was so prevented from taking part in the leading events.

Mr. Johnston says in one of his letters that he expected to be met in a more friendly and fraternal spirit. Well, I'd like to know what he wanted. He at first said the time was too short, and I extended it nine days, i. e., till the 27th. inst., then he said he would like to go into a bicycle race on that date, and would like the race to come off two or three days before the 27th. I then proposed the 24th, and he made no objections to that date, and did not propose any other. I made all arrangements accordingly. Again he wrote saying that he did not think he would go into the bicycle race, and asked to have the canoe race on the 27th, or later, but as I had made all arrangements for the 24th I objected to be made a weather cock of, and refused to paddle on any later date than the 24th, and he refused to paddle on that date.

Mr. Johnston made considerable of the point that I wished to race him in my own town and on my own course, as I did, wishing to let my Galt friends see a good fast contest. If Mr. Johnston really wants to race I will now offer to paddle him over his own course any time within the next two weeks, either half a mile or a mile, with either single or double blades, either for a trophy or for nothing, and will do any other reasonable thing to meet his wishes that he may desire. The only stipulation I will ask is that whatever he wishes to do he must put it in writing, so that I may not be bamboozled as I was at Galt by having a course surveyed, etc.

Hoping to hear from him at an early date, beg to sign myself,
Yours, etc. H. F. MACKENDRICK.

TORONTO, Oct. 1.

Editor Mail:

Mr. Mackendrick has, through your columns, at last made me a very fair and reasonable offer, namely, to paddle on my own course any time within two weeks, but I regret to say that I cannot accept this offer because I am away from Toronto on business, and do not know when I will see Toronto again. I do no expect to be in Toronto for two or three weeks, except perhaps for a day or so. Up to the 1st of October Mr. Mackendrick persistently refused to race on any other date than the 24th, and in consequence of his refusal I stopped training and came to the conclusion our race was off. Mr. Mackendrick says it was unkind of me to ask why he did not race me at Stave Island last year. I understood he had purchased a racing canoe especially for the race. I was told he was "laying for me," and I thought I had a right to refer to the fact that he was at the meet, taking part in other paddling races, and did not compete in the championship race. It is true I heard that he had sprained his ankle, but I thought when he disregarded his sore ankle and competed in other paddling races that he might have forgotten the sprained ankle when the championship race was called. I would not have referred to the matter at all had not Mr. Mackendrick suggested that I wished to shirk the race with him.

Mr. Mackendrick does not see why I should have referred to the fact that he had never competed with any fast men, and thinks it has nothing to do with the matter. Well, I simply referred to it when commenting on the nerve of Mr. Mackendrick issuing his famous challenge to all the world on the strength of his winning one race. There is no doubt, I think, Mr. Mackendrick can drive a canoe along at great speed, especially with a single blade, but he might have issued the challenge earlier in the season and given the boys a chance to compete against him. It is to be hoped that Mr. Mackendrick will change his mind about his retirement and come out next season, as there are several paddlers beside myself who will dispute his right to the championship of the world, and who would like at least to have a chance to compete with him. Yours, etc. M. F. JOHNSTON.

GODERICH, Oct. 6.

CAMPING AT THE MEETS.

THE officers of the Central Division have taken up a subject that is of the greatest importance to every man who attends the meets, and have just sent out the following circular, which explains itself. We hope that the replies will be sufficiently numerous to give evidence of a general interest in the matter, and that they will aid future committees in making better arrangements for meals and supplies:

Dear Sir: For the purpose of investigating how canoeing has progressed for the past five years, we have sent you the following circular letter, which we have addressed to all canoeists known to us to have been present at the 1884, 1885 meets, and which we desire you, in the interest of canoeing and of the American Canoe Association, to answer. The substance of the answers received will be published in the FOREST AND STREAM, or *Sail and Paddle*, unless a request by you is made to the contrary. Very truly yours, EDWIN L. FRENCH, JAMES K. BAKEWELL.

"*My Dear Sir:* Will you please describe the amount of camping outfit you took to the first and last meets which you attended, enumerating the articles, if any, added to or subtracted from your outfit between these times, also stating your reasons for so doing."

224 JERSEY STREET, BUFFALO, N. Y., Sept. 27.

THE BRITISH C. A. MEET.—From a rather brief account of the third annual meet of the British Canoe Association at Falmouth, in the October issue of the *Model Yachtsman and Canoeist*, the first "salt water meet," by the way, there seems to have been very little of the true canoe meet such as has proved so successful in America. There were few canoes and little racing, the canoe yawls being of more prominence than the regular canoes. The entertainments included a concert, a four-in-hand excursion, a cricket match, a visit to the training ship Ganges, and expeditions to view the maneuvers of the naval fleet off Falmouth. The distinctive features of an American canoe camp were missing, and the affair appears to have been a remarkably pleasant picnic or camping with little canoeing to it. The officers elected were: Com., John McGregor; Vice-Com., H. Wilmer; Rear-Com., J. D. Hayward; Secty-Treas., Percy Nisbet. Two new divisions were established at Oxford and Cambridge. The report was so carefully worded this year as to give no offense to the most sensitive and delicate canoe owners.

HOLYOKE C. C.—This club held its fall regatta on Oct. 11, the events being as follows: 100yds. paddle, Judd, Towne and Hodgdon starters, won by Hodgdon; 100yds. standing paddle, Selden, Judd and Parsons starters, won by Selden: sailing race, 2 miles, W. Lamb, Metcalf, Schuester and Ladd starters, won by Metcalf: ½ mile tandem, Parsons and Hodgdon, Metcalf and Selden, Louis and W. Lamb starter, won by Hodgdon and Parsons; hurry-scurry race, Morrow, Heywood, Syms and Judd starters, won by Morrow; ½ mile paddle race, for championship of Holyoke, Selden Metcalf and Towne starters, won by Metcalf.

CHANGE OF ADDRESS.—Vice-Com.-elect of the Eastern Division Mr. J. W. Cartwright, Jr., has changed his address to 611 Washington street, Boston.

A. C. A. MEMBERSHIP.—Atlantic Division: Frank W. Crane, New York.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

C. E. C., East Smithfield.—Nitrate of mercury is used in percussion caps and is secured by a gum or shellac.

M. S., Albany.—The report of falconry in the Catskills has decidedly the character of a newspaper "fake."

W. M. H., Newport, R. I.—Will you please furnish me the address of some good, reliable breeder of bloodhounds, one that you know and can recommend? I wish to get one as soon as possible, already trained. Ans. You cannot do better than write to Mr. Winchell, Fair Haven, Vt., whose advertisement you will find in another column.

F. H. B., Baltimore, Md.—Killarney II., whelped April, 1883, Breeder, R. G. Taylor, Baltimore, Md. Sire Shomberg's Hela, by Echo out of Lady Palmerstone. Dam, Killarney, by Rufus II. (Von Culin's St. Patrick II.—Moll) out of Von Culin's Moll II. by Rufus out of Friend. There is not a Duke or Connaught, of the breeding you give, either in A.K.R. or A.K.C.S.B.

W. J. S., New York.—In two townships in this State a law has been passed prohibiting the shooting of ruffed grouse over dogs for a period of three years. Kindly tell me if the above would apply to a person shooting on his own property in said townships. The law was made to keep the market-shooters away. Ans. While the spirit of this particular law would not prohibit shooting on one's land, it is a rule that game laws apply to game on one's own property as well as to other game; and under the law named you cannot shoot with a dog at all.

AUSTIN, Ill.—1. I am an amateur hunter on a small scale. I wish to purchase a dog that will hunt for chickens or take to water after ducks. I am told a cocker is the best, but they seem too small to me to stand the work. I wish your advice. I would prefer a cocker as they are such nice dogs in the house, but don't want one if he cannot hunt. 2. Also give proper proportions of powder and size of shot with proportion, for No. 12 gun. Ans. 1. You would find a Clumber or field spaniel the best for your purpose. You will obtain just the information you want in "The Spaniel and its Training," published by us. 2. See our book "611 Hints."

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.
BY G. TRUMBULL.

Contains the local names in popular use, and eighty-nine illustrations, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

To all dwellers by the water and in the country and especially all who shoot, the book will supply a great need, and every one who is interested in birds will be interested in it.—*Boston Evening Traveller.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

There is a delightful dearth of dead languages in this book. The sportsman who looks between the covers for a description of some game bird—a description which will enable him to identify the creature should he meet it in the woods or on the water—is not compelled to shut the book, drop a bad word or two upon it and go in search of some Greek and Latin dictionaries to find out what the description means.—*New York Herald.*

WILD INDIAN LIFE.

PAWNEE
HERO STORIES AND FOLK-TALES.
With Notes on the Origin, Customs and Character of the Pawnee People.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages. Illustrated. Price $2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parellel to the East Indian mango feat. . . . Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—*N. Y. Tribune.*

LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

YACHTS, BOATS
AND
CANOES,
WITH SPECIAL CHAPTERS ON MODEL YACHTS AND SINGLEHANDED SAILING.
BY
C. STANSFELD-HICKS.
AUTHOR OF "OUR BOYS, AND WHAT TO DO WITH THEM."
NUMEROUS ILLUSTRATIONS AND DIAGRAMS
AND
WORKING DRAWINGS OF MODEL YACHTS AND VARIOUS SMALL CRAFT SUITABLE FOR AMATEURS.

DESIGNS:

Model Yachts.—Defiance, Isolde, Bonny Jean, and 10-tonner with sail plan.
Canoes.—Birch, Mersey Paddling Canoe, L'Hirondelle, Sailing Canoe.
Sailing Boats and Yachts.—Dabchick, Wideawake, Myosotis, Una, Singlehander by C. P Clayton, Puffin, 3-ton Racer, 3-ton Cruiser, 24ft. Auxilliary (steam and sail) fishing boat.

This volume contains much that is valuable and interesting to American yachtsmen and canoeists. The design, construction and use of small craft of all kinds is treated of in a simple and entertaining style, and the instructions are clear and easily understood.
Large crown 8vo., 380 pages and 16 large folding plates.

ANSWERS TO CORRESPONDENTS.

A NAME ON A POSTAL.

If you have a friend, who might be interested in the FOREST AND STREAM, but does not know the paper, send us his address on a postal card. It will be esteemed a favor by us; and it may be so regarded by him.

SUSQUEHANNA RIVER POLLUTION.

UNDER this heading will be found in this issue a brief letter from a Pennsylvania correspondent relative to the scarcity of black bass and wall-eyed pike at Bainbridge, Pa., once a famous locality for both of these introduced game fishes. Mr. Bare attributes the present dearth of fishes to freshets and to pollution by mine water and mill refuse. It seems hardly possible that mine water could affect the Susquehanna at a distance so remote from the coal region, and yet Mr. Bare is a veteran fisherman, celebrated for his skill and acute observation, and his statement must be received with the respect due to one of his experience. The conditions were generally unfavorable for fishing during the past season. Freshets played sad havoc with the fish in many eastern streams, notably the Potomac and the Susquehanna, and unfortunately their injury was most grievous during the spawning season, so that the effect is likely to be felt even more keenly in the near future. The theory of injury from mine water is somewhat of a surprise to us. We were aware that many of the trout streams of northern Pennsylvania have been practically depopulated through this agency, but had never heard the scarcity of black bass in the lower Susquehanna accounted for in this manner, and we cannot tell how far the opinion may be justified by thorough investigation. The harmonizing of conflicting interests in our water courses is becoming a matter of extreme importance, and is attended with serious difficulty. The mill refuse must be disposed of, and can be conveniently floated off in our streams, while its disposition in any other way may involve considerable expense and loss of time. The mill owner will adopt the most expeditious method without regard to any other interests than his own, and he will be kept in check only by a determined public opinion expressed in protective laws. In many portions of our country this struggle between opposing interests is in progress, and the result is not always gratifying to the long-suffering public, but we look forward hopefully to the time when the pollution of streams and the consequent destruction of fish will be finally unknown except as an unpleasant memory.

LAWS FOR THE BENEFIT OF THE LAWLESS.

THE charge to the jury by Chief Justice Peters in the Maine case of State vs. Darling, published in full in the first number of the *Book of the Game Laws*, is an admirable exposition of some of the relations sustained by the game laws to the public and to the public interests. No portion of the document is more suggestive than that paragraph wherein it is pointed out that if the game laws are broken with impunity they become in effect statutes for the express benefit of those who violate them. "The great majority of persons, all good people," says Justice Peters, "will observe these laws, and if the violators of the laws are not to be punished they would be supported in their violation of the laws and it would be a law really for the benefit of law breakers rather than for law observers; because, while the great majority of the people are obeying the law, the few who are not obeying it, if not punished for their violations, are benefited, as they can more readily capture the game when the great majority are not attempting to capture it. It is the bounden duty of all to obey the laws."

The truth of this observation is abundantly illustrated in actual experience, not only with respect to deer hunting but shooting in general and fishing as well. How many a patient, self-respecting and conscientious sportsman has waited until the opening of the season on trout or quail or woodcock, to go out at last only to discover that long before the opening day the streams and covers had been robbed by the close-time fishermen and gunners.

It is a common experience, particularly in the prairie chicken States, that if a man waits for the season to open he must do so with a full knowledge that others less conscientious—or rather, absolutely without any conscientiousness or squeamishness whatever—are anticipating him and industriously gathering in the birds. He must wait—if wait at all—knowing as an assured fact that when opening day shall come and he goes into the field it will be to barren grounds. To such an extent, indeed, is illegal shooting, before the season opens, carried on in some sections, that many gunners, who would cheerfully obey the law if it did not mean being robbed, join with the rest in premature slaughter and go in for what there is, when they can get it, "now or never." Those who break the law have all the fun and all the birds; he who obeys it is cheated out of everything but the privilege of lugging a gun over barren fields. The law in such cases is altogether for the benefit of those who violate it, and to the serious disadvantage of those who observe it.

Now, if a given law prescribing open and close seasons is based on common sense, and if its enforcement would result in best preserving the game supply for the benefit of all, manifestly this joining in with the lawless shooters in killing game in close season is not the part that a self-respecting sportsman would most cheerfully take. But where the conditions of prevailing disregard for the law are such that there remains no choice save only of illegal shooting or no shooting whatever, human nature will hardly be proof against the temptation. The same principle governs in other fields; the common plea, "if I don't, somebody else will," is potent to justify numberless illegal and even immoral actions and practices. The average every-day American sportsman of this generation is made up of about the same clay as the average every-day man who does not happen to share his tastes, and no matter how high may be the rule of conduct prescribed for him to adopt theoretically, in actual practice he is influenced by the considerations which control human nature in general. We may lay it down as a lofty principle for him to follow, that if he cannot have lawful sport he must go without any; but while the average man may applaud such a sentiment he goes in for the sport.

And yet we are hoping for a time and for conditions—and not only hoping for them but working toward them—when public sentiment will be strong enough to suppress the illegal sport of those who would defy the game and fish laws; and when that time comes, the laws will be, as they are designed to be, for the good of all, and not for the benefit of the lawless at the expense of the decent portion of the community.

THE RELUCTANT CAMP-FIRE.

THE depressing opposite of the fire that is the warm heart of the camp is the pile of green or rain-soaked fuel, that in spite of all coaxing and nursing, refuses to yield a cheerful flame. Shavings from the resin-embalmed heart of a dead pine and scrolls of birch bark fail to enkindle it to more than flicker and smoke, while the wet and hungry campers brood forlornly over the cheerless center of their temporary home, with watery eyes and souls growing sick of camp life.

Night is falling and the shadows of the woods thicken into solid gloom, that teems with mysterious horrors, which stretch their intangible claws through the darkness to chill the backs of the timid with an icy touch, and the silence is terrible with unuttered howlings of imaginary beasts.

Each one is ready to blame the other for the common discomfort, and all the high priest, who so far fails to kindle the altar fire. He is an impostor who should be smothered in the reek of his own failure.

Yet, as the group regard him with unkind glances and mutterings of disapproval, he perseveres, feeding the faint flame with choice morsels of fat wood and nursing it with his breath, his bent face and puffed cheeks now a little lightened, now fading into gloom, till suddenly the sullenness of the reluctant fuel is overcome, wings of flame flutter up the column of smoke, and the black pile leaps into a lurid tower of light, from whose peak a white banner of smoke flaunts upward, saluted by the waving boughs that it streams among.

Tent and shanty, familiar trees and moving figures with their circle of grotesque, dancing shadows, spring into sudden existence out of the blank darkness.

The magic touch of the firelight dispels every sullen look, warms every heart to genial comradeship; jokes flash back and forth as merrily as the sparks fly upward, and the camp pulses again with reawakened cheerful life.

Verily, fire worketh wonders in divers ways.

THE GREEN MOUNTAIN STATE.

VERMONT has made notable advances in respect to her game and fish interests, and the report of Commissioners Brainerd and Allerton, just sent to the Legislature, is full of encouragement. There is a general growth of public respect for the fish and game laws, say the authors of the report, due mainly to a better understanding of their purpose and meaning, and to an appreciation of the good results which follow their working. This is shown by the fact that, although owing to restocking and protection, the fish supply of the State has been largely increased, and temptations to unlawful fishing in a corresponding degree multiplied, the complaints of infractions are steadily growing less. Fishing is better than formerly, and the people of Vermont are beginning to reap appreciable profits from sportsmen-tourists who visit their State.

The Commissioners do well to urge this economic view; it is an appeal to Yankee thrift; and Yankee thrift is a powerful factor when once enlisted in any cause. The sooner Vermont, and for that matter every other New England State and all States which can offer attractions for shooters and anglers, shall appreciate at its true importance the money value of game and fish protection, and do away with the silly notion that it is prudence to exterminate natural sources of profit, the sooner we shall have substantial backing for protective systems.

The Commissioners strongly urge that the State should be provided with a hatchery for trout and other fish. Under present conditions it is not practicable to meet all the growing demands for brook and lake trout and landlocked salmon. By the provision of a suitable hatching establishment the output could readily be made to fill all requirements, and at reduced expenses. The anglers of the State, and others who visit Vermont for the fishing, are organizing a movement to supplement this recommendation of the Commissioners by a further appeal to the Legislature; and there is little doubt that Vermont will shortly be as well equipped as are her sister States in this respect.

The Sportsman Tourist.

BY UTAH LAKE.

THE first article that I sent FOREST AND STREAM was written in Utah and ever since that time I have been partial to the Land of the Saints. So here I am once more, though in another and far more beautiful portion of the Territory. If my preface sounds like the advertisement of a real estate agent it is due simply to the surroundings. I have no land to sell, but wish that I could buy all within the range of vision.

Provo lies almost 50 miles south of Salt Lake City, in the most beautiful valley imaginable. Surrounding it are rich farms, hedged with stately Lombardy poplars, green and purple with the leaf and bloom of the third crop of alfalfa. About the neat farmhouses are orchards, where a wealth of apples, pears and plums is going to waste, and there are vineyards in full bearing. Three miles west of the town is Utah Lake, a body of fresh water 40 miles long by 12 wide, abounding in trout and a fish that is here called herring, which resembles a huge Eastern dace, and there are also carp and shad, which have been introduced and are now abundant. Across the lake are purple mountains, rich in gold, silver and iron, if mining camps are any indication.

Half a mile to the east the Wasatch range rises to a height of 10,000ft., or 5,500ft. above the waters that nestle at its feet. Clear to the top the mountains are a mass of crimson, scarlet, flame and gold, the autumnal foliage forming a glorious contrast to the somber green of the conifers. Through walls of rock crystal streams have channeled their way and rugged cañons lead to the upland wilderness. Among the clouds that rest upon the higher peaks are sheep camps and here, almost in our sight, deer are browsing. Bears, too, are in the immediate neighborhood, though I have not yet had the pleasure of seeing any. Elk are 50 miles away. That is not far for this country.

Provo River is the largest of the streams that bursts through the mountain fastnesses. As a trout creek it is seldom equaled and rarely surpassed. The water is now low and clear. Last Sunday morning I saw a boy with a string of thirty trout that he had caught within two miles of town. They would average more than half a pound each, and he claimed to have caught them with a fly. I doubted his statement at the time and doubt it still. Bridal Veil Falls, eight miles up the river, is one of the most beautiful sheets of spray in the land, and the scenery of this cañon is alone worth a trip half across the continent.

But the crowning sport of this season is the duck shooting. It surpasses even Brother Leffingwell's famous ducking grounds on the Mississippi, or those wondrous club preserves of which Mr. Hough is constantly telling us. Ah, me! I don't know why these vagrants of air and water cross the desolate mountains to seek this lovely spot, but they probably know their own business. Utah Lake is shallow and its borders are vast beds of cattails and rushes. The impetuous mountain torrents as they approach it forget to hurry. They broaden and are filled with algæ, duckweed and the vegetation upon which ducks thrive, and here are also any quantity of succulent little frogs, snails and minnows. What more could they ask? It is too early now for the best shooting. Canvasbacks have not begun to arrive, but every evening and early morning the bends of the lake are black with teal and green-headed mallards, with a sprinkling of redheads. The moon is near its full and our evening programme admits of no change.

About four o'clock we get into our hunting clothes, fill the pockets with shells, incumber ourselves with hip-boots and stride down the main street. A mile walk brings us to the town pasture, with its mud-holes, where killdeer and jacksnipe peep and whistle. At its further side are the rushes, and here we find two float-bottomed scows awaiting us. These boats seem to be public property. First come, first served, is the rule. There are no retrievers in this section, and so the scows are a necessity. Night before last three of us came down and found the boats gone. We dropped four teal, that fell in the water where they could not be reached, and then we gave it up in disgust. But on all ordinary occasions the craft are obtainable, and we paddle out a mile or so to a large sedge island where the scow is soon concealed amid the rushes. The other boat goes a mile to the east and moors at the mouth of Spring Creek, the best feeding ground on the lake. We have time for a solitary smoke before the ducks begin to fly, and here is the place to remark that decoys are absolutely unknown here. There is no need for them and the local sportsmen are not acquainted with their use. It seems to me that if they were used there would be no end of killing. But all good things will come in time.

A peep from the natural blind shows inverted peaks reflected from every side in the blue water. Across the lake the sun is touching the Tuitic hills. Over the watery path by which we came a flock of teal is swiftly circling, and just out of range a great flock of green-headed mallards is enjoying itself.

Bang! The ball has commenced at the mouth of Spring Creek. Lie low. There is but one way for the birds to fly, and experience has taught that they will strike the water close beside us and right in the midst of the patch of lemna and utricularia. Here they come, swifter than the wind. Out a little too far for a sure shot they pass, but they circle in. Now they are only 30yds. away, and dropping. First barrel, second barrel; in with two more shells, and the dose of shot is repeated before they are gone. Two dead teal and one cripple are on the water. A long shot saves the latter, and there are no living ducks within half a mile. Even the distant mallards have gone. The first impulse is to push out the boat, but before the idea is fairly formed there are more shots from Spring Creek, and another pair comes by, but they refuse to drop in answer to our salutation. It is now time to gather in the dead. This done, we are ready for another flight. The wait is not long. As twilight falls and the wind arises there is a constant whistle of wings, and as the moon comes out bright and clear the mallards get in their work. By 7 o'clock we have all we can carry, and we slowly wander back to town to a late supper, making glad the heart of the landlady with the thought that she will not have to provide beef for to-morrow's dinner. Great quantities of ducks are shot every evening for the Salt Lake market, but the supply does not diminish nor do the birds become more shy.

Now, if this little account of Utah Lake and its surroundings is painted in more glowing terms than I am wont to use, I can excuse myself only in the words of a Mormon bishop, a native of England, who, when asked to give some good reason for the youthful marriages that prevail in this Territory, said, "Hit's not the boys, ye know, and hit's not the girls, ye know; hit's the bloomin' hamorous hatmosphere." SHOSHONE.

PROVO, Utah, Sept. 25.

MOOSE RIVER AND THE WEST BRANCH.

VII.

THAT afternoon we loaded our dunnage once more in the wagon with the intention of reaching Moose River village, thirty miles distant, that night. "Can we get there before dark?" we asked the driver.

"Wal, that ere road ain't no trottin' park. It comes pretty nigh being up hill both ways, but I reckon we'll git there," was his non-committal answer. We rumbled through the covered bridge over the East Branch, and were soon on the bank of Dead River, which we followed for perhaps a mile before turning to the north. Dead River is not, as might be inferred from the name, a stream of still, "dead" water. On the contrary, it is shallow and quick, and was called the River of the Dead in commemoration of the men of Arnold's expedition who perished by it.

What an indomitable spirit must have been that of a man who would conduct an army through such a howling wilderness as this region was in Arnold's time. There was always a tradition that one of Arnold's officers was buried in a boat at a certain place, and a few years ago an excavation was made. The body of the unknown hero was found reposing in the bow of a batteau, and was left undisturbed.

A log cabin with its rough exterior partially hidden by vines evidently trained by a woman's hand, is the last habitation seen as one goes up Dead River. After photographing it, we commenced the ascent of a high hill, up which we could see the serpentine windings of the road. As we ascended from the valley, peak after peak of the mountain range beyond the Kennebec rose slowly from behind the intervening hills, Mosquito and Moxie mountains standing out prominently, while others, many of them nameless, notched the sky line as far as we could see, till they faded away into the blue suggestions of mountains, almost indistinguishable from the blue sky above them. All were clothed with the endless forest, and across their green slopes drifted the shadows of the clouds. We passed two log houses standing amid fire-blackened stumps, and then for ten miles rode through woods where the only sign of man was the road. The horses were attacked by swarms of moose flies, and their sides were covered with bunches where they had previously been bitten. This fly is a large brown insect, the size of a honey bee, and though it rarely attacks man, its bite is very poisonous to animals. Fifteen miles from the Forks we halted at Parlin Pond, where there is a large clearing and a tavern. The house stands a quarter of a mile from the pond, which may be seen across a hay field, lying under a mountain which rises beyond it. We received a cordial and noisy welcome in rich Irish brogue from an ancient Hibernian gentleman, whose attention was immediately drawn to our corduroys. "The loikes o' thim I haven't set me eyes on since I left the old sod, forty years ago," said he, and we entered in on his good graces at once. We baited the horses and resumed our way.

We passed Parlin Pond Stream and entered on a tract of country miles in extent, where both fire and flood had ravaged the land till it was the scene of the wildest desolation. Down in the valley and far up the mountain sides in every direction was the dead forest. In the valley the white, bleaching skeletons of trees destroyed by water were reflected in black, stagnant pools. On the mountain slopes the charred trunks of trees killed by fire stood out grim against the grayscarred rocks. Many were strewn about in inextricable chaos where they had fallen, while others, still standing, stretched out their gaunt, broken branches as if in supplication. Here and there one, by some miracle, had escaped, and the ledges which had been laid bare by the raging element had their nakedness partly clothed by the weeds which were springing up among the fallen monarchs. It was a ghastly sight to look upon as we saw it in the waning light of the afternoon. At the top of a hill beyond the burnt tract was a house, standing lonely and deserted.

The farm itself was fast going back to a state of nature, and indeed, the majority of the few clearings we passed had been abandoned, and the houses left to decay. We sat on the doorstep of the old house, and, as we gazed at the immense panorama of rolling country, we wondered whose feet had worn the stone, and whose hands had wrested those fields from the wilderness. An immense amount of toil had been expended, for one large field had been cleared of stumps; but the owner had given up the unequal struggle with nature and she was fast taking her own to herself again. What a fight does the pioneer have with the implacable and unyielding forces of nature, and what a price must he pay in the sweat of his brow for all he gains! These people had worked hard to make a home; the house had been a good one in its day, and by the door were traces of an attempt at a flower bed. Did the man who built it bring his young wife there, and did she try to brighten the isolation of her life with a few blossoms? Had there been children born there, whose first sight of the world was the surrounding mountains and forest? Where had they gone; were they dead, or were the fighting the battle of life somewhere where the odds were not so great? Such were the questions that we asked ourselves; but the old house kept its secrets, and the tall grass swayed in the wind, and crickets chirped merrily, as if life were all sunshine, and struggle and hardship things unknown. Whoever chose this site had an eye for the picturesque, for the outlook was grand; but it must have been a terribly bleak and desolate place when the snow covered the ground and the winter winds howled through the mountain gorges. As the sun sunk low on the western horizon we crossed a mountain known as Owl's Head, far below us the island-dotted expanse of Atteau Pond reflecting the glow of the sunset. Beyond it was Wood Pond, and we knew that a few miles more would bring us to our journey's end. It was down hill all the way from Owl's Head, and after the hard up-hill pulls in the heat of the afternoon we enjoyed the descending grade as we hurried on in the cool of the twilight.

In the woods it was already dark, but daylight still lingered in the open. A fox ran across the road and the nighthawks were screaming overhead. Some horses in a pasture gave proof that we were approaching the settlements, and before nine o'clock we drew up at the door of the tavern in the little frontier village of Moose River, almost up to the Canada line. Our journey by road and wagon was ended; now for the river and the canoes.

VIII.

In the morning we looked out on a dismal, bedraggled landscape; rain was falling from the dull, leaden sky, and Moose River village had a most woebegone and forsaken appearance. Its one street, along which the houses are scattered in a haphazard fashion, crosses the bridge a short distance from the hotel, and once out of town is again the Canada road. Moose River itself is here a narrow stream of dark, sluggish water, winding through rude fields and apparently in no more of a hurry than the current of everyday life in the village.

All days are alike in this remote place; there were few people on the street, and on their hands time seemed to hang heavily. Two teams which passed through caused quite a flurry of excitement, and then the town relapsed into its normal state of sleepy quietnes, and one might have thought it Sunday. To be sure, the two stores were open, but that would have been the same on the seventh day of the week. We could see no church, though there may have been a place of worship.

The storekeepers kept open if they had nothing else to do; otherwise the customer hunted them up before he could make his purchase. We bought some artificial flies and then went down to the bridge, where we watched some musquashes swimming about under the alders which drooped over their burrows. The merchant, being of a sociable nature, came down and joined us; and as we commented on the various affairs of life in general and musquashes in particular, a prospective buyer shouted from the store, "Hi! thar; come up here, I want ter buy suthin'." "All right," responded the imperturbable storekeeper, "I'll be up in a little while, and if ye ain't in a rush, ye better come down here and see this musquash." But the customer was in a "rush," so the store was opened and the transaction accomplished, after which the proprietor again locked the door and went to dinner.

Our own canoes had not yet arrived, and as the rain was nearly over by noon, we donned our rubber coats and boots, took the cameras and splashed along the soft, muddy road on our way to Wood Pond. After two miles of sticky pedestrianism we turned into a path which led through a thicket of wet and dripping bushes. Down the length of this green alley we saw the pond, and across the water Sally Mountain, with its summit hidden by great banks of clouds which hung low and heavy over it. Wood Pond is a pretty sheet of water, with wooded shores, and is surrounded by a pebbly curb. When we returned to the house we found that the guides had arrived. There was Cy, tough and wiry; Bill, who is tall and broad-shouldered; Francis, sinewy and muscular, and with swarthy, copper colored skin, and Dennis, strong as an ox and overflowing with rollicking Irish wit. We were glad to see them, for we had camped with them and knew them all as good friends, pleasant companions and experts in all things pertaining to woods life and forest-craft. It was too late to make a start that day, but we all went to bed in good season so as to be ready for an early one on the morrow.

We were up at five o'clock, but on going out to take a look at the weather, found that the day promised to be even more dismal than the preceding one. The wind had howled and whistled all night, and the morning was cold and raw and a drizzling rain was falling; but even these discomforts did not induce us to remain longer in a place where there was nothing more exciting to do than to eat, smoke and sleep. We ate our breakfast and then the canoes were launched, the luggage stowed away and we glided under the bridge and down-stream, at last fairly on our way.

There was no trouble as to selecting partners, we went as in former seasons, William and Cy together, Harry with Bill, while I took the bow paddle in Francis's canoe. Dennis presided over the destinies of the "waugan" boat. Waugan is a word I never heard except in the backwoods of Maine. It is used by Indians and lumbermen, and applies to the commissariat of a camp. The supplies of all kinds are designated by the single word waugan; the cabin or tent in which they are stored is also the waugan, and the canoe or batteau which transports them is the waugan boat.

As we pushed off Francis said, "My grandfather and grandmother came here once through the woods from Canady. They came here to Moose River and camped; built 'em birch and went down to big lake. No village here then; all woods."

We dipped our paddles in the stream and the graceful craft shot forward as if they were glad to go; the trees bent and swayed in the gale; and glancing back we saw the clouds scurrying over the top of Sally Mountain.

The wind was in our favor, and as it blew against our backs helped us on. "Guess we find big sea on when we get to Long Pond," observed Francis as a gust swept by, rippling the water and blowing the rain in our faces; and added, as he glanced at the sky, "I guess he's goin' break away though; seems to lightin' up; guess he aint goin' rain much more."

We paddled on down the winding stream between mountainous banks, mostly wooded but with an occasional open meadow. A log cabin stood in a rough clearing where some one was starting a new farm; a batteau was moored to a tree near by, and a woman and several children watched us curiously. What a place it seemed for children to live in, and we asked ourselves if they could be like other children, shut in as they were by the wilderness and seeing nothing of the great world, except now and then the canoe of some passing voyageur. The passage of four canoes at once was, no doubt, quite an event in their little lives, and they watched us as long as we were in sight; and their dog stood in the water and barked at us. Babes in the wood they were, and we wondered if the dark shadow of the grim forest would not fall on them, and make them grave and old before their time.

Seven miles of dead water brought us to the head of Long Pond. The inlet was marshy, and as we looked over the bending reeds and sedges, we saw that a heavy sea was running and the white caps were dancing to the music of the wind. Out of the river and the shelter of

the trees, and on the open lake, which is ten miles long, we had to give our whole attention to the management of the canoes. It had ceased raining, but the wind did not abate, and the clouds were drifting swiftly across the sky. If the wind, strong as it was, had blown in any direction except the way we were traveling we should have been obliged to go ashore, but as it was we kept on. We paddled steadily and took the waves "quartering," crossing the trough diagonally, having, now and again, to hold back as some large wave went by.

It was not a matter of going too slowly; the danger was in going too fast, and we had to avoid getting ahead of these great waves and thereby taking water over the stern. Sometimes, almost in spite of us, the wind would take the bow or stern about, but there were strong skilful hands on the stern paddles, while we in the bows bent to with energy. And whether we were paddling with all our strength or holding back poised on the crest of some foaming wave, which was sliding under us, there was a glorious exhilaration in it, which sent the blood tingling through our veins, and enough spice of danger to call for whatever coolness of head and steadiness of hand we possessed. We avoided taking in any water except as an occasional wave would dash us with spray, but after two or three miles of this work we landed in the lee of a high, rocky point on the windward shore, to wait till the wind should go down a little.

The woods in the vicinity had been burnt and blueberries were growing thickly where the fire had run. We took two views from the top of the bluff, and after waiting a while and seeing no prospect of a change, resumed our journey across the wind-swept water, and pushed ahead through the white caps and spray to the narrows, half-way the length of the lake. A strip of sandy beach, on which grow a few stunted, weather-beaten bushes, divides Long Pond at the narrows.

This bar puts out from either shore, leaving a passage through, and it broke the wind so that in its lee we had comparatively smooth water. We went through the narrows and a few rods further to an old head works, and there we stopped for dinner and to spend the night if the wind should continue to blow.

There was a good shanty on the raft with a stone and sand fireplace before the door. We lifted the canoes out on to the raft, placed an anchor against the door to shut out the wind, and then sat down on the edge of a bunk to rest a bit before getting dinner. The headworks was anchored several rods from shore and in such a position that we could see up and down the lake on both sides of the narrows. Bill procured some wood and we soon had a good fire going and a kettle boiling, and it was not long before the odor of ham and eggs and the aroma of coffee whetted our already keen appetites. After our meal we sat in the shelter of the shanty and enjoyed a siesta which we considered well earned. The sun was shining and the wind seemed to be decreasing in violence. We puffed away at our pipes and listened to the lapping of the waves against the raft, and watched the geese and fish hawks which were circling over head, thinking, the while, that this was a good comfortable world to live in. William went ashore to photograph the head works, and afterward he and I climbed to the top of the cross beam which supported the capstan, in order to focus on the narrows and the view up the pond.

"Well," exclaimed William, "this is photographing under difficulties, and no one other than a couple of cranks like you and me would be up here." This after a number of fruitless attempts to secure the focus.

"High art!" observed Harry sententiously.

"About ten feet too high," I added as I made a frantic grab at my hat, which a gust of wind was dallying with. I was sitting astride the cross beam holding the camera steady as best I could, while William, with his legs twined around an upright, hung on with one hand and clung to the flapping focus cloth which enveloped his head, with the other. At last he announced that he had the focus and I retained the camera in place, while Harry passed up the plate holder to him. William placed the holder in the camera, drew the slide and flashed the drop shutter; but before he could replace the slide a saucy puff of wind whisked it off into the water. It was rescued with a landing net, but was soaked so that it could not be used. William reversed the holder, and this time the exposure was made, attended by no accident.

"That picture ought to be a good one after our efforts to get it," said he, and so it proved when developed.

After a while we went on down the lake; the paddling was not so hard as in the morning, though the waves still broke with force against the rocky shore. The forest on either hand was unbroken except where a ledge of white rock jutted into the lake far ahead on the left. We plied our paddles steadily, our object being to reach Lower Churchill Stream and camp there for the night.

The selection of a camp ground is a matter of much importance to the traveler in the woods, and unless one knows of a good site which may be reached before sundown, watch must be kept for a suitable place. There is considerable work to be done in the process of pitching a camp, and enough daylight must be reserved to enable the guides to erect the tents, cut wood for the night, build the fire and get the supper before the darkness of night closes in. We arrived at Churchill Stream in ample season, and a more charming location for a woodland camp might be sought for many a day. We turned toward what appeared to be simply a little cove in which reeds and grasses were growing, but as we entered it a winding passage was descried, up which we went into a pool of quiet water. Above this pool a grassy island nearly blocked further progress, but we paddled through another narrow canal of only a few feet in width, into another pool whose peaceful, sylvan loveliness will never be forgotten. Great forest trees drooped over it and were reflected in the deep, still water whose calm bosom was unruffled by the slightest ripple. The only sound was the murmur of Churchill Stream, which came flowing down through the woods and emptied in over a little fall, whose rim of shining foam sparkled in contrast to the dark surface of the pool. In the woods to the left was the deserted cabin of some hunter, and on the right bank a flat rock made a natural landing place, beside which the chaste, sweet blossoms of a wild rose bush perfumed the air with their fragrance.

We landed at the big rock and pitched our tent at the foot of a great pine. Big Pine Camp we called it. A fire was built and supper was shortly under way. Dennis made a loaf of bread, and while it was baking in the Dutch oven before the fire, we whipped the pool with our flies and caught trout enough for supper. They were all small, though the pool had the appearance of promising better things. A fir tree was felled, the top of which furnished material for our beds, and wood was collected for the night.

Francis said he and Dennis would sleep in the hunter's cabin; so we only pitched the largest of the three tents. The balsam boughs were spread on the floor—the ground floor Harry called it; the rubber blankets laid over them to keep out the dampness, and then the woolen blankets—and we were ready for the night. By the time these chores were done our meal was ready, and after discussing it we enjoyed that pleasantest part of the day to the camper, the social hour around the camp-fire. Pipes were lighted, and, as we stretched our feet toward the genial warmth, we talked over our plans and recalled reminiscences of other days spent in the woods and by the streams. But suddenly our quiet chat was interrupted.

What was that? Was it the scream of a loon or the cry of a wild animal? Our ears were on the alert. Hark! There it is again. A shrill scream came over the water, grating harshly on the stillness of the night.

"It's a man," said Francis, who never wasted any words. "Listen!"

It came again from the west, a long distance off, but sounding clearly.

"It must be some one in trouble on the lake," said Cy, and he, and Bill, and Dennis, in less time than it takes to tell it, were in the canoes and flying over the water as fast as their muscular arms could wield the paddles.

They called again and again, but only once was the cry repeated, and after searching in vain for the owner of the voice, they returned to camp. We were not disturbed again, and never knew who or what it was.

William and I had one more duty to perform before we turned in, and that was to remove the exposed plates from our holders, and replace them with fresh ones in readiness for the morrow.

This is a simple operation in a photographer's dark room, but in the woods it is a different matter.

We took the holders and plates and a small red lantern, and sought the seclusion of a dense thicket of spruce and cedar, far enough from camp so that no stray gleam from the fire would penetrate our retreat. Then, kneeling on the ground with our heads so close together that we were in momentary danger of bumping them, we went through the operation, Harry holding the lantern for us. If any person, ignorant of the mysteries of photography, had stumbled upon us crouched there in the darkness of the thicket, and heard us muttering by the dim, red light, which shed a baleful glare upon our faces, his only conclusion would have been that we were plotting nothing short of murder.

I slept that night next the entrance to the tent, and as the flaps were turned back that the heat from the fire might enter, I lay for a long time enjoying the peacefulness of the scene. The lover of nature who would enter into full companionship must woo her by night as well as by day, for in the hours of darkness does she exhibit some of her most charming phases and teach some of her most interesting and instructive lessons.

The evening was cold but clear, and I lay there wrapped in my blankets listening to the voices of the night. I gazed into a land of enchantment. Out of the dusky shadows which lurked under the bushes rose the trunks of the great pines and spruces; and overhead their branches, through which the night whispered its soft monotone as a mother might croon her lullaby over her little ones, were drawn in sharp pencilings across the sky. Far above them, the evening star shone with a pure, sweet light as it floated among the myriads of shining worlds in the jeweled firmament. The pool lay black and still, and in the soft glow of its surface the serrated line of the tree tops was reflected. From far over the lake came the wild laughter of a loon, the strange, unearthly scream being softened by the distance; and then the answering call of its mate, in weird uncanny cadence, came wailing across the water like the despairing cry of a lost soul.

The faint odor of the wild roses tinged the air with the mere suggestion of a perfume, and the gentle murmur of the stream over the stones and its soft, gurgling plash as it entered the pool stole soothing to the tired senses.

The regular breathing of my companions told me that they had preceded me to the land of dreams; and I closed my eyes and slept, with the assurance that here in the wilderness as in town, we were safe with Him who holds the winds in the hollow of His hand.

WILLIAM AUSTIN BROOKS.

Natural History.

NOTES ON THE WOODCOCK.

Editor Forest and Stream:

In the exercise of an inalienable right, the pursuit of happiness, I have spent many hours perusing the FOREST AND STREAM, and many days around the forests and along the streams pursuing the gamy woodcock. I am a lover of both, as the former entertains and interests me, and with the latter I am fascinated. I have for many years devoted most of my leisure hours, during the proper season, to this my favorite sport, hunting the woodcock. I have noticed the opinions and arguments, presented from time to time in your columns, on the question whether the woodcock makes the whistle that is music to the sportsman's ear, with his wings or bill. Also as to his habits in securing his food. I wish to give, as briefly as possible, my recent observations on these points.

While hunting yesterday, with neighbors George and Henry, I witnessed an actual and conclusive demonstration of the source and manner of this whistling, about which so much has been written. Henry, by a long shot, brought down a woodcock. I sent my pointer, Nell, to retrieve. As she delivered the bird to hand I found it a very large one, with but one shot mark and that in its head. George, observing its unusual size and plumage, took it by its bill and held it up for a closer examination. The bird began fluttering, making the flying motion of its wings, and surprised us with as perfect whistling as when started from the ground. I was delighted by such a demonstration and said to my companions, "How did he do it?" Both replied, "With his wings." I continued, "There is much question how this noise is produced. Let us test the matter carefully." George placing thumb and finger at base of bill, pressed both mandibles closely together and again held up the bird. It attempted to fly and again the whistling occurred, which we could locate in each wing, beyond a doubt. The movement of wings was not simultaneous, but one following the other quickly; thus giving the whistle its *click, click*, character. We three are now positive that we know how he does it, for besides our certain location of the sound at the wings, the bird was held in such a manner that it was impossible for it to make any sound with its bill.

I learned a while ago that a boy living near me had captured a slightly injured woodcock. Having in mind the feeding controversy, I soon had it in my possession, with the object of seeing how he does it. I placed the bird under a willow crate on the ground, and putting some earth worms on a thin layer of fresh earth in a dish, I set it before him. Several hours after I found the worms undisturbed. At night I covered them in a depth of several inches, but was disappointed in the morning to find that he had not bored for them. I found the bird greatly weakened and stupid from inanition, and feared he would not survive long. Procuring a pitcher of water, I commenced pouring it on the dish of earth containing the worms, and was pleased to see the woodcock move quickly to the dish. He pushed his bill full length into the dirt, and bringing out a worm swallowed it. He eagerly continued until the last worm had made the passage of his long bill. After this there was no trouble about his feeding; but there was great trouble about procuring worms enough. His appetite demanded at least half a pint of solid worms both morning and night. He would often come to the dish and feed as soon as placed where he could see it, and was undisturbed by my watching him. It was amusing when he occasionally brought out a worm seized in the middle, as he would put up his foot and deftly straighten it out, so that it would go down easily. I repeatedly left the worms before him uncovered, and I could not discover that he ever touched one. But cover them with earth, and their fate was sure. They were bored to death. Several weeks of observation and study of this bird afforded me much pleasure and satisfaction, giving me many points, the half of which I have not yet told. D. S. S.

WELLESLEY, Mass.

GAME BIRDS FOR LYNN.

THE public-spirited citizens of Lynn, Mass., having secured title to an area of forest land, and having with commendable forethought set it apart as a permanent public possession, are now turning their attention to enriching it with game birds. The following letters explain themselves; and do credit to all concerned. The first is addressed to Chairman John Tuttle, of the committee on acclimatization, of the Massachusetts Association, and the second is a reply from Mr. Thayer of the same committee:

DEAR SIR—There is in Lynn a public forest of 1,500 acres in area, which has been obtained partly by purchase and partly by gift, a considerable amount of the purchase money having been contributed by subscription, the remainder having been furnished by appropriations of the city. These woodlands are within easy access of the city and around the ponds furnishing the water supply for Lynn. It appears to me that this park affords an opportunity of extending the work of yourself and associates on the committee of the Massachusetts Fish and Game Protective Association relative to the introduction of game birds in this State. Last Monday I had a conference with the Mayor upon the subject, and he agreed with me in regard to the matter, and said that if your Association would furnish a suitable number of such game birds for the public park there was no doubt but that the city of Lynn would pass an ordinance forbidding all shooting or trapping on this tract, and furthermore, in connection with this, action would be taken to enforce the ordinance by means of giving to one or two of the men employed in the forest authority in order that they may act as game wardens. Trusting that this matter may meet the favorable consideration of yourself and associates, I am, yours very truly,

C. J. H. WOODBURY.

DEAR SIR—I have been instructed to notify you that your letters relative to introducing game birds into the Lynn Park have been considered by this committee. In reply, the committee will agree that there shall be an ample number of suitable birds furnished from those imported to amply stock the park with game, in case the city of Lynn shall see fit to pass suitable ordinances prohibiting shooting in the Lynn Park, and shall assure us that the ordinances shall be properly enforced, also that the birds shall be fed whenever it may be necessary, and protected as may be otherwise needed. This committee has decided to expend the present season over $1000 as a preliminary movement; and if the public sentiment supports, and proper protection to the game loosed is forthcoming to encourage the Massachusetts Fish and Game Protective Association in its work, the present season's work will be but a beginning of more extended movement and larger expenditure in the immediate future. An early action (if desirable) on this would be agreeable to the committee, as we are expecting within a few weeks at the furthest to receive large consignments of birds, consisting principally (at first) of California mountain and valley quail. Later in the season we shall receive prairie chickens, sharp-tailed grouse, Virginia quail and possibly wild turkeys. Very truly,

HENRY J. THAYER, Sec'y.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—Three wild boars (*Sus scrofa*), two European badgers (*Meles taxus*), three pine martens (*Mustela martes*), one European barn owl (*Strix flammea*), one European roller (*Coracias garrulus*), one black-bellied weaver bird (*Euplectes afer*), two finches (*Euplectes* ——), two yellow-headed conures (*Conurus jendaya*), two west African love birds (*Agaporius pullaria*), two yellow-winged parrakeets (*Brotogerys virescens*), two golden-headed parrakeets (*Brotogerys tui*), two St. Thomas conures (*Conurus xanthotemus*), one cayenne rail, (*Aramides cayennensis*), one courlan (*Aramus giganteus*), two turkey vultures (*Cathartes aura*), one rough-eyed caiman (*Caiman sclerops*), one emperor boa (*Boa imperator*), one tree boa (*Epicrates angulifer*), one common boa (*Boa constrictor*), one anaconda (*Eurcetes murinus*), two banded rattlesnakes (*Crotalus horridus*), one dusky rat snake (*Spilotes pullatus*), sixteen slow worms (*Anguis fragilis*), two agile lizards (*Lacerta agilis*), twenty European salamanders (*Salamandra maculosa*), five salamanders (*Salamandra* ——), five salamanders (*Triton cristatus*), twenty-six fire-bellied toads (*Bombinator igurus*), and fifty-three newts. Exchanged—One tree boa (*Corallus hortulanus*), two thick-necked tree boas (*Epicrates cenchria*), and one

carinated tree snake (*Herpetodryos carinatus*). Presented—One gray fox (*Canis virginianus*), two red foxes (*Canis vulpes fulvus*), one gray squirrel (*Sciurus carolinensis*), one opossum (*Didelphys virginiana*), one woodchuck (*Arctomys monax*), one prairie dog (*Cynomes ludovicianus*), one white-throated capucin (*Cebus capucinus*), one Merian's opossum (*Didelphys dorsigera*), one raccoon (*Procyon lotor*), fifty-four reed birds (*Dolichonyx oryzivorus*), one nonpareil (*Cyanospiza ciris*), one song sparrow (*Melospiza melodia*), one yellow bird (*Chrysomitris tristis*), one great-horned owl (*Bubo virginianus*), four banded rattlesnakes (*Crotalus horridus*), three common hog nosed snakes (*Heterodon platyrhinus*), one copperhead (*Ancistrodon contortrix*), one Marcy's garter snake (*Eutænia marciana*), one alligator (*Alligator mississippiensis*), four painted terrapins (*Chrysemys picta*), four musk turtles (*Aromochelys odoratus*), and one diamond-backed terrapin (*Malaclemmys palustris*). Born—One Indian antelope (*Antelope cervicapra*), three ground rattlesnakes (*Crotalophorus miliarius*), sixteen DeKay's snakes (*Storeria dekayi*), nine garter snakes (*Eutænia sirtalis*), twenty brown water snakes (*Tropidonotus taxispilotus*), ten Cyclop's water snakes (*Tropidonotus cyclopcum*), and thirty slow worms (*Anguis fragilis*).

Game Bag and Gun.

THE RUFFED GROUSE.

WHO that has heard the somber shades of the dense pine forest throb beneath the strokes of his hoarse resounding wing, or in the autumn woods has seen him flash for an instant amid the hues of crimson and gold, or seen him pierce like a shaft of light the dark green of the cat-brier swamp, can ever forget the ruffed grouse? What sportsman can forget the feelings with which he has heard his drum-beat echo from the dark mountain side, or through the bursting woods of spring, or in those soft, still autumn days when the leaves are falling through the mellow haze of Indian summer, or, as sometimes heard, in the noon of night in the depths of the forest primeval? Few pictures hang more bright in the inner chamber of the sportsman's soul than the broad, fan-like tail spread along his path as he treads the trail of the deer, or its broad bands shining on the carpet of checkered leaves or sweeping over the mossy carpet of wintergreen, or vanishing in the heavy green of the laurel brake.

Not even the majestic woodcock with his solemn dignity, not even Bob White with his sweet, graceful ways and artless beauty, not even the brilliant, but erratic, little genius of the boggy meadow, not even the noble turkey with his beamy bronze and bearded breast, can raise such tender memories as this grouse. For all these must be sought, and often sought in vain, in their native haunts. But the ruffed grouse is a more familiar spirit, and many a time plays across the sportsman's path when wandering over the sapling-clad slope where the autumn woodcock lies in the full bloom of life and fatness, or when he is following Bob White through the hazel thicket, or when roaming from pond to pond in search of ducks among the vine-clad arbors of the river bottom. And often the hunter of the deer sees him strut before him as he sits resting on a fallen log, and often when on the trail of the deer in winter sees him shake the snow from his lightning wing, as, bursting from its cover, the bird goes whizzing away amid the snow-draped trees.

Versifiers like to rant of the majesty of the eagle. But the majesty of this most majestic of game birds is not like his. It is not the majesty of a great clumsy thief, with no redeeming qualities but size. No Viking he of the bright blue sea above. His nobility is not that of an old Danish sea king, but that of inborn grace, dignity and beauty, an overpowering individuality that impresses itself on the dullest lump of pot-hunting clay.

Few of those who most love this noble bird have ever seen him in the simplicity of youth, before he has left his mother's side and gone forth to roam alone the spangled shades of the rugged mountain side or the sombre shrubbery of the tangled glen. For his hearthstone is too often in the dense mass of summer's wealth, and few are the eyes that can follow him into the deep, dark brake or into the shaggy covering of the mountain's breast until autumn's frosts have tattered their gay banners and trailed their green glory in the dust.

For certainty of finding this grouse at home in his early days with comfort in hunting him few places have ever reached the bluff regions of the Upper Mississippi. Here this grouse lived and loved and stayed until long after the autumn leaves were scattered on a thousand winds; and even after the deep snows of winter fell upon his early playground many a one remained instead of seeking the covers of the bottom lands. Here he may be found while the trees still stand in the full green of summer and before any hue of death has touched their shining heads. Years ago these bluffs were studded from base to crest with large oak trees scattered more or less along the slopes, and more abundant and dense of foliage around the sides and heads of the numerous ravines. Where they happened to fall the rich verdure of the white birch generally filled their places, and in the bottoms of the ravines and along the base of the slopes the crab apple and wild plum and scrub oak formed abundant cover. Everywhere along the hills the ground below the trees was densely carpeted with green, upon which the sunlight filtered in a thousand shades through the openings in the leaves above. And yet the walking was always good and the view was generally free in all directions beneath.

It was on one of the fairest of days in August, 1867, that with a friend and two dogs I first roamed these pleasant shades and found my old friend in a new kind of home. From nearly the foot of the bluffs where the outer guard of soft maple and white oak saplings began to encroach on the black oak of the hills to very near the top, where the birch was flying its bright green flag from its snowy staff, the dogs were soon racing to and fro, while we were strolling along behind them half way up the hillside. We soon came to a shallow ravine where the ferns and the prairie grass that covered the ground where taller and greener, and the shade of the black oak and maple was deeper and cooler than on the rest of the hillside. The elder dog, named Jack, had hunted such ground before and seemed to know all about such places, and at once started up the leeward side of the ravine with slow and cautious trot, while the younger, named Frank, seemed to have an intuition that the other dog knew more than he did and slowed down his pace to about the same. And soon Jack's trot subsided to a walk as his nose caught the faint breeze that played over the shady side of the hollow, and his tail slackened its lashing motion and settled to a slow wavy swing. Quietly he moved along, with nose upraised, just above the deep green of the ferns and prairie grass, and the bright golden hue of the lady-slippers and the carmine of the wild peas, raising it from time to time still higher with inquiring sniff and swinging steadily off to leeward, so as to keep the breeze fairly in his nose all the time. And soon the old dog's tail began to straighten and the joints of his legs to stiffen, and he turned his head slowly from side to side and snuffed the air more cautiously as he moved more and more slowly along. And all the time Frank coming up the other slope, some hundred yards away, with eyes fixed intently upon Jack, imitated all his movements, even more strongly than if he had smelt something himself instead of taking Jack's word for it.

Suddenly Jack stops, and as suddenly Frank does the same, and at the same instant a line of mingled white, black and gray, with roaring wings enveloping the whole in a haze of brown, bursts from the rank ferns some ten yards ahead of the dog and darts like an arrow through the green arcade.

Bang-whang go two barrels of the guns, almost together, a feather parts from the long outspread fan behind the booming wings, and in a second more the brown streak fades among the distant trees.

Bbbbbbbb goes another from almost the same place, almost before the first one is out of sight, and bang goes one barrel of each gun exactly together, and a cloud of feathers floats from the downward whirling bird, while, with boisterous *bbbbbbbb*, seven or eight more birds rise curling, flashing, darting and whizzing from the ferns in all directions.

But Jack seems to have no anxiety about the birds that have fallen, and after going cautiously a few steps forward stops again with slowly waving tail. Carefully he moves along, sniffing daintily at the air on high, and swinging off occasionally to one side so as to catch the full breeze, then, as he advances a few paces beyond where the other birds had risen, his limbs and tail gradually stiffen until he again becomes quite rigid, with Frank on the other side of the ravine imitating all his motions almost as accurately as if the two were connected by an electric wire.

As we come up to him he suddenly relaxes, moves off a few yards to one side again, and then with nose high upraised and body sunk low in the grass he crawls forward a few feet, more in shape like an alligator than a dog, and then comes again to a standstill. As we advance a little in front of the dog, three grouse burst roaring from the ferns some twenty feet ahead of us, and dart away in different directions. One whirls downward out of a cloud of feathers; another changes his course at the report of another gun and mounts skyward through the treetops; the third, dashing the sunshine from his glistening wings, scuds away through an open place, with the guns belching flame and smoke vainly at the place he had just left; while the one that had mounted above the trees, poising for a second aloft, closes his wings and descends with a heavy thump to earth.

The fallen birds retrieved, we went on to find the scattered birds. Some three hundred yards we wandered along, and suddenly Frank began to dawdle in his pace. With gently oscillating tail he sniffed inquisitively at the breeze that swept up the hillside from the long ravine below. To our senses it was laden with the fragrance of ferns and wild buckwheat and wild peas and white clover, with wild rose and mint; but the dog smelt something more, for he suddenly stopped with the quickness of thought, and at the same instant a grouse broke with uproarious wing from the deep, green cover some fifteen feet from his nose. Two charges of shot shivered the blended white and green of the birch behind which he disappeared, the air throbbed no more beneath the beat of his hoarse wings, and a faint nebula of fine feathers drifted into sight on one side of the tree.

Up and down the hill again both dogs were soon beating the ground. In about five minutes Jack, coming down the hill on a gentle canter, dropped into the grass as suddenly as if shot and lay there with only the tip of his nose visible above the ferns. As we came to him a bird rose like a rocket only a yard from the dog and whizzed away upward as if bound for the stars. My friend's first barrel decimated the banded feathers of its broad, outspread tail, and he caught it with his second barrel as it was speeding its bob-tailed career high among the branches of the old oak trees. As it fell another bustled with riotous hubbub almost from the same spot from which the last one rose, and, wheeling with its breast mottled with black and white in full view, cleft the breeze so fast that the shot from my gun was held back by the resistance of the air waves. At least that was my theory then, and it ought to suffice at this lapse of time.

Some ten minutes passed away and we found Frank anchored apparently to a stump in a little ravine far up the hillside, with Jack indorsing his draft on our confidence with his most statuesque attitude, some 30yds. behind him. The birch was waving in the breeze above him, and the ferns were swaying gently below his nose, the raspberries and blackberries were still bright on the bushes in the ravine, and the young oaks were as green as in the spring, but other sign of life there was none. We threw stones in ahead of the dog but nothing moved. We tried to urge the dog to flush them, but he would not budge. At the risk of losing a shot I went in, for the ravine was deep and steep-sided. A few feet ahead of the dog I slipped and fell, and in a twinkling the sky above me seemed alive with roaring wings and meteors of white and black and brown mixed in a whirl that made the air tremble more than even the thunder of my companion's gun which was spouting flame and smoke above my head. When I recovered myself I found that four birds had made all the uproar and that my friend had pacified two of them.

The grouse were now so scattered that it was better to search for a new flock than to try to find the single birds that had flown far up and down the hillsides. So we moved along several hundred yards until we came to a broad-bottomed ravine. Along the hills near its head the oaks stood larger and closer than before, the ferns were brighter, longer and greener, the birches were taller and maples and aspens were jostling them aside A soft fragrance as of wild honey and thyme haunted the dark, cool shades and everything hinted strongly of the favorite home of the ruffed grouse.

Old Jack at once took the hint, and with gingerly tread went marching up the bottom of the ravine with nose aloft and slowly undulating tail. Though he had yet smelt nothing, the spirit of the place whispered "grouse" so strongly that his fancy kept him on a half point from the start, just as many a good old dog's imagination makes him change his pace the instant he enters a dark, damp swamp where everything breathes the magic word, "woodcock." And even Frank seemed enthralled by the cool, green, silent shade and threaded the birchen bowers and the beds of fern with more than usual care.

But Jack went far up the hill several times and came trudging back looking somewhat dispirited, and Frank, after snaking his way as often up and down through the ferns, seemed as badly muddled; yet both seemed to think there must be game there. We passed around the head of the ravine, over ground that seemed specially made for grouse to spend the day in, but they seemed to have that provoking trait that game often exhibit, of ignoring the fine places you pick out for it and preferring to make its own selection. Further down the ravine, below where the scrub-oaks, and maples, and aspens broke into the heavier black oak that robed most of the hills, and where the bottom widened out into a little valley, lay a long thicket of crabapple and wild plum, edged with black haw and hazel, where it broke into the oak and maple of the hills. Knowing that the birds ranged low as well as high along these hills, we went to it. The dogs soon disappeared within the dense, green shrubbery, and naught was heard of them in a minute more but the light rustle of their feet. And but another minute seemed to pass away before that too ceased.

Leaving my friend on the outside where he would be apt to get a shot at anything that came out, I went into the thicket. There stood Jack bent like a bow with tail and jowl nearly parallel, as he had evidently thrown himself with a sudden whirl upon striking the scent from one side. And a few yards behind him, half hidden in the deep green, stood Frank, with the solemnity of a tombstone on a winter night. As I stepped behind Jack there was a bewildering burst of uproarious wings and a dozen or more birds went darkling through the green, some wheeling out of the top, some scudding straightaway, some darting low toward the edges. Quick as a flash I dropped on one knee and sent a charge of shot through the leaves where one's fan-like tail was vanishing on a sharp curve as I raised the gun. But by the time the shot reached there it was gone. And by the time I discovered it was gone the rest were all gone. But dimly through an opening I could see my friend on the hillside with half a dozen grouse swiftly driving toward him. One went past him like an arrow feathered with white and brown, and was gone before he could raise his gun. Another whirling into sight above the brush with its full white breast broadly mottled with black brightly flashing in the sun, just a trifle too late for me to shoot at, went spinning by him with unruffled feather at the report of his gun. And then five or six more went roaring past him and above and behind him, while he, in confusion, shifting his gun first from one side to the other, and hardly knowing what to shoot at, let them all go past and stood as if looking for more to come.

SNIPE AT CURRITUCK.

YOUR readers may be interested in an account of two days of sport on the coast of North Carolina at Currituck Inlet, the game sought being of the snipe family, consisting of willet, yellow-shanks and graybacks, or to use a name common to the locality, bay birds.

During the latter part of August on a Saturday evening, about 5:30 o'clock, friend H. and myself took a steamer at the foot of Seventh street, Washington, bound for Norfolk, Virginia. My gun was a 12-gauge Parker, and I carried about 400 rounds of shells loaded with No. 8, a favorite size with me. H. carried two guns, 10 and 16 gauge, 600 rounds of shells, also loaded with No. 8s, and a seven months old setter which had been thoroughly broken, or rather trained, to retrieve. In the morning bright and early, about six o'clock, we found ourselves a few miles this side of Old Point, and greatly to our disappointment, because, had the boat been running on its usual time we should have been within a short distance of Norfolk. This delay defeated our plans and made it impossible to catch the 10 A. M. train at Norfork for Virginia Beach, and thus compelled us to wait over until 3:30 in the afternoon. We were, of course, much worried, as we had previously telegraphed for a conveyance to carry us down the beach to our destination, a distance of 29 miles, and also expected to meet some friends at the Beach Hotel who were to accompany us. However, as luck would have it, our friends had arranged matters for us, evidently unticipating our trouble, and upon arriving at the beach we found a two horse team and driver at our disposal, and got under way at exactly 4:30 o'clock.

The drive along the shore of the Atlantic was one of the most interesting features of the trip, and, had I been unsuccessful in procuring game, I should doubtless have felt compensated for the trouble and expense incident thereto. The weather was delightful. The surf in itself was a magnificent sight, and we found much interest in viewing numerous wrecks which had accumulated on the shore for years, some of recent date. One in particular, a large three-masted schooner, hailing from Boston, I think the name was Mary Pool, we learned had gone ashore last October, and had been thrown so far up that no tide since had been of sufficient height to carry her off. The crew were still on board, and had succeeded in getting her eighty feet nearer the water during a period of ten months. By the way, I saw in a newspaper a few days ago that she was afloat and had been towed to Norfolk.

Nightfall found us within a few miles of our destination. A little rapid driving over sand hills brought us to the coveted spot, a small frame house, containing six rooms, situated about a mile from the ocean and within a few minutes' walk of the inlet.

The hour fixed for getting up in the morning was four o'clock, rather early I must admit, but as we were anxious to be on the hunting grounds by five, we found it none too soon. Being equipped for bringing to bag a goodly number of birds, all jumped into a two seated wagon, the party consisting of four, White, Taylor, Hunter and myself; and after about ten minutes' ride, found ourselves upon the marshes, but not in the humor one would suppose an occasion of this kind would produce.

Although the morning was cool, bright and clear, and our expectations for a good day's sport unbounded, we were worked up to almost fever heat and feeling somewhat sore, and all owing to the detestable mosquito,

Talk about the "Jersey," why he isn't to be mentioned in the same breath as his North Carolina cousin. To say that they were as thick as bees does them an injustice. They actually covered us from head to foot, and would insert their venomous bills into our clothing with as much ease as an ox would his horns into a hay stack; there was no let up with them, and had it not been for a stiff breeze which sprung up after we had been out for perhaps an hour, I don't think there was a man in the party who would have remained on the grounds for a minute longer than was absolutely necessary.

However, upon reaching the grounds previously selected by friend W., who had "been there" before, and was considered an "old timer" in the business, although young in years, good sport was predicted, and W. immediately proceeded to locate us at what he considered good stations about 300yds. apart. After placing out our decoys, as very little snipe shooting is done in that locality without them, each one was ready for the fun, and fun it was too. I had scarcely time to return to the station after giving the finishing touch to the last decoy, before the birds began to make their appearance. There were scores of them, the yellow-shanks being in the majority, and three hours' almost continuous shooting was the result. By this time the birds became wary and somewhat scattered, and consequently we concluded to give them a rest. Upon counting the killed we found we had a total of 415, the smallest number, 65, being bagged by myself. As honest confession is good for the soul, I will not say that it was owing to my poor marksmanship that I came out at the tail end of the list, but must attribute the cause to a severe headache, which began to assert itself by the time I had knocked down fifteen or twenty birds, and the more I shot the worse my head would ache. I must not forget to say that H. got the second best bag, 120, and that the "old timer," W., took the cake, bagging 150.

Having gathered up the birds we started for the house, and upon our arrival there awaited us a tempting breakfast of which we at once partook. This over, my companions amused themselves in various ways, while I, having thrown myself on a couch, endeavored to get rid of the aforesaid headache which still affected me in a mild form. My efforts were not fruitless. I felt entirely relieved when I arose, and so expressed myself, and when asked if I wished to resume the sport, of course replied in the affirmative. Everything being in readiness, it did not take us long to repair to the hunting ground, and, as the decoys had not been disturbed after the first shooting, we were soon banging away again at a rapid rate.

I had hardly seated myself on an old leather cushion left at the station by H., who had previously occupied it, before two large jack-plovers flew past in good shooting distance. I succeeded in bagging one, but the other continued on the wing after a clear miss. The rest of the boys were soon at their posts, and for a short time the shooting was excellent, over 200 birds falling victims, principally gray-backs, which we considered superior to the others in point of flavor and condition. In some instances they were so fat that upon striking *terra firma* in their fall from wing the flesh on their breasts would split wide open. On collecting the spoils the wagon was hailed, and in a few minutes we were again at the house. Thus ended the first morning's sport, and the next question to agitate us was, what to do with the game.

As will be observed, more than 600 birds had been killed, and to dispose of them to good advantage, the weather being warm, was no small matter. However, after some little discussion, all concluded that they should be shipped to Norfolk for distribution among our friends. To accomplish this end, it was necessary to first freeze them in a large chest prepared for the purpose, and then pack in a barrel which was provided with an ice tank, placing myrtle leaves between the layers of birds. This done, the barrel was lifted into a pony cart, and not many minutes elapsed before it was aboard one of the small steamers which ply up and down the Chesapeake and Albemarle Canal, bound for Norfolk.

In the afternoon my companions again started for the marshes in good spirits, being encouraged by former success. I had concluded to remain at the house, thinking it more than likely that my headache would return should I again resume shooting that day. The time seemed to pass rapidly, and it was not long before I heard the voices of the returning sportsmen. They came back in the same good humor in which they left, notwithstanding a small bag of game, about 150 birds, and at once began to make excuses for their failure to "bring to grass" the usual number of birds. H. displayed a swollen jaw, the result of frequent shocks from his gun, and W. attributed his small score to the wariness and high flight of the birds.

This ended the first day's shooting. At 10 o'clock all retired, and by daylight preparations were under way for another trip to the hunting grounds. In an hour's time we were off, and after shooting for nearly two hours at some scattered birds we concluded that we had had enough, at least for the time being, and returned to headquarters. A half hour later we were all sitting around the breakfast table, making chaos of the good things, especially the ever-favorite dish of snipe. Breakfast over, friends W. and T., who were residents of Norfolk, said they would start for home in the afternoon, and after some little talk H. and myself concluded to do likewise. The results of the two last shootings were soon packed in a box with cracked ice and myrtle branches, and it was not long before we were under way. At 10 o'clock Wednesday morning we landed in Washington, none the worse for the wear.

The grounds over which we hunted was the property of the Currituck Inlet Club, of which H. is a member, and nearly, if not all the land in the vicinity of Currituck, is posted and controlled by various clubs, some of them representing considerable wealth. W. E. V.

WASHINGTON, D. C.

CYLINDER VS. CHOKE.—*Editor Forest and Stream:* I know it is standing face to the gale, but I stand there all the same. This rage for close choked guns is not in the superlative degree sensible. For cover shooting—not at the trap—give me the old cylinder bore, or pretty close to it. As for trap-shooting, that is another matter. But why should a tolerably fair shot, whose work is confined to brush and stubble, concentrate all his load into what is practically a bullet after it leaves the gun? With my cylinder bore I notice that I get as much game as the chokebores.—FOGY.

CHICAGO AND THE WEST.

CHICAGO, Ill., Oct. 15.—To-day I got a note from Col. E. S. Bond, the well-known South Water street commission man, who sells about as much game as anybody on the street, in all probability. In response I called, and we passed the time of day.

"I see by last week's FOREST AND STREAM that you don't like that article on 'Law-breaking Game Eaters' that appeared in the *Herald* lately. Now, my dear sir, do you know what I wanted to see you for? I wanted to ask you how many times this year you have broken the Indiana law by bringing game out of that State?"

"Not once, this year," said I, "but last year"—

"That's it. You maybe didn't know it was unlawful. Now, my friend, do you know who wrote that article in the *Herald?*"

"Well, Colonel," said I, "judging from the South Water street twang it had, and the way it went for the sportsmen, I should think a man about the size of Col. Bond was not far off about the time that article was written."

The Colonel looked a little wise at this.

"Now, here," he said, "is a letter that you may want to read, and here is my answer to it. That will show you just what I think about the game laws of some of our States. Show both sides of the case if you are fair. You say agitation is good."

Following are the letters:

GRAND RAPIDS, Mich., Oct. 9.—Bond & Whitcomb, 201 South Water Street, Chicago, Ill.—GENTLEMEN: A circular sent to your trade has come into my possession wherein you say that the decision of the U. S. Supreme Court upholds in the original package case a principle which destroys the right of a State to regulate the manner in which game shall be killed and shipments made thereof out of the State. If this is your opinion, will you consent to make a test case of the matter. If so, please advise me without delay, otherwise I shall take steps to enforce our law against you. —Respectfully, WM. ALDEN SMITH.

CHICAGO, Ill., Oct. 14.—Wm. Alden Smith, Esq., Game Warden of the State of Michigan, Grand Rapids, Mich.—DEAR SIR: Your favor of the 9th inst. is at hand. Your proposition to make a test case as to that section of your game law prohibiting shipments out of the State is respectfully declined, as I have no money to waste on such a case. The point in question has been passed upon by courts of two or more States. Kansas had such a section in the game laws of that State, which was held by the Supreme Court of the State as unconstitutional on the ground that the Legislature had no right to interfere with commerce between States. Judge Field, of the Circuit Court of Lake county, Indiana, in the case against F. A. Howe and the late Judge Knickerbocker, charged with transporting game contrary to law out of that State, held that the law was unconstitutional for the same reason.

The Supreme Court of Minnesota in the dressed beef case held that the law prohibiting the sale of beef unless first inspected on hoof was not constitutional, as it prohibited the importation of dressed meats from other States in violation of the inter-State commerce section of the Constitution of the United States. Hence, if unlawful to prohibit imports of food it would be unlawful to prohibit exports of the same. The Supreme Court of your own State, in the case against O'Neil, in recognizing the property right in game, virtually wiped out the non-export clause in the game laws of your State, and held that game acquired in the open season could be held and sold every day in the year. The court decided that a thing once lawful never became unlawful by lapse of time, and adds that this is a well settled principle of law.

Justice McCreary of the U. S. District Court of Iowa in the Granger cases held that transportation from one State to another was inter-State commerce, over which the Legislature had no control, and that this power belonged exclusively to Congress. The decision of the Supreme Court of the United States in the original package case is well known and re-affirms the decision of the lower courts covering the point in question. The only adverse decision covering the point is a late decision of the Supreme Court of Illinois holding that game was not property, and that transportation could be prohibited inside or outside the State. Able lawyers hold that this is mere dictum and not good law.

In the face of all these decisions you will see that it would be a waste of money to make a test case, especially in the face of the decision of the Supreme Court of your own State in the O'Neil case.

In your letter you misquote my circular, as it did not say that I denied the right of a State to regulate the manner in which game shall be killed, as the State Legislature has that right, and it is admitted by me. You will find that I will give my earnest support to all game laws protecting game for food. The Legislatures of nearly all the States wisely prohibit prize fights, cock fighting, dog fighting and other cruel sports. The killing of harmless birds or animals for sport should be prohibited by law, and the whole object of game protection should be to preserve it for food. The killing of birds or animals for sport develops the vicious and brutal instincts in human nature and blunts the finer sensibilities. Our country roads and boulevards afford good opportunities for our sportsmen to take all the exercise they need without the incentive to kill harmless birds or animals.

In conclusion I wish to say that I regard the decision of the Supreme Court of your own State in the O'Neil case as a just and fair one and founded on a sound common sense view of the question before them. I regret I cannot say the same thing of the decision of the Supreme Court of Illinois in the Effingham case above referred to. Yours respectfully,

E. S. BOND, of Bond & Whitcomb.

The latter letter covers two or three well-known points; for instance, it is known generally that no Indiana constable will arrest a shooter for taking game out of the State. The Michigan decision is also known. It is very probable, however, that so far as the Illinois decision is concerned, the Effingham case will be found to be a "dictum" that will stick. It would seem that Col. Bond has offered the gage of war to the Michigan warden. The result is not determined.

Such is the game dealer's side of it. The letter expresses the genuine views of its writer, except the part where Col. Bond says he will support all the laws protecting game for food, and righteously declaims against the naughty sportsman who kills game for sport. That is pretty funny, and Col. Bond knows it is funny. He likes to shoot as well as anybody, but he always takes pleasure in having a whack at the sportsman in game law matters. For instance, he told me that he and his friend John Watson had just got back from a week's trip to Dunning, Nebraska, where the two guns got about 25 prairie chickens a day, just for food, you know; and would have gotten more, if the Colonel's favorite dog which he kept so that he could go out and get a little food with it, once in a while, had not recently died. They also went out after deer, but failed to get any food of that sort, as some hounds had run the deer out of that section. Col. Bond, Col. Bond! estimable and jolly soul as you are, tell us, which of ye twain, the game dealer or the sportsman, is entitled to wear the jewel of consistency?

But here was a good place to get some shooting news. My friend the Colonel told me that the hot dry winds that ruined the crops of western Nebraska also killed many chickens, as there were not even any dew at night during the hot season. The failure of crops would cause a great many settlers to fall to shooting for the market for a living. He had sent out to one party, who would shoot for the market in Nebraska this fall, a bill of ammunition that amounted to $187. Think what that will do. Then ask yourself once more whether it is the sportman or the market shooter who kills off the game. All the shooters of Chicago will hardly shoot $187 worth of ammunition at actual game during the whole season.

"Once the center of the pinnated grouse region was in southern Kansas," said Col. Bond, "but they seem extinct there now. Then it was northwestern Iowa, till that got played out, then it was southwestern Minnesota, then Dakota. Now it is in northwestern Nebraska, west of the North Loup country. We get most of our chickens from there now. From the way the preparations are being made to shoot them systematically there, I think this year and next will clean them pretty much all up there, and that ends it. There won't be any more chicken center then. I've seen the game center move 1,000 miles in my time.

"I believe about the best place for ducks now is at the lakes about forty miles north of Dunning, Nebraska, but there is no road to get there on.

"We are now getting a great many fine mallards from northwestern Nebraska, away out beyond the Loups. Both the Loups have plenty of water this season, though the Platte hasn't. I lately got in 287 fine mallards from Minnesota, south of Crookston, on the Manitoba road, and not far from Ada, in Noreman county. There are lots of mallards in there. Dakota is all dried up. We have also got in this fall enormous shipments of Wilson's snipe, robin snipe, yellowleg plover, etc., from the country around Big Stone Lake and Lake Traverse, in Minnesota. There is where most of our snipe come from.

"Partridges and venison have been very scarce this fall. We have not sold a dozen saddles all this season. The deer are being cleaned out of Wisconsin. From stations where we used to get a thousand saddles or carcasses in a season, we now will not get over ten or twelve saddles, if we do that.

"Do you know who cleaned out most of the deer in Wisconsin? It was an outfit called W. S. Hale & Bro. They hunted for the market on a grand scale. They had dozens of hounds, and they hired all the Indians they could get and put them on the runways to shoot for them. They made a regular business of killing deer, and in three years, while they were around Crivitz, now Ellis Junction, they shipped out over 3,000 deer from that one station. I have not heard much from this outfit for the past four or five years."

Is there not enough in this to sicken any lover of sport or of humanity? Is there not enough to make even apathetic sportsmen resolve to see to it that better and more sensible laws are enacted and enforced? Is it not plain to be seen how inoperative and worthless are laws and a system under which the game has disappeared from this great country almost in a day?

Oct. 16.—To-day is the day that was set for the trial of the two game law cases, the State vs. Henry A. Sloane and State vs. J. B. Brosseau, the charge being unlawful exposure for sale of pinnated grouse before the date of Oct. 1. The main prosecuting witness is M. B. Bortree, the attorney for prosecution F. S. Baird. Suit was brought Sept. 25. To-day a continuance was had till Friday, tomorrow, 10 A.M., which makes the third continuance. It is a question whether issue will be really joined tomorrow.

The history of these cases is peculiar, and attests once more the manifold beauties of the Illinois game law and the manifold sorts of wisdom of its exponent, the honorable Mr. Brusewitz, by the grace of Gov. Fifer, game warden for the county of Cook. The honorable Mr. Brusewitz has again opened his mouth and put his foot in it. It is a way he has. The honorable Mr. Brusewitz knew that the open season for killing prairie chickens began Sept. 15. He did not know that the legal season for selling them began Oct. 1, and not Sept. 15, he not being posted on our nice law. Accordingly, about Sept. 14, Mr. Brusewitz officially appeared on South Water street—it is about the only time he ever did appear there—and notified every game dealer on the street, and most of the restaurants also, that they could now sell all the prairie chickens they wanted to, as "the season was now open." Naïve Mr. Brusewitz!

The defendants in this case were among other dealers who took advantage of Mr. Brusewitz's indulgence and hung out chickens for sale. Henry Sloan was out of town at the time, but his clerks exposed the birds for sale. Mr. Bortree, it is understood, would just as soon be game warden as not. Mr. Baird was once in the Legislature, and was promoter of what is known as the "old game law." Perhaps Mr. Baird would not be averse to going to the Legislature again. Mr. Baird is one of the Board of Directors of the Fox River Fish and Game Association, whose good work in fish matters has so often been mentioned in these columns. The Fox River Association in the main knows and cares most for fish protection. Game protection is only a wing with it, but the body is earnest and honest, and it took up this game case, intrusting the matter to Mr. Baird. Ostensibly the Fox River Association is behind these suits. Really, however, its connection with them is only nominal.

Mr. Bortree and Mr. Baird passed by a whole street full of offenders, and picked upon Henry Sloan, who is the very man they ought to have left alone. Henry Sloan is a member of the Mak-saw-ba Club, and is more sportsman than he is game dealer, and more gentleman than he is anything else. He does not want to break the game laws, although it is not for me to say that he has or has not done so. I know he was among those dealers who all through late August and September sent out word to their customers in other States that they must desist from sending in prairie chickens until Oct. 1. In this specific case he was selling under specific advice of Brusewitz, and Brusewitz has since the filing of the suit gone to him and offered to pay any fine that might be imposed. Our warden out here is unique, be it observed. He doesn't work to get game dealers fined for violating the law, but promises to pay the damage if anybody else gets them fined!

The probability of a fine in these cases is slight. Brusewitz has refused to put his name on the warrant for prosecution. Under the wording of the law, which by Justice Smith has been construed before now, the game warden is the only witness who can arrest or search in a case involving illicit game. In other words, if the warden don't see it, nobody can. It will be remembered that last year Mr. Donald, acting for the State Sportsman's Association, employed a man to watch South Water street, who laid cases against Henry A. Sloan and G. W. Randall. Both these cases, as was duly reported, were dismissed by Justice Smith on the ground that the game warden was not the complainant. 'Cause why? He isn't complaining. There couldn't anybody get him to complain then, and there can't now. He's all right. He's Brusewitz, by the grace of, etc. He pays fines, not in-

flicts them. He is a bright and living example of the heights of glory that the illustrious game warden system is capable of attaining.

There may be some new crook in the ways of the Illinois law which will make these cases stick, but at present it is hard to distinguish them from the others above cited, which didn't stick. The probability is that they will be dismissed. If that is done, the cause of game protection will again be hurt instead of helped. The result will be duly reported.

It might be supposed that from lack of savage fervor against game dealers who have exposed illegal game for sale, and from the presentation of the game dealers' side of the export question, as *vide* Col. Bond's letter, FOREST AND STREAM correspondence was in league with the game dealers, not with the cause of game protection. Let me gravely assert that such is not the case. But it seems better to offer all the facts about the game laws, and not to accredit it to either the laws or the sportsmen who say they wish to see the laws supported with a virtue that is not possessed. If the laws are worthless and will not hold water, it is time we all knew it, and time we devised a better way to stop the horrible slaughter of our game, which in spite of laws and sportsmen is going on all through the West. It seems folly to suppose that this slaughter cannot at least be modified; it is equal folly to suppose that protection phases of sportsmanship such as we have had in the past ever will do much to modify it. The figure of protective sportsmanship, in the West at least, has long been merely a gigantic effigy stuffed with hay. It is time we knocked the hay out of it. It needs sharp words and appalling facts to startle sportsmen out of their mutual admiration; it needs the display of the resources of those who are interested in game destruction, to show the feebleness of the actual resources of those who claim to be interested in its preservation. It does no good to cover up and to dissemble and to attempt to deceive oneself. It is the locked horns, the issue joined, the fight fought out, that counts in life. For this end, let us hope to see the sportsmen of this region insist on the removal of the man Brusewitz, and insist upon the services of a man who can and will make a case stick against the South Water street men who, most of all, are encouraging and holding up the slaughter of game. Let them insist upon a change in the law which shall make it read like plain common sense to a common-sense man. As for Col. Bond's letter, I hope Wm. Alden Smith will start suit against him. The Illinois case is at least an offset against the Michigan case, and a future Michigan judge may call the Michigan case a mere "dictum," and think the Illinois decision, that game is not property, good law. FOREST AND STREAM editorially disagreed with the Illinois decision, but FOREST AND STREAM would hardly object to seeing another test case in Michigan and one also in Wisconsin, since now the sportsmen have the Illinois case to stand on. It ought to be decided, and if shooters can ship game across a State line no paper ought to say they cannot, or to keep the fact a secret.

Should the Sloan and Brosseau cases stick, it is said that fourteen other arrests will at once be made on South Water street. In another column, perhaps later, attention will be called to the season's work of the Fox River Fish and Game Association, and in the obverse of this picture readers may perhaps find something more cheerful to look upon.

Oct. 17.—Mr. T. F. Rose, of Camden, N. J., and Mr. Frank Toppin, of the Philadelphia *News*, are in town to-day on their way West, and will travel in company as far as St. Paul or perhaps Winnipeg. Mr. Toppin will go West via the Canadian Pacific, and will stop at Vancouver, Seattle and other coast points, making a very fine trip of it, though not stopping to shoot much. Mr. Rose will stop a few days in Dakota or Manitoba, perhaps near Devil's Lake, N. D., shooting ducks and geese and trying for a few chickens. He then goes to Butte, Mont., and strikes south via the Park to Cheyenne, stopping for big game at points not yet determined, and spending a month or more on his trip, which should be a delightful one.

Mr. S. C. Glover, a well-known sportsman of Grand Haven, Mich., and erstwhile contributor to FOREST AND STREAM, is off at Chicago to-day, *en route* to North Dakota after geese.

Mr. S. R. McCormick and his friend Mr. Ryerson, of this city, start this week for northwestern Nebraska after wildfowl and chickens. It is rather late for the latter.

Mr. Samuel Trude and his son, A. S. Trude, go to Nebraska, along the Dismal River and three forks of the Loup, for their hunt, and not to Dakota, as was at first intended.

Devil's Lake, N. D., is the goose-shooting point most valued this fall by Chicago shooters, but I am told there is a station about 30 or 40 miles this side, Larrymore, or some such name they give it, which is the best place to stop off. Messrs. Farmer, Dicks and Hansen are in there now.

Mr. E. C. J. Cleaver and Mr. Alex T. Loyd will start soon on a little duck trip, probably to the Spring Lake country, described in late mention in these columns.

Mr. A. S. Trude, the well known criminal lawyer of this city, accompanied by his father, an enthusiastic sportsman, start from Dakota soon on a trip after big game.

A novel feature in the project of blasting out the rock ledge at Momence and so draining the Kankakee marshes. The drainage trustees of Chicago propose turning a river of their own and a part of Lake Michigan into the Illinois River, and they don't want the Kankakee drained in at about the same time. Indiana Legislature has appointed commissioners to let the contract for blasting out the ledge. There is still some talk that the State of Illinois can interfere with the letting or carrying out of the Indiana contract. Work was to have been begun by this time.

Mr. Roger D. Williams and his kinsman Mr. E. D. Sayre, both of Lexington, Ky., were in town yesterday on their way to Montana and the Coast. They will both stop off at the meet of the American Coursing Club at Great Bend, Kas., next week. Mr. Williams is known as a prominent greyhound man and will take his string of winners clear out to the Golden Gate with him and try for the big California stakes. But first there will be some dallying with that deceptive Kansas product, the double-geared jack rabbit of the buffalo grass.

Oct. 18.—Mr. Herbert S. Smith, of the Washburn & Moen offices here, starts to-day for a two weeks hunting trip in Wisconsin. He will try Green Lake and other points in that State, and will also stop off for some squirrel shooting at Barrington, in this State, where he should have some fun. His friend Mr. Cameron has lately had good duck shooting at Green Lake, and if it were not for that Mr. Smith would be disposed to try Spring Lake, in this State.

Mr. E. C. Cook, the well-known sporting goods manufacturer, and his friend Mr. Loughridge were down at their club, the De Golyer, about two weeks ago and had magnificent sport at jack snipe. Mr. Loughridge alone killed over 200 and Mr. Cook says he never saw such a bag of snipe as they had. They shot only two days. Mr. Ward was not along. Mr. Cook says he never had a better time in his life. The weather was too warm then for ducks, but the keeper reports to-day that the water is coming over the marsh in good shape and plenty of ducks are in. Mr. Cook and Mr. Loughridge go down again Monday morning. The De Golyer Club, it will be remembered, lies above Water Valley and has some of the very best marsh on the Kankakee. The club ditches are giving them plenty of water this fall, it seems.

Yesterday the game law suits against Henry A. Sloan and J. B. Brosseau were tried. The Sloan case resulted in an acquittal, as was earlier surmised would be the event. The Brosseau case is under advisement till Oct. 24. Such is life in the Wild West under the ægis of the Illinois warden law.

On last Sunday two young men, Geo. Earl, of 601 North Clark street, and Michael Michaelson, both stenographers, were out hunting ducks in a boat on Fox Lake. A flock of mudhens flew by. Michaelson who, sitting in the rear, and who by any rules of shooting ought by no means to have fired, or to have had a gun with him in that part of the boat, raised his gun to fire. The same old sickening, terrible accident occurred. Earl received the charge in his right shoulder and fell stunned to the bottom of the boat. Michaelson lifted him to his seat. It was a three miles pull to the landing, four or five to to railway station and fifty miles to Chicago. The sufferer was taken to a hospital in the city and his arm was amputated. From the effects of this young Earl died on Thursday. Michaelson is suffering the usual prostration from grief. Doubtless other young gentlemen will go out with guns scattered all over the boat instead of all placed in the bow, where they should be, and doubtless before long another man-slaughterer will be prostrated with grief.

E. HOUGH.

DOG AND GUN IN CAROLINA.

IT has been some time since I wrote to you. Various causes have contributed to my silence, but the most potential has been the state of my health. I am glad to say that it is now somewhat better, and I hope to be able some time in November to go out into the field with my light 14-bore and my dogs Rip and Ned, and have some sport with Bob White, or the Virginia partridge of Audubon. I shall not be strong enough to take long and rapid tramps, for at best when one reaches my age he must have observed the wisdom of the lower order of animals and not attempt the impossible. It was Swift, I think, who, in contrasting the conduct of the human race with the dumb brute, said:

> "A dog by instinct turns aside
> When he sees the ditch too deep and wide;
> A foundered horse will oft debate
> Before he tries a five-barred gate."

Well, I am forced to "turn aside" very often and to "debate" a good deal in both cases. In the one case I search for a cow-ford or family bridge, and in the latter I crawl up very slowly and get down with the most abundant caution. I can get down as rapidly as anybody, but prefer the gentler mode for fear I might disable myself.

My old dog Argo, which in some respects was surpassed by no dog I have ever seen, has gone to "the undiscovered country." He did not have the most acute sense of smell, and was often too eager and rapid for the hunt; but he had an abundance of "bird sense," and a capacity to endure which I have never seen equalled. He did not potter along like a galley slave a few yards only from his master, looking back timidly, but ranged wide and rapidly, and when I was resting on the fence or a log or stone, he would find the birds if any were in the field. I would never have one of those snail dogs, fearing the sportsman to go over nearly as much ground as he. If such a dog is a retriever he would be of some service in that respect. Poor old Argo. He had no ancestry so far as I know. His daddy was simply a plain pointer of no pedigree, and his dam was equally humble, but he could wear out in the course of a hunt several of the blooded stock one after another.

I have long since been the advocate of light guns for small game, and am glad to see that sportsmen are beginning to adopt the idea. A gun which will weigh 6lbs. to 6½lbs. is abundantly heavy, and late in the afternoon, far, far more comfortable than one which will "kick the beam" at 8lbs. to 10lbs. Nor do I want to carry 3½ to 4drs. of gunpowder when a little more than half that quantity is abundant. To me it seems ridiculous to use 5drs. of powder for one little bird. It reminds me of what Dr. Wolcot said of Samuel Johnson's style:

> West gives an inch the importance of a mile,
> Uplifts the club of Hercules—for what?
> To crush a butterfly or to brain a gnat.

From all I can hear, the bird crop is very abundant all over the State. The nesting season was a favorable one, and young coveys are frequently seen. If the hawks and foxes do not get among them sport will be excellent. There is some nice hunting ground near a place which I own, twelve miles north of this town, where there is a mineral spring, whose waters have proved serviceable in cases of hay fever. On the streams near by there are large fields and plenty of cover, and a man who can walk well and shoot well can easily get in a day from fifteen to thirty birds. Then in Montgomery county, just north, there is good shooting. Indeed the whole of the central part of the State is for such purposes quite attractive. The best of the sport is off from the railroads necessarily; and a man who can do without a daily paper or a carpeted floor can go to some quiet farm house and spend several weeks very enjoyably, and at a small expense.

I have never seen any of those "feather-weight" guns, and do not know that I ever shall. I have so many, and more in fact than I can use, and cannot afford to buy one more just to add to my armory. Nobody will give me one, I feel sure, so I must get along as well as I can.

I have been browning gun barrels by the method set forth in Greener's book. But I am not able to get that shine on them which they had when they came from the shop. Perhaps I do not rub them sufficiently or am in too great a hurry to end the job. I am not sure that it is worth much, any way.

I do wish that Schultze and E C powders were within the limits of my purse. The former I have tried and am much pleased with it. With 2¾ drams, three wads, 1oz. No. 6 shot, I made some remarkably clean kills of sage hens in Idaho last year. I think I must try to get a few canisters of the E C and see how it will do.

I read with much pleasure the account given by "Chasseur" of his experience in the coast section of this State. He writes well, and as a general thing I presume he does not overdraw the picture. But the scuppernong grape is not black, but a delicate brown when ripe, and the depth of the water on the bar at the mouth of Cape Fear is more than 12ft.

And now, having used a *nom de plume* for a long while, I shall for the present throw off the mask, and sign myself WALTER L. STEELE.

ROCKINGHAM, North Carolina.

ADIRONDACK DEER.

Editor Forest and Stream:

It is quite true, as your correspondent "Hubert" would have me believe, that the hounding of deer is not a nocturnal sport. The chase is usually begun in the early part of the day, but it is not uncommon for an ambitious and lusty dog to follow his deer in and out of a stream till long after dark, and only take the back track when tired dog nature is on the verge of collapse. I have heard such foolish hounds yelping far into the night, and can readily imagine that the early slumberer might be much disturbed by it.

By the way, why does not some one argue the case against this imitation sport from the hound's standpoint, for, omitting the element of terror, they surely suffer as much as the deer. The morning after a long run a hound is a pitiful sight to see, with his swollen paws, stiff joints, and thin enough to pass for an image of vanity. And if in addition to other incidental misfortunes he has run foul of a fretful porcupine and got well quilled, the dog's misery is complete.

But to return. Your correspondent asks if it be true that the deer are being exterminated in the Adirondacks as the result of hounding. I think those who are familiar with the country will answer no; and in fact it is generally believed that the deer are increasing in numbers. If the practice of hounding was as fatal to deer as it undoubtedly is to the finer feelings of those who follow it, the deer by this time would have dwindled into a tradition. Unfortunately for argument in the matter, the deer in the majority of cases escapes capture when hounded, and each experience aids them in future adventures of the kind. I set out to put your controversialists right regarding night hunting and the destructiveness of hounding, but it is impossible to approach within gunshot of the latter subject (excuse to figure of speech) without trying to persuade others of its iniquity. Yet when it comes to the point I don't see what we Pharisees are going to do about it. Cut and dried logic will lead to but one or two conclusions: Either all deer shooting is unholy, or hounding is a proper occupation, for there is really no probable moral difference between shooting a deer in the woods and cracking his skull with a bullet or club when the animal is in the water.

But dropping logic and viewing the case from the higher lead of humane instinct, there is no more revolting custom in the world of sport. Written words are cold and unpersuading, but the object lesson of a single water butchery, such as I myself have been guilty of, ought to settle the matter beyond doubt for every right-minded man or woman. I don't believe that even Cain, who was the first sportsman we have record of, would have played such a dirty trick upon the Mesopotamian deer, and I am quite sure that Nimrod, Adonis, Diana and the other lights in hunting matters would have wept to think that men could ever sink so low.

D. C. L.

A PLEA FOR BRUIN.

Editor Forest and Stream:

In a recent issue of you paper "Special" has something to say about the cruel practice of bear trapping, and details a case of unnecessary cruelty by reason of neglect to properly attend to the steel trap after the same had been set. In the same issue of the paper, speaking on the subject of the proper limit as to the quantity of game killed by any one sportsman in a stated time, you say, "as regards the shooting of bears, panthers, wolves, wildcats and all that class, the sportsman is generally conceded to be justified in availing himself of his opportunities to the utmost." "The object here is to annihilate," etc. Now, in regard to the black bear I beg leave to differ from you, and believe that he as one of the grandest game animals on this continent is entitled to proper protection as such, besides that he, and all other fur-bearing animals as well, ought to be protected at certain seasons of the year for economic reasons.

Unlike the other animals aforementioned, the black bear is not a game destroyer, nor can he be to any great extent charged with the destruction of domestic animals, and it is safe to say that where a hundred dollars' worth of sheep have been killed or maimed by dogs, not a dime's worth have been destroyed by black bears. Such being the case, I see no good reason why the black bear, an animal conceded by all who have been successful in his capture by fair means, to be, next to the moose, the noblest game found on the American continent east of the Mississippi River, should not be accorded the same protection as deer or any other game animal. His glossy black hide when prime is a trophy that any sportsman might well be proud of, when he is satisfied that its original owner was killed in a sportsmanlike manner, and not by a lingering death in the cruel jaws of a steel trap, and his flesh is by no means to be despised as an article of food as all who have eaten of it will testify. His capture requires more of those qualities that go to make up a true sportsman than the capture of any animal with which I am acquainted on this portion of the continent, and as I write before me lies a rug made of the glossy covering of an old veteran, which a few years ago led a party of us a merry dance over hill and dale, through thickets and swamps well nigh impenetrable, for the greater part of the day, until finally brought

to bay, he died a true game animal to the last. Talk of sport, one hunt like that was worth an age of deer hunting at its best, and ought not to be named on the same page with deer dogging or jacking.

Bruin's capture requires on the part of the sportsman the hardest of work, the best knowledge of woodcraft, lots of endurance, and to insure success, well trained dogs. If successful and when in at the death he will have no qualms of conscience (as perhaps might be the case when a dying deer cast a last appealing look at him), for his bearship's last act will probably be a vicious cuff that augurs no good to any dog within reach of that powerful limb. Living or dying he is game, and shall he not be protected as such in the proper seasons?

Brother bear hunters, let us hear from you.

URSUS A.

TWO BEARS WITH ONE BALL.

Editor Forest and Stream:

Recently seeing an item in a local paper stating that a bear hunter near Cañon City, about fifty miles west of this place, had performed the marvelous feat of killing two bears at one shot, I wrote to him to get the particulars of this extraordinary affair, and in due course of time received the following letter:

CAÑON CITY, Col., Sept. 20.—I received your note of inquiry on the 18th. The item you refer to is correct, inasmuch as I killed two bears at one shot. One was a black, the other a brown bear. They were standing broadside, one beyond the other, at about 100yds. distance. The ball passed through the shoulders of the first one and broke the back of the second. The black bear was full grown, weighing probably about 300lbs. The brown one was about half grown, likely a yearling. I used a single shot Winchester, .45-70 caliber.

I was out looking for bear and came across four feeding on acorns, two standing as described. I killed two at one shot, and one of the other two, running, at about 150yds. distance, at a second shot.

I may add that I have killed six bears in the last two weeks at seven shots. Yours respectfully, A. S. SAGE.

Mr. Sage says he *killed* the two bears at one shot. Now a bear is rather tenacious of life, and one shot through the shoulder, or one with a broken back is not necessarily killed, though possibly fatally injured. I am sorry Mr. Sage did not state more explicitly whether or not the animals were instantly killed or whether he finished the job with an axe or some other weapon.

However, the feat was a remarkable and an uncommon one, and will take rank with any I have read of for some time. TENDERFOOT.

PUEBLO, Colorado.

OHIO DEER HUNTERS.

DAYTON, Ohio, Oct. 20.—Five parties of deer hunters have already left this city upon their regular annual expeditions into the wilds of the West and Northwest. Philip Kern, Julius Wehner, Edward Schwind and Louis Schwind are in the pine woods near Iron Mountain, Michigan.

Harvey Puterbaugh, Edward Stuck, John Puterbaugh, Louis Groneweg and Jacob Puterbaugh are camping in Forest county, Michigan.

S. S. McKinney, John Franz, Frank Volker, Sabin Statler and Levi Falknor, of Piqua, and John F. Beaver, of Dayton, with Phil Leidigh, Eli Stayrook, Frank Griffin, W. B. Chichestry, William R. Nivin, Charles L. Robb and Ira Brown have gone to Montana to shoot bear, deer, moose and elk, and will not be home until December. There are sixty hunters in the party. They have chartered two cars, and will camp on the banks of Lake St. Marys, Montana.

James Burnett, Joseph Endress, Jr., W. D. Emerick, Jacob Fudge, Samuel Browsman and George Coleman form a Germantown party that has gone for three weeks' deer hunting in the Upper Michigan peninsula.

Xenia sent three large parties to the wilderness west of Floodwood, Michigan. The old Greenville deer hunters have divided into two parties and are in camp near Floodwood, Michigan. Camp No. 1, D. S. Heim, J. H. Schwable, Charles Johns, James Knick, Daniel Snyder and Frank Culbertson. Camp No. 2, Dr. A. J. Marling, Harrod Mills, S. A. Hostetter, J. N. Lowry, Oscar Davidson and S. N. Wilson.

Fred Huber, William Ten Eyck, Levi Gluck, Samuel Harver and John Von Kopf, of Tippecanoe, have gone to Pike county, Wisconsin.

Oct. 20.—If the same conditions prevail in the Scioto valley as here on the Miami, quail will be as scarce when the season opens as they were last year, and farmers will be again unjustly blamed for the slaughter. People, however, are getting their eyes opened to the facts, and a sensation will develop when it becomes generally known that town hunters, men of respectability who go out ostensibly to shoot rabbits and doves are really after quail, and take pot shots wherever they can get them, as being less liable to detection than if they shoot the birds in the air.

This being true, then it is not the protective game law that is to be credited with the remarkable increase in numbers of quail through Ohio and Indiana, but rather the mild weather of last winter. The birds had not been shot at until within the past three or four weeks, but now are being slaughtered without restraint. Less than a month ago the coveys were large, twenty to thirty quail in each, and very tame. Now they are growing wild and coveys are not found with over twelve to sixteen quail. Country papers are cautioning farmers against participating in this illegal shooting, but the danger is that farmers will see no other way of getting a share of the game, and the quail will thus be depleted. We have no efficient game wardens in this vicinity. BROWN.

NEW HAMPSHIRE WOODCOCK.—A party at Newport, N. H., during the six days ending Oct. 11 killed seventy birds, chiefly woodcock and partridges (ruffed grouse). They stopped at the hotel and drove from one to ten miles to reach the covers.—T. H. B.

MASSACHUSETTS BIRDS.—The October gales have brought some good flights of shore birds, and Boston gunners have been after them. But the report is that they are wilder than ever this year and very hard to approach. In their flights they steer far away from boats or blinds. George T. Freeman, of Harrington & Freeman, has been down to Annisquam after ducks, with fair success. The quail hunters are generally disappointed in this State. The restocking has given more birds, but they have all along been too small to shoot. Whether the broods from the birds put out by the Fish and Game Protective Association have been later than the native birds, it is hard to tell. But it is certain that the open season beginning Sept. 15 is altogether too early for quail, and even the market hunters are not pleased with it. One sportsman, and a true friend of game protection, says that soon after the open season begun he made a trip to the Cape, with a view to quail shooting. He hired a team and drove along one of those well-known sandy roads that run through the woods. A bevy of quail was started, when behold the little chickens were so young and small that one of them actually got tumbled into a wheel rut in the sand and could not get out. Some of these little quail were obtained and the skins were mounted, and they will be presented before the Legislature this winter as conclusive evidence of the faulty condition of a law that allows of the hunting of birds so young.—SPECIAL.

KENTUCKY QUAIL.—Shelby County, Ky., Oct. 9.—The happy results of the efforts of the Kentucky Fish and Game Club are to be seen already in this county in the increase of the number of quail. There is so little forest here that pheasants, turkey, deer and the like are almost unknown, but there is a great abundance of quail; and if the pot-hunters (mostly negroes) are kept from their nefarious work there will be plenty of shooting for the sportsman. Of course there are any quantities of hares, but they are so heavy to carry, and are such dry eating that but few sportsmen will shoot them. There are a vast number of negroes about the towns who don't work in winter and who hunt for "meat," and scour the country and shoot everything they see larger than a sparrow. These create a nuisance, and often cause the true sportsman to be forbidden the privilege of shooting on farms. A man could have fine sport in either of two ways; he could make a good bag of quail, or by having two or three beagles to start and trail hares he could kill a brace of dozen in a few hours, and a hare properly cooked and served is not to be "sneezed at." No fishing or fox hunting here to any amount.—J. S. M.

COLUMBUS SPORTSMEN'S LUCK.—Columbus, O.—"Judge Frank F. Huffman, Dr. Elmer Potter, Capt. Wm. F. Burdell, Maj. J. L. Rodgers, Col. C. D. Hinman and Col. Horace Park started on the 20th ult. for the Rosseau country, near the Lake of the Woods, Minn., where moose, caribou, elk, deer and bear are reported plenty. That country is also the home of ducks, geese, brant and swan. The fishing, too, is reported the very best. The party expect to stay about six weeks. We hope to have the opportunity of publishing a full account of the trip on the return of the party." The above is from a Columbus, O., paper. The parties have just returned from the tiresome trip (being absent but three weeks) much disappointed. They did not see a live moose, caribou, elk, deer or bear while they were away. They had good duck shooting and bass fishing, that's all. There is a vast amount of delusion in this going "away off" for sport when one can often do as well near home. Those remaining here had nearly as much success with ducks and bass within thirty miles of Columbus. I am too much disabled to get out.—M. P. P.

QUAIL IN TOWN.—Zanesville, O., Oct. 18.—I was surprised yesterday, while sitting in my office, to hear quail calling one another in the center of the city. This was about noon. At 4 o'clock I went out for a walk and found that a whole covey was scattered over the city, in flower gardens, trees and on tops of houses. Friday, while driving through McIntire Park, in the city, I saw a covey of quail running around, apparently as tame as chickens. The reason they are so tame is that they are well protected, nearly all the farms are posted, the law being in force up to Nov. 10. We have only thirty-five days shooting in this part of the State. We expect good quail shooting this season, but only those who have privileges to hunt on farms will enjoy the best shooting. I have an invitation for the opening day and I am getting my Irish setter Toby Glencho in trim for this occasion. He has not been in the field for two seasons, but when he sees a gun he nearly goes crazy.—F. V. R.

THE CURIOUS ANTLERS mentioned by a Whitesboro', N. Y., correspondent in our last issue may be seen at a taxidermist's shop on Fayette street, Utica.

OUR readers who enjoy the sport of duck shooting will find an offer of importance to them in our advertising columns to-day. A half interest in a celebrated shore is offered by the owner for sale for the sake of company. The flight at this point is said to be excellent, and it is an opportunity that seldom offers. See advertisement of Geo. H. Wild.—*Adv.*

Camp-Fire Flickerings.

"That reminds me."

JIM, Bob, John and the writer were sitting around the camp-fire one night when the subject of snakes came up. Bob asked how many eggs we supposed an old chicken snake could eat at one sitting. John said he thought one setting would hardly make a lunch for a good-sized chicken snake. Says Bob, "Do you know how a chicken snake manages to break the shells after he has swallowed a stomach full of eggs?"

"I suppose the stomach dissolves the shells the same as it digests other things."

"Oh no," says Bob, "he goes to some hard piece of ground—a road is a good place—and raises himself up like a rainbow, just standing on his nose and tail, and then strikes himself down on the ground until the shells are broken."

"Ah," says John, "I didn't know that before. I am glad to learn such an interesting fact in natural history."

The next day was rainy and we were sitting in camp, when we heard some one at a distance pounding heavily.

"What do you suppose is making that noise?" said John.

"Some one splitting rails," said Bob.

"No," said John, "it's a chicken snake breaking a stomach full of eggs." LEW WILLOW.

ARKANSAS.

"THE BOOK OF THE GAME LAWS."

WE take pleasure in announcing that the first number of the *Book of the Game Laws* will be ready for delivery early next week. The work has been long in preparation and publication has been delayed by the unexpected bulk of the material. The contents comprise all the game and fish laws of the States, Territories and British Provinces.

The better to insure accuracy, all important sections are given in their full text, as they appear on the statute books. Errors which might arise from abstracting or paraphrasing are thus avoided. To give the exact letter of the statutes is something that has not before been attempted in any general compilation of the game laws. Certain minor sections and local laws, or parts of them, are abbreviated. Laws of local application are printed in smaller type following the general laws of each State.

The *Book of the Game Laws* will be a regular periodical, published by the Forest and Stream Publishing Co. The quarterly numbers will be issued on the first days of October, January, April and July. Each quarterly issue will contain all the laws given in No. 1, and a supplement of sixteen pages or more comprising amendments, changes and additions to date, and other material.

Certain classes of laws omitted in the initial number of the *Book of the Game Laws* will be given as special compilations in subsequent numbers. These include the statutes relating to fish commissioners, fishways, game warden systems, modes of procedure in law enforcement, bounties on vermin, laws at to forest fires, dogs, damage to stock, careless use of fire arms, incorporation of clubs and societies, etc., together with special county, town and other local regulations.

From time to time there will also be given reports of law cases, the text of decisions of the courts relating to game and fish laws, and such discussions of game protection interests as, it is hoped, will prove useful in promoting a clearer understanding of the subject, a more general public regard for the statutes, and a more intelligent appreciation of their purpose.

Price of each single part, postpaid, 50 cents. Annual subscription (four complete numbers), $2.00. Upon receipt of $1 will be sent one complete number and three quarterly supplements following on dates of publication. By this mode of subscription the subscriber will receive all the new material contained in the numbers for a year.

Sea and River Fishing.

SUNAPEE LAKE FISHING.

THE fishing, except for salmon, was not so good this year in Sunapee Lake, New Hampshire, as in some previous years. The number of fishing places is small. As many as twenty-five boats have been anchored in one string. Two large steamers and some smaller ones are churning right over the fishing grounds, making six round trips a day. The fish have undoubtedly moved because of these sources of noise and fright.

Fully 1,000lbs. of landlocked salmon were caught in Sunapee Lake. Three hundred trout and salmon were taken in May on about two acres of fishing ground (Blodgett's Landing), the trout from 1 to 5lbs., the salmon from 5 to 10lbs.

Some of the fishes found in Sunapee Lake are black bass, pike-perch, yellow perch, sunfish, pickerel, suckers, horn chub, dace, roach, catfish, eel, smelt, brook trout, golden trout, Loch Leven trout, rainbow trout and landlocked salmon. All of the *Salmonidæ*, except the brook trout and the golden trout, were introduced, as were also pike-perch, black bass and smelt. The roach was probably introduced as a bait fish. It is known at Sunapee as the "grass fish," and we have seen only a single specimen from that locality. The sunfish or pumpkin seed is called "flatfish" or "flat sides" at Sunapee and in some other portions of New Hampshire. It is believed that the pike-perch has died out.

The smelt, which was introduced more than twenty years ago, occassionally reaches 10in. in length. It is extremely abundant, and is often washed up on the eastern shore of Sunapee by strong winds. The young landlocked salmon here is sometimes styled "tinker salmon," from its resemblance to a small mackerel. The largest landlocked salmon ever taken in Sunapee Lake, as far as our knowledge goes, was caught July 21 by Mr. Walter Aiken. It weighed 14¾lbs, and fought over an hour.

The introduction of smelt into New Hampshire lakes has an important bearing upon the number and size of the trout and salmon reared in them. The fish are usually transported as fish, but Mr. Aiken established them in Webster Lake by the novel method of taking the fertilized eggs after they had been glued to stones in the spawning brook. Stones with the eggs upon them were placed in a little tributary of Webster Lake, and now the waters are teeming with smelt.

AN ALLIGATOR GAR.—Mr. A. Turpe, of Brackettsville, Texas, has sent to the National Museum a six-foot specimen of that interesting fish the alligator gar (*Lepidosteus tristœchus*), which is not a bad rival in size of jaws and teeth of the formidable reptile for which it is named. The gar was "pearl green on the back and sides, the back a shade darker, the belly white, head light green, under jaw white, eyes black, with wide golden circle, two golden shades in star shape."

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

A JULY IN WISCONSIN.

SEVEN men, in varied lines of professional and business life, rationally concluded that it would be good to spend a few weeks in the woods. Our objective point was the Turtle waters of northern Wisconsin. These are best reached by the Milwaukee, Lake Shore & Western Railroad, whose genial officers and trainmen must like to go fishing themselves, for they all showed the keenest interest in our welfare and success. Fortunate is the angler who falls into their hands.

We left Chicago at 7:30 P. M. on the 7th of July, and before noon the next day the last clearing was south of us, a straggling little village of rough cabins would start up beside the track now and then, and every few miles a gem of a lake would flash out among the dense timber—a turquoise in an emerald setting. Jim Lawson, a former guide of ours, boarded the train at Lac de Flambeau, and we were soon deep in the question of the best camping and fishing points. At 4 P. M. on Tuesday we left the train at Mercer. This is a flag station just outside and north of the Chippewa Reservation. As we passed through the Reservation we saw some of the Indians, sorry specimens of the noble red man. We were reminded of an experience we had a year before at Mud Lake, on the southern border of this same Reservation. Four of us, with two guides, Lawson and Card, had tramped over from Minocqua, seven miles, taking a couple of boats on a wagon. Putting the boats into the water late in the afternoon we had a half dozen fish by dusk. The best fish had been lost. The boats were approaching each other, creeping along the edge of the weeds with trolls whirling. Now," said I, "Lou, if we could have a strike just here we would show the others how to land a 'lunge." As if in response to the suggestion, a 10lbs. fish, he was that at least, struck my No. 8 skinner as the other boat came within oar's length of us, and going out of the water seemingly 6ft. with the beautiful rainbow leap. But that fish had evidently started out to give my pride a tumble. After a stubborn fight he was at the boat's side, and Lou was ready to rap him over the head, the best method, if properly used, to get a muscalunge ready to be lifted into the boat. But I held his nose too high with the line, the smart blow only releasing him from the hooks, and he went away to meditate upon the folly of trying to eat barbed steel. There was something saddening in the loss under the circumstances. It was not the moment of triumph anticipated.

As night came on we went to our camp. Supper was eaten and we were about to crawl into our tent for a welcome rest. Back of us was the somber forest. Imagination pictured the uncanny things it might contain. Two squaws in a birch canoe had run one of the boats a race for the tent, which stood where an Indian trail ended at the water's edge. The squaws had beaten, and disappeared in the forest, leaving the canoe on the shore. We soon found where they had gone, evidently to meet a half-dozen bucks, who, full of bad whisky and curses, came whooping upon our camp just as we were ready to go into our tent for the night. They were bent on making trouble. The squaws had told them that we were catching their fish. One of them could speak fair English, and spoke for the chief, who was one of the gang. They insisted on our taking our bosts and leaving the Reservation at once. It was ten o'clock at night. The team had gone. The "noble red men" were evidently on the war path, so far as we were concerned. The situation looked squally. We had a fighting chance, but were not looking longingly for any chance of that kind. We invited Lo to supper, as a pacifying measure, and lo he accepted. His appetite is always active. Six of him nearly cleaned out our provisions. Card dickered an hour for the birch-bark canoe, a beauty, which the squaws had used, and got it from the old chief for $8. By the next morning they were at the nearest saloon spending that money. Their consent that we should stay until daylight quite satisfied us. We fished the lake until the next night, as long as we had intended to, and then returned to Minocqua. But some of our party confessed afterward that they did not get much sleep, and that the note of a screech owl toward morning sounded painfully like the yell of a savage.

But to return to Mercer. This town consists of Jim's house, a tent, and a store with $20 worth of goods in it. Within seven miles of it, however, are forty lakes, and that is more to the point. These cluster in what is practically an unbroken wilderness, and around them in every direction are—more lakes. They have not been fished very much as yet, and they would supply splendid sport for years to come if the netter could be kept from getting in his deadly work. But we saw at the mouth of every creek connecting one lake with another the stakes which marked the spots where nets had been placed last spring. A few years will see these superb lakes stripped of all their attractions for fishermen, save those offered by the scenery. When the lakes now accessible in north Wisconsin are fished out, that will be the end for every one but the rich men, who can buy the lakes and restock them as private preserves. There will be no virgin waters for the masses of sportsmen, for beyond those now within reach lies Lake Superior.

We were not long in getting our duffle into boats. We went up a narrow creek a quarter of a mile and found ourselves in a beautiful little lake, on whose shores we pitched our tents where, at a time more or less remote, the timber had been cleared away by the Indians, possibly for a village or a bit of garden.

If when these Indians left the spot they had taken the mosquitoes with them there would have been nothing to mar our happiness. But the pests were there in multitudes. They swarmed out of the brakes, which grew thick and tall all about us. They pounced upon us as though they knew we were fresh from civilization. Doses of evry sort were useless. Even "Nessmuk's" vile decoction smeared on and left on until we were glazed like patent leather and smelled like tar barrels, was no good. The pestiferous mosquitoes never paused in their repast. These creatures have a scent like a sleuth hound, for they will find the smallest crack in a tent front, and worm their way in for a nip at your neck. The Wisconsin variety can bore a well in a man's epidermis and start his pumping works to running full blast with wonderful quickness. He does not go prospecting about for a juicy spot, but stakes out his claim instantly, and at once sinks a shaft. The first few nights were torture. The pack of pests were in full cry all night. Head nets were of no avail. One sufferer vowed to get even with the tireless torments. Dirt was thrown up around the bottom of the tent so that no insect could crawl under, the opening at the front was pinned so closely that nothing could squeeze through there, and then the Parson, with blood in his eye, began a grand hunt which would last some nights for a couple of hours, but when it was over his July *Century* was streaked with red marks where he had slapped the mosquitoes against the tent, and there was peace and quietness for the rest of the night. To build a smudge in the back of a tent does no good. The mosquitoes drop down among the bedding and simply wait for the air to clear. Seal up the tent and then kill all inside. There is no patent on this plan and I commend it most heartily to all campers.

Our first fishing was done on a lake about half a mile from the one on which we were camped. We had to push through a narrow creek just wide and deep enough to float our boats. John N. finally concluded we were going too slowly. After making some decided changes in his toilet he took to the water. After a heroic struggle with the boat and the mosquitoes he got us through into the next lake. It was a beautiful sheet of water, opening out to the right and the left into half hidden coves which looked exceedingly fishy. It was late in the afternoon and not much time for fishing. Skirting the shore opposite the point of our entrance Lawrence had the first strike. It was the first fish of any size he had ever hooked on a light rod, but he played him skillfully, a 3½lb. small-mouth bass, and after a splendid fight the panting fish was lying in the bottom of the boat. To say that Lawrence looked happy would be putting it mildly. He looked ecstatic. There are not many moments in life like that to a man. There is not much sense of triumph in fighting a fish out of the water with a line that would do for a clothes line and a pole that might serve as a flagstaff. The fisherman using such tackle enjoys the pleasure of asquisition when he captures a fish. But he has no feeling of triumph. The fish has had no chance to escape. He has been lifted by superior brute force out of the cool shadows of his native haunts, and flung helpless at his captor's feet. But take a rod that bends double with the fish's weight and a line that would snap if the fish could put the full strain of his marvellous muscles upon it, then the cunning of the angler must be added to the strength of his arm to get the lithe swimmer, and it becomes a battle royal. Under these conditions success brings to the sportsman the joy of conquering, as well as the delight of getting. Well, I saw both these kinds of happiness written on the face of my young friend as he sat with the bronze warrior floundering at his feet. It was a fine picture. We were in a cove of the lake that was unruffled by a breath of breeze. The sun was too far down the west to do more than flood the place with soft radiance on the burnished surface of the lake, lighting but not warming the cool spaces of the quiet woods, penciling the fringe of rushes along the shore in the water below till no one could tell where the green stems ended and the green shadows began, while the whole emerald glory of the woods seemed to reach as far down into the motionless waters as it did up into the motionless air. All this we saw and more as the boat floated quietly on the lake in the few minutes of peaceful content which naturally follows the angler's victory.

In a few minutes more John N. had the first muscalunge, a 4lb. fish, which made a good fight. Two 3lb. big-mouth bass completed the catch, and we returned to camp not overloaded but with enough fish to make us happy. It is not what you get the first day, but what you are going to get the next, which fills your cup of content to overflowing.

Several trips to the same lake resulted each time in about the same catch, four or five fish. This hardly suited our ambition, and we began to talk of moving our camp. Stanley caught his first 'lunge within a hundred yards of the camp, the only fish we caught in that lake, but not Stanley's only 'lunge. Some one had brought a pie from Jim's house, and it had been carefully put away for supper—that is, had been set in the shade of the cook tent. While we were discussing the first course of beans and bacon, lying around the table, which consisted of a little ridge, on the ground, Stanley's foot struck the pie abaft the wheel-house, swept away smoke stacks, masts, all the contents of the hold, everything except the hull. The camp put on crape and mourned for the lost pie.

We struck camp after a week's stay and portaged over into Echo Lake, a distance of half a mile, then went up the creek which connects Echo Lake with Ox Bow, Spider, Fisher, Cedar and Turtle lakes above, in the order named. John L., not Sullivan, but a man as big in heart as the pugilist is in muscle, was compelled to leave our first camp after a single night's stay, being to ill to remain. We were sorry enough to lose so genial a companion and enthusiastic a sportsman. We went as far as Spider Lake, and well named that beautiful sheet of water is, the bays and coves sprawling out from the main body of water in a dozen directions, densely wooded at every point. This is true of all these lakes. The virgin forest crowds down to the very water's edge everywhere. We camped on an ideal spot. A narrow point of land 200yds. long, 15yds. wide and perhaps 20ft. high, along the middle, juts out into the lake. A score of noble pines stand well out on this point and give just shade enough to rob the sun of fierceness at noonday, but are far enough apart so that the breeze was never shut off. The voices of these giants, low and sweet, were never still. All day they whispered, and at night sang the weird lullaby which they have chanted through uncounted summers. Far up among their branches the little red squirrels barked at us for invading their domain. We made a table by nailing cross pieces on two of the pines and then laying side by side a dozen birch saplings. Among the empty tins on this table the little squirrels made a wonderful clatter some mornings, and they grew so tame that twice we got near enough to touch them. But of all the strange sounds to be heard in the northern wilderness, what is more weird than the loon's cry? Who ever can grow used to it? A laugh some people call it. It sounds more like the cry of a lost spirit wailing through some unsunned cavern of the underworld. In almost every lake we found a pair or two of these birds, and often the stillness of the night would be pierced by their strangely beseeching, lonely cry.

There are comparatively few birds in the Northern wilderness. They seem to like open country and to be near the haunts of men. The solemn, silent aisles of the unbroken forests are too lonely for them. We saw a number of porcupines—ungainly, ugly creatures that they are. A few miles south of us Gov. Fifer and his party saw a solitary bear. We were not so fortunate. Two or three deer were sighted in the dim distance. We came upon one spot on a lake margin where the tender grass had been cropped short by them. In the open season that country would be good for deer.

Not only did we have a good camping spot at Spider Lake, but we had a well-made camp; Tom, a royal camper out, gave the directions which the rest of us carried out, and the result was an increase of comfort over our first camp. A cook tent for storing provisions, good side logs for the open fire, well-made beds of hemlock browse and a well-filled ice pit, were among the luxuries. We all appreciated the skill and thoughtfulness of our camp captain.

A favorite fishing place was at the Narrows. The shores draw together until they are not more than 15yds. apart. Here, earlier in the season, many small-mouth bass were caught. We seldom failed to catch from ten to fifteen wall-eyed pike when fishing here in the afternoon. After a stubborn battle Tom got the biggest one into the boat—a thick-set fellow weighing about 5lbs.—not the biggest in the lake, perhaps, but the largest we saw.

Indeed, the fish we caught were not as large as they had been in our dreams before we left home. This will not be surprising to any old fisherman. Undoubtedly we chose the wrong season for successful fishing. May and September are much better months than July and August. There are several ways of accounting for this. I do not think the bloom on the lakes has anything to do with it. But just when the bloom is on the lakes the young tadpoles are to be seen everywhere, dodging away as one's boat runs through the water. They lie near the surface, and the muscalunge have only to open their mouths and gobble all they want. The pollywog's tail disappears about the time the bloom of the lake vegetation does, and the young frog hops up on a log where the fish cannot get him. A glittering spoon looks much more interesting to a hungry fish than when he has a full stomach. Here, I think, is the real reason for the dullness of midsummer as a fishing season in the north lakes.

However, we caught all we needed for our own use and enough to make many of our friends happy. If we fished a while without getting a strike we appreciated one all the more when we got it. Such was Stanley's experience. He was not the last to catch his first muscalunge, but he had been out several times before he hooked one of the little warriors. When he did, the fun was furious for a while. The surface of the lake was like glass. As we skirted the shore there was a green forest beneath us as well as above us. As the spoons swept past an old tree top Stanley's rod dipped with the tug of a fish, and it was a gamy youngster. He made the most of his six pounds. Three or four times he went out of the water. But it was a cool hand at the butt of the rod, and the emerald-mailed fighter was brought safely to gaff. The boys insisted that I got excited; in fact, they said this each time a fish was caught. I denied it, but have a vague suspicion it was true. What's the use of catching fish if you don't get fun out of it? And I never could take my fun in profound silence, like a clam.

Stanley and John N. went home sooner than we hoped, but we were partly consoled by the arrival of Ira, who was inexperienced in roughing it, but who took bravely to the discomforts of camp life.

It was after his arrival that the four of us took the two boats and went up to Fisher Lake. We had to go up a winding creek where sometimes there was scarcely water enough to float the boats. Now and then a deep pool would give us a small-mouth bass weighing 2 or 3lbs. We did not meet with much luck at the lake. The only thing that broke the monotony of the day was Lawrence's good fortune in hooking a fish that would have weighed about 15lbs. We were casting when the fish seized the spoon and at once leaped frantically into the air. Then he went to work as though he knew all about Keeley's motor, and was using it to drive himself about through the water. Several times he was at the boat side, but would dash away at sight of the gaff. At last, with the line wrapped twice about his body, he gave a sudden, unexpected plunge which snapped both line and tip. If he was not born with a silver spoon in his mouth he certainly went away with one there that day. On the way back to camp Tom and Ira met with a mishap. In shooting one of the rapids their boat struck a submerged boulder. Tom was standing up. As we swept around the bend we heard him shout "Hello, here!" and looking back, saw him pitching head first into the water. It was ludicrous enough. Ira was caught and drenched by the flood that poured over the side of the boat. We whistled and called, but there was an ominous silence. It was a great relief to us, physically, when the boys came into sight after their ducking, and looking cheerful enough to make it safe for us to laugh as loud as we wanted to. The boys themselves enjoyed the episode—after they got dry. Who can tell why it is that the most uncomfortable experiences of camp life are the very ones you get the most fun out of in "talking matters over?" I suppose it to be according to the law of compensation.

It was a day for regrets when we pulled down our tents and started for the railroad. We talked of the time when we would return. Whoever left a pleasant camping place without laying some such plan? But when we go back it shall be in the spring or fall. Then the fishing in this region is superb. Our hope is that we shall wet our lines in those waters when bass and muscalunge have the vim of cooler days and emptier stomachs. Lawrence and I lingered at Jim's house and fished in the nearby lakes for a few days after the others were gone. The queerest part of our catch during these days was a 'lunge that would ordinarily weigh about 5lbs. He was heavier when we got him, for he had recently swallowed a 2½lbs. bass. I couldn't see how he ever got the bass down his throat or kept him from kicking a hole in his stomach. And who can account for his dashing at the trolling spoon when he already had a whole commissary department inside of him?

We were well cared for by Jim's wife and her pretty daughter Polly, who accounted for her immunity from mosquito bites by saying she "guessed she was too hateful for 'em to bite her." Jim is a queer old woodsman. He has a couple of big black hounds which he hitches to a sled in winter, and drawn by them explores the country for new lakes against the time when outers begin to arrive. When John L. was sick and we were debating where we would better send for a doctor, Jim thought the one at Minocqua was the man because he had a "philosophy."

"What is a philosophy, Jim?"

"Wy, a consurn to run on the railroad."

It dawned on us gradually that a "philosophy" was a railroad velocipede. Having occasion to send him some money, he advised us to send it by express, because if we sent a bank draft "he would have to get some fellar up to Hurley to indemnify him." Jim knows the good fishing places better than he does his grammar. We were reluctant to turn away from his hospitable "hotel."

RICHARD GEAR HOBBS.

THE CLUBS OF THE ST. CLAIR FLATS.

NO. VIII.—THE NORTH CHANNEL CLUB.

THE whole of the St. Clair Flats is by no means comprised in the narrow section lying along the present ship channel, and although the bulk of the club interests center at that point, there are clubs elsewhere on the Flats. Of these exceptions, we need pause to note only one, the North Channel Club. Of the St. Anne Club, on the Sui Carté, not enough was learned to warrant description in detail, and besides there is a space limit in all papers, as well as a last notch in the patience of all readers. But the North Channel Club we must mention, because it is so old and so able an organization.

This club house is some miles distant from those of which we have been speaking, and in the old ship course through the Flats known as the North Channel. As in all the other clubs, the building is on "made land." In front of this is a good dock and a walk to it. The club house is a good wooden building, with 28 sleeping rooms and a big club room, a fine ladies' parlor, dining room, gun room, etc. The floors are of hard wood and the main stairway is of cherry. All the furniture is very good, and the walls are well embellished with pictures of game birds and fishes. A noteworthy feature is the great fireplace, big enough to take in a small log. This is something that every club house should have for cold days. About the house is a wide veranda, about 150ft. long, which is something that every club house should have for warm weather.

The full name of the club is "The North Channel Shooting Club of Detroit." Unless we mistake, this is the oldest of the clubs we have struck, for it runs back 15 years. The articles of association run back to March 5, 1875. The first officers were Marcus Stevens, president; L. P. Knight, vice-president; James P. Donaldson, secretary; E. H. Butter, treasurer; and the signing members were the above gentlemen with R. W. King, Wm. C. Williams and Deming Jarvis. The capital stock was originally $10,000, consisting of 400 shares That made each share $25. To-day a share is held at $100, but no stock has been sold for five or six years. The annual dues are $15. There are now 100 members of North Channel Club.

This club is a business-like and regular sporting club, devoted to shooting and fishing. Its shooting ground is right at hand, only two or three miles from the house. It has 12,000 acres, or about six miles stretch of good shooting ground, including plenty of rice. Near by here are the white sand spawning grounds of Goose Bay. So many bass were speared here by the natives that the club tried to buy the water from the Government, but this it could not do. The earliest of the perch and pickerel fishing is over in this direction. The bass fishing there no longer amounts to anything, but the duck shooting remains good. Last spring was an exceptionally good season all over the Flats. Mr. McGaw, of the Queen's Hotel, Toronto, bagged 84 in one day, and bags of 30, 40, 50, etc., have not been uncommon. The birds are mostly redheads and bluebills.

In open water shooting the North Channel men use a very low double-ender, decked and coamed. For their marsh work some of them use the Rice Lake canoe, which is a veneer boat with much the lines of a birch, and generally reputed to be teetery and no good on earth for duck shooting. The boat house of North Channel cost $1,900, and is over 100ft. long. Over 200 boats are owned in the club, and there are two steam yachts, the Whistler, coal, owned by the club, and the Rustler, oil, owned by Mr. Brabaw, the steward. The steward is paid a salary and charges a rate per diem for board. The pusher's fee is $2 a day for fishing and $3 a day for shooting.

Some time ago mention was made in these columns of a supposed practice of stealing wild duck eggs by the Indians or half-breeds of Manitoba. This practice, if doubtful there, is certain nearer home. In a talk with the president of this club, Mr. R. D. Robinson, a very well posted and affable gentleman, he informed the writer that the French natives steal the wild duck eggs whenever they get a chance. These French seem to have no respect whatever for the game laws, if indeed they know there are any.

Mr. Robinson has been prominent in the efforts to secure proper legislation in the matter of game and fish laws, especially the latter, and has done all he could to secure their enforcement, the latter including the payment of $55 to a game warden out of his own pocket in one year. He may be supposed to be fairly well posted on what he talks about in the matter of fish supply about North Channel. Mr. Robinson says that the bass fishing is now absolutely worthless there. He does not think there were 10 bass caught all last year. Once they could catch all they wanted. Five years ago he once caught 30 bass in one day, 6 of which weighed 4½lbs. each. This failure of the bass supply he attributes to the seining, netting and spearing which has been so long pursued without let or hindrance. It should be remembered that it was over in this direction that so much of the seining was done that called out the voyage of "No. 11" and the Detroit wardens. Let us repeat here what was said last spring in these columns upon this subject, that no better way to stop these depredations could be found than to abolish the undefined county lines which cross these waters, and put the Flats and the Detroit River in the hands of one warden and an assistant or two. Provided with a good craft, such an officer could swoop down upon the law breakers when he was not expected. He would not be known and watched as a local warden is, and he would not be hampered with the fear that he was overstepping his own jurisdiction. As it is, in that watery country, it is next to impossible to locate, assert or prove county jurisdiction. Under the old system the game fish resources of this naturally magnificent region have, as we may at least see in this once abundant locality, been quite exhausted. By what shall we judge a system if not by its fruits? How long will the old folly of this system in the West continue?

The members of the North Channel Club must go some distance for bass fishing now, but sometimes they go far enough for a little fun. The club holds many baitcasters, and they prefer to a great extent the 8ft. split-bamboo, 8 to 9oz. in weight, and the Kentucky reel. The minnow is largely used in the deep-water fishing, and the crawfish is much liked for the small-mouths.

Following is the list of the North Channel Club as near as obtainable at this date: President, R. D. Robinson; Vice-President, Gilbert Hart; Secretary, J. Lathrop; Treasurer, Adam Wiley. Members of Detroit—W. B. Robinson, L. P. Knight, J. Lathrop, Wm. A. Butler, Jr., Jas. P. Donaldson, Julius Hess, W. H. Wheeler, Henry C. Penny, R. W. King, L. B. King, John Newell, William Kelley, Frank D. Black, Jefferson Wiley, John N. Ford, W. C. Colburn, Geo. B. Remick, James H. Caniff, Fred E. Butler, George Jerome, Benj. B. Campbell, Wm. A. McGraw, F. A. Baker, Geo. W. Bates, Hugh W. Dyar, Chas. O. Barnes, R. D. Robinson, A. C. McGraw, M. K. Cristy, C. G. Cristy, R. P. Toms. A. F. Holmes, Albert S. Austin, Jas. K. P. Norvell, James Beatty, C. E. Newcomb, W. C. Yawkey, Alfred E. Brush, Edwin F. Conely, Fred W. Clark, Chas. B. Lothrop, Geo. H. Lothrop, Geo. M. Savage, Henry Chandler, Edwin D. Sunderland, John B. Nichols, Henry W. Lord; of Cleveland, O.—L. Austin, A. E. Sterling, R. K. Winslow, E. M. Munson; of St. Louis, Mo.—James Richardson, France Chandler; of Niagara Falls, N. Y.—S. T. Murry, D. Isaac; of Rochester, N. Y.—W. F. Huntington, H. H. Morse, C. H. Babcock, S. C. Steele, Charles A. Hayden, A. B. Lambertson, H. H. Warner. W. S. Kimball, James C. Hart, Wm. I. Babcock; J. Hart Welch, Hartford, Conn.; H. C. Hobbs, Bridgeport, Conn.; Albert Stone, Boston, Mass.; T. McGaw, Toronto, Ont.; Henry J. Taylor, St. Catharines, Ont.

The summer life of the Flats is joyous and happy, and no one, whatever be his position in life or his occupation on the spot, is free from the infection of the sweet donothingness or from the democracy of the local genius. Quite this much may be said of the feminine element resident or transient thereabout. As I paddled quietly up to the cabin yacht, at the close of my day's labor along the channel, I heard a sound of laughter and mingling voices, and soon learned that the boat had been boarded by a flock of maidens from the hotels near by. These were entertained by Messrs. Parker and Wherry, who in all gravity showed them the resources of the craft, and explained the why and wherefore of everything aboard, even going so far as to remove all scoffing at the culinary ability of the three navigators of No. 11 by making them a cup of coffee and washing the dishes afterward in their presence. The moon was out in splendor that evening. The level wrinkling sea lay far and wide beyond our sturdy little ship, and across it, dim and ghostly in the rising mist, glided the sails of many boats coming and going like dreams in the night. The scene quieted even the merry party on board our boat. On the rail of the deck sat one young girl, whose head might have served as the model for the painting of the "Neapolitan Fisherboy," so dark was the hair, so dreamy the eyes and so innocent all the features. After the fashion of young girls, this maiden gazed thoughtfully up at the moon, dreaming no one knows what. Kindly the moon spread her spell upon the land and water, mellowing the outlines of the shore, making noble palaces out of the structures near by and softening the distant ones into merely vague suggestiveness. The breeze just barely whispered on the silvered sails. If there were shadows they lay beyond and one could not see them. Quiet, peaceful, beautiful, almost melancholy in the exquisite tenderness of its absolute repose, this scene was one to charm the heart, yet tantalize the mind that would attempt to fix or measure it. We can not measure dreams. And here, certainly, was simply a dream of the elements, delicate, intangible, a figment of the relaxed and resting mind of the Universe. Only the words of a dream, then, would fit it and the drowsy mind may have whispered to the sleeping sails the lines which the half-wizard poet is said to have composed while in a dream—of that land of the mystic East, where once did Kubla Khan:

"A stately pleasure dome decree,
Where Alph, the sacred river, ran
Through caverns measureless to man,
Down to a sunless sea."

175 MONROE STREET, Chicago. E. HOUGH.

HALF-HOURS IN THE SIERRA NEVADA.

III.—A PAIL OF FRY.

IN the summer of '87 we made a trip to Lake Nanon for the purpose of stocking it with trout. None of this system contained trout, or other fish, naturally. They were stocked in '65 or '66, and so suitable did the waters prove to the well-doing of the original fry that in eighteen years the waters were teeming with large trout. Lake Nanon had never been stocked and, like the others, it was impossible for it to become so, naturally. So one windy day B. and I took a covered pail, with eight small trout in it, and started on a weary climb. For a mile our way was comparatively level and little streams were close enough together to renew the water on the fish. The pail was a small one and the water needed frequent renewal, especially so on account of the size of the fish, which were all 9 or 10in. long, the smallest we could procure. The last half-mile gave us a climb of 500ft. This must be accomplished up, or near, the little channel of the stream, which flowed out of the lake, as nowhere else could we procure water. If we could have chosen any route it would have been easy enough. But the road we had to scale was a corker. The rocks were bare of vegetation and slippery with the action of the stream, which, in high water, spread itself all over the face of the cliff. The rocks we were climbing lay exactly under the direct rays of the sun and the heated granite would almost burn one's feet. B. soon played out, so that he could not relieve me in carrying the fish, and I sent him ahead by an easier route. It is said that virtue is its own reward, but I doubted it that day. A hundred times did I wish those fish in Sheol, but pride prevented giving up the job. Once I had a narrow escape from serious accident, and probable death. I had slowly wormed my way up an almost perpendicular ascent of 75ft. and finally reached a point beyond which it was impossible to proceed. By leaping from the point I was on, across a deep cleft in the rock, it was possible to alight on a projection that would hold and give an easier pathway. It was a dangerous attempt, but I was stranded and must take the chance. Balancing carefully for the attempt I leaped and landed short. My feet slipped on the treacherous granite and to save myself I dropped the pail, and away it went, clattering down the cliff, and as I clung desperately to a cleft with my fingers I could see the trout go kicking down in different directions. I am not as active as I was 30 years ago and this was no joke. My whole weight depended on my fingers, as the rock fell away underneath, so that I had no foothold. Something had to be done and that right quick. A larger and deeper cleft existed in the rock, two feet below the one I had my fingers in, and letting go with one hand I clutched at it and let go with the other. Being no acrobat my hold was not sure and away I went, down the cliff after the pail and fish. Nothing but a merciful chance saved my life. Twenty-five feet below a small shrub had gained a foothold in the rock and I fell fairly into it. It sustained my weight, and after a moment I regained my breath, which the fall had knocked out of me, and clambered down to the bottom. I regained the pail, got fresh water in it and "went a fishing." The trout had all landed in a pothole but one and it was gasping its life away on the hot rocks. I had no difficulty in getting them all, and choosing a new route got to the top. Soon afterward I gained the lake shore and had the satisfaction of liberating my captives in its pure waters. All but one swam away into the depths, and that one turned his belly up and feebly worked his gills. Whether he ever recovered or not I do not know, but alive or dead he cost me a hard half hour to get him there. B. wanted to know what kept me so long behind him, but he got no satisfactory reply, and when he sees this he will know for the first time. My arms were sore for a week afterward and one hip was so bruised as to give me much pain for several days. This year, in August probably, I intend to see if our labors were repaid, as I intend giving a half a day to whipping Nanon's placid bosom. The story does not sound much in the telling, but it was mighty interesting to me at the time. AREFAR.

AUBURN, Cal.

[TO BE CONTINUED.]

TROUT AT THE UPPER DAM.

MR. EDWARD A. SAMUELS sends us the following list of large trout taken at the Upper Dam, Rangeley Lakes, Me., this year. The list was furnished by Mr. J. A. French, of French's Hotel:

		Lbs.			Lbs.
Aug.	29.	T. B. Stewart	6½	Sept. 9. Henry Swett	5 5/16
"	29.	T. D. Parker	6¼	" 10. T. B. Stewart	6 9/16
"	30.	W. J. Reynolds	4½	" 11. C. E. Marston	6¾
"	31.	J. A. French	6¾	" 12. T. B. Stewart	5
Sept.	1.	T. B. Stewart	8 8/16, 6 2/16	" 15. W. H. Fullerton	5 3/16
"	1.	C. H. Barber	4	" 15. R. N. Parish	7 5/16
"	3.	T. Parker	6 6/16	" 19. R. N. Parish	6¼
"	5.	O. S. Osgood	9½	" 22. R. N. Parish	7¾
"	7.	W. A. Drake	6½	" 23. F. W. Lond	6½
"	7.	F. Braggnotte	4	" 24. R. N. Parish	6 14/16
"	7.	J. P. Elton	7¾	" 26. W. J. Reynolds	6 6/16
"	8.	J. P. Elton	7 1/16	" 29. J. A. French	4 14/16
"	8.	Miss M. R. Horton	6 1/16	" 30. R. N. Parish	8 14/16

All of these trout were taken on the fly at the Upper Dam. I think there were two or three others that I did not weigh, so did not get them down. J. A. FRENCH.

LAKE MELISSA.—Mr. H. P. Ufford sends us, apropos of Lake Melissa and Buck's Mill Pond, the following extracts from a letter from Dr. Langdon, which may be of interest to many of our readers who are familiar with those Minnesota localities: "GREENWOOD, Minn., Oct. 4.—The place is now overrun with cottages. There are six on the west of Greenwood and four or five east. The beauty of the place is nearly gone, to my mind. We (Mrs. F. and I) went out the other day and caught 19 small-mouth bass in about an hour. She caught 14 and I 5. They were nearly all of them full of spawn. They were caught on the bar at Rocky Point. A few days later Burns, Starling and Mary caught 26, I believe. Our 19 weighed 5¾lbs., which was a big catch of small-mouth bass. They are putting in a new dam at the Mill Ponds, and will raise the water in the lake about a foot when it is finished. I understand they are to put in a fishway, but I'll believe it when I see it, for they have been talking about it for the past three years. They made some money this year running a small steamer down to Melissa twice a day, and as they only charged 50 cents a round trip, they were well sustained. They are to build a dock somewhere on our shore and have a regular landing, and continue running the boats next year. If they succeed in fixing the ponds so they can run through, they will make trips down there when necessary. They have leased the hotel at Detroit to parties who intend keeping it open all the year around, which will be a big improvement over the old way."

BLACK BASS NOTES.—In Pleasant Pond, New London, N. H., black bass have not generally been caught after September 15. On the 4th of October, however, nine of these fish, averaging over 1lb. each, were taken in this pond, and during the same week twenty bass were caught in a day in Webster Lake, N. H. A few years ago October was one of the best months of the year for taking black bass in Sunapee Lake by trolling with the fly. Now they go into deep water in September, and are not taken at all in October. It might be possible to catch them in their winter quarters, if we may judge from the successful fishing at Big Stream (Glenora), Seneca Lake, N. Y., in the early part of October. Here in 40 or 50ft. of water large numbers of bass were taken with live minnows. We have often remarked upon the game qualities of this fish, and in this connection were interested to hear the following account from Mr. Langdon, of Plymouth, N. H.: Last August, in Lake Waukewan, he caught a 3¼lb. black bass on the smallest Montreal fly. The bass left the water a dozen times before he was landed, and twice made two consecutive jumps, leaving the water and instantly leaping again as soon as his tail touched the surface.

SUSQUEHANNA RIVER POLLUTION.—Bainbridge, Pa.—This year the fishing in the Susquehanna has been a failure. In the first place the river has been too full of water, keeping the stream muddy nearly all summer; in the second place, the great flood of last summer having washed the grass out of the river, the bass could find no harbor in their old haunts and have gone to deep, rocky

parts of the stream, where they are hard to find; third, our river is too much polluted with the offal of the coal mines. At the present writing the river is nearly as black as ink on the east side. The west side, below the Conewago Falls, is polluted by the York Haven paper mill, as all the refuse matter of that establishment is thrown into the river; fourth, we do not seem to have one-tenth the fish we had here five years ago. Then, at this time of the year, one could see hundreds of young bass from two to four inches long, while now it is rare to see one along the shores. "Salmon" are just as scarce as the bass, one is caught occasionally, and in moments of despondency I sometimes think that fishing in our lovely river is practically played out.—J. T. Bare.

AN INVESTMENT FOR A LIFE-TIME.

The *American Grocer* has this to say about fishermen and a fisherman's book—Mr. Samuel's "With Fly-Rod and Camera": This is a volume calculated to interest, instruct and amuse large numbers with various tastes or hobbies, yet all lovers of nature. It is difficult for one not by nature or acquisition an expert angler to comprehend their enthusiasm for the sport, nor can we share in the pleasure the narration of their experience affords.

A New York millionaire, who rarely finds time for an outing, returned from a fishing excursion in Canadian rivers, where he was successful in landing a thirty-pound salmon, boiling over with good feeling, declaring that he would give $1,000 for the repetition of his experience in landing that salmon. Recently we yielded to the enthusiasm of the parson, whose excitement in landing a 6¾lbs. black bass at Budd's Lake had not subsided, accepting his invitation to spend a day in seeking for another like experience. Eleven hours in the broiling sun landing every now and then a perch, catfish or "tunny," cooled our ardor but did not dampen his. The true angler is never disheartened. One victory with fly-rod, one proof of skill, will keep up his courage for a life-time.

The "true fly-fisher is ever satisfied with a moderate creel, and is content with the scientific and skillful capture of a few good fish. The beauties of nature, as revealed in his surroundings, the sparkling water, the shadow and sunshine, the rustling leaves, the song of the birds, the hum of insects, the health-giving breeze," the wooded lakes, studded with islands, or bordered by rocky palisades, the running, merry, musical brook, or dashing mountain stream, the quiet pools, are all so many passengers of joy and comfort, bringing in their train health and pleasure. Thrice blessed is the angler, who finds delight in a camera or has a love for botany or the sciences generally. Then the flowers talk with him and the rocks tell tales, and he is never solitary when in search of "the gamy denizens of the rivers and lakes."

If you cannot enjoy these pleasures, or having enjoyed them, are debarred from their repetition, then live the experience over and over again, as you turn the pages of the elegant book noted above. It is illustrated with 150 plates, made from photographs taken by the author, whose admirable selections of subjects deserve better treatment at the hands of the engraver. Some of the reproductions are fine; others require the aid of a powerful glass to reveal their charm. They show the wondrous beauty of Canadian rivers, the lakes and streams of Maine, the scenery about Cape Breton, views of camps, Indians, bunches of salmon, sea trout, striped bass; instaneous pictures of "Landing a Salmon;" "Casting a Fly;" "Time for the Landing Net." One of the finest is "The Upper Pool" on the Cascapedia and "Famous Salmon Pool on the Margaree River, Cape Breton."

The text is free from technical statements, containing many descriptions of fish and their habits told in dialogue. The book is of great value to the amateur, for it touches upon almost every detail of fly-fishing, of camp life, of experiences, excursions, catches, exciting struggles, of difficulties encountered, numerous victories won, the hard fight, as when it required half an hour to land a "togue" weighing 16lbs., or the struggle with salmon, one of which weighed 48lbs., the taking of thirty fine salmon by four rods in three days on the Cascapedia. The habits of fish, method of fishing, the tackle, the fly, the blunders of the inexperienced, making the cast, and other important little things connected with the angler's art are noted.

This work is a splendid volume to place in the hands of the youth, particularly such as show an inclination for angling, that are fond of the forest and stream and who have an artistic side to their nature which needs a little stimulus. It will prove an investment that will return an income throughout one's life. A fine book is one of the best of companions, and "Fly-Rod and Camera" is one that will be read and re-read with pleasure.

Fishculture.

A YEARLING LANDLOCKED SALMON.

At the State hatchery at Sunapee Lake, New Hampshire, small landlocked salmon frequently come from the brook into the tanks in which breeding fish are kept. An example 5½in. long, which made its appearance Oct. 11, 1890, showed the following color in life: Ground color, lemon-yellow on the sides, the back with a faint tinge of olive; 15 to 20 reddish-orange roundish spots both above and below the median line, the largest about ⅓ as big as the pupil; nine parr marks, the deepest of them scarcely longer than the eye; five well defined saddle-shaped dark bands across the top of the back, all of them except the fifth continuing downward into the parr marks; upper half of body and head profusely black spotted, none of the spots much exceeding the pupil in size; two roundish black spots on the gill cover; the dorsal fin with black spots in about three series, those near the base of the fin largest and most distinct; the adipose fin has three large dusky blotches; the tail fin is obliquely marked with long, narrow, dusky blotches and with a dusky margin posteriorly, nearly as wide as the eye; the under surface of the head and belly, as far as the vent, are milky white; the pectoral, ventral and anal fins suffused with pale yellow intermingled with dusky and with a narrow whitish margin in front.

The position of the breast fins at certain times is peculiar, the inner and terminal margins being raised up while the anterior margin is depressed. This is more noticeable when the fish is frightened.

The increase of the landlocked salmon in Sunapee Lake is very gratifying, and the size reached by this beautiful species is a sure indication of the value of the landlocked smelt as food for the larger *Salmonidæ*. A salmon weighing 14½lbs. was taken during the past season by Mr. Walter Aiken, and among the breeding fish are a number of examples exceeding 10lbs. in weight.

MASKINONGE HATCHERY FOR ONTARIO.—A project is on foot, fathered by Mr. H. Calcutt, for the stocking of the rivers and lakes in this district with maskinonge fry. Mr. Calcutt intents circulating a petition asking the Government to establish a hatchery in the Otonabee river or Rice Lake, or any other suitable place, for the propagating of maskinonge. Mr. Calcutt's idea is to inclose a portion of marsh so as to prevent inroads from eels and large fish, and within this inclosure place the spawn for hatching. At present the great drawback to fish breeders is that bass and eels gobble up nearly all the small fry before they are big enough to take care of themselves. It is proposed to keep the fry in the Otonabee hatchery for a year or so under the charge of Mr. Gilchrist, Inspector, until they reach a fair size. Then they may be turned into the river and Rice Lake, and transplanted in Stony Lake and its tributaries. The cost of the thing would be trifling, Inspector Gilchrist says he can easily procure all the spawn required, and the building of the inclosure would be a small matter. The whole cost would be more than defrayed by the fees paid by American sportsmen for the privilege of fishing in these waters. The addition of a million maskinonge fry every year would in the course of a few years sensibly increase the value of our fishing grounds and attract more visitors, while affording our own people better sport. The minnows would not be set at liberty until they were the length of a finger, so that a very small proportion would become prey for the larger fishes. The Government encourages the breeding of whitefish and bass, but as yet no attempt has been made to propagate maskinonge. It is to be hoped Mr. Calcutt will be heartily supported in his efforts toward this end. He has already received considerable encouragement from the Minister of Marine and Fisheries, Hon. Mr. Tupper, who, during his visit to Peterborough a few weeks ago, promised to give any such scheme his support. As the cost would be small, there is great hope that the Government will establish the hatchery. Mr. Calcutt's petition will be circulated in the town and county of Peterborough. All sportsmen will feel an interest in it, and those devoted to piscatorial pleasures will be doubly interested in the success of the appeal. The petition will, no doubt, be warmly supported.—*Peterborough (Ont.) Examiner.*

The Kennel.

FIXTURES.

DOG SHOWS.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 13 to 17.—Third Annual Dog Show of the South Carolina Poultry and Pet Stock Association, at Charleston, S. C. Benj. McInness, Jr., Secretary.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1658.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.

March 2 to 5.—First Annual Dog Show of the Duquesne Kennel Club, at Pittsburg, Pa. W. E. Littell, Secretary.

March 3 to 6.—Second Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderffer, Secretary.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

FIELD TRIALS.

November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 3.—Fourth Annual Field Trials of the Indiana Kennel Club, at Carlisle, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 3.—Second Annual Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Toronto, Ont., Secretary.

Nov. 4 to 8.—First Beagle Field Trials of the National Beagle Club, at Hyannis, Mass. F. W. Chapman, Secretary, 364 Washington street, Boston, Mass.

Nov. 7.—Ninth Annual Field Trials of the Robins Island Club. W. L. Wellington, Secretary, Brooklyn, N. Y.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

COURSING.

Oct. 21 to 25.—Fifth Annual Meet of the American Coursing Club, at Great Bend, Kan. I. D. Brougher, Secretary.

PHILADELPHIA KENNEL CLUB FIELD TRIAL ENTRIES.

MEMBERS' STAKE.

ENGLISH SETTERS.

Rosa Lee (Dr. John A. Hartman), black, white and tan bitch (Berry V.—Ferguson's Ruby).

Rod Gem (E. W. Clark, Jr.), black, white and tan dog, October, 1885 (Roderigo—Gem).

Ben Hur Franklin (W. B. Smith), lemon and white dog (Ike—Leda).

Jack (Samuel Goodman), August, 1886.

Ezra Noble (L. Shuster, Jr.), black, white and tan dog, May 5, 1888 (Count Noble—Alphonsine).

Clementine (L. Shuster, Jr.), black, white and tan bitch, Oct. 2, 1889 (Ezra Noble—Cornelia G.).

Sleepy Noble (L. Shuster, Jr.), black, white and tan bitch, Oct. 2, 1889 (Ezra Noble—Cornelia G.).

Perseverance (Ezra Comfort), black, white and tan bitch, April 13, 1886 (Chalkley D.—Cassino Gladstone).

Rock (R. Masden Vaughn), lemon and white dog, April 17, 1885 (Duke—Nell).

Edge Mark (Francis S. Brown), black, white and tan dog, February, 1888 (Skidmore—Flo Maclin).

Katie Noble (Francis G. Taylor), black, white and tan bitch, December, 1885 (Count Noble—Queen Meg).

King's Mark (Col. B. Ridgway), blue belton dog, April 12, 1886 (King Noble—Belle Belton).

Sue Noble (Col. B. Ridgway), black and white bitch, November, 1887 (Count Noble—Fannie W.).

Prince (J. A. Stovell), liver and white dog.

Larry Noble (H. Fitzgerald), orange and white dog, Oct. 2, 1889 (Ezra Noble—Cornelia G.).

GORDON SETTERS.

King Item (H. F. Smith), dog (Little Boy—champion Roxie), Aug. 27, 1888.

Countess Roxie (H. F. Smith), bitch (Little Boy—champion Roxie), Aug. 27, 1888.

Flash (B. F. Hall), dog.

Shot (B. F. Hall), dog.

IRISH SETTERS.

Larry S. (Fred Maher), dog (champion Chief—Leigh Doane), 1885.

Rockwood Chance (Chas. T. Thompson), bitch (Desmond II.—Leda Glencho), Jan. 3, 1889.

POINTERS.

Rock II. (Connell & Cullen), liver and white dog (Graphic—Lady Belle), July 22, 1887.

Fan Fan (Connell & Cullen), liver and white bitch (Graphic—Lady Belle), July 22, 1887.

Victor the Blue Stocking (John B. Ellison), liver and white bitch (Beaufort—Zuba), May, 1885.

Tempest (J. H. Winslow), liver and white dog (Beppo III. Lass of Bow), July, 1888.

ALL-AGE STAKE.

ENGLISH SETTERS.

Rosa Lee (Dr. John A. Hartman), black, white and tan bitch (Berry V.—Ferguson's Ruby), March 28, 1888.

Rod Gem (E. W. Clark, Jr.), black, white and tan dog (Roderigo—Gem), October, 1885.

Ezra Noble (L. Shuster, Jr.), black, white and tan dog (Count Noble—Alphonsine), May 6, 1888.

Clementine (L. Shuster, Jr.), black, white and tan bitch (Ezra Noble—Cornelia G.), Oct. 2, 1888.

Sleepy Noble (L. Shuster, Jr.), black, white and tan bitch (Ezra Noble—Cornelia G.), Oct. 2, 1889.

Hazel (John B. Ellison), black, white and tan bitch (Baron—Hazel).

Perseverance (Ezra Comfort), black, white and tan bitch (Chalkley D.—Cassino Gladstone), April 11, 1886.

Rock (B. Masden Vaughn), lemon and white dog (Duke—Nell), April 17, 1885.

Edgemark (Francis S. Brown), black, white and tan dog (Skidmore—Flo), February, 1888.

Katie Noble (Francis G. Taylor), black, white and tan bitch (Count Noble—Queen Meg), December, 1885.

List Noble (Francis G. Taylor), orange and white bitch (Count Noble—Fate Gladstone).

King's Mark (Col. B. Ridgway), blue belton dog (King Noble—Belle Belton), April 12, 1886.

Sue Noble (Col. B. Ridgway), black and white bitch (Count Noble—Fannie W.), November, 1887.

Prince (J. A. Stovell), liver and white dog.

GORDON SETTERS.

King Item (H. F. Smith), dog (Little Boy—champion Roxie), Aug. 27, 1888.

Countess Roxie (H. F. Smith), bitch (Little Boy—champion Roxie), Aug. 27, 1888.

Flash (B. F. Hall), dog.

Spot (B. F. Hall), dog.

IRISH SETTERS.

Larry S. (Edward Maher), dog (champion Chief—Leigh Doane), 1885.

Spinaway (Dr. G. G. Davis), bitch (Chief—Nellie), Aug. 18, 1888.

Silk (Dr. G. G. Davis), bitch (Chief—Gypsy Maid), Sept. 5, 1888.

Rockwood Chance (Charles T. Thompson), dog (Desmond II.—Leda Glencho), Jan. 3, 1889.

Rockwood (Charles T. Thompson), dog (Desmond II.—Luray II.), October, 1888.

Desmond II. (Wm. H. Weiss), dog (Frisco—Grouse II.), 1886.

POINTERS.

Rock II. (Connell & Cullen), liver and white dog (Graphic—Lady Belle), July 22, 1887.

Fan Fan (Connell & Cullen), liver and white bitch (Graphic—Lady Belle), July 22, 1887.

Victor the Blue Stocking (John B. Ellison), liver and white bitch (Beaufort—Zuba), May, 1885.

Tempest (J. H. Winslow), liver and white dog (Beppo III. —Lass of Bow), July, 1888.

White Fawn (J. H. Winslow), lemon and white bitch (Grafton—Ethel), May, 1887.

Inspiration (Francis G. Taylor), lemon and white dog (Bang Bang—Telie Dock), Aug. 10, 1888.

David of Delphos (J. W. M. Cardeza), liver, white and ticked dog (Dick of Delphos—Westmoreland Bessie), Aug. 26, 1888.

Gambol (Wm. H. Weiss), lemon and white dog (Gough—Larkspur), 1886.

Cronie Wise (P. Henry O'Bannon), lemon and white bitch (Croxteth—Young Butch), Nov. 24, 1887.

DERBY ENTRIES.

ENGLISH SETTERS.

Albert's Duchess (John A. Hartman), white, black and tan bitch (Warwick Albert—Princess Belton), Feb. 14, 1888.

Reverly (Francis S. Taylor), black, white and tan dog (Roi d'Or—Mildred), February, 1889.

Buster (B. Ridgway), black, white and tan dog (King Noble—Cricket), March, 1889.

Clementine (Lawrence Thurston, Jr.); black, white and tan bitch (Ezra Noble—Cornelia G.), Oct. 2, 1889.

Jean (John B. Ellison), black, white and tan bitch (Eritz—Hazel), Oct. 8, 1889.

Larry Noble (Hil. Fitzgerald), orange and white dog Ezra Noble—Cornelia G.), Oct. 2, 1889.

Lucy Noble (W. B. Smith), black, white and tan bitch (Count Noble—Alphonsine), 1889,

Madge (George Fox), bitch (Gun—Victoria), Sept. 12, 1889.

Old Smed (Lawrence Shuster, Jr.), black and white dog (Ezra Noble—Cornelia G.), Oct. 2, 1889.

Peg Woffington (Francis S. Brown), black, white and tan bitch (Ben Hill—Nora), March 17, 1890.

——— (Gerhard Schreiber), orange and white dog (Ezra Noble—Cornelia G.), Oct. 2, 1889.

POINTERS.

Beauty Spot (W. M. Cardeza), liver and white bitch (Half-and-Half—Fayette), July 4, 1889.

Bessie Item (Hil. Fitzgerald), orange and white bitch (Gambol—Mollie R.), Jan. 19, 1890.

Bob Toland (John B. Ellison), dog (Victor the Blue Stocking—Charlotte Corday), Oct. 12, 1889.

Duchess of Hessen (J. H. Winslow), liver and white bitch (Duke of Hessen—Duchess of Waterloo), July, 1889.

Jack Ellison (J. H. Winslow), liver and white dog (Victor the Blue Stocking—Charlotte Corday), Oct. 12, 1889.

London (George Fox), dog (Beaumont— ———), October, 1889.

Sparkle (Dr. G. S. Davis) (Desmond II.—Lorraine), died after she was entered in the Derby.

INTERNATIONAL FIELD TRIAL ENTRIES.

The entries for the International Field Trials, commencing Monday, Nov. 3, so far as received, are given below. The date of closing entries has been extended to the 22d inst., and it is expected a few more entries will be received. The farmers in the vicinity of Louisville have very kindly consented to allow the trials to be run on their farms, where birds are very plentiful. The entries number so far 39, 23 in the All-Aged and 16 in the Derby, of which 24 are English setters, 2 Irish setters, 1 Gordon setter, and 12 pointers. Following are the entries:

ALL-AGED STAKES.

ENGLISH SETTERS.

Mingo II. (John Mercer), black and white dog (Mingo—Lady Thunder).

George (J. B. Field), black and white dog (Mingo—Ban).

Canadian Jester (T. G. Davey), blue belton dog (Knight of Snowdon—Leddersdale).

Belle of Kent (Thos. Guttridge), roan belton bitch (Mark—Dyke).

Ightfield Ranger (A. P. Heywood Lonsdale), black, white and tan dog (Dick Windom—Peep Bo).

Ightfield Rosa (A. P. Heywood Lonsdale), liver and white bitch (Ross—Pitti Sing).

Speculator (Dr. Totten), orange and white dog (Fred W. —Queen of the South).

Carrie T. (Dr. Totten), black, white and tan bitch (Banker—Belle).

Pitti Sing (Thos. Johnson), liver and white bitch (Baron Doveridge—Norah).

Dover (C. A. Davidson), black, white and tan dog (Dashing Berwyn—Romp).

Maggy Bee (F. W. Eddy), black, white and tan bitch (Kink—Lucy Bee).

Dinah C. (W. B. Wells), black and white bitch (Mingo—Fausta II.).

Cambriana (W. B. Wells), black, white and tan bitch (Cambridge—Romp).

Matane (W. B. Wells), black, white and tan dog (Mark J. —Cambria).

Clinker (T. H. Nelson), lemon and white dog (Kink—Fausta II.).

GORDON SETTERS.

Gordo (J. L. Campbell), black and tan dog (Royal Duke—Norah).

POINTERS.

Ightfield Dick (A. P. Heywood Lonsdale), liver and white dog (Dick III.—Belle of Bow).

Ightfield Guelph (A. P. Heywood Lonsdale), liver and white bitch (Bang's Boy—Linda).

Ightfield Deuce (A. P. Heywood Lonsdale), liver and white bitch (Wynnstay—Dainty).

HOPE PACTZEL (Fred W. Shaw), liver and white dog (Fowler—Shultz).
IGHTFIELD BLYTHE (Thomas Johnson), liver and white bitch (Dancer—Ightfield Bloom).
BREEZO (R. G. Hervey), liver dog.
MARCUS (R. G. Hervey), liver dog.

DERBY STAKES.

ENGLISH SETTERS.

MINGO II. (John Mercer), black and white dog (Mingo—Lady Thunder).
ION (A. P. Heywood Lonsdale), black and white dog (Woodhill Bruce—Lucy).
PHŒNESSA (A. P. Heywood Lonsdale), black and white dog (Woodhill Bruce—Lucy).
DART (Dodds & Mathers), black and white bitch (Fakir—Star).
FOREST SPORT (Forest Kennels), black and white dog (Locksley—Forest Queen).
BELLE (Montague Smith), blue belton bitch (Banker—Belle).
LADY SPOT (Jos. Kime), black, white and liver bitch (Mingo—Lady Thunder).
LADY PATCH (Jos. Kime), black, white and tan bitch (Mingo—Lady Thunder).
MANITOBA FRISK (Amory R. Starr), black and white dog (Dick Bondhu—Western Belle).

IRISH SETTERS.

DAN O'CONNELL (L. Hillsengarden), dog.
EMERALD ISLE (Dr. McLean), bitch.

POINTERS.

IGHTFIELD UPTON (Thos. Johnson), liver and white dog (Ightfield Dick—Polly Peacham).
BEACON (A. P. Heywood Lonsdale), liver and white dog (Ightfield Dick—Polly Peacham).
TYKE (A. P. Heywood Lonsdale), liver and white dog (Ightfield Dick—Perdita).
EATON (A. P. Heywood Lonsdale), white and liver dog (Ightfield Dick—Duke of Westminster's Bess).
WESTMINSTER DRAKE (T. G. Davey), liver and white dog (Lad of Bow—Kate VIII).

INDIANA KENNEL CLUB'S FIELD TRIAL ENTRIES.

Editor Forest and Stream:

The Indiana Kennel Club's All-Aged Stakes closed Oct. 1 with 26 entries—14 English setters, 2 Irish setters and 11 pointers—as follows:

ENGLISH SETTERS.

QUAIL (Hon. Harry S. New), black, white and tan bitch (Change—Flora).
NANNIE B. (Dr. J. A. McLeod), lemon and white bitch (King Noble—Queen Vashti).
LADY RAPIER (J. I. Case, Jr.), black, white and tan bitch (Count Rapier—Donna J.).
PRINCE LUCIFER (J. I. Case, Jr.), black, white and tan dog (King Noble—Elsie Belton).
BENDIGO (T. P. Bissell), orange and white dog (Shot—Fly).
LILLIE BURGESS (Geo. A. Day), orange and white bitch (Gath's Mark—Esther).
SAM WELLER (W. T. Hunter), black, white and tan dog (Roderigo—Dixie).
JUBILEE (J. M. Freeman), black, white and ticked dog (Gath's Mark—Esther).
JERRY MANDAN (R. B. Morgan), black and white dog (Mandan—Prairie Belle).
STEELE (R. B. Morgan), black, white and tan dog (Roderigo—Flora M.).
FLORA (Geo. G. Ware), black, white and tan bitch (Gladstone's Boy—Clara).
DON'S NELLIE (A. H. Fowler), black and white bitch (McDuff—Fame).
DAN FOREMAN (A. H. Fowler), black, white and tan dog (Foreman—Miss Elsie).
LONE JACK (Royal Robinson) black and white dog (Change (Queen B.).

IRISH SETTERS.

FANNIE M. (Thos. Morse), bitch.
DON ARCH (A. W. Archibald), dog (Dude—Flipper).

POINTERS.

CROXLILL (Harry J. Smith), liver and white bitch (Croxteth—Daisy).
LASS OF BLOOMO (W. T. Hunter), liver and white bitch (Lad of Bow—Bloomo).
BOUNCE (G. W. Amory), liver and white dog (Bob—Sal).
DOLLY C. (Joseph Crugour), liver and white bitch (Graphic—Marguerite).
GYP (Dr. T. S. Hucker), lemon and white dog.
BERTRALDO (Hon. J. E. Guinotte), liver and white dog (Cornerstone—Bessie Buford).
INDEX (R. P. Daggett), liver and white dog (Ossian—Nellie E.).
HOOSIER HARRY (H. A. Comstock), liver and white dog (Devonshire Sam—Gipsey).
THOMASTONE (W. H. Holmes), liver and white dog (Cornerstone—Firenzi).
PICKWICK (Madison & McGuffin), liver and white dog (Graphic—Marguerite).
RODMAN (W. B. Allen), liver and white dog (Rod—Belle).

P. T. MADISON, Secretary.

THE COURSING MEET.

[*Special to Forest and Stream.*]

GREAT BEND, Kansas, Oct. 21.—The meeting has a decided damper in the hard rain which put a stop to everything. There will be no running to-day, but we hope to see things moving to-morrow. There are sixteen entries in the All-Aged Stakes and ten in the Puppy Stakes. The class of dogs on hand is of the highest grade ever yet seen at a meet here, and the winner must do some good work before he comes out on top. E. HOUGH.

COLLIES IN AMERICA.—Philadelphia, Pa., Oct. 15.—*Editor Forest and Stream:* In reply to the remark of your correspondent J. W., we beg to say that there is no likelihood of any change, either in the management or interest taken in the Chestnut Hill Kennels; but we are of the opinion that in view of the fact that the United States now have as good blood as can be found in the world, and many dogs are coming out at the shows year by year that could compete in the best ranks in England, it is not likely that importations will continue to any great extent. We hope to have plenty of good youngsters to show next winter and spring, but feel that we must be prepared to meet the severest competition. We mention, merely for the interest of breeders, that we have seen more good collie bitches distributed over the country within the last 18 months, than have been called to our attention since we have been interested in the breed. These are most of them American-bred, and we shall expect, from this fact, that next year—even more than the present one—will show such an improvement in the general run of collies upon the show benches, that it will be patent almost to everybody that breeders in this country are now well on the way—already reached by many of those in England—of being comparatively sure, with judicious mating, of securing invariably typical stock. The disadvantage hitherto has not been lack of good stud dogs, but lack of good typical brood bitches.—THE CHESTNUT HILL KENNELS.

DOG CHAT.

THE great coursing event of the year at Great Bend, Kansas, is now in full swing, and news of the results of the different stakes will be looked for anxiously. This year especially, for two of our Eastern greyhounds, Mr. Belmont's Minnie Staton and Mr. J. H. Watson's Drytime, will take part in the fun. "Our only German" and Mr. Watson started on their long journey Oct. 11. We do not know much of Drytime's capabilities, but she is bred to go, for is she not by Britain Still out of Haytime? Minnie Staton we know can hold her own with most of them, as shown in the easy manner in which she mowed down her opponents at the Eastern Coursing Club's meet last New Year's day. We hear that both have been put into good fettle. Mr. Phister, of Cincinnati, writes us that he has already sent to the meeting his three greyhounds, Norwegian, who is a half brother to the great Fullerton, Belle of Eltham, his litter sister, and Nettlefield, the latter by Dick Dog out of Cambarne. Belle of Eltham is particularly fast. They have been put in the hands of Dr. Von Hummell, and having been several weeks out there, they will ere this have become accustomed to the plains. Although these dogs have only just about recovered from their fearful experiences on the voyage over, being three of those Col. North so generously donated to Mr. Phister in the early summer, they will no doubt give a good account of themselves, and the half-way State of Ohio may scoop in some of the ducats. Mr. Phister tells us that he has decided to show these dogs on the circuit next spring, and will put them in charge of Mr. Williams, of the Rookwood-Landseer Kennels.

The great meeting at Merced, Cal., will no doubt be well attended, for there are many good greyhounds owned on the Pacific coast, and the announcement of the goodly sum the International Coursing Association has collected for prizes, has put life into all the greyhound men. After a week's rest from their labors at Great Bend, most of the hounds will journey to the Merced plateau. Among the list of probable entries we notice Midnight, a son of old Mother Demdike, by Friday Night, and also two of his sons out of Peasant Girl.

Speaking of the Great Bend meeting, reminds us of the solid silver cup the National Greyhound Club of this city is giving for the winner of the All-Aged Stake, and a picture of which we set before our readers this week. Though only

THE NATIONAL GREYHOUND CLUB CUP.

organized this summer, this specialty club has made rapid strides and now counts some fifty-six members on the roll, among whom are all the prominent greyhound men of the country, and several new members will be balloted for at the coming meeting. We have also received photos of the proposed medal which the club intends to donate at the different shows. On the obverse side will be several scenes in the field, in which deerhounds, greyhounds and the Barzoi take part, on the reverse is a sort of coat of arms, with a greyhound and a deerhound holding up a shield, something after the style of the lion and unicorn in the English coat of arms. The medal is to be 3in. in diameter, and of solid silver. The rough design was made by Mr. Huntington, who has already done so much for the breed in this country. These medals are intended to be the finest of the kind ever offered in this country.

We understand there is to be a bench show of dogs in connection with the Rhode Island Poultry Association, at Providence, this winter. Properly managed a good show of dogs ought to be the result, for it is some time since a show was held there, and being easy of access from New York and Boston, no doubt, with proper judges, the right kind of dogs can be secured. There is this to be said in the matter, if a thing is worth doing at all it is worth doing right. *Verb sap.*

We are also in receipt of a circular which states that a dog show will be given by the Central City Kennel Club, in connection with the Michigan Poultry and Pet Stock Association, at Jackson, Mich., Jan. 10 to 14. The show will be held under Kennel Club rules, but as we cannot find their name on the list of recognized shows we think they are wrong in holding forth the assertion that their wins will be counted by the A. K. C. Mr. C. W. Sarvis will be superintendent and Major J. M. Taylor, of New York, will judge all classes. The show will be held in the Assembly Hall and good prizes are promised.

Mr. Mercer's bad luck sticks to him, for we hear that the Clumber, Bromine's pups are all dead. This is a pity, as with Boss's fine body and the bitch's good head, something out of common was expected from the union. "Clumber" also tells us he has sold an interest in his kennel to Mr. W. H. Middleton, a nephew of Gen. Sir Fred Middleton, late Commander in Chief of the Canadian Army. They intend to import the best that can be procured in England. Other news from Ottawa is that Mr. Keyes's good cocker bitch, Rideau Flossie, second in open class at Ottawa, nearly succumbed to distemper after the show, though two years old. Our correspondent asks, "Where would the puppies be?" The Clumber, Snow, if she recovers, will be bred to The Cardinal next time.

We understand that Mr. C. L. Wilton, of New York, has purchased from Mr. Mortimer his smooth fox-terrier Suffolk Risk, by Raffle out of Suffolk Syren. Mr. Wilton is to be congratulated on the purchase, as he is certainly about the best home bred one in the country, as the following winnings will show: First dog puppies, first Fox-Terrier Club's Grand Produce Stakes, first Stud Dog Stakes and special for best puppy of either sex, New York, 1890. The price paid was a long one. This gentleman is also the owner of Brockenhurst Quick, which he imported during the summer. While on the subject of fox-terriers we may mention that the large sum of $3,000 has been sent over to the tight little island, to be the medium of exchange for the best that can be procured of this breed, one dog and two bitches. This ought to secure some of the cracks; in fact, the best of them if the proper man handles the money and knows what he is about.

Our correspondent from Hamilton, Ont., writes us that "The executive committee of the Hamilton Kennel Club met Oct. 16, and after hearing the opinions of the leading dog owners and breeders in Canada and the U. S. A., decided that it would be unwise to hold a bench show until next fall. It was decided that the show was to be given in September, but no positive date was fixed upon, as the other Canadian Kennel Club will be corresponded with, with a view to arranging a complete Canadian circuit with separate and non-conflicting dates. It was decided, however, in the meantime to give a series of members' meetings during the winter, at which the various breeds of dogs will be described by competent judges and club diplomas given to the members producing the best specimens of the breeds under consideration, if bred by themselves. It is thought that this will tend to arouse much interest, and it may induce some dog owners to hang the mongrels upon which they now pride themselves." This is a very good idea for any young kennel club, provided the lecturers are the right men.

A good many lovers of pointers and setters seem to be exercising their brains on the question of what constitutes style in the field. We fail to see what style has to do with filling the game bag, for it is well known there are many clever "bird dogs" whose style is anything but graceful, though their nose is in the right place. Style, in itself, is very aptly described by a writer in the *Breeder and Sportsman*, when he says, "Good style is, we believe, that indefinable blending and subtle voicing of all the better elements of ease, grace and intelligence, which indicate the state of perfection of the animal or person possessing them."

We hear that Dr. H. Clay Glover will be one of the judges at the South Carolina dog show, to be held in Charleston, S. C., next January.

We learn that Messrs C. H. Ruhl and Chas. W. Sarvis have started a kennel at Jackson, Mich., to be known as the Grand River Kennels. They intend to breed great Danes and greyhounds.

We learn that Mr. Lacy shipped, per S.S. Ronans, Oct. 14, the two black and tan terriers Salisbury and Queen III. From what we can make out, Mr. Comstock has struck a bargain in the latter, as reports proclaim her to be something very good. We shall await their advent with some anxiety, as the prevailing rough weather is hardly the thing for this delicate breed. They are consigned to Mr. Stoddard's stables, on Greenwich street. Speaking of rough weather, the steamship France, on which the noted King Charles, Royal Duke, is coming over, is some days overdue. Besides this dog, this vessel also brings four great Danes and the lions that are to perform at Niblo's. [As we go to press we learn that the France has arrived safely in port after encountering fearful weather.]

On the way home from Canada we stopped off at Covert, N. Y., the home of Mr. Wixom and the Hornell-Harmony Kennels. After looking round the kennels, which were so ably described by "Highland" a few weeks since, we were treated to a couple of beagle trials, which we enjoyed immensely. Sly reynard was led over the fields for a mile or so and then the little beauties were let loose. The grass being wet, the scent lay well and was picked up in fine shape; Royal Krueger and a youngster, named Nib, dividing the honors of the chase between them. It has been said that Bannerman stock cannot hunt, but, from what we could see, "Roy" and his children refute this entirely.

We have received from the New York Pasteur Institute a circular giving statistics regarding the number of people treated since its opening in February last. Out of 610 persons bitten by dogs or cats, who have come there for treatment, 480 were needlessly alarmed, as it was proved the animals that bit them were not mad. Still, they were treated, and now have in their blood the virus which they sought to escape. In 130 cases, it is said, the dogs were mad, and of course it is claimed that this anti-hydrophobic was the means of saving them. What folly! Such institutions only add to the fear that many people have of the dog, and rather than do any good, it works considerable harm; and we quite agree with Dr. Bell-Taylor, of Nottingham, Eng., when he says: "The only conclusion I can draw from a careful consideration of the whole facts of the case is, that we are bound, in the interests of both science and humanity, to set our faces like flint not only against this hydrophobia cure craze, but also against the whole system of manufacturing disease, keeping up the supply (when it would otherwise die out) and spreading it broadcast among men and other animals."

We hear that George Bell having sold his last Idea, has now purchased from Mr. H. B. Nicoll, of Cookstown, Ont., the black cocker dog Kildare, a dog which, though left in the cold at Toronto, will doubtless receive due recognition in the future. When he next appears in public he will be known as Obadiah.

We hear that Mr. E. H. Moore's new purchase, the St. Bernard bitch Altona, arrived safely at her new home last week. She is a litter sister to the noted Alta Bella and was purchased from Mr. L. C. Norris Elye. Altona, therefore, is a daughter of Mr. Moore's new dog Alton and out of the noted prize winner Bellegarde, by champion Bayard out of Crevasse II. She has won, besides other prizes, first in novice class at Chelmsford. Being so closely related to Alta Bella, who is considered one of the grandest bitches that has ever been bred, Mr. Moore is to be congratulated on his judicious purchase.

Mr. Washington A. Coster has sent us a circular issued by the Trunk Line Passenger Committee, relating to the issue of tickets to Amelia Court House, Va., on account of the Eastern field trials. The reduced fares are on the certificate plan, one full fare going and one-third of the highest limit fare returning. The reduction is for persons going to the meeting from trunk line territory. Persons attending the meeting from points beyond the Richmond & Danville R. R. should purchase to Danville, Burkeville or Richmond, as most convenient, taking a certificate from agent from whom ticket is purchased, and repurchase to Amelia Court House. This certificate will be honored at either of the above places for the above rates, returning to starting point, if presented on or before Dec. 6. Dogs will be carried free on signing a release and upon presentation of a club card, signed by Mr. Coster, the holder of which is entitled to not more than three dogs. Mr. Slaughter, the assistant commissioner, has taken up the question of rates with all co-operating companies and they promise to agree to the same reduction.

Dr. Foote has purchased the farm of 27 acres he has been so anxiously looking for, so that now his kennel of black and tans and Me Too will literally revel in clover, and we shall expect to see some rattling black and tans in the future.

We take this opportunity to cordially thank our many friends for the kind expressions they have tendered us on

assuming the kennel editorship of this journal. We trust that our pleasant relations with the doggy fraternity may continue in the future. Our aim will constantly be to encourage the improvement of every breed of dog, and though our criticisms may hit hard sometimes, depend upon it, they will be given impartially and from a sense of honest conviction.

THE ENGLISH SETTER STANDARD.

A GOOD deal of interest has been evinced lately as to what style or type of dog the new English Setter Club would adopt in their new standard. We publish, therefore, the standard in full, which has already received the indorsement of the executive committee, and which will be finally adopted at the meeting of the club on the 23d inst. A copy has already been sent by the secretary, Mr. P. C. Ohl, to every member of the club for suggestions.

ENGLISH SETTER STANDARD.

The English setter is essentially a field dog, and a proper estimate of his value on the bench can only be made with a due regard to his field merit, as expressed in his formation and blood characteristics. No judge of a setter on the bench can take into account the quality of his nose or the quality of his intelligence. The value of these characteristics can only be determined in the field, when they are brought into use, except, perhaps, as the quality of these important factors may be incidentally suggested by the absence of indications of outside blood and the presence of certain expressions of the motions, with which the judge is familiar. There is, however, so much guess-work in valuing these qualities that no points can be allowed for them. The judge should divest himself of an attempt to measure the probable quality of a dog's nose or intelligence on the bench. He should be concerned chiefly with the quality of the dog's formation for speed, endurance and adaptability for the work required of him, much attention, too, must be paid to those race characteristics which have no relation to the question of locomotion, for a badly bred dog is sometimes well formed, but the presence or absence of characteristics which indicate outside blood, presupposes that the dog, although made to go, and able to go, will be wanting in the instincts peculiar to the breed.

The setter formation which seemed to be the most desirable years ago, is no longer held to represent the best type of the breed, and characteristics that were then thought desirable have proven objectionable. The present ideal compared with the ideal of ten years ago differs in the addition of such particulars as have been proved to be desirable, and the loss of those which trials have demonstrated to be undesirable.

The head of the English setter of to-day differs very little from the head as described by writers ten or even twenty years ago. The present type is for a head a trifle longer and lighter than that described of dogs in the past. This type is desirable since it is in harmony with the general conformation of the dog, the demand being for more length and less weight throughout.

The following description, in which we quote largely from "Stonehenge," we submit:

Head (20).—The skull is of a peculiar character, not so heavy as that of a pointer, and without the furrow and marked prominence of the occipital bone. It is narrow, or of medium width between the ears, and the brows should be raised at a sharp and decided angle from the nose. The nose should be long and with width in harmony with skull, without any fullness under the eyes. In the average dog the length should be four to four and one-half inches from the inner corner of the eyes to the end of the nose. Between the point and root of the nose there should be a slight depression, at all events there should be no fullness, the nostrils must be wide apart and large in the openings, and the end of the nose moist and cool. In all setters the end of the nose should be black or dark liver-colored, except that, in whites or lemon and white, a pink nose may be pardoned. The jaws should be exactly equal in length, a "snipe nose" or "pig jaw," as the receding lower one is called, being seriously faulty. The ears should be hung well back and set low, of moderate length and slightly rounded at the point, and without the slightest tendency to prick. The "leather" should be thin and soft, carried closely to the cheeks, so as not to show the inside, and should be clothed with silky hair about two inches in length. The lips are not so full and pendant as those of the pointer, but at their angles there should be a slight fullness, not reaching quite to the extent of hanging. The eyes must be full of animation, and the width between them should be in proportion to the size of the head and face, so that the eyes should be equally free from a close set, as well as a wide staring expression, and they should be set with their angles straight across. The best color is a rich brown.

Neck (6).—The importance of a long, lean neck has not been fully realized until quite recently, or, at all events, there has not been sufficient stress laid upon the point. Length of neck tends to high-headedness, and permits the dog to feel about for scent over a greater amount of space than he could with a short neck. Besides it adds greatly to his style, and to the ease and freedom of action of the shoulders and forelegs. The setter's neck has not the rounded muscularity of the pointer's. Being considerably thinner, it should gradually deepen as it approaches the shoulders, joining them in a graceful curve. It must not be throaty, though the skin is loose.

Shoulders and Chest (15).—The shoulders should be formed so as to permit of perfect freedom of action to the foreleg moving from the shoulder joint, giving a long, extended stride. The shoulder blades should be deep and wide, and sloping well forward. The upper arm should be of good length from point of shoulder to elbows, and the elbows well let down and at such an angle as will bring the legs fairly under the dog. A leg formation that is straight from point of shoulder to foot is objectionable, and more so one with the excessive angle throwing the leg too far back under body of dog. A medium angle from point of shoulder to elbow is the correct form. Mr. Laverack was said to be fond of a setter with well-sprung ribs back of the shoulder, a feature all right, provided that they had depth also, but he laid so much stress upon this point in his selection of dogs for stock purposes, that his breed was not only round in the barrel, but the width was carried forward between the shoulders, a very objectionable form, as also is the deep, thin chest, with light spring of the ribs behind the shoulder, known as "slab-sided." Public field trials have demonstrated that there should be as much volume of the chest as it is possible to obtain, distributed in such a manner as not to interfere with the shoulder of the dog, or restrict his pace in any way, that is, the chest between the shoulders should be thin enough to allow the shoulders to lie flat and move with freedom. Back of the play of shoulders, the ribs should spring gradually to the middle, and then gradually lessen to the back rib. The greater the length from the shoulder to the last rib, and the greater the depth of the last rib, the better. The drop in chest should be just back of the elbows, the chest sloping from this point upward toward the neck, permitting the dog to carry his neck and head up with more ease. Great depth between the shoulders is objectionable, since it puts too much weight on the shoulders and forelegs. The weight should be distributed as evenly as possible between the forward and hind parts; the tendency is too much forward. By bringing the greater volume of chest back of the shoulders, the fore parts are relieved of weight that should be, in part, supported by the hind parts. A longer dog than the type described in former standards is desirable, but with the additional length and weight in the middle, there will follow a tendency to "sway-back" which is to be met with a slight arch or additional strength in the back.

Back and Loins (10).—It has been the custom of some writers to treat of a dog's loin as his back, we make the distinction between it and the back as extending from the last rib to the hips. These two parts are to be considered separately, since a dog may be good in one and weak in the other. The loin should be strong and of moderate length. There is such a thing, however, as a dog having too much loin. Every ounce more than he needs is so much dead weight. In estimating the quality of a dog's loin, due regard must be paid to his condition, as a fat dog, with naturally a poor loin, appears exceedingly good in this particular, while a dog with naturally a good loin, but in poor condition, will appear deficient. An arched loin is desirable, but not to the extent of being "roached" or "wheel-backed." The back should be strong at its juncture with the loin, a slight arch not objectionable, and should slope upward with a slight rise, to the point of the shoulders. Any "sway" or "drop" back of the shoulders is a sign of weakness.

Quarters and Stifles (8).—The quarters should be broad across the top, the hip bones slightly prominent and wide apart, with good length from them to point of bones, at root of tail; the quarters should be well muscled; the stifles should be well bent—excessive bend, although fashionable for a time, is not desirable. A slight bow at stifles is a point of merit, as the feet in such cases stand squarely under the dog and are moved forward in a straight line, the slight bow serving as well to keep the stifles and legs easily away from the body when the quarters are brought forward.

Legs, Elbows, Hocks (8) *and Feet* (7) (15).—The elbows and toes should have the same direction, and should point straight from front to rear, and if not straight the "pigeon-toe" or in-turned leg is less objectionable than the out-turn, in which the elbow is confined by its close attachment to the ribs.

The upper arm should be flat, muscular, strong and bone fully developed, the muscle should feel hard and should be d void of flabbiness. The forelegs should be flat and taper gradually from elbow to pastern joint; it should feel hard and flinty, with no looseness of skin. The pasterns should be short and strong and nearly round. The slope from pastern joint to foot should deviate but slightly from the perpendicular. The hind legs should be muscular, with wide thighs and wide, flat hocks and plenty of bone. The lower thigh should have fair development of muscle. The feet deserve careful attention, as upon their capability of standing wear and tear depends the utility of the dog. Two types are recognized, the round cat foot and the long hare-foot. Either type is good, but the cat foot is preferred. The feet should be close and strong and well padded, with toes well arched and clothed with hair, but it should be short and thick.

Stern (5).—The stern or tail should be carried straight, or with slight curve upward, either slightly above the middle of the back, or down. There should be no curl, it should taper to a fine end, and reach the hocks. The feather must be composed of straight, silky hairs, falling loosely as a fringe when the tail is raised and tapering to the point of the tail. There must be no "bushiness" whatever.

Coat and Feather (5).—The coat should be flat, with an absence of wave or curl. By this is meant a full coat such as characterizes the true English setter. The feather should be moderate, and that on the back of the legs should be thin and regular.

Color and Markings (4).—Too much stress must not be put upon color, for the color in this breed is largely a matter of fancy. Some prefer black and white, or black, white and tan; others, lemon and white, and others again liver and white. Being so largely a matter of fancy, it should be dealt with gently. The colors now recognized are as follows: Blue belton, black, white and tan, black and white, lemon or orange and white, lemon or orange belton, liver and white, liver belton.

Symmetry.—After examining a dog critically in all his points there yet remains to be estimated the harmony of the whole. The dog may have a good head, shoulders and quarters when looked at simply as single points, but when they are looked at collectively, as a part of one dog, they may be sadly out of harmony with each other. The head may be a good head seen simply as a head, but it may be too large or too small for the dog. The foreparts may be good in themselves, but too heavy or too light for the hindparts or the rest of the dog. It is harmony of all the points which constitutes the symmetry and quality, and these points, in their proper relation to each other, go a long way toward what constitutes the beauty and serviceable qualities of the dog.

THE COLLIE CLUB STAKES 1891.—Philadelphia, Pa., Oct. 15.—*Editor Forest and Stream:* Referring to the remarks in your issue of Oct. 9, signed "The Squire," I beg to say that it would appear to me also advisable that some change should be made in the proposed terms for the Collie Club Stud Dog Stakes, in regard to the progeny that can compete. What is the objection to conforming to the custom, which seems to be pretty general in England, of allowing any progeny of any age, that are exhibited at the show where the stake is decided, to compete? It is, to my mind, a great mistake to limit the number of the progeny, either by qualifications of age, or otherwise. Provided there are at least two of the get of any stud dog at the show, it seems to me it would be well to allow such dog to compete. If the Collie Club think it best to rule that the progeny must be out of more than one bitch, I see no special objection to this, but am of the opinion that this stipulation would be as far as it is wise to go, in regard to dictating rules, as to the progeny that can make the stud dog eligible. The stud dog should not only be at public stud, but exhibited on the bench at the show where the stake is to be decided. This should be a *sine qua non*.—MITCHELL HARRISON.

POINTING SMALL BIRDS.—Indianapolis, Ind., Oct. 14.—*Editor Forest and Stream:* I have a very fine young Irish setter who has been following me when I go through the city with buggy, and has by so doing acquired the habit of pointing sparrows by sight, so that it interferes with his proper action in the field. He has a good nose, and if you could advise me what to do to bring his attention to point by scent only, I would be greatly obliged.—OTTO STECHEAN. [We have owned a number of dogs that would point small birds by sight, and have invariably succeeded in breaking them of the habit by simply letting them point and taking no notice of them whatever, letting them point while we continued our course, leaving them to follow us when they pleased. This of course when taking them out shooting. When a point is made to a game bird it should be killed if possible, but whether killed or not the dog must be praised and petted, and given to understand that this is what is wanted. This course, if properly pursued, will soon bring your dog all right.]

TO MY LOST LURAY.

IN a box with his brother,
Each solacing the other,
The puppy left Virginia by express,
A gift to me. He knew my first caress,
And made me love him by his puppy pranks,
His roguish bites and barks and kissing thanks.

The pretty little fellow
Had paws of tawny yellow,
And nose and chops the same; and two tan spots
Above his hazel eyes, that seemed like dots
Of thought upon his forehead; and for the rest,
In sable, shiny black Luray was dressed.

I thought him so much better
Than any puppy setter,
I took him to the dog show; with his eyes—
I know it was his eyes—he won the prize.
(He was the only entry in his class,
Some friends took pains to say—but let that pass).

As soon as he grew older,
His fluffy puppy shoulder
Stood high and gaunt; his loins began receding;
In every line and point he showed his breeding.
The time has come, said I, to test his grain,
And now, if ever, to begin to reign.

I improvised a quarry,
And I made him fetch and carry,
And "charge" and "heel" and "find;" and do all, in short,
To fit a setter for a life of sport.
He did not learn his lesson in a day,
And often sought to shirk his work for play.

I tried not to upbraid him,
Tho' often, when I made him
Do this or that, he taxed my patience much;
For if I held a bone in careless clutch,
Which I would think to hide and make him find,
He'd steal up soft and snap it from behind.

And then to see him scamper
Was something of a damper
On training. How he'd frisk and twist and bound,
And toss the bone and catch it off the ground,
And wait, crouched low before with hips held high
Till I approached him, when away he'd fly!

And then I'd shout: "Charge down, sir!
You'll never win renown, sir,
Behaving so." But by and by he came
To understand me and to find my game
More fun than his; he'd watch my wave of hand,
Or stop and listen to my least command.

So he was wise and sober
Some time before October,
When dogs and hunters take their tramps afield.
The first day he was puzzled, nor revealed
His sense; the next he nosed about; the third
He trailed, he pointed, and he fetched his bird.

He never made a blunder,
But hunted to the wonder
Of all who knew him. When another gun
Than mine had killed, and other dogs were done
With searching for the bird, my side he'd leave,
Go far within the bush and then retrieve.

There never was a cartridge
More sure to find a partridge
Than he. What pride he took to fetch his bird—
The puppy with his partridge! Wilding heard
It all at night, I fancied, when Luray
Crept in his stall, and close beside him lay.

They always slept together
In frosty autumn weather,
They loved each other. Wilding munched his hay,
And breathed warm kisses on the dog; Luray
Coiled in the straw where Wilding put his nose
And gently licked it after every doze.

The next day, when the pony
Was in his cart, his crony
Before we started always rustled to kiss him;
He never failed, but Wilding seemed to miss him
Until he jumped and licked his face; the start
Thus authorized, he ran beneath the cart.

Alas! all that is ended;
An illness came, attended
With pain and poison; I have lost Luray.
'Tis sad that every dog must have his day;
Oh, why did not Luray have his? Two years—
So much for loving; all the rest for tears.

And now I've told my story,
I must tell you how I glory
In having loved Luray. What better than
Such love for such a dog? I loathe the man
Who snarls at dogs; his very soul's agog.
God made the world; God also made the dog.

—*John Eliot Bowen, Century for October.*

DOGS OF THE DAY.

A FEW days ago I took advantage of a spare morning to run out to the Swiss Mountain Kennels at Germantown to see if there was any prospect of puppies out of the recently imported St. Bernards Dart and Donna Silva. When they arrived here I had a very strong suspicion that they were not with whelp, and I regret to say that such is the case. It is of course quite a disappointment, but their owner takes it philosophically, looking for better luck next time. It is always a pleasure to go out to these kennels and see the excellent condition the dogs are in. The motto there seems to be "Eternal vigilance is the price of success." And yet even that safeguard does not prevent accidents. Recently a very nice smooth-coated bitch, Morna (17,089), jumped over a fence while the kennelman was absent for a few moments and hung herself; and the day before I made my visit the black cocker bitch Waggles, while running in the orchard with the St. Bernards, had given offense to one of the St. Bernards and received a nip in return which terminated her earthly career. She was one of the best-bodied cockers I have ever seen, and but for being a little too blocky in head would have taken a tiptopper to beat her.

The bright side of the story consists in noticing two very nice litters of St. Bernards, one by Marquis of Stafford and the other by Arch Duke. Marquis of Stafford is a son of champion Save, an almost entirely white dog, but who gets nicely marked puppies. I also saw two very promising puppies not quite four months old, by Arch Duke out of Madame Barry. I saw them some time ago and then said that I thought Arch Duke was a promising sire. Since then these puppies have come on well, and with good luck will make their mark. When the kennel editor of FOREST AND STREAM can spare time to run over to Philadelphia I hope he will do so and permit me to take him out to see them.

Mr. J. A. Long, of St. Louis, tells me he has some very promising collies by Archibald. As the dam is fully as well bred as the sire they ought to be good ones, and I hope their owner will at last have the good turn he deserves for his many plucky purchases of stock in England.

On Friday of last week I was very much astonished to receive a letter from Mr. Jas. L. Anthony, criticising some of my remarks which appeared in the last week's issue of FOREST AND STREAM. Of course, I have no objection to criticism, considering that I indulge in it so much myself,

but there are certain styles of criticism which are certainly unpleasant and of such I would characterize Mr. Anthony's. In order that others may judge whether or not I have reason to object to such criticism I herewith give a copy of the letter:

"My attention has been called to your remarks as to the National Beagle Club and my action at the A. K. C. meeting.

"First, I suggest that you get a dictionary and learn to distinguish the difference between the words acquiesce in and adopt. Second, that you post yourself as to the object in the constitution of the aforesaid club, viz.: among other things to adopt a standard at variance with the one adopted by a present member, under which the dogs of the club should be judged on the bench. In fact, the club had for its main object the destroying of the older club.

"You may see no propriety in a field trial club belonging to the A. K. C. I and many others do, for if my dogs were alone good for the bench I would soon end their existence. No one of that class alive for me if you please.

"I write this, not that I object to criticism, but you had better get posted, especially as you are an officer of the club, before criticising the action of another."

The first thing that struck me in reading this letter was the unfortunate reference of Mr. Anthony to the dictionary. Surely Mr. Anthony must remember that once before I had occasion to bring the dictionary into a discussion which we had, but for Mr. Anthony's sake I would fain drop that subject. Mr. Anthony's suggestion to me to procure one to learn the difference betweeen the phrase "acquiesce in" and the word "adopt," is entirely uncalled for. If I had meant to use adopt, I would have done so, but I chose the word acquiesce because it stops a long way short of adopting, and the A. K. C. was just as far short of any idea of adopting a beagle or any other standard.

Regarding the suggestion to post myself as to the object named in the constitution of the National Beagle Club, Mr. Anthony overlooks this very important point. The published minutes of the meeting are intended to afford information to all dog readers. Now there is not one single reference in the official report to the object of the National Beagle Club, neither is there any reference in Mr. Anthony's rosolution. It was Mr. Anthony's duty to so word his resolution as not to allow of any mistakes being made. Though he fails to make this meaning clear, I yet gave him the benefit of the doubt, when I said that I was not aware that the framing of the standard was part of the object of the National Beagle Club, thus qualifying my remarks, and any person who knew that such was the object of that club could therefore draw their own conclusions.

As far as the National Beagle Club having for its object the destruction of the American Beagle Club, that is a matter that concerns the Beagle Club men. The older club, as Mr. Anthony's calls it, has been little better than a laughing stock for years, its efforts to improve the breed of beagles being confined to the offering of half a dozen 50-cent collars during the year. About the last thing I heard of it was a frantic appeal on the part of some official for members to do something in the way of helping it along, or they might as well shut up shop. If the American Beagle Club had been doing anything, it is safe to say that there would have been no opposition. As it is, it is but a stumbling block in the way of improvement.

While the subject of destroying older clubs is on the carpet, how was it that Mr. Anthony did not object to the killing off of the older setter club? Why did he not object, for instance, to the use of the A. K. C. rooms for that purpose? Perhaps he will say that the older club was not a member of the A. K. C., but I think I am correct in saying that the older club had applied for membership in the A. K. C. before the meeting for the purpose of organizing the second setter club was held. It is a bad rule that will not work both ways.

I never said that there was no propriety in field trials clubs belonging to the A. K. C.; I simply implied that I did not see what use they were in the A. K. C., or it to them, and, considering that there is only one such member, it looks very much as if they were of the same opinion. Mr. Anthony's reason for what he calls propriety in field trials clubs being members of the A. K. C., appears to me to be very strained. What has the membership of the field trials club got to do with its holding trials? Here occurs something which Mr. Anthony has overlooked. For instance, the present field trials member has adopted a standard, that is to say, has adopted rules for running of field trials. Now suppose another club comes in, must this club adopt the same rules, or is it to be turned to the door for the same reason that the beagle club was? To Mr. Anthony I give credit for desiring to own pointers that have other merits besides their appearance, but I am under the impression that I should have to look elsewhere than in field trials records to find out that they have any such merit.

Regarding Mr. Anthony's final sentence I do not see that my being an officer of the club has anything to do with my criticising an official report. I am not an official in the sense that I am charged with the direction of the club in any way, for a member of the stud book committee has but little to do with the club at large. Mr. Belmont took up the same line once and I replied to him at the meeting, and subsequently made reference to it in FOREST AND STREAM, that I declined to consider my being a delegate or a member of the stud book committee prevented me on any occasion from criticising any action of the club. If it is improper for me to criticise the club when I think it commits a fault, it is equally improper for me to say anything when I think it is right. Taking that view, it was improper for me to take any part whatever in the discussion of the A. K. C. accounts, but certainly no person with sense would advance the proposition that it was only proper for an officer to write in favor of the club and that he must say nothing when he sees what he believes to be an error. It might perhaps be a little out of place for a person who was not in the habit of writing to the papers to come out boldly and attack something of not any great importance, but that is not my position at all. I am well known as a writer for the press, as a critic upon all subjects in the dog world and as one who has always had his say upon kennel club matters. I was accepted as delegate with that full knowledge; I was appointed on the stud book committee with that full knowledge, and it is quite too late in the day to suggest that because I happen to be on that committee I must refrain from criticising another delegate of the club or any proposition he may make.

If I am not very far out of my reckoning the onus is upon Mr. Anthony for taking such a position and saying to a fellow delegate what he should or should not do, that being within the province of the A. K. C. alone. When that body decides that it is so much above all creation that mortal man must not even criticise it, even if he happens to be one of the elect and entitled to enter the outer courts, then I will get outside and watch the edifice crumble into dust.

Your correspondent "Namquoit" credits me with saying that Lord Bute is the best St. Bernard in England. If he can place his finger on any such statement I will acknowledge it as an error, but I think he will find that I said he was said to be the tallest, a claim that has not been disputed. J. W.

A MAP OF THE UNITED STATES.—A large, handsome map of the United States, showing North and South Dakota, mounted and suitable for office or home use and issued by the Burlington Route, will be furnished responsible parties free on application to the undersigned. Playing cards for 15 cents in postage by applying to the undersigned. P. S. EUSTIS, General Passenger and Ticket Agent, C., B. & Q. R. R., Chicago, Ill.—*Adv.*

FUN AT DOG SHOWS.

THE black and tan terrier breeders and owners seem to be in a bad way, for not long since Dr. Foote made a public appeal for competent judges to adjudicate upon the merits of his breed. It is useless, Doctor! You might as well whistle to the moon and expect it to send down a full report of all, our telescopes fail to reveal. Most of the clubs won't pay any heed to your request. Why should they? You are only a gentleman breeder and exhibitor, nothing else. If you don't like their judges you can keep your dogs at home. Yet, were you one of the "mighties" at 44, your prayer would be heard, but being only a pariah, as all of us are who are out of the charmed circle, your appeal is only a feather weight. Just give us one more chance, Doctor, and we will have another Meersbrook Maiden comedy. We never have a tragedy in the fancy. It is a thousand pities we do not once in a while. Dogs would be greatly improved if we did, I think.

The nearest approach to a "Meersbrook Maiden Comedy" I ever knew of in England was recently, when Captain Miller "judged" Irish setters. Here is how he did it: Open class: Yerker, third prize, Drinnagh, hc. Novice: Valentine, second prize; Drinnagh, third; Yerker, vhc. Puppies: Drinnagh, third prize; Yerker, vhc.; Valentine, hc. Cup for best Irish setter in open classes, Cloyne II. Now Cloyne II. only got a c. card in the open class, yet she was awarded the cup. This is quite on a par with the little happy incidents in my late "Fun at Dog Shows." Now, if our toadying dog show committees would only invite Captain Miller over to take the circuit of our coming spring shows, Dr. Foote would be more happy and "Mephisto" would forever lay aside his pen.

Et tu, Brittle! I thought you would be the one to keep the "laugh and grow fat" ball a-rolling and you have gone and done it. Only a month or so ago (Sept. 13), in a Philadelphia paper, you told us that at Wilmington show, Blemton Rubicon's skull had fined down tremendously since you last saw him at Boston, and that he looked more like his dam than ever. Oh, shame on you Brittle! Don't you think "the exact counterpart of his dam" judge can make blunders that are sufficiently stupendous and conspicuous without being still further handicapped with your indorsement? I know you have recently stated that a man who did not know on which side his bread is buttered is a fool. I am also aware that your dogs are being well cared for at Babylon. But, my dear boy, "taffy" is at all times liable to soil one's fingers, and besides, United States coin is good enough for us. Although the leading man in the Meersbrook Maiden comedy is backed and recommended by the A. K. C., "he's all right," Brittle. True, he is a countryman of yours, but for your own sake don't tell us that fox-terriers' skulls "fine down tremendously" with advancing years. Did you ever know a child's skull to grow less as the child grew older? I have known skulls to grow thicker, but "fine down tremendously" oh, never! Do not tell us that Blemton Rubicon "looks more like his dam than ever," or we will think you are making our friend the butt of ridicule. This will never do, as we cannot afford to have his "occupation gone." So, Brittle, in mellow language we softly murmur, "Don't." More anon. MEPHISTO.

WILL RUN SARSFIELD.—Pittsburg, Pa., Oct. 20.—*Editor Forest and Stream:* Since the publication of the nominations of the entries for the Eastern field trials, in which appears the name of my red Irish setter dog Sarsfield, entered in the All-Aged Stake, I have received four letters asking if it is my intention to start him. I wish to state here that I have entered Sarsfield in good faith, have sent him to Amelia county, Virginia (the county in which these trials are to be held), and he is now in the hands of the man who will handle him in the trials, and to whom I have given instructions to run Sarsfield under any conditions if he is alive and well. It is not my desire nor intention to own a dog that I am afraid to run in field trials or show on the bench, and although Sarsfield is nearly seven years old, which is a year and a half older than the oldest dog of any breed entered, and nearly four years older than the oldest Irish setter entered, he will go if Providence permits it. I don't expect Sarsfield to make so good a showing as some younger dogs, but I certainly expect that he will give as good an account of himself as can be expected of any dog of his age. I will also state that this is the first reasonable opportunity I have had to run Sarsfield since I purchased him about a year ago, and if any one imagines that it is not my honest intention to run him in the Eastern field trials, and is willing to back his opinion, I will allow him odds of two to one for any reasonable amount.—W. L. WASHINGTON.

INTERESTED CRITICISMS.—Buffalo, Oct. 20.—*Editor Forest and Stream:* I have received a copy of the *Canadian Kennel Gazette* for October. "Our Special Reporter" gives most of the judges advice as to how they should go to work to get at a dog's merits. He says if Mr. Lacy had handled the greyhounds himself, at Ottawa, he would not have concluded that the black greyhound was equal in condition to the brindle. Then he intimates that the handler of the first prize winner fooled the judge. I will leave to St. Bernard and greyhound breeders his criticisms of the awards of those classes at Toronto: but want to say that the judging of black and tan terrier bitches gave entire satisfaction to every exhibitor, so far as I know. Desdemona has beaten Rochelle Nadjy under Mr. Lacy, and I know her owner, Dr. Foote, did not complain of the awards, and certainly the first prize winner, Broomfield Madge, can beat them both. "Our Special Reporter" shows his personal hostility to Mr. Mason, and any man who is so governed by his prejudices, is totally unfit to write criticisms. We can all respect honest differences of opinion, but we want fair play, not personal abuse and rowdyism.—A. W. SMITH.

DAMAGES FOR A DOG.—Canastota, N. Y., Oct. 20.—*Editor Forest and Stream:* The case of Reed vs. Zimbeck was tried on the 16th, and resulted in a judgment for the plaintiff, amounting to $59.90. This is as it should be, excepting amount of judgment, which is decidedly small.—OSCEOLA. [This is a case which has excited considerable attention among the sportsmen in the Oneida valley. It seems a man named Milton Zimbeck while working for one Guston Barton, shot a pointer belonging to Mr. Reed, who is a market shooter. Barton had given orders to Zimbeck to shoot any stray dogs that might come round the place while a certain bitch of his was in season. The pointer was valued at $150. Mr. Zimbeck claimed in his defense that he only meant to sting the dog, as he knew who it belonged to, but killed him by accident.]

THE BIG MEET.—Chicago, Oct. 6.—*Editor Forest and Stream:* The literature of the American Coursing Club is in town, and it deserves notice from every greyhound man. Reports from the country around Great Bend say that the jack-rabbits are just as numerous as ever, and all things point to at least a hopeful meeting. Mr. Ira D. Brougher has done good work as secretary. The business meeting for election of members is on Monday evening, Oct. 20, and the rest of the week will be put in on the field. This is the annual greyhound event of America. There is no spot on earth where the natural advantages for a coursing meet compare with those of these flats on the Uhl and Garney ranch. After all is said, it is W. W. Carney to whom the club owes most of its success. A pleasant and profitable meet is wished for 1890.—E. HOUGH.

WHERE ARE THE GORDON SETTER MEN?—*Editor Forest and Stream:* Now that a special stake has been made for Gordon setters at the Central Field Trials, an opportunity is offered for the owners of Gordons, who have heretofore been so loud in their praise in print, to enter and run their dogs, thereby demonstrating whether or not they possess the superior field qualities claimed. I should be glad to see some of Mr. Malcolm's dogs run, as I believe that gentleman claims his dogs to be a little better than any other strain of Gordons. Dr. Myer from what I learn, will run some from his kennels, Dr. Dixon should also be represented, having quite a kennel of Gordons. As Little Boy and Beaumont have under different judges alternated in winning on the bench, it would be a great satisfaction to lovers of Gordons to have these two dogs meet at the trials and decide which is the better field dog. As they are of about the same age, seven years, neither would have the advantage of youth. The owners of the Item Kennels, I understand, have sufficient confidence in their dogs to make some entries, Dr. Whitaker, and Mr. Collins should run something. Where are Heather Harold and Heather Roy? Why is it that the officers of the Gordon Setter Club are doing nothing, while private subscriptions for a purse are being made by its members and outsiders? Now is the accepted hour. In December next at the Central Field Trials is the time and place for the owners of Gordon setters to show the public if these dogs possess the merit claimed for them, or if it is all blow.—JUDGMENT.

THE INDIANA FIELD TRIALS.—Indianapolis, Ind.—*Editor Forest and Stream:* The Central Traffic Association has granted special rates in Indiana to parties who will attend the Indiana Kennel Club's trials at Bicknell, beginning Oct. 30. Tickets will be good going, from Oct. 27, and good returning, during and three days after the trials are completed. Tickets should be bought to Vincennes, at which point return tickets can be purchased at one cent per mile. The Louisville & Nashville Railway Co. will sell tickets from any point on their line and will carry dogs free of charge. Parties buying tickets to Vincennes must secure from the agent of whom they purchase their tickets, a certificate showing that they have paid full fare. This certificate when signed by me will enable the holder to purchase his return ticket at the reduced rate. Parties in Indianapolis can secure round trip tickets to Beckwith at $4.70, if bought at the up-town office. The Puppy Stake will start Thursday, Oct. 30, and the Members' Stake the next day.—P. T. MADISON, Sec'y.

WHIPPET RACING.—Detroit, Mich., Oct. 19.—*Editor Forest and Stream:* I have seen the letter you mention; would say there were three watches held on my dog at London, Ont., they all gave him 12½sec. for 200yds. and 6¾ for the 100yds. The course was a slow one at that. The same dog has made 12sec. on a cinder track. The height of Ben Bow is 19in., weight 22lbs. In regard to the English dog you have referred to, he could not have started from scratch, being so light a dog he must have had quite a start, under handicap rules, if that was the case his record is no good. I do not see why whippet racing must be a low sport, unless it is made so. We are trying to improve it and also trying to get it recognized by a better class of breeders. I have run my dogs at athletic meetings, before the best society here, and it gave great satisfaction, especially with the ladies. I think with a little care it will be popular. I am sorry not to be able to send you a cut of the dog.—THOMAS BLAKE.

ANOTHER DUKE-RHŒBE GONE.—*Editor Forest and Stream:* It is with feelings akin to sadness that I announce the death of the Llewellin Pride of the West. His owner, Mr. W. Alex. Bass, received word last week from Accomack county, Va., of his sudden death, but as yet has not received the particulars. Pride was bred by Dr Stork, of Milwaukee, Wis., and was out of Lola, by Count Noser. His loss will be keenly felt, for he was of a most affectionate disposition, and above all one of the best all around dogs in the field that it has ever been my pleasure to shoot over.—TEE KAY.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Chief's Kate. By H. B. Ledbetter, Farmington, Mo., for red Irish setter bitch, whelped Sept. 27, 1889, by Chief (Berkley—Duck) out of Jennie P. (Tim—Youbet).

Grand River Kennels. By C. H. Ruhl and C. W. Jarvis, Jackson, Mich., for their kennels of great Danes and greyhounds.

BRED.

☞ **Prepared Blanks sent free on application.**

Lady Bedivere—Tristam G. F. E. Lamb's (Baltimore, Md.) St. Bernard bitch Lady Bedivere (champion Sir Bedivere—Princess Louise) to F. H. Greiner's Tristam G. (champion Plinlimmon—Cigarette) Aug. 25.

Rose—Little Boy. S. E. Davis's (Horicon, Wis.) Gordon setter bitch Rose (Moss—Furn) to Dr. S. G. Dixon's champion Little Boy (Dixon's Pilot—Fly), Oct. 5.

Nettie—King of Obos. J. Pipher's (New Market, Ont.) cocker spaniel bitch Nettie to G. Bell's King of Obos (Obo II.—Darkie), Aug. 28.

——*—King of Obos.* John C. Eccles's (Dunnville, Ont.) cocker spaniel bitch —— to G. Bell's King of Obos (Obo II.—Darkie), Sept. 10.

Little Red Ridinghood—King of Obos. G. Bell's (Toronto, Can.) cocker spaniel bitch Little Red Ridinghood (Obo II.—Toronto Bell) to his King of Obos (Obo II.—Darkie), Sept. 15.

——*—King of Obos.* G. W. Watts's (Toronto, Ont.) cocker spaniel bitch —— to G. Bell's King of Obos (Obo II—Darkie), Sept. 28.

Martha Washington—King of Obos. Dougles & Lockwell's (Woodstock, Ont.) cocker spaniel bitch Martha Washington (Black Duke—Lady Stanley) to G. Bell's King of Obos (Obo II.—Darkie), Oct. 1.

Rochelle Nadjy—The Senator. Rochelle Kennels' (New Rochelle, N. Y.) black and tan terrier bitch Rochelle Nadjy (champion Vortigern—champion Meersbrook Maiden) to their The Senator (Patrick—Pink), Oct. 1.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Vin. Rockland Kennels' (Nanuet, N. Y.) beagle bitch Vin, Sept. 25, eight (four dogs), by Racer, Jr.

Clarissa. R. H. Burr's (Middletown, Conn.) Irish setter bitch Clarissa (Bravo—Leonia), Oct. 13, five (two dogs), by his Don III. (Elcho, Jr.—Pequot dogs).

Hillside Jaunty. C. S. Hanks's (Manchester-by-the-Sea, Mass.) fox-terrier bitch Hillside Jaunty (Raby Mixer—Jaunty), Sept. 7, six (three dogs), by A. Belmont, Jr.'s, Blemton Brawler (Blemton Rubicon—Blemton Bedlam).

SALES.

☞ **Prepared Blanks sent free on application.**

King Lear—Lady Nettie whelps. Orange and white St. Bernard dogs, whelped June 8, 1890, by F. E. Lamb, Baltimore, Md., one each to J. C. O'Donnell, Allegheny City, Pa., and E. H. Greiner, Buffalo, N. Y.

Viola. Black and tan setter bitch, whelped May 25, 1890, by champion Royal Duke out of Carmen K., by H. H. Thomson, Philadelphia, Pa., to Chas. Bedford, same place.

Faustina. Red Irish setter bitch, whelped April 10, 1890, by Blaze out of Gladys B, by R. H. Burr, Middletown, Conn., to J. T. Collins, South River, N. J.

Eric. Red Irish setter dog, whelped April 10, 1890, by Blaze out of Gladys B., by R. H. Burr, Middletown, Conn., to E. H. Morse, Willimantic, Conn.

Keziah. Red Irish setter bitch, whelped April 10, 1890, by Blaze

out of Gladys B., by R. H. Burr, Middletown, Conn., to John Welch, Choctaw Nation, Easton, I. T.

Bromine. Lemon and white Clumber spaniel bitch, whelped October, 1884, by Tower out of Leda, by Bate & Geddes, Ottawa, Can., to F. H. F. Mercer, same place.

Boss III. Lemon and white Clumber spaniel dog, whelped September, 1883, by Damper out of Lotus, by Bate & Geddes, Ottawa, Can., to F. H. F. Mercer, same place.

Idea. Black cocker spaniel bitch, whelped Nov. 7, 1889, by King of Oboe out of Snow II., by G. Bell, Toronto, Can., to G. H. Brush, Buffalo, N. Y.

Ensign Tom. White, with black markings, fox-terrier dog, whelped June 13, 1890, by Bones out of Nina, by by C. S. Hanks, Manchester-by-the-Sea, Mass., to Roy Johnston, Chicago, Ill.

DEATHS.

Actress III. On Oct. 14, 1890; was in whelp to Racer, Jr.; owned by Rockland Kennels, Nanuet, N. Y.

THE SPANIEL AND ITS TRAINING.*

HOW this book came to be written and why, is best told in the author's own explanatory note: "When, several years ago, I stood in need of a work to instruct me in the art of spaniel training," says he, "I found that none existed which was at all suited to my needs. I had, perforce, to study out the subject for myself, without assistance, and to be my own tutor in threading its intricacies. The training system described in this book is the result of my labors, and while I do not proclaim it to be infallible, still I am positive that most, if not all, spaniels may be well and thoroughly taught if the rules laid down herein are strictly followed. In the main it is purely original, for it was not until I had practically completed the system, to my own satisfaction at any rate, that I read a book on general training."

The chapters are practical and sensible. There is no theory in them. Here is a man who trained his dogs; learned by experience how to do it; and now has put down his experience for the benefit of others. We predict for "The Spaniel and Its Training" that wide popularity and favor which of right belong to practical books by practical men for practical men. In addition to the chapters on training there are descriptions of the several varieties of spaniels, with portraits of typical specimens; notes on the spaniel in America, and the standards adopted by the English and American spaniel clubs. The chanters are:

Introductory; Spaniels; Selection; Preliminary Hints; First Lessons; Retrieving; Retrieving from Water; "Heel;" "Hie On"; Dropping to Hand, Command, Shot and Wing; Gunshyness; Ranging; Miscellaneous Hints; A Day Afield; Spaniels in America; Standards of English and American Spaniel Clubs.

The Spaniel and Its Training; By F. H. F. Mercer. To which are added the American and English Spaniel Standards. New York: Forest and Stream Publishing Co., 318 Broadway. Cloth. Illustrated. Price $1.

Rifle and Trap Shooting.

RANGE AND GALLERY.

MASSACHUSETTS MARKSMEN.

WALNUT HILL, Oct. 17.—The "distinguished marksmen" of the militia—the men who have qualified as sharpshooters, won State prizes, shot in Creedmoor or the English rifle teams—held a special shoot to-day.

The competition is given under the auspices of the State and medals are awarded the two men making the highest scores. The match is a new thing, the competition of to-day being the first one ever held. The conditions call for 10 shots each at 200, 500 and 600yds.

It was about 11:30 o'clock when all the contestants reported at the range. At this time the rain was falling in sheets, and the wind was blowing across the range from 10 o'clock with almost hurricane force. These conditions prevailed during the shooting at 200yds., but upon moving back to 500yds. the water ceased to fall, and the wind, although strong, became steadier. It was indeed a hard day for the "distinguished men."

Yet, despite conditions, some excellent records were made, notably the 47 of Sergt. Merrill at 600yds. The shooting of Lieut. Sterling was wonderfully clever under the circumstances. The match closed a little after 3 o'clock with Lieut. Sterling the winner of the first prize and Sergt. Johnson winner of the second prize.

	200yds.	500yds.	600yds.	Total.
Lieut. J. A. Sterling, 2d Infantry	42	45	45	132
Sergt. W. C. Johnston, 2d Brigade	41	43	44	128
Lieut. C. P. Hilliker, 8th Infantry	43	40	44	127
Lieut. W. G. Hussey, 8th Infantry	42	45	40	127
Priv. C. E. Horton, 6th Infantry	41	44	41	126
Sergt. M. W. Bull, 1st Brigade	41	43	41	125
Sergt. G. R. Russell, 1st Infantry	43	43	39	125
Sergt. W. M. Merrill, 2d Brigade	37	40	47	124
Lieut. S. S. Bumstead, 2d Brigade	44	37	42	123
Corp. W. D. Huddleson, 1st Infantry	38	39	44	121
Corp. T. D. Barroll, 1st Cadets	37	42	40	119
Qm. Sergt. E. T. Stevens, 2d Infantry	38	42	38	118
Lieut. W. H. Merritt	36	40	40	116
Lieut. R. B. Edes, 5th Infantry	37	41	33	111
Priv. E. F. Bergholtz, 2d Cadets	42	32	7	81

INTERSTATE LEAGUE.—At a meeting held in Jersey City on Wednesday evening, Oct. 15, the organization of the Interstate Gallery League was perfected. The clubs represented were the Lakeside and Our Own, of this city; Excelsior, of Jersey City; Hudson, of Marion, and the Turtle Bays, of New York. The Harlem and the Albig, of New York, have also joined, but their delegates were absent. The officers elected were: D. Mahoney, Lakeside, Pres.; L. P. Hanson, Excelsior, Vice-Pres.; C. H. Townsend, Our Own, Corresponding Sec'y; Henry Hanson, Hudson, Financial Sec'y; C. H. Plate, Turtle Bays, Treas. It was decided to make the organization permanent, the object being to advance rifle shooting by arranging for friendly competitions, and to cultivate sociability among riflemen of the different clubs. The next meeting will be held on Oct. 26, at the Turtle Bay range. The permanent headquarters of the league will be at the Excelsior range, 78 Montgomery street, Jersey City. All clubs wishing to join the league are requested to send delegates to the next meeting. At this meeting details will be arranged for a team tournament, with first, second and third prizes.

EPHRATA, Pa., Oct. 17.—The members of the North End Rifle Club met on the range this afternoon for rifle practice, and succeeded in making the following score at 200yds., off-hand, with a gale blowing across the target that almost upset the shooters at times, the weather being clear and cold:

L M Wiest	6	3	9	10	7	8	7	4	5	9	—68
C S Wenger	5	6	8	8	9	10	0	4	5	5	—60
W L Carpenter	10	3	5	4	6	4	7	7	7	7	—60
W D Winters	4	6	7	6	5	6	8	5	3	6	—56
C Konigmaker	6	0	4	4	4	5	3	10	7	0	—43
D B Lefever	6	5	4	10	0	4	0	0	4	0	—33
R W Bickley	6	0	10	0	0	4	6	3	0	0	—29

The club will meet again on Friday afternoon for practice. The shoot for class medals will come off some time during November. A number of our members are going up to Michigan in a few weeks for a month's deer hunt.—D. B. L., Sec'y.

BOSTON, Oct. 18.—The regular weekly shoot of the Massachusetts Rifle Association was held to-day at its range with a good attendance of riflemen. The shooting conditions were good. Below will be found the best scores made. Distance 200yds., standard American target, re-entry allowed:

All-Comers Off-Hand Match.

G B Warren	84	G L Hosmer	68
S C Sydney	78	S D Hart	66
A S Field	72	M R Smith	61
J B Hobbs	69		

All-Comers Rest Match.

J Francis	113	S D Hart	104
S Wilder	107	T Oliver	102
M R Barter	107	J B Hobbs	102
F Daniels	106	I B Thomas	99
A H Ballard	105	J W French	99
John French	97		
S B Martin	94		
V Hastings	93		
A N. Mann	88		
M T Day	86		

NEW YORK, Oct. 14.—The weekly shoot of the Empire Rifle Club took place at Zettlers gallery, 12 St. Mark's Place, on Massachusetts 12-ring target, 1¾in. bullseye, 100ft., possible 120:

W Rosenbaum	113	J Zettler	96
J Grimm	101	W Maisenholder	102
W Miller	105	W Overbaugh	107
C Zettler, Jr.	102	G Hillmeyer	90
E Smith	98		

ST. LOUIS, Mo., Oct. 17.—Mark C. Billmeyer made the top score at the last shoot of the St. Louis Pistol Club. After being 9 points short in four shots, he dropped six shots in the 10-ring and wound up with 91. A 12½yds. standard American target:

M C Billmeyer	7	9	9	6	10	10	10	10	10	10—91
S G Dorman	8	7	9	10	8	10	7	10	9	10—88
A McBean	7	6	10	9	9	9	7	10	9	10—86
G Alexander	8	8	7	8	10	10	6	9	10	9—85
W Buser	7	10	10	9	6	10	7	9	10	7—85
G Bast	7	9	9	8	6	7	10	7	10	9—82
J Chase	9	10	9	7	4	5	9	5	9	5—72

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

Oct. 23.—Second Annual Tournament of the Maplewood Gun Club, at Maplewood, N. J. Open to all. Bluerocks, three sets of traps. C. W. Brown, President, Maplewood, N. J.

Nov. 18-19.—Open-to-All Tournament of the Woodside Gun Club, Woodside, N. J. Carl Von Lengerke, Sec'y, 843 Broad street, Newark.

DAYTON, OHIO.

DAYTON, O., Oct. 20.—The Urbana and Plain City Gun Clubs shot three team matches, and Urbana won two out of the three, the conditions for all of the contests being 25 targets to each man, rapid-firing system. First was a 4-men team race, and resulted: Plain City 82, Urbana 81. Second match, 6-men teams, resulted: Urbana 124, Plain City 121. Third match, 9-men teams, resulted: Urbana 149, Plain City 143. Following is the complete score of this last contest:

Urbana.

Hupp	1111101010011111111111111—21
Hovey	1111111000010000100101011—13

Balanger	1111001111101011101101111—18—143

In a live-pigeon shoot here, Wm. Kiefer killed 18 out of 20, Chas. Miller 16, Will Kneisly 14, Rolla Heikes 18, Geo. Makley 16.

Second match, 10 pigeons, Heikes used a 16-gauge gun, Kiefer a 10, Makley, Miller and Kneisly 12.

Heikes	2121111110—9	Miller	2102111111—9
Makley	1012111101—8	Kneisly	1121101111—9
Kiefer	0210011100—5		

Two live-bird matches were shot at Troy, 7 birds each, $3.50 entrance, E. F. Davenport referee:

H Prill	1111111—7	Ed Ruck	1000001—2
R Heikes	1101111—6	Chas Young	1111111—7
S McDonald	0101101—4	H Brown	0011111—5
Shorty Bacon	1111110—6	Dr J W Senour	0111000—3

First and second money div.

Prill	1101010—4	Young	1111110—6
Heikes	1111110—6	Bacon	1111011—6
McDonald	1101111—6	Dr P F Eagle	1101111—6
Jas Stith	1110101—5	Brown	0311101—4

All dropped out in the shoot-off for first except Heikes and Bacon, and they killed 11 birds each and were still tie, but there being no money left in the purse they quit. BROWN.

BOILING SPRINGS TOURNAMENT.

THE first of the proposed annual tournaments of the Boiling Springs Fishing and Gun Club was held upon the club's grounds on Tuesday, Wednesday and Thursday of last week. The grounds are located midway between Carlstadt and Rutherford, N. J. A commodious club house has recently been erected and the grounds are supplied with all the necessary paraphernalia. The management of the tournament was in the hands of Major J. M. Taylor, of the American Shooting Association, and he was ably assisted by the members of the club. All target competitions were run under the rapid-firing system, except those at unknown angles, and both inanimate and live bird events were governed by A. S. A. rules. The first day was anything but pleasant for outdoor sport, but the attendance, notwithstanding, was fair. The second day was much better, both as to weather conditions and attendance. It seems almost impossible to get New Jersey shooters to turn out in any great numbers when inanimates are the targets. This was fully demonstrated upon the last day, when the programme called for live bird events. On that day, by far the largest attendance, both of contestants and spectators, were upon the grounds. The birds were a fair lot of flyers and were made a shade stronger by a stiff breeze that blew from the right-quarter. Taken as a whole the members expressed themselves as perfectly satisfied with this, their first attempt, and hope for better patronage next year. All ties were divided, except where otherwise stated. Scores:

First Day, Friday, Oct. 14.

Regular No. 1, 10 singles, $1 entry:

Miller	10	Klees	7	Paul	4
Van Riper	9	Lane	7	C Collins	3

Regular No. 2, 10 singles, $1 entry:

WELLINGTON, Mass., Oct. 18.—There was a full attendance of the grounds of the Wellington Gun Club to-day, and the weather conditions were favorable for the sport. Following are the scores made in the merchandise match at 20 singles and 5 pair standard: Gale 25, Cowell 24, Gore and Hooper 23, Stanton and Melchor 23, Dill 21, Bond 20.

THE GIFFARD GUN.

THE Giffard Gun and Ordnance Company Limited, is now added to the list of English corporations. It has a capital of £250,000, in shares of £1 each. The directors of the new company are The Right Hon. Lord Camoys, Stonor, Oxfordshire; R. J. Lloyd Price, Esq., D.L., J.P., Carlton Club, and Rhiwlas, Bala, N. Wales; Lieut.-Col. T. Tully, St. Stephen's Club, S.W., and Mill House, Wimbledon; Capt. B. T. L. Thompson, 4 Altenburg Gardens, Chapham Common, London, S.W.; J. Stewart Wallace, Esq., Cliftonville avenue, Belfast, and at 11 Queen Victoria street, London, E.C. (chairman at the Mid Kent Water Company Limited). Consulting and technical advisor, Mons. Paul Giffard, Paris.

In a recent publication issued by those concerned in floating the stock of the company, the promoters say, touching the inventor of the gun and the merits of the arm itself:

"M. Paul Giffard—the inventor (with his brother) of the well-known Giffard Injector—has, after many years study and a great outlay, perfected his system for the use of liquefied gas as a substitute for gunpowder or other explosives, to the satisfaction of some of the leading authorities in Europe. Since perfecting the 6, 8, and 12 millimeter guns as applied to sporting and rifle purposes, and also pistols of varied caliber, M. Paul Giffard has been devoting his entire attention to the perfection of a rifle suitable for military purposes, as also the application of his invention to cannon and other warlike instruments, in which he claims to have already achieved results sufficiently satisfactory to justify his belief that the adaptation of liquefied gas for war materials will be successful. The vendors state that they have already entered into a contract for the sale of the rights for the United States of America, including North and South America, excepting Canada, for a very large sum to the principal firm of gun and ammunition manufacturers in that country, and that they have received substantial offers from the leading manufacturers in the principal European countries to whom the guns have been submitted, and whose approval has been accorded. The completion of the negotiations in regard to these is now pending.

"The liquefied-gas gun appears to be destined to create a new era in the manufacture and use of all classes of sporting guns and rifles, also pistols and saloon arms. By it many of the difficulties which hinder the adoption of magazine rifles are obviated. Guns of 6, 8 and 12 millimeters are capable, according to caliber, of firing from 50 to 300 consecutive shots without recharging."

The following are the claims advanced by M. Paul Giffard in respect of his new liquefied gas gun:

1. Absence of the usual report, fire, smoke, dirt and smell.
2. Great precision, the force used being capable of the most accurate adjustment.
3. No recoil.
4. No heating of the gun, even when fired with the greatest rapidity.
5. The gun is small, light and inexpensive, and can be handled with perfect safety.
6. The projective power does not deteriorate, but is as effective after a lapse of twelve months as when the reservoir or cartridge is first loaded, and is not affected by damp.
7. The reservoir containing the liquefied gass is small and light, and the cost is very small.
8. Spherical or elongated conical bullets and small shot can be used.

In order to realize the practical advantages of this invention it is only necessary to remember that the gun is supplied with a metallic reservoir charged with liquefied gas, fixed under the gun and holding, according to the caliber, from 50 to 300 charges. These may be discharged in rapid succession, as may be desired, without loss of effect. To recharge the weapon it is only necessary to substitute a full reservoir for the empty one; this can be instantly done, the reservoirs being made interchangeable. They are light and cheap, practically indestructible, and can easily be supplied through gunsmiths.

According to news just received from London the Colt Co. has bought the American rights to the Giffard gun patents for £200,000. Experts who have seen the gun in practice are enthusiastic in its praise. The French Government is said to be experimenting on its application to cannon of the largest size.

DAVENPORT, IA.

DAVENPORT, Ia., Oct. 17.—The Forester Gun Club, of Davenport, held their semi-annual tournament Oct. 15 to 17. The attendance was not large, owing to bad weather and because a large number of our sportsmen are out after game; but those who were in attendance received a royal welcome and had three days of pleasure. Owing to sickness a number of the old stand-bys were not in attendance. Mr. Emmerson, of the Foresters, is laid up with a broken limb, but is in good spirits, and is counting the days when he can be out again. Among those present were C. O. Perkins, Des Moines, Ia.; A. Tucker, J. A. Ruble, Chas. Grim, J. R. Stice, Geo. Leffingwell, Mr. Cairncross, Mr. Wooster, Wm. Horbaugh, G. E. Converse, R. O. Heikes and Mr. Davenport, of Dayton, O., and W. H. Skinner. The live birds were an extra good lot, and Jim Stice can tell you how it happened if he will. A number of the boys go to Omaha to attend Parmalee & Nason's tournament, Oct. 22-24. All ties were divided unless otherwise stated.

Shoot No. 1, 7 single live birds, entrance $6.50:

Extra Shoot No. 3, 5 single live birds: Budd 5, Grimm 4, Ferrall 3, Wagner 2.

C. W. BUDD.

CALIFORNIA STATE SHOOT.

SACRAMENTO, Oct. 11.—Interest in the State Association match was well sustained, and the gathering has been a great success. This morning there were a few live birds on hand, and it was decided that the first event of the day should be a field "shoot." This was an innovation on ordinary styles of trap shooting, the idea being to have the contest approach as nearly as practicable to field shooting. The idea was to have the shooter stand at a line 35yds. from the traps, facing the same, with gun cocked and loaded and stock below the point of the elbow, and to call "ready" to the puller. He starts walking toward a line 25yds. from the traps, which under no circumstances must he pass. Immediately upon the shooter crossing a line between the two (the 30yds. line) the trap is opened without further notice, and he is then privileged to shoot, having use of both barrels. The shooter must not advance after the trap is sprung, and should a bird fail to rise the shooter must stop at the point where he was when the trap was sprung and remain there until the bird rises. The referee orders another bird if necessary.

There was some splendid shooting done by Louis Nicolaus, of the Pelican Club of this city, especially distinguishing himself at bluerock shooting. In the 50 bird match he tied out champion Chick and Taber of Los Angeles for first honors, and proved himself a quick and reliable shot. The youngest shooter on the ground was Mr. Cadwalader, over whom none of the older shots have much advantage in skill. Chick, of San Diego—the man who defeated the world-beater, Captain Brewer—always shoots well. He was in very good form throughout the meeting, and when not first in a race he was always in at the division of the spoils. Henry Bassford of Vacaville, Charles Hass of Stockton, and F. Coykendal of San Jose, were also in the front rank of the contestants.

The shoot-off of the Fay badge match was a notable one. The match was at 20 single live birds for the $500 badge, and the highest scores were made by Henry Bassford, Chas. Haas, J. M. Morrison and Mahlon Cubbin, who tied on 19 birds each. They shot off the tie at 4 birds, and all killed but Morrison. Osborn dropped out of the second 4, Bassford and Hass again tieing. They tied also on the third 4 and again on the fourth, and then agreed to decide the temporary ownership of the badge on the following day.

At the conclusion of the 50-bird match four dozen birds had been secured, and the men went to the traps to settle the matter. It was agreed that they should shoot off at 20 birds each. This was another exciting trial of skill. Each shot a 10-gauge gun, standing at 30yds. from the traps. The rules of the Association provide that the badge shall be shot for under Hurlingham rules, which provide for a circular boundary line 80yds. from the central one of the traps. But the grounds had been laid out as prescribed by the American Association's new rules, which provides for a more circumscribed boundary, in the shape of a horseshoe, terminating in a straight line from heel to heel of the shoe at the score (30yds. from the traps), and either by special agreement or common consent the match was commenced and shot out under the latter rules. This change from the original conditions governing the match caused Mr. Bassford to lose the prize.

He missed his 9th, 17th and 20th birds, and Haas his 2d, 13th and 16th, causing another tie on the 20 birds shot at. The birds were all hard hit and died just outside the boundary line. Then the men agreed to decide the match with the 9 birds remaining in the coop, giving each 3. The first 2 were killed. Bassford's 3d bird was a low-flying dusky incomer, and as the shades of evening had already fallen upon the field, it was difficult to see plainly. Bassford waited until the bird was within about 30ft. of him, and slightly overshot, but succeeded in crippling it. Then it rose rapidly, and when almost directly over his head (he standing on the dead-line) gave it the contents of his second barrel, killing it. The force of the charge drove the bird a few feet ahead on its course and it fell squarely on the line between the flags and rolled over, leaving only about an inch of its tail feathers inside the line. The bird was decided a lost one by referee Sperry. Had the Hurlingham rules been followed, as prescribed, it would have been scored for the shooter. As Haas killed the third and last bird, the beautiful and valuable diamond badge went into his possession for at least one year. The scores were:

Haas	10111111110101011111—17	Bassford	11111110111111110110—17

Shoot-off at 3 birds each:

Haas	111—3	Bassford	110—2

MADISON COUNTY LEAGUE.—Cazenovia, N.Y.—The seventh meet of the Madison County Sportsmen's Association, and the last one of the season, takes place at Eaton, N. Y., the latter part of this month. Eaton, although the smallest village represented in the association league, never does anything by halves, and all are looking forward to a jolly time. Every county ought to organize a league the same as this one, for out of it will come some good shooters.—HAMMERLESS.

WHITEHOUSE, N. J.

ON Wednesday, Oct. 15, a team match between the Union Gun Club, of Springfield, N. J., and the White House Gun Club, was shot off on the grounds of the latter club. The teams were composed of 8 men each, at 25 bluerocks per man. The Union Gun Club won by 155 to 99. Sweepstake shooting was also indulged in, with results as follows:

Union Gun Club.

Drane	0110101011111101111110110—18
Pudney	1111111101101110101111011—20

HUTCHINSON, KAN.

HUTCHINSON, Kan., Oct. 14.—The Gun Club, of our city, held a very pleasant two days' tournament Oct. 7 and 8. Although we had not a large attendance the shoot was a very enjoyable affair to everybody. The visitors were Andy Swiggert, Towanda; I. L. Wright and T. A. Bavington, Lyons; A. P. and T. Blackler, C. A. Hegglund and H. E. Bush, McPherson and Messrs. Detar and Davis from La Crosse. Ties divided:

First match, 9 singles—Allen 9, Swiggett 8, Young 7, Rupel 6.

Second match, 12 singles—Young 9, Detar 9, Swiggett 8, Dodds 8, Allen 6, Davis 6, Winters 5, Rupel 5.

Third match, 6 singles, 2 pairs—Detor 7, Davis 7, Swiggett 7, Young 6, Dodds 5, Allen 5, Winters 4.

Fourth match, 7 live pigeons—Swiggett 7, Beach 7, Young 6, Davis 6, Allen 5, Winters 4, Bardett 3, Dodds 3.

Fifth match, miss and out live pigeons—Young 5, Swiggett 4, Beach 3, Dodds 1, Davis 1, Allen 0, Winters 0.

Sixth match—Young 8, Davis 8, Detor 8, Dodds 7, Winters 7, Bartlett 6, Currens 6, Allen 5.

Seventh match, team match, 12 singles per man:

Dodds	11	Young	10
Allen	8—19	Winters	6—16
Davis	9	Currens	5
Detor	9—18	Bartlett	5—10

Eighth match, 10 singles: Young 9, Detor 9, Allen 6, Davis 6, Bartlett 5, Currens 4, Dodds 4, Winters 3.

Ninth match, 9 singles: Young 9, Detor 9, Allen 8, Swiggett 7, Dodds 5, Currens 5, Davis 3, Bartlett 2.

Tenth match, 10 singles: Dodds 9, Allen 8, Detor 8, Swiggett 8, Bartlett 8, Young 7, Currens 7, Davis 6.

Eleventh match, 9 singles: Currens 6, Swiggett 6, Young 5, Bartlett 5, Allen 4, Johnson 4.

Second Day.—First match, 9 singles: Swiggett 8, Young 8, Allen 8, A. Blackler 7, Dodds 7, Bavington 7, Wright 6, T. Blackler 5.

Second match, 6 singles and 2 pair: Bush 10, Swiggett 8, Dodds 8, Young 7, T. Blackler 7, A. Blackler 7, Bavington 7, Allen 7.

Third match, 15 singles: Bush 14, A. Blackler 14, Swiggett 13, Young 13, Dodds 12, Allen 12, Wright 12, Bavington 11, Kiger 10, T. Blackler 13.

Fourth match, 12 singles: Swiggett 10, Young 10, Dodds 10, Bush 9, Allen 8, Rupel 8, T. Blackler 8, A. Blackler 7, Kiger 5.

Fifth match, 10 live pigeons: Bavington 9, Allen 9, A. Blackler 8, Bush 8, Dodds 8, Swiggett 7, Young 7.

Sixth match, 18 singles: Young 16, Bush 16, T. Blackler 15, Dodds 15, Allen 15, Swiggett 14, Hegglund 14, Wright 13, A. Blackler 11, Bavington 15.

Seventh match, 9 singles: Bush 9, Hegglund 9, A. Blackler 8, Wright 8, Young 8, Swiggett 8, Allen 7, Dodds 6, Bavington 6, Currens 6, T. Blackler 3.

Eighth match, 6 singles and 6 pairs: Currens 10, Bush 10, Bavington 10, Swiggett 8, Young 8, Dodds 8, Hegglund 8, Allen 7, T. Blackler 7.

SHADY.

WOODSIDE.—Newark, Oct 7.—Woodside Gun Club badge shoot held at their old grounds Oct. 7. Each man shot at 50 Ligowsky clay pigeons; the scores below will prove that the shooting was far from easy. This is the last shoot that this club will hold on these grounds. They have rented a beautiful large plot of ground right on the edge of the Passaic River, between the bank of the New York and Greenwood Lake Railroad and the 50-call Second River in Woodside, three minutes walk from the Bellville station of the Erie Railroad or from the N. Y. & G. L. R. R., Newark Station. Here they will build a very large roomy club house; and on Nov. 18 and 19 hold an open-to-all tournament at artificial targets. The club has never been beaten in any match and stand ready to shoot a ten man friendly team race with any target club in the State. They will give a $30guarantee on the first day (Tuesday) and a $40 guarantee on Weanesday, two sets of traps will be in progress both days and a good time in general is promised to all visitors. Programmes may be had by addressing Carl von Lengerke, 843 Broad st., Newark, N. J., or E. A. Geoffrey, 13 Monclair avenue, Woodside, N. J. Score of last shoot:

Geoffrey	10111011100111110110101111110101111110101111110111—39

Mead	1211—4	1000—1	
Hathaway	0122—3	2211—4	

CLEVELAND, O., Oct. 16.—A few of the faithful braved the storm this afternoon and shot at the East End Gun Club. The first badge was won by Held, and on the shoot-off in the tie for second place between Wherry and Brockway the former won. Thirty birds were shot at:

Wherry	27	Brockway	27
Sweetman	26	North	25
Held	29	A B Jones	17
Reynolds	26	Black	21
Elworthy	21		
John Silsby	15		
Tamblyn	16		

At the Chamberlin blue rock shoot at the East End grounds today the score was as follows at 25 birds:

Rodgers	20	Brockway	15
Wherry	21	Reynolds	15
Sweetman	17	Tamblyn	17
Fritz	14	Elworthy	11
J Albert	10	A B Jones	20
North	21		
Joe	15		
Black	18		

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

STANDING SAILS.

[From the Sail and Paddle of October, 1890.]

AS the mover of the resolution adopted by the executive committee to restrict the regular races of the A. C. A. to canoes whose sails may be readily lowered when afloat, I gladly accept the suggestion that I should present to your readers the views that I hold on the subject as I stated them to those who were at the camp. I do not do this with the idea of allowing myself to be drawn into newspaper discussion with those who hold opposite views, but simply to present the case as it appears to me, leaving it to others to do the same.

In the first place, this motion is no new thing. When I was chairman of the regatta committee in 1889 a resolution for the abolition of standing sails, and hiking seats as well, was, on the recommendation of that committee, submitted by the commodore for the written vote of the executive committee. With regard to standing sails the vote was nearly unanimous that they should be abolished, although some members suggested that as some men might already have their sails rigged for the season, it would be better to postpone action until after the races of 1889. On this the commodore and secretary, on my suggestion, cast their votes to postpone action, in order that there might not be the slightest chance of doing injustice to any one. The motion now made is to come into force next year.

The action taken is in accordance with the rule adopted as to paddling canoes. A limit has been fixed, and an arbitrary one it may be called, as to the beam of a canoe. We do not care, as an association, to provide races for canoes of less than 28in. beam, because there is no object to be gained in encouraging a narrow, unsafe style of canoe; nor do we provide races for canoes over 16ft. long, because we do not care to build up the racing machine which would be clumsy to transport. In the same way we have legislated against keels of over 3in. in depth, as they were not considered "shipshape" on a light draft canoe, and so with regard to slip keels, which were abolished long ago. So, too, it is provided that centerboards shall not drop more than 15in. All these rules are more or less arbitrary. The object of all of them is to encourage and develop the best, safest, most serviceable, most shipshape style of canoe, one that we can recommend not only to our own members, but to would-be canoeists throughout the country as well. Is not that one of the objects of the Association, one of the advantages gained by united action? Has any one suffered by any of these arbitrary rules?

One objection to the sail that cannot be lowered when afloat is that it is not a shipshape contrivance, and for this reason it should be treated as the slip keel was treated. It seems ridiculous on the face of it that a large Association should have to confess to the world that its highest development, after ten years of experimenting, is a sail that, in the event of either a violent storm or a dead calm coming on, cannot be lowered without the owner upsetting and going overboard to do it.

Such a sail is a source of danger and for this reason it seems to me that we should not encourage it by providing races for it. I am aware that some of the experts of the Association claim that it is safe, or, at all events, as safe as the lowering rig. Granted that the one is as bad as the other after an upset has occurred, no one surely will deny that where, as in most cases, a storm can be seen coming on, the sail that can be reefed is safer than one that can neither be reefed nor lowered, and the sail that can be lowered in time to avoid the danger is safer than the one that must stand until it is knocked down.

It is claimed that the standing sail is faster. This is at least open to question. But if it be so, what then? There is no more advantage in gaining five seconds with an objectionable sail than with an objectionable paddling canoe.

If the sail had been confined to the modest limits of the Pecowsic sails—which, by the way, could be lowered and stowed when afloat, mast and all—it would have been less objectionable, but it has grown beyond the safe and manageable stage, and the tendency is ever upward.

There need be no difficulty about obliging men to get new sails. It is safe to say that every racer will have new sails for next year any way.

I claim the privilege of an old member to ask the younger members—racing enthusiasts and others—to remember that the Association was not organized and does not exist for the sole purpose of racing, that in taking charge of the development of the canoe on this continent, its object has been to develop both in hull and in rig a useful, ship-shape and safe boat, one that it can safely recommend and hold up as a model to the canoeing world. I ask all, old members and new, to look at this matter as one affecting the general interests of the Association, and not from any personal standpoint.

E. B. EDWARDS.

The reasons why the action of the executive committee in relation to the standing sail question should be indorsed are good and sufficient and may be stated briefly. They need no argument, for if any one who thinks otherwise will retire to his tent for a few moments, and consider the fact calmly and honestly, he must surely come to the same conclusion.

The standing or laced sail is unsafe. This fact alone is enough to decide the matter, and the strongest argument in its support is, that no one does or can deny it.

The continued use of the standing sail would discourage the development of the best all-round and most desirable rig, as well as the invention and manufacture of good fittings, smooth running rigging and neat connections. Every canoeist should take pride in having a knowledge of all sorts of knots, splices, grommets, servings, etc., and it is the duty of the Association to encourage the rigs and races that will make the members expert with the needle, marlin spike and palm.

The standing rig is unseamanlike, and a nuisance in a canoe when not under way. What is there more interesting or what better test of a good canoe handler than to have one make a landing on a lee shore of a windy day? The man with the smooth hoisting rig luffs into the wind, furls sail, stows everything neatly and makes a comfortable landing, while he with the standing rig makes numerous unsuccessful attempts, and finally waits for his companion to come and "stop her" as he lands and "hold her" while he removes the sails, both getting thoroughly drenched from the seas that are washing in—helpless creature.

By retaining the standing sail we would detract entries from one of the best races we have—the cruise. It is not so much the sailing and paddling that make this race so interesting to both contestant and onlooker as it is the changes at each turn. How quickly every defect is noticed, and how pleasing it is and so "ship shape" to see one with a good rig come up to the mark and make the change without a break or jam.

The most of our sailing races are short, and consequently the same wind generally prevails throughout, yet many times have we all seen instances where a race has been lost to the best canoe or man because his standing sails would not admit of the shaking out or turning in of a reef. Might not Lacowsic have won the Trophy in 1887 had she been able to have turned in a reef, and might not Uno have won the first N. Y. C. C. trial race in 1890 had she been able to have shaken out a reef, and might not the same canoe have won the N. Y. C. C. international cup, regardless of fouls, in 1890, had she been able to have turned in a reef in the last race? There have been many such instances.

It has been remarked that a man who can sail a canoe can sail anything. Imagine what a "show" an expert canoeist would make of himself by coming to anchor in a cat or sloop and not know how to furl sail, probably never having seen a halliard.

Presuming that in all races the winds hold steady throughout, and that the standing sail has an advantage in speed over hoisting sails of equal area, there are men who will not use the standing sail for reasons stated or others as satisfactory to themselves. Is it just that they should be thus handicapped?

The action taken this year indorses the action of the executive committee of 1889, when the question was first advanced, since then they permitted the retention of the standing sail only because they considered it too late to legislate against it for that year.

Last year the Association made a single class of all canoes for the purpose of making better and closer races and putting everybody upon the same footing. It is just as reasonable and probably more to the purpose to require everybody to work in the same direction and for the same result in sails.

Permit me to venture the opinion that the best racing will be, and the best men and canoes will win, when the one man, one canoe rule is extended to include the rig.

M. V. BROKAW.

DANGER IN CANOE SAILING.

THAT the great changes of the last three or four years have served to make the American decked canoe a faster and more efficient machine for sailing, and at the same time rob it of various important features, and to limit materially the wide range of usefulness which first brought popularity to the craft, is a point on which canoeists are well agreed. On the no less vital point of safety there is, however, a wide difference of opinion, it being claimed by some that the latest of the bottled up racing craft are far safer than the class of canoe in such general use about 1885.

While to any one who watches the capsizes which occur in almost every race without causing any very serious delay to the canoeist, and often no more inconvenience than the wetting of his feet, it would appear that in the new boats the danger of canoe sailing has been reduced to a minimum; there is another side to the question, which is only apparent on a closer study of the subject. Up to a certain point the new boats are undoubtedly safer than the old; with the whole interior of the canoe given up to sealed compartments, with hardly space to hold a bucket of water in the tight footbath that has replaced the old open well; with a lighter, less complicated and more effective rig, and with the powerful means of controlling and especially of righting the canoe which the sliding seat affords, the chances of a capsize are now not only much fewer, but if one does occur the results are likely to be less serious. As long as boat and gear are intact it is the work of a moment to raise a canoe whose spars lie flat in the water, to trim sheets and resume one's course, bailing out the water when occasion serves should the well hold enough to be troublesome. This is done again and again in every race; and the fact that a man had capsized in any of the races at the late meet failed to awaken any apprehensions as to his safety. Compared with a capsize in the old boats, which involved, as a matter of course, a ducking, a swim and a withdrawal from the race, it would seem that all the advantages on the score of safety were on the side of the newer craft.

As every old canoeist knows, however, there was comparatively little danger in a total capsize of the old boats; they were amply provided with air spaces, the sails could be lowered or the masts pulled out, allowing the boat to be easily righted, and in spite of the big well partly filled with water, it was possible even in moderately rough water to climb aboard and sit on the floor, the water being then bailed out and the boat being under control of the paddle if the sails were disabled. With the new craft, however, when once a capsize has gone beyond a certain point it assumes a far more serious aspect than of old. Just as the power and safety of the canoeist are increased by the sliding seat so long as he remains astride of that useful appliance, so are both diminished as soon as this partnership is rudely dissolved and the crew is by any means dethroned and tumbled into the "drink."

As ballast has been discarded and the weight of the hull fined down, the initial stability of the canoe has been materially decreased, and she is far less capable of standing up under the weight of her racing masts, supposing her to have a good lowering rig, but of racing area. While this rig is probably lighter for a given area than the old, at the same time the actual area of sail and accompanying weight of masts is far greater in proportion to the stability of the hull, and the new boat is proportionately more difficult to right and to board than the old. While the big open well in one case gave lodgment to a considerable weight of water, which is excluded in the other, it at least had the advantage that a man could seat himself so low as to add greatly to the stability, allowing him to bail out or to take a needed rest with safety. With the latest improved bathtub cockpits, or even the less extreme shown in such canoes as Canuck, there is no room for the man to sit in the canoe; he must sit high up on the deck, where his weight alone is enough to capsize the canoe in a sea unless he is under way and with sails adjusted to buffet the sea. The old canoe, with some weight of hull and perhaps a little ballast, and with its coaming, beading, keel and other projections, offered every facility for boarding from the water; but, as some have found lately in practice, the new canoes, light and corky, without keel, beading, laps or any projections, and with a deck and bottom polished so that they offer no better hold than an eel, is a very different sort of steed to mount in a bit of sea. It is not merely a question of throwing one's self into the well, to rest there for a time in comparative safety, if nothing more; but of climbing on to the smooth and slippery deck, regaining the deck seat and keeping the boat on her way under sail.

Even in cases where the canoe does not capsize, but is disabled for the time in rig or deck seat, and such mishaps have increased greatly in numbers in two years, the modern racing canoe is by no means a safe and comfortable craft to weather out a squall or to buck a sea or a tide rip in. Light and buoyant, with little displacement and a high center of gravity of hull, of spars, and especially of crew, who must stick to the deck seat, as there is no lower place for him; even if he has a suitable paddle, and if his sails can be lowered, the crew would find himself in a very unpleasant plight if compelled to lie to for rest, or to ride out a squall, or to paddle for a few miles against wind and sea. While in the old canoes he would be seated low down and in a comparatively safe and comfortable position, protected by hatches or apron, and able to keep the paddle going and to rest at intervals; in the new style of craft he would be constrained to devote all this time to balancing himself in an uncomfortable and strained position, where the weight and windage of his body were doing the least possible to aid him.

We have said nothing thus far about standing sails and equipment, but the bad features of the racing machine are often made worse by the use of standing sails, or even lowering ones, of exaggerated size; while at the same time there is an absence of even such an integral part of the canoe as the paddle. The modern sailing machine has been reduced to the simplest possible elements; a light hull, a large suit of sails, a deck seat, board, rudder and tiller, with a well that is rapidly approaching the same proportion to the hull that the bung hole has to a barrel. In the development and refinement of the purely racing features, the essentials to safety and comfort have been entirely neglected until they have disappeared entirely, save in so far as they are incidental to the racing.

This class of canoe has been called into existence for a specific end, for fast sailing; it is intended only for match racing in company with other craft, over short courses close to the shore, or for practice sailing in the neighborhood of a club house. When used for such purposes by a skillful sailor, and where the shore can easily be reached in case of a mishap or of the crew being tired out by several hours of hard work in holding up a big rig; it cannot be said that the boat is unsafe, or that there is more danger involved than in the case of most vigorous outdoor sports; in fact, it may be said to be as safe as the old canoe.

When, however, the racing canoe is used for long runs, at a distance from the shore, with no other canoes about to give assistance if needed, and with the canoeist dependent solely on himself and his boat in the case of any emergency, the new boats cannot compare with the old. Any of the frequent mishaps to seat or sails that compels a resort to the paddle is likely to prove a serious matter if the canoe be kept out for a length of time in bad weather. The reason for this lies not in the standing sail alone, nor even in its size, but in the whole style and outfit of the canoe. It does not alter the case that some exceptionally expert canoeists have handled their racing craft with most wonderful skill, and performed feats which would be pronounced impossible, as when Mr. Warder capsized in Lake George in 1888; the racing canoe is dangerous in the hands of any but an expert, and if used under conditions where it may be exposed for an indefinite time with no hope of outside assistance.

The causes for this are so many and so complex that we see no hope of any successful attempt to remedy the matter to-day; the mere abolition of the standing sail is too trivial a measure to warrant half of the disturbance it has created. If it is desired to prevent any unnecessary danger from the use of such a craft, and to relieve the Association from responsibility in case of a fatal mishap, both of which points were urged as reasons for the prohibition of the standing sail at the recent meeting in camp, the best course is for the Association to recognize officially the present canoes which enter its sailing races as constituting a racing class, intended for expert sailors and match racing, and unfitted for the cruiser or the novice.

THE CHANGE OF THE RACING RULES.

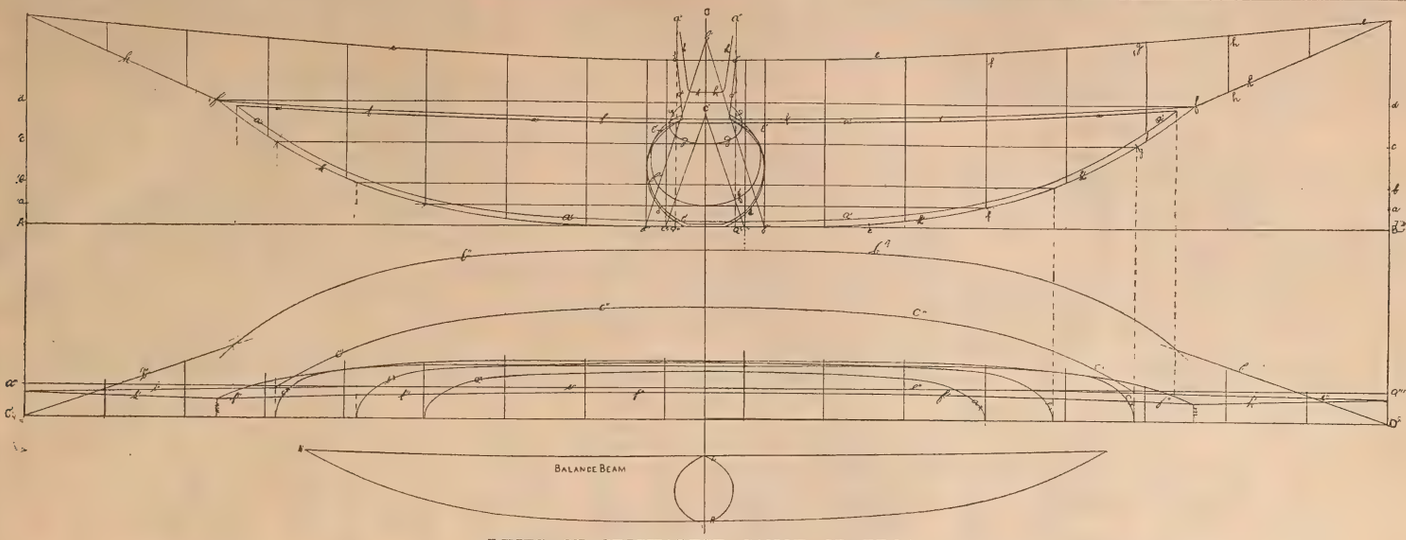
THE letters which we reprint elsewhere from the *Sail and Paddle* are of especial interest, in that they were written by the two members of the executive committee who were chiefly responsible for the passage of the recent motion relating to standing sails, and it may be reasonably assumed that, coming from such sources, they present the best possible arguments in support of the action of the committee. Save in the second paragraph of Mr. Edwards's letter, there is no attempt to explain or justify the unusual course adopted in passing the motion, but both gentlemen confine themselves to the arguments against the standing sail.

The points which they raise are two: first, that the standing or laced sail is dangerous. Second, that it is the duty of the Association, through its rules, to encourage and promote the safest, best and most serviceable type of canoe, in which would naturally be included all features, and not merely those of the rig. That a standing rig, such as is carried on Canuck, is a dangerous and undesirable feature to encourage is hardly likely to be disputed by any one; but at the same time the assertion that all standing sails are unsafe, as made by Vice-Commodore Brokaw, is entirely too general, and in the absence of the proof is likely to be disputed by many, in fact Mr. Edwards himself, in the latter part of his letter, takes a much less extreme view. While we can indorse the plea for shipshape and serviceable rigs, and while, in accordance with this policy we have long urged the limitation of standing sails of huge size, we recognize fully that for certain uses the standing sail is superior to all others. This is especially the case with the racing, or even cruising, mizen; which sail, being within easy reach of the crew, can be quickly lifted out and laid on deck, and in fact can be handled more effectively and with much less gear than a hoisting and lowering sail. When used in this way the standing sail is unobjectionable on the score of danger, and can in no way be classed with a mainsail of 90ft. stepped a few inches from the bow and entirely out of reach from the well.

Even in the case of the latter sail, though it be admitted that it is dangerous and unshipshape, we cannot perceive that it is worse in either respect that three or four other racing features which are found in company with it, or that there is any justification for the singling out of this one feature as the object of special and extraordinary legislation. To us the huge standing rig has seemed a fitting accompaniment to the bath tub well, the big board in the center of the canoe and the unlimited slide of the deck seat. We have for years urged the necessity of some legislation in these matters, and though we believe that now the time has gone by when such work could be done to the best advantage; if the opponents of the standing sail can make it clear that their main object is to effect by legal means a change of policy on the part of the Association in the direction of the discouragement of extreme and special features, and the active development of better and more serviceable canoes, they can count on our heartiest co-operation.

It has not yet appeared that any such change of policy was contemplated, nor that either of the gentlemen in question had any further end in view than a successful crusade against the standing sail; in fact, in writing on this subject a little over a year ago, Mr. Edwards expressed himself as follows in the FOREST AND STREAM, of Feb. 28, 1889: "The place of a centerboard, whether in the center of the canoe or forward, is to me a matter of comparatively small importance. I don't use one myself and I do not sleep in my canoe. A tent and a soft side of a rock are good enough for me." In this statement, which is certainly inconsistent with what he describes in his present letter as the object of the rules, he offers an argument that may with propriety be turned against him by the friends of the standing sail. It is a serious question now whether it would be possible, or even politic, to prohibit all racing features which tend to destroy the general usefulness and safety of the canoe; and if this is the case but little good can be done by the summary prohibition of one particular feature which has been tacitly recognized and encouraged by the Association for five seasons. One side point of Mr. Brokaw's letter is worth a special notice, he offers an excellent argument in support of the view lately held by many, that the real superiority of the big standing sail was so slight that the evil would soon correct itself and that no legislation was necessary.

On what has proved to be the real issue in the case, the mode in which the subject was recently brought up and acted upon by the executive committee, there is nothing in either letter save the opinion of Mr. Edwards to the vote of 1889. We have, since the meet, been able to discuss this question very fully with a number of members of the Association, men whose opinions on minor points differ widely; but with one or two exceptions we have found a general concurrence in the views we have expressed as to the haste and illegality of the whole proceeding. In contrast to this opinion, which we believe to be quite general, a few have condemned very severely our course in criticising any acts of the executive committee, claiming that the committee has supreme power to govern the Association as it deems proper, and that the members at large have no right to question its acts; and also, even in cases where the committee might make a mistake, the fact that they acted for the good of the Association should screen them from criticism or blame. We have further been accused of impugning the motives and misrepresenting the acts of the committee, and of abusing such influence as we may have to create a feeling against them.



It is our office to collect and publish news, and in particular the news of the business meetings of the A. C. A. for the information of the large number of members who cannot be present. It is also our business to have positive opinions on all that occurs in canoeing, and to express them editorially; whether or no we are always correct does not matter so long as our views are honest and impartial, and this point we leave to the many canoeists among our readers. In the present case a very important step has been taken by the committee, a step in which every member of the Association is interested, and we have endeavored to publish a truthful and accurate account of the business transacted, relying at first entirely on official information. This has been a very difficult matter, from the fact that the official minutes as a matter of course do not contain a full report of the long and complicated discussion; and though we have since sought for information from the members present, there is a difference of opinion on the part of some as to the most important points. To instance only one, the proposer of a very important motion declares that it means what the wording would infer, while the seconder asserts that something totally different was contemplated. It is most important that all the facts of the case shall be fully known, and if, in spite of special diligence, we are in error on any points, we shall be glad of correction.

Concerning the motives of the members of the executive committee we have no means of knowing them, and most certainly do not intend to cast any reflections upon them; we have worked too long and too intimately with these same men to believe that they had anything in view but the welfare of the Association. As to their acts, the case is entirely different, not only are the official acts of the committee a fitting subject for the discussion and even criticism of the members, but in cases where a mistake has been made, no matter from what motive, it is the duty of every member to work for its immediate correction.

In the present case two very serious mistakes have been made; in the first place the executive committee has exceeded the powers granted it by the laws of the Association, and has deliberately set these laws aside in order to accomplish a certain end. In the second place the firmly established custom of open and informal discussion of all changes of the laws has been departed from, and the proposed change was introduced only at the last moment and at a most unexpected and unusual time. The results of these measures are too plain to be mistaken: the rules have been so seriously disturbed as to destroy all the permanence and stability that has thus far characterized the sailing regulations, leaving them to be altered at the mere whim of a minority of the committee; the feeling of confidence on the part of the members at large in the judgment and also good faith of the executive committee has been seriously impaired, and finally, the actual work has been done in such a slipshod manner and the wording of the motion is so loose and ambiguous that it must fail entirely of attaining the end in view.

Looking first at this latter point, we may assume from Mr. Edwards's letter that the intention was only to prohibit standing sails so large that they cannot be practically handled with safety in a canoe. This view is not in accordance with that of Vice-Com. Brokaw, who would prohibit all standing sails; but Mr. Edwards was the proposer of the motion. The actual words are, "After the present season the regular races of the American Canoe Association shall be confined to canoes whose sails can be readily lowered when afloat." The man who reads this in the light of past discussions, and who wishes to be on the safe side beyond doubt, will abandon all standing sails and go to the meet with a full lowering rig. At the same time, there are a number of skillful canoeists who, in the stiffer canoes, can readily lower a standing sail of large size when in still water, and there is nothing in the above rule to prevent a man entering a race with two standing sails, say a mizen of 60ft. and a main of 50, such as are now being used, and on winning, coming up before the regatta committee and laying both of his sails simply on deck. That this would be an evasion of the spirit of the rule there is no doubt, but it would comply with the letter; and, if the action of the committee is not rescinded, we shall see canoes built next year for the purpose of carrying standing sails and yet evading the rule.

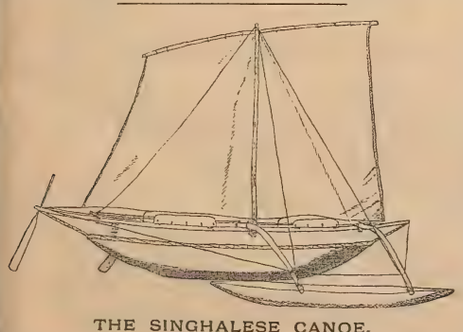
In connection with this matter of the wording of the motion is its form; there is no question as to the proper place for such a restriction, it obviously belongs to Rule I of the Sailing Regulations, with other similar limitations of hull and board, but instead of placing it there the committee has preferred to put it in the form of a general edict, something that has never been done before. So much has been said in regard to the action of the committee in changing the sailing rules without even notice to the regatta committee that such a step was in contemplation, that the defense is now made that the motion is not a part of the Sailing Regulations, but was passed by the committee under the powers given them in Act VI. of the constitution for the "general government of the Association." We doubt very much whether this point is technically correct, there being laid down a specific

LINES OF SINGHALESE CANOE OR PROA.

place in the rules and mode of adoption for all such limitations; but in any case it is an explantation that will fail to satisfy intelligent members, and that in itself is a confession of weakness.

We have in a previous issue discussed the legal aspects of the case; the ignoring of the existing regatta committee, though they were within hail of the meeting, and the attempt, while declaring that no indorsement from a regatta committee was necessary, to substitute one made by a previous and now defunct committee; the peculiar tactics in the same line in the attempt to justify a change in one rule by the mutilation of another that is just as valid. In further proof of what has been the past policy of the Association, we quote the following official notices from the FOREST AND STREAM of 1884:

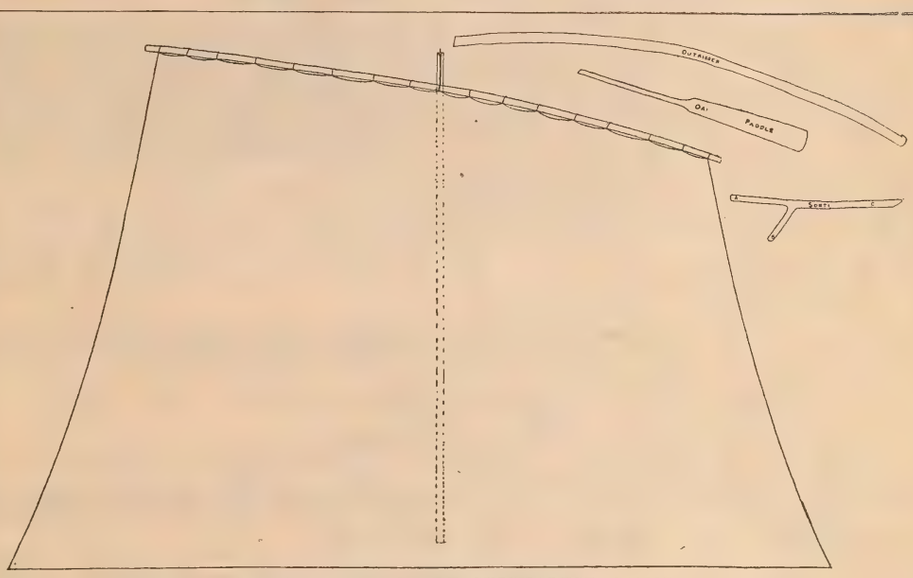
"There will be a meeting of the Executive Committee of the Association at the Delavan House, Albany, N. Y., on Saturday, Oct. 4 at 10 A. M. *All members of the Association* are cordially invited to present, either in person or by letter, any suggestions or ideas for the action of the committee that they may deem of benefit to the Association. The following members will constitute the regatta committee, and they will be obeyed and respected accordingly: R. W. Gibson, of Albany, chairman; R. J. Wilkin, of New York; J. L. Weller, of Peterborough. The committee will meet at the call of the chairman previous to Oct. 4 to prepare such matter *as it may deem advisable to submit for the action of the Executive Committee.* Members are respectfully requested to address all communications relative to matters in the jurisdiction of the regatta committee to the chairman thereof on or before Oct. 1. [Signed] C. A. NEIDE, Sec'y A. C. A."



By order of the Committee.

"*Editor Forest and Stream:* The regatta committee will meet at a very early date and will be glad to have the benefit of suggestions from any practical canoeists. These will be much more serviceable than any criticisms at a later date. Therefore, let any canoeist write his ideas immediately for publication in these columns and they shall receive due consideration in making the programme and regulations for 1885. (Signed) REGATTA COMMITTEE."

In 1885 the same notice was again sent out by the secretary.



These are only two instances of the close relations existing between the executive committee, the regatta committee and the members of the Association; if a contrast is evident between these notices and the course of the present executive committee it is not our fault. In the present case the issue was one of the most important that has ever come up, it had been brought up in the regular way a year before and failed to pass, dropping at once out of notice; the member who reintroduced the subject was in camp for over a week and yet gave no notice of his intention to do so until the conclusion of the regular business, for which the meeting of Aug. 18 was called; the fact that the executive committee had no power in the matter was fully discussed and an attempt made to give them this power; a number of the committee while favoring the object of the motion urged strongly that all action should be deferred until the regular season for such changes, only two months distant, when the matter could be acted on with care and deliberation; but in spite of all this the question was so urgently pressed that men finally voted for it against their convictions. We have heard from several who voted for the motion that they either considered it unnecessary as the case then stood, or that they would much have preferred to defer all action until it could go through the regular channels at the annual committee meeting in November.

So far as we can judge of the motives for such hasty action, there was no intent of secrecy or precipitation, but an excess of zeal over an evil which is greatly exaggerated led to the sudden reopening of the question as soon as an opportunity presented itself; and, once under way and face to face with a certain amount of opposition, every effort was made to carry through the motion, and in the excitement of the discussion many vital points were entirely overlooked. If the facts are as we have stated them then the question is whether the Association is willing to indorse such hasty, illegal and ineffectual legislation merely out of regard for the standing and high aims of the men behind it, or whether the sanctity and stability of the laws so long recognized are not to be maintained above all other considerations.

THE SINGHALESE CANOE.

THE modern racing canoe is peculiarly a product of civilization, the result of a long course of study and experiment by men of education and intelligence; but, unique as it is, with its narrow beam, large sails and sliding deck seat, a parallel may be found for it in the work of comparative savages. The canoe here shown, though differing in many important particulars, is yet closely enough allied to the American racing canoe to make a comparison both interesting and instructive. Both are craft of narrow beam and light displacement, with little or no stability in the hull itself, but carrying very large sails by virtue of practical mechanical contrivances. What is done in the more civilized craft by the weight of the crew thrown far out to windward, is accomplished in the other by a similar means, a fixed weight being used that serves at the same time as a counter balance in itself and as a support for live ballast in the shape of the crew outside of the hull proper. The craft here described is known as the Singhalese, Ceylonese or Pointe de Galle canoe or proa, and is used in the vicinity of the island of Ceylon. The following drawing and description were furnished by Mr. John W. Kennedy of Chicago. We hardly fancy that is will be necessary for some time to prohibit floating outriggers in the rules of the A. C. A., but the idea

SAIL AND FITTING OF SINGHALESE CANOE.

has already been tried by a Chicago canoeist, his canoe being fitted with a metal cylinder of about 70lbs. displacement rigged out in each side.

According to Folkard these boats have probably been in use for several thousand years, he supposes Pliny to refer to them. Anson, in his voyages, speaks of their speed in extravagrant terms, declaring that they sail 80 miles an hour. Observations taken by British officers show them to have a speed of 20 miles an hour. Com. Wilkes, of the United States Navy, speaks of the speed of similar boats as inconceivable. The model from which these lines are taken was made by a native. It was sent from India by Capt. Baker, of Boston, who wrote, "These canoes are at once the safest and fastest boats that float. Their high wall sides and great rake of bows enable them to live in heavy seas, and their narrow beam, and enormous sail give them remarkable speed. They easily sail around the fastest English pilot boats. They sail close to the wind, and make but little leeway. I have met them 60 miles at sea, and you need have no fear of crossing Lake Michigan in one of these canoes; but be sure of your fastenings! These boats make good headway under paddles." The sailing directions sent by Capt. Baker, have unfortunately been lost. It will be seen that the sail must be managed somewhat as a dipping lug, and that the boat tacks without turning; the balance beam being always to windward; the sail being swung around, end for end, and the boat starting on the new tack with the end forward which was previously aft.

The main body of the canoe is made from the trunk of a tree, the upper third is formed of planking. The planks are lashed to the canoe portion by thongs; the angle of junction between the two parts being filled with a strip of bark or wood properly fitted in. The planks are joined to one another also by lashing. The seams are made water tight by pitch. At a number of points below the sheerline, especially where the mast is placed, and where the outriggers rest, a wooden pin pierces both sides of the planking extending across the boat and projecting some distance beyond it. By means of these beams the outriggers are lashed down across the gunwale, and securely held in place by a sort of figure of 8 knot. The mast stands on the lee side of the plank portion, with its foot resting on the canoe. It is lashed to a cross tie, and is properly sustained by guys. It is exactly amidships. The two outriggers are not placed at equal distances from the center, but they may be said to be led aft, so that the balance beam floats very much nearer one end of the canoe than the other. It is probable that this is only a matter of convenience, in order that one end of the boat may be utilized more easily and safely in landing, boarding, etc. About midway between the middle of the boat and the extremities, seats for the crew are arranged longitudinally, two on either side. They consist of a board resting with its inner edge on the gunwhale. The crew sit on these seats, with their feet hanging in the canoe. These benches are secured to the cross ties.

The balance beam is a log of wood in general shape like a cigar. Near its upper circumference, toward either end, a notch is cut for the reception of the outer end of the outrigger. Below this notch is a large hole which pierces the beam from side to side, through this hole the rope passes by means of which the properly notched outrigger is most firmly lashed to the beam. The beam, as will be seen in the cut, is not exactly alike at each end. Whether this variation be from accident or design is not known, it may be here remarked that in order that the balance beam shall secure equal stability to the boat on either side, it is necessary that its specific gravity should be just half that of water, (that is, that its weight relatively to water should be such that in beeling the canoe would meet a like resistance whether it tended to submerge the balance-beam, or lift it from the water).

The outriggers are curved as in the figure, and made of natural growth as a bamboo pole. They should possess a certain spring. It is noteworthy that the curve of the outriggers is such that when the canoe rests upright on a plain surface (in trim), the balance beam just touches that surface, and also that what might be called the horizontal plane of the beam is not, when thus *in situ*, in correspondence with a horizontal (water-line) plane of the canoe, but that it inclines away from the water-line plane of the boat at an angle of 88deg. So that the lashings of the outriggers to the beam do not look directly upward, but upward and outward from the canoe.

The paddles are of the shape represented in the cut with a slight curve on their face. It is probable that they are made use of as lee boards to prevent lee-way. Projecting to leeward from the gunwale of the canoe is what may be called a counter balance. It is called by the natives a "sorti." It consists of a forked beam of wood something like the letter Y. The straighter arm A is lashed over the gunwale, while the oblique arm B, rests against the side of the canoe where if joins the planking. The main branch of the Y, C, extends perpendicularly outward from the boat's side and serves as a seat. Upon this the natives sit when it is desired to diminish the drag of the balance beam, as during gentle breezes, or while the boat is being paddled. Extending from the canoe to the balance beam are man-ropes, by the aid of which the sailors may walk along an outrigger to the beam. When carrying all sail in a high wind they straddle the balance beam to add to its efficiency by increasing its weight.

The various parts of the drawings are as follows: *A B*, Base line of sheer plan. *C D*, Center line of body plan. *C' D'*, Center line, half-breadth plan.

ALASKAN CANOES.—The Thlinket canoe is hewn from a single log, shaped to long, slender lines, and rises at the bow with a high, sharp point that suggests a Venetian gondola. They are painted black with a mixture of soot and seal oil, which further suggests the gondola, but they are damp and most unpleasant boats to ride in. An Adirondack canoe is a very canal boat for steadiness in the water as compared to these teetering canoes that balance on hair lines and fairly toss unwary passengers into the water. There are no cross pieces or seats, and the Indians sit flat on the bottom of the canoe and maintain one position for hours without moving, and on canoe journeys they are very dictatorial to any white passengers because of their restlessness and incessant changes of position, which threaten to capsize the canoe each time. The Indians go on long journeys and make the canoe their home for weeks at a time, and even venture out on the open ocean and across the broad sounds of the coast in these canoes. They think nothing of paddling down to the British line to see if they can get a little more in trade, and visit along at all the friendly and interesting villages on the way. In this roving instinct, this desire for sightseeing and visiting, they show another trait they hold in common with the Japanese. At every village there are canoes belonging to visiting Indians to be seen on the beach, and one meets Sitka Indians everywhere else in the archipelago, and members of all the other tribes from time to time at Sitka. When the canoes are beached they are drawn up high and dry, filled with grass, branches and seaweed, and carefully covered with old blankets or mats woven of cedar bark, and a row of these high-beaked canoes sometimes have an unpleasant funereal look.—*St. Louis Republic.*

LAWRENCE C. C.—An important meeting of this successful club was held on Oct. 3, one new member being elected from a list of twenty-nine proposals, to fill the only vacancy in the membership, the limit being 250. It was decided to hold at least three meetings next sea on, two on the water and one ashore, and also to lease the Lawrence cricket grounds. Commodore Lawson, A. C. A., was present and spoke on the subject of the Association and its aims, a number of those present applying for membership.

ST. LAWRENCE RIVER S., C. AND S. L. CO.—We are informed that Dr. Alexander Bain, of Clayton, who has so long been identified with the St. Lawrence skiff, has retired from the above firm. The business will be continued by Messrs. C. G. Emery and J. D. Little, with Mr. J. G. Fraser as manager.

CLASSIFICATION ON THE ST. LAWRENCE.

At a special meeting of the St. Lawrence Y. C. of Montreal, held on the evening of Oct. 15, the following report on classification was submitted, considered and accepted. A motion for its acceptance was adopted almost unanimously. The consideration of the individual amendments to the sailing regulations, recommended by the report, which require to be carried by a two-thirds majority, was postponed until Oct. 24:

ST. LAWRENCE Y. C.—REPORT OF THE COMMITTEE ON CLASSIFICATION.

This committee, having been appointed to consider the question of classification, and any possible improvements in the sailing regulations, beg leave to submit the following report:

Having taken into consideration the developments of racing, both on our own waters and elsewhere, we consider that our rules require revision in regard to:

First—The general system of classification and measurement.

Second—The methods of measurement.

Third—The limitation of crews.

Fourth—The more accurate definition of certain existing rules.

Classification and Measurement.—It is the measurement rule, and the system of classification, under which racing is carried on, which has the principal effect in determining the type of yachts which are built for competitive racing, and the more the type of vessel developed by the existing systems differs from that which meets the wants and conveniences of owners, the fewer will be built to compete in the races so governed.

The essential feature of the system of measurement and classification is that boats of different dimensions and types which are about of the same size, may be raced together; and that the influence of the system upon design is such, that the most successful racing craft may be also the most desirable craft for cruising and pleasure sailing.

The selection of any one of the prime elements of a vessel as a basis for determining its size is equivalent to discriminating against that element in favor of the others; this dimension is, in fact, taxed, and the inevitable result is a tendency to increase the size of the vessel without increasing the taxed dimension. Under the club's existing system of classification and measurement, while length is rigorously restricted by the classification, beam and draft are taxed to only a limited extent by the system of time allowance, which it is everywhere conceded cannot adequately compensate for difference in size; the result, of course, being that a designer is forced to take the full waterline length allowed for the class he builds into, and increase the power to an abnormal extent; building, in fact, large vessels on a short waterline length. The liberty of the designer in selecting the prime elements of speed, in dimension and model, is reduced to a minimum, and an arbitrary type of model is developed.

The club's present measurement rule seems in every way to provide the basis necessary to prevent the results which follow from the taxation of one dimension, as all the elements of speed—viz., size, length and, through the sail area, beam and draft—are fully taxed. If the classification be based on the corrected length found by this rule, the designer is left free to select for any given class his proportions of length and sail, which implies of beam and draft as well, length being diminished as sail is increased. As an instance of the manner in which classification by corrected length would work for a 30ft. class, a vessel might be built for that class with 25ft. l.w.l. length and 1,225sq. ft. of sail, or 27ft. l.w.l. length and 1,089sq. ft. of sail, or 29ft. l.w.l. length and 961sq. ft. of sail.

Vessels built under such a system are much more likely to be of a normal type, and, therefore, more generally useful and less expensive to build and keep up, than under any other now known.

Your committee therefore recommend that the club should base its classification upon corrected length, and we make this suggestion with the more boldness, because in doing so we are but following in the footsteps of the classification committees of the Seawanhaka Corinthian, the New York, the Lake Yacht Racing Association, the Corinthian of New York, and the Larchmont. Classification by corrected length has been adopted by the Yacht Racing Association of Great Britian, the Lake Yacht Racing Association, the Royal Nova Scotia Yacht Squadron and the Corinthian of New York. It only failed of adoption on the Atlantic coast because united action could not be agreed upon, owing mainly to the influence of vested interests; which influence does not complicate the matter as far as this club is concerned. It has been found possible to classify the existing fleet upon a corrected length basis in such a manner, that while no hardship is inflicted upon any existing boat, the most desirable sizes of boats for our waters will be encouraged. By making the limits of the classes over 30ft. corrected length, over 24 and up to 30ft., and 24ft. and under, the existing boats will be placed in the same relation, the one to the other, that they occupied under the old classification at the beginning of the season. The probable cost of a 30-footer under this classification would be $1,000, and of a 24-footer $560. In order that those of our members who do not care to build such expensive boats, or who cannot get crews for large boats, may be enabled to take part in the racing, provision should be made for a small class of yachts, which, while comparatively inexpensive, would be safe and seaworthy little craft. After giving the matter much consideration, the conclusion arrived at is that a limit of 18ft. corrected length will be the best suited to produce such a class. In order that this class should be composed, not of racing machines, but of miniature yachts, it is advisable that a minimum beam of 5ft., or in lieu thereof at least 500lbs. of standing ballast, be necessary to enable a boat to enter the class; and, as these boats are intended to be perfectly safe if handled by one man, that the racing crew be restricted to two men. The boat which should be encouraged by these regulations would cost about $125, and while one man could handle it with perfect safety, it should accommodate two or three for cruising or pleasure sailing.

Such a class would, in the opinion of your committee, do much more to promote the interest in yachting than the present skiff classes do, and it would appear to be advisable that they be abandoned.

The second class of skiffs has practically ceased to exist as a racing class; and the first class skiffs on the squadron list are now, with one exception, owned in a canoe club, under whose auspices they race with apparently more satisfactory results than under those of this club. It would not, therefore, in any way injure the skiff racing to drop the skiffs altogether from the club races, and your committee feel confident that the skiff owners would not feel such action to be a hardship and would still retain their connection with the club.

The position of the boats of the present fleet under the recommendations of your committee, is shown on Table I., as appended. The ratio between length and sail area, as established by a corrected length classification in the various classes by Table II.

Measurements.—In order to prevent as far as possible any evasion of the measurement rule your committee recommend:

First—That the perpendicular measurement be taken from the upper halliard sheave instead of as at present from the gafftopsail halliard sheave.

Second—That in the measurement of the base line the forward point of measurement be half way between the jibstay and the topmast stay.

Third—That any excess in the length of the spinaker boom over the distance from the mast to the forward point of base line should be included in the length of the base line. At present the spinaker is the only sail on which there is not some limitation, and your committee are of the opinion that unless the present rule is amended the size of spinaker will increase to an undesirable extent with the necessary accompaniment of a long and dangerous boom.

Limitation of Crews.—In recommending classification by corrected length, your committee find it necessary to advise that the present restriction upon crews be greatly increased. So important does it deem this matter to be, that it will be in its opinion useless to adopt other measures for improving the fleet, as long as boats of 21ft. on the waterline are permitted to carry a fair working crew for a vessel of 40ft. Classification by corrected length, with the present crew limit, would make it possible to build a big racing skiff against which our present boats would have no chance of winning. Take for instance in the 30ft. class, a 31ft. Sauvé skiff with 860ft. of sail, and eleven men to hold her up. Such a boat would, of course, be perfectly useless for anything but racing. As matters now stand the limit of crew is so high that the ratio between sail area and stability encouraged by it is such as to make it undesirable for the typical racing boat to be used for pleasure sailing, unless she has her racing crew on board. As racing crews cannot be got for ordinary sailing this means that much of the usefulness is taken away from the boat and less pleasure can be derived from her. The sailing strength of the club is also concentrated to an undesirable exient upon a few boats, and an expensive type of vessel is encouraged. It is therefore recommended that a limit of one man for every 5ft. of corrected length be imposed.

Accurate Definition of Certain Rules.—Certain of the sailing regulations of the club are somewhat indefinite, and do not precisely signify their intention, therefore the committee suggest:

First—That the form of entry be altered to conform more closely to the practices of the club.

Second—That the rule prohibiting the shifting of ballast should be amended as to prevent ballast from being carried on the floor of the cockpit, or anywhere but under the platforms or in the lockers. This amendment is but the amplification of an existing law, it is in harmony with the policy of the club, and with the practices of yacht clubs generally.

The whole respectfully submitted. (Signed) G. H. Duggan.
David A. Poe.
James Paton.

CHANGES IN THE L. Y. R. A. RULES.

The Hamilton Y. C. gives notice that at the annual meeting of the Lake Yacht Racing Association, to be held in Toronto on Nov. 8 next, it will seek to amend the constitution thereof as follows:

1. That the following be inserted in paragraph 3 of Article V. after the words "shall keep the Yacht Register provided for by Article XI., Section 2," namely, "shall keep a record of the names and times of the starters in each race held under the auspices of the Association in a book provided for that purpose."

2. That the following be added to paragraph 2 of Article VI.: "but no delegate shall give a proxy to any person who is not a co-delegate with him from the same club."

3. That the words "other than the assessment mentioned in Rule I of the Sailing Regulations" shall be inserted in Article VIII. between the words "no other assessment" and "shall be levied."

4. That the words "and in good standing therein" at the end of paragraph 1 of Article XI. be struck out.

5. That the following be inserted as Article XIII. under the heading of "Arrears:" "First—No club which is in arrear for any assessment shall be entitled to be represented at any meeting of the Association, nor shall any of its fleet be allowed to compete in any race under the auspices of the Association, Second—No yacht, the owner of which is not in good standing in the club to which he is supposed to belong, shall be entitled to compete in any race held under the auspices of the Association."

6. That in Rule I. of the Sailing Regulations the following shall be inserted after the first paragraph: "The executive committee shall, however, at least one month prior to the first race of the annual circuit, appoint an officer, at such remuneration as they shall think fit, whose duty it shall be to attend all regattas held under the auspices of the Association, and (under the direction of the officers of the club giving the regatta) superintend the laying and logging of courses and laying of buoys, calculate the time allowances in the different classes, fire the guns at the proper times, take and correct the times of the competing yachts and generally do such work in connection with the management of regattas as may be reasonably required of him. He shall also keep a record of the names and times of the starters in each race and after the close of each circuit shall send such record to the Honorary Secretary of the Association. The executive committee shall have power to levy an assessment on each club of the Association sufficient in the whole to pay expenses incurred by the employment of such officer."

7. That the following be added to the last paragraph of Rule II., "but shall be classed and have crews allowed at their full rating."

8. That the words "the day before the day" in Rule III. be struck out and the words "twenty-four hours at least before the time" be substituted therefor. That the last two sentences of the said rule be struck out and the following be substituted therefor, "Sundays shall not be computed." That the following be added to the said rule as paragraph 2 thereof: "Prior to the first race in which a yacht may compete in any circuit, its owner shall deposit a certificate of measurement with the Association officer mentioned in Rule I., which certificate shall be in the form following or to the like effect:

"We hereby certify that..... ...the owner of the..... .. rigged yacht.....is at present a member of the ..... Yacht Club in good standing, and that the measurements of the said yacht, in accordance with Rule II., are as follows:
Jibstay hole in bowsprit to boat.....
Topsail halliard sheave to top of boom or under side of gooseneck .....
Eyes of rigging to top of boom or under side of goose-neck.....
Gaff.....
Waterline.....
Corrected length.....
Time allowance for one knot .....
.....Measurer. .....Secretary.
....189

"Should any change be made in the rig or measurement of a yacht during a circuit, a new certificate shall be deposited with such officer before such yacht shall be allowed to compete in any subsequent race."

9. That in the form of entry mentioned in Rule IV. the words "her Association number is ...." be inserted between the words "her distinguishing flag is ....." and "her rig is ....." and that the words "her time allowance for one knot is ....." be inserted after the words "and her corrected length, in accordance with Rule II., is .... feet."

10. That the words "when the number of entries required have been made and shall at the discretion of the sailing committee be entitled to the prize, subject, however, to Rule V.," in Rule VI. be struck out and the following substituted therefor: "when two entries have been made and shall be entitled to the prize, subject, however, to Rule V."

11. That paragraph 1 of Rule VIII., relating to distinguishing flags, be struck out.

12. That the words "No one, however, shall be allowed to steer a yacht in any race unless he be a member of a club belonging to the Association" in Rule XI. be struck out.

13. That the words "distinguishing flag" in line 6 of Rule XX. be struck out and the words "a flag" be substituted therefor.

14. That the following be added to Rule XXIV. at the end thereof, "and no yacht shall be allowed to alter her rig or ballast to enable her to sail in a different class than the one for which she was originally measured unless her owner can show to the satisfaction of the sailing committee that it is his intention to sail permanently in the class to which he is altering his yacht. When there is no race for a yacht in the class to which she belongs she shall be allowed to sail in the class above, time allowance to be computed on her corrected length."

15. That the words "to which said yacht belongs," in line 4, of Rule XXV., be struck out, and the words "belonging to the Association" be substituted therefor.

16. That in the table of time allowances the words "can be expressed in hundredths" be substituted for the words "can be expressed in tenths" in the second line of page 37, and that all the words after "the next higher number" in the same sentence be struck out.

Hamilton Y. C., Oct. 4.

The foregoing are the amendments which it is proposed to send to the Association, but in addition it is proposed to move at the meeting as an amendment to amendment No. 14 that the following be added to amendment No. 8: "And should such change be made to enable a yacht to sail in another class than that in which she has previously sailed in the same circuit, such new certificate and a declaration by the owner that the change is a permanent one for the remainder of the circuit shall be deposited with such officer at least forty-eight hours before such yacht shall compete in any such subsequent race."

Yachting.

RACING RULES ON LAKE ONTARIO.

The reports of the Hamilton and St. Lawrence Y. C.s, which appear elsewhere, give ample proof that the yachtsmen of Lake Ontario, with their neighbors of the St. Lawrence River, do not propose to be left behind the times in the matter of racing rules, but to keep ahead rather than astern of yachtsmen in more favored localities. The report of the Hamilton Y. C. shows at least a careful study of the new rules in the light of the present season's racing, and an attempt to improve still further the minor details. The work of the St. Lawrence Y. C. is in a line with that done last year on the Lake, the adoption of a classification by length and sail area, and its wording shows the care and labor which the committee has devoted to their task. Such progressive, intelligent and united action as that of the clubs of the Lake Y. R. A. and the St. Lawrence Y. C., nearly all young clubs dating back less than ten years, presents a very pleasing contrast to the conservative and dilatory actions and the lack of harmony which has attended similar movements for reform in clubs which from their age and high standing should take the lead in every movement for the advancement of American yachting.

CAPT. CHAS. BARR.—It is reported that Capt. Barr and Minerva's crew have been already engaged to sail one of the new Burgess 46-footers next season.

CLYDE YACHT BUIDING.—The Clyde is obtaining its own share of orders for the coming season. Mr. G. L. Watson has in hand a 40-rater for a French owner, which has to be launched in time for the voyage out to the Mediterranean and some racing at Nice and elsewhere. The success of Deerhound, also designed by Mr. Watson at Nice last year, has led to this order, and the cutter will probably be better than Creole. The cutter is being built by Messrs. A. & J. Inglis, of Glasgow, which means that she will be up to the requirements of a first-class cutter. Mr. Watson has also been intrusted with another 10-rater, which will be built by Mr. Adam, of Gourock, the builder of Phantom. The owner of this cutter intends racing in this class on the Clyde as well as in the English Channel. Mr. Watson has in hand a 7-ton cutter for Mr. M. Clintock, to be built by Mr. Ninian, of Largs, who has had several commissions from the same designer. Another cutter which Mr. Watson is furnishing the designs of is being built at Rutherglen on Clyde, in a building yard which has turned out some good craft. The same designer has in hand an 8-ton cruiser for the west coast of Ireland, and which may prove the occasion for the sport getting a new spurt in Galway Bay. Mr. Watson has also in hand a racing gig for the upper Thames.—*The Field.*

THE FALCON ON THE BALTIC.—Every yachtsman who has followed the adventures of the little Falcon and her intrepid master, Mr. E. T. Knight, on her long cruise to South America, will be ready to ship again in a boat of the same name, but of a different type, for another cruise in the same company. Though far less stirring and exciting than the first cruise, the present one is by no means less interesting, being as unique and unconventional as most of Mr. Knight's ventures. The yacht is an old steamer's life-boat, diagonal built, sharp at both ends, about 29ft. over all, and 3ft. draft, with a yawl or rather ketch rig. The parties to the cruise were three, Mr. Knight, a paid hand, and a lively and energetic leak in the keel; which afforded constant employment to the first two during a good part of the voyage. The rout taken was from London to Harwich, thence across the North Sea to Rotterdam, thence on to Amsterdam, through the Zuyder Zee and the Holland canals, and thence through the Danish Archipelago to Copenhagen. Even with the very bad weather of the Jubilee year the cruise was a pleasant one, and those who follow it in the neat volume published by Messrs. W. H. Allen & Co. will find plenty to repay them.

A QUADRUPLE COLLISION.—About half-past 10 o'clock on Sept. 29, when the tide in Portsmouth Harbor was at half flood and rushing in with considerable force, a somewhat singular accident occurred. The Vanduara, cutter, was being moved out of the tier opposite Messrs. Camper & Nicholson's yard by her own crew, with the object of being taken to a mud berth in Haslar Creek, when the strength of the tide caused her to foul the schooner Ptarmigan, the steamship Lyra and the yawl Anaconda. The Vanduara, Ptarmigan and Anaconda were thrown across the bows of Nelson's flagship Victory, and a general smash up was only averted by a perfect miracle. The yachts all sustained more or less damage, the Ptarmigan getting the worst of it, being jammed against the Victory by Vanduara, and losing both her topmasts and crosstrees, while it is feared that both her masts are sprung. The other two yachts also had their bulwarks, bowsprits and gear partially carried away. The Victory lost her jibboom and attachments, but was not otherwise injured. The Lyra fortunately escaped any injury whatever.—*The Field.*

STEEL CHAINS AND ANCHORS.—No device for casting chains, however, or making them in any other way from steel, has been so far successful up to the present, as to have been practically adopted by any vessel classed in Lloyd's, or by any ship in H. M. Navy. Cast-steel anchors, however, have come into use during the last few years, and it has been necessary to consider the question of a special set of tests for them. This was done in 1887 by a joint committee, appointed by the Board of Trade, the Admiralty and Lloyd's, and their report was given by us in these pages. It may be that as more is known of the properties of steel and of its alloys, a means may be found of casting chains with such uniformity of result that they will stand the severe tests, and meet the large requirements necessary in the case of chain cables. What has recently been stated of nickel-steel would appear to indicate that in that, or in some other similar alloy, may be ultimately found a metal from which may be cast chains of much greater strength than those at present in use.—*Nautical Magazine.*

A NEW IDEA IN RACING.—The Erith Y. C., on the Lower Thames, has lately introduced what promises to be a most popular feature in in its racing. The club has been presented by Com. G. W. Brown and Vice-Com. T. H. Smith with three racing boats, alike in every particular, which boats are manned for racing by crews drawn for each from among the club members, three men and a helmsman for each boat. The boats, which were built by Messrs. Stone, of Erith, are clinker-built centerboard craft, 18ft. l.w.l., 6ft. beam and 2ft. draft aft, with plumb stems, the rig being a lug mainsail and a jib. They are very handsomely finished, being bright above water. As they are identical in size, model, rig and sail area, it is of course a question of handling as to which will win, and the racing will form a most admirable school for Corinthians.

MODEL YACHT SAILING.—The Philadelphia Model Y. C. has done good work this season in encouraging this interesting branch of yachting, a number of races having been sailed. On Oct. 18 the first race for the Ladies' Challenge Cup took place on Centennial Lake, in Fairmount Park, the starters being Secret, Com. Biddle; Vindex, Capt. Porter, and Swanhilde, Prof. Koenig; all 30in. craft. Swanhilde won 7 out of 11 points.

NEW YORK Y. C.—The last regular meeting of the year will be held to-night.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

W. H., Youngstown, O.—You do not give the breed of your dog.

W. H., Youngstown, O.—You omitted to tell us what breed your dog is.

J. A. H., New York.—The quail are usually in good supply there, and there is land not controlled by clubs.

English Setter.—1. Where can I get an English setter dog trained, not broken, for partridge and Woodcock? 2. Where can I get an English setter puppy that I can be sure is good blooded and is all O. K.? Ans. You had better advertise for what you want.

J. C. H., Lanesboro, Minn.—1. How ought an oil paint for making linen waterproof and sufficiently supple to be composed? As I frequently, for the sake of exercise, tramp through the woods even in rainy weather, this is to me an important question, and one I have been unable to get answered by my acquaintances in this neighborhood. The rubber coats I can get out here I have found to be unreliable and painted coats need renewal of the painting quite often. 2. Why does the Forest and Stream of late so seldom contain any notes about the buffalo? Ans. 1. We quote a receipt given before in these columns. "Take 2½lbs. alum and dissolve in 10 gallons of boiling water; then in a separate vessel dissolve the same quantity of sugar of lead in 10 gallons of water and mix the two solutions. The cloth is now well handled in this liquid until every part of it is penatrated, then it is squeezed and dried in the air or in a warm apartment, then washed in cold water and dried again, when it is fit for use. If necessary the cloth may be dipped in the liquid and dried twice before being washed. The liquid appears curdled when the alum and lead solutions are mixed together. 2. There is little to report. See note in our gun columns today.

INFORMATION WANTED.

Washington Game Resorts.—Washington, D. C.—Having just arrived in Washington I wonder if any of your readers can tell me through your columns where is nearest point I can find duck shooting and how to get to it.—I. S. P.

Names and Portraits of Birds, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by Forest and Stream.

Forest and Stream, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

For Sale.

First Class Ducking Shore

Half Interest For Sale.

To any gentleman who is in search of a quiet place to enjoy the pleasures of ducking and comforts, together with everything required for the sport, I have just the place, situated at the mouth of Romney Creek, on the Chesapeake Bay, and a few hundred yards from the celebrated Taylor's Island, twelve miles from Havre de Grace. Have gunned from Back River to Havre de Grace for twenty-five years and finally purchased this property as being one of the most certain places affording cove and bar shooting, containing the celebrated **Locust Point Bar,** 1,100ft. long. Five boxes in bar, making the most comfortable flying point at head of bay. The dwelling house is situated on high land and was built for comfort and is situated fifty yards from the bar.

There is nearly two miles of shore for fishing purposes. Nine miles from Perrymans station P. W. & B. R. R. Six hours from New York to the shore. Want of companionship of some gentleman who only shoots for the pleasure in it, and one who after a hard day's shoot can enjoy a good dinner of fish and duck (provided we get the duck), segars and dominoes as a digester and to bed *sober* at 9 o'clock. Now to any such gentleman who is looking for an interest in such as I have described, I would say that these places don't *grow*, and the opportunity offers itself once in a lifetime, and this is just that time. The interest on the cost per annum would not purchase a share in any large club, where *all* the shooting is done in the dining room. There is nothing to purchase. No improvements to be made, and the man and wife in charge board you for cost. Map of the property at FOREST AND STREAM office. Nothing misrepresented in any particular. Can give plenty of references as to the shooting to be had, also of myself, and expect in return references as to my associate. GEO. H. WILD, Red Bank, Monmouth county, N. J.

ANSWERS TO CORRESPONDENTS.

A NAME ON A POSTAL.

If you have a friend, who might be interested in the FOREST AND STREAM, but does not know the paper, send us his address on a postal card. It will be esteemed a favor by us; and it may be so regarded by him.

NON-RESIDENTS IN NEW JERSEY.

NUMEROUS inquiries have been made of late respecting non-resident licenses for shooting and fishing in New Jersey. The game law of that State, Act of April 4, 1878, makes it unlawful for non-residents to shoot or fish "without complying with the by-laws of the game protective societies, organized or to be organized under the laws of this State;" and a penalty of $50 is provided for violation. Plainly there is here no requirement of a license unless such a license shall be specifically prescribed by the by-laws of some game protective society. In certain counties—Camden, Gloucester, Atlantic, Salem, Cumberland and Cape May—the license is demanded by a by-law of the West Jersey Game Protective Society, which reads:

Any person or persons, non-residents of this State, wishing to kill, destroy, hunt or take, at any time, any game . . . shall first become members of this Society, by payment of the membership fee to the secretary, receiving a certificate of membership, signed by the President and Secretary, and sealed with the corporate seal of said Society. . . . Each non-resident member shall receive from the Secretary a certificate of membership, said certificate to be issued for the term of one year. . . . The fee for membership in this Society for non-residents shall be five dollars for the first year, and for each succeeding year two dollars

We know of no other society whose by-laws require non-residents to take out licenses; although we believe that the New Jersey Game and Fish Protective Society, of Plainfield, has collected money from sportsmen visiting New Jersey and given them certificates in return. It is probable that a test case in the courts would demonstrate that such collection of money by the Plainfield society under its existing by-laws is without warrant of law. In reply to an inquiry on this subject, Mr. W. L. Force, the secretary, writes to the *Book of the Game Laws:* "I do not know of any clause in our by-laws compelling a non-resident to join our game society. The State law, however, says that they must 'comply with the by-laws,' etc., and the second section of Section 7 is supposed to cover the case." Section 7 reads as follows:

§ 7. The annual dues of members shall be two dollars for each year, to be paid by each member in advance, the first payment to be made to acccompany the application for certificate of membership, and subsequent payments to be made annually in advance upon the commencement of each succeeding year of membership; and in case of non-election such first annual fee shall be returned forthwith to such applicant. Non-residents desiring to become members of this society, in accordance with the provisions of Chapter CLXXXIV. of the Laws of the State of New Jersey, must comply with the provisions of this section.

The whole question turns on the meaning of the phrase "must comply with the provisions of this section." We cannot see that it means that the non-resident must join the society or pay any money to anybody for a certificate. If the Plainfield society wishes to compel non-residents to take out a license, it can readily accomplish that end by saying so in plain English in its by-laws.

It would be interesting if some one would test this question by taking it into the courts. Meanwhile the sportsman dwelling in a less favored clime who seeks New Jersey covers is admonished that it will unquestionably be cheaper to pay the $2 than to pay New Jersey lawyer fees.

THE DEAD CAMP-FIRE.

A HEAP of ashes, a few half-burned brands, a blackened pair of crotched sticks that mark the place of the once glowing heart of the camp, furnish food for the imagination to feed upon or give the memory an elusive taste of departed pleasures.

If you were one of those who saw its living flame and felt its warmth, the pleasant hours passed here come back with that touch of sadness which accompanies the memory of all departed pleasures and yet makes it not unwelcome. What was unpleasant, even what was almost unendurable, has nearly faded out of remembrance or is recalled with a laugh.

It was ten years ago, and the winds and fallen leaves of as many autumns have scattered and covered the gray heap, or, if it was only last year, and you fancy that the smell of fire still lingers in the brands, how vividly return to you the anxious deliberation with which the site was chosen with a view to all attainable comfort and convenience, and the final satisfaction that followed the establishment of this short-lived home, short-lived, but yet so much a home during its existence.

Nothing contributed so much to make it one as the camp-fire. How intently you watched its first building and lighting, how labored for its maintenance with awkwardly-wielded ax, how you inhaled the odors of its cookery and essayed long-planned culinary experiments with extemporized implements, over its beds of coals, and the consequent exaltation of triumph or mortification of failure.

All these come back to you, and the relighting of the fire in the sleepy dawn, the strange mingling of white sunlight and yellow firelight when the sun shot its first level rays athwart the camp, the bustle of departure for the day's sport, the pleasant loneliness of camp-keeping with only the silent woods, the crackling fire and your thoughts for company; the incoming at nightfall and the rekindling of the fire, when the rosy bud of sleeping embers suddenly expanded into a great blossom of light whose petals quivered and faded and brightened among the encircling shadows of the woods. You laugh again at the jokes that ran around that merry circle and wonder again and again at the ingenuity with which small performances where magnified into great exploits, little haps into strange adventure, and with which bad shots and poor catches were excused.

At last came breaking camp, the desolation of dismantling and leave-taking. How many of you will ever meet again? How many of those merry voices are stilled forever, from how many of those happy faces has the light of life faded?

Who lighted this camp-fire? Years have passed since it lit the nightly gloom of the woods, for moss and lichens are creeping over the charred back-log. A green film is spread over the ashes, and thrifty sprouts are springing up through them.

You know that the campers were tent-dwellers, for there stand the rows of rotten tent pins inclosing a rusty heap of mold that once was a fragrant couch of evergreens inviting tired men to rest, or you know they spent their nights in a shanty, for there are the crumbling walls, the fallen-in roof of bark that never again will echo song or jest.

This pile of fish bones attests that they were anglers, and skillful or lucky ones, for the pile is large. If you are an ichthyologist, you can learn by these vestiges of their sport whether they satisfied the desire of soul and stomach with the baser or the nobler fishes; perhaps a rotting pole, breaking with its own weight, may decide whether they fished with worm or fly; but whether you relegate them to the class of scientific or unscientific anglers, you doubt not they enjoyed their sport as much in one way as in the other.

You know that they were riflemen, for there is the record of their shots in the healing bullet wounds on the trunk of a great beech. For a moment you may fancy that the woods still echo the laughter that greeted the shot that just raked the side of the tree; but it is only the cackle of a yellow-hammer.

There is nothing to tell you who they were, whence they came, or whither they went; but they were campers, lovers of the great outdoor world so akin to you, and you bid them hail and farewell without a meeting.

SNAP SHOTS.

MR. T. M. ALDRICH, who called the other day on his way South with a string of dogs for the coming trials, tells us that the shooting season in Rhode Island has not by any means made good the promise of the earlier year with respect to ruffed grouse. The birds bred well, and a capital season was anticipated; but gunners have failed to find them. Nobody can satisfactorily account for the failure; but the grouse tick theory has its supporters. Another noticeable feature of the season is that quail are remarkably backward in growth; they are small, too small to shoot. It might be thought that the small ones are second broods; but if that is the case, ask the shooters where are the birds of the first broods?

Moose are reported numerous in Nova Scotia this season. A correspondent who has just returned reports that his party shot three, and saw and heard many more. A great many have been killed. Digby is a starting point. Non-residents are required to pay a license. From what we learn, there appears to be reason to believe that the license law is not enforced with perfect impartiality. It is said that in some localities it makes a difference as to what hotels are patronized by visiting sportsmen, immunity from prosecution for hunting without a license counting as among the advantages enjoyed by the guests of certain inns.

The man Hoxie—that Rhode Island game protector who was caught with a big basket of grouse and woodcock killed out of season—will be up for trial again to-morrow. It will be remembered that he got off with only one fine the first time. The officers of the prosecuting society are determined to vindicate the law in this case. The average Rhode Island farmer, in the vicinity of Narragansett Pier and other summer watering places, has absolutely no scruple whatever about shooting robins, chicken partridge, young quail and whatever else he can dispose of to the restaurant keepers.

We record with much regret the death of Dr. Amandus Ferber, whose papers on angling have for many years given pleasure to the readers of FOREST AND STREAM. Dr. Ferber was a devoted fisherman; his experience in fly-fishing on the west coast of Florida was perhaps more extensive than that of any of his companions. He was a man of gentlemanly instincts, who by his principles and practice did credit to the craft.

We would be glad to have information about shooting resorts in the South. As noted by our Boston correspondent, sportsmen from the North are finding their way in increasing numbers to Virginia, the Carolinas, Georgia and Florida. For the benefit of those who are seeking desirable hunting points, we invite communications on the subject.

The Sportsman Tourist.

MOOSE RIVER AND THE WEST BRANCH.

IX.

TOWARD morning I was awakened by the cold. The fire was nearly out and a little brown rabbit lay crouched by the embers, so near that I could almost touch him with my hand. When I arose to put on some wood he scampered away. Rabbits often do this, seeming to enjoy the warmth.

Day was just breaking, and as we were all cold the camp was soon astir. A new fire and a cup of coffee put us to rights; and while the others were engaged in preparing breakfast I took my rod to see if I could not add some trout to our larder. I thought the fish had been frightened the night before by the entrance of the canoes into the pool, so I went around through the woods till I came out on the brook above it and then fished down.

A few small fish rewarded me, but I looked for better sport in the pool. I stood in the water just above the little fall and cast my flies into the edge of the foam. I made a few casts and another small fish was added to those in the creel. Then I tried to drop my leader in under some bushes where the current set in under the bank. It was a hard place to get at, but looked as if there ought to be some fish there. Some old patriarch of the trout tribe ought to make his headquarters there, I thought. My first cast landed my flies in the overhanging bushes, and one of them is there now, for ought I know to the contrary, but my fly-book supplied a duplicate. At the next few trials, in my efforts to avoid a similar accident, I did not reach the desired spot. Another cast, however, and the three flies floated lightly down on the riffle under the bushes. Scarcely had they touched the water when a noble trout threw himself out bodily and seized the white-miller. I struck hard and the reel clicked as he shot across the pool, I reeled in gently and the rod bent under the strain. My footing on the slippery stones of the brook was precarious, and I had not brought the landing net. As my captive darted this way and that in his efforts to escape, I thought it was about an even chance whether I landed him or he capsized me. But at last he began to tire, and I drew him toward me wondering how I should get him, for I did not dare lift him out by the leader. Finally when his strength and courage were about gone I led him carefully into shallow water and to the shore. Not till I had him safely in the basket did I draw a long breath. His weight was a trifle over 2lbs.: and I caught another which weighed a pound. I heard my companions calling me to breakfast and returned to them. We made short work of breaking camp, and at an hour which would be called early in the city we had left Long Pond behind us and were again voyaging down Moose River.

The woods were vocal with the song of the white-throated sparrow, whose beautiful, clear notes were those most often heard as we traveled, and at all of our camps we were serenaded by this little musician, sometimes hearing it in the middle of the night. The drumming of the woodpeckers resounded from the dead trees, and a kingfisher skimmed like a streak of blue light along the stream. The harsh screams of bluejays and the cawing of crows were other expressions of bird life, and once we saw a bald eagle sail majestically over and disappear beyond the treetops.

As we rounded a bend we saw some distance ahead an old wing dam, and heard the sound of rapids, the swash of the water over the shallow, stony bottom becoming mere distinct as we approached it. As we left the dead water and entered the rapids, the guides stood erect, the better to look ahead and choose a safe course for the fragile canoes, and the paddles were exchanged for the setting poles.

The running of the rapids in a canoe is the most thrilling experience incidental to a journey through the wilderness. The canoeman stands erect, with one foot in advance of the other, and with his long iron-tipped setting pole controls the movements of the birch. He does not allow the canoe to go down as swiftly as a novice would suppose she would have to, but "snubs" her along slowly, now and again giving a few vigorous pushes to reach a better channel. Submerged rocks show their location by the appearance of the water which rises over them in a smooth mound, which ends in a wave of snowy foam on the lower edge, as the water sets off from the sides. A canoe if handled skillfully will clear them by a hand's breadth in safety. Sometimes, finding the water shoaling, it is impossible to proceed and then the canoe is backed across the stream to a point from which a channel may be selected. At times a bump against a rock is unavoidable, but unless a sharp, jagged point or edge cuts the birch she usually sustains no serious injury. The responsibility of the management rests upon the man in the stern, though the bowman may render assistance with his paddle. One danger, though it is rather an unlikely accident, is the chance of the setting pole catching between two stones or in a cleft in a ledge, and being wrenched from a canoeman's hands. In that case, unless he is quick to seize his paddle, the stern will swing around broadside to the current and a capsize is then unavoidable. This accident did happen once to me, but not being in a bad place a few vigorous strokes of the paddle brought the little craft to a place of safety and the pole was recovered. There is danger too of the pole slipping off a smooth rock and causing the canoeman to lose his equilibrium. It may be said that the act of shooting rapids is never unattended by some degree of danger, but when one finds himself in the midst of foaming, tossing water, beneath which he gets on all sides glimpses of submerged rocks and ledges, between which and his own precious body there is only the frail shell of a birch, it is most exciting and exhilarating. The light canoe tosses like a cork, and receives slap after slap from the waves which wash its sides and dash their spray in the faces of the voyagers, but with a skillful man in the stern one is ever ready to repeat the adventure. It is true, however, that running rapids is not as many a romancer and artist has written or pictured it; the experience as it is often depicted by both pen and pencil would never be undertaken by the most expert of canoemen, unless with suicidal intent.

These rapids were not difficult to navigate—I have been through stiffer water—and we went on down until we came to the head of Burnt Dam Pitch. Here we had to make a portage. The canoes were lifted out and shouldered by the guides, who carried them around the fall, over a rough path abounding in slippery stones and logs, between which were many dangerous holes. The luggage was transported in like manner. The water was bad for a mile or more below the pitch, and as there was a path along the top of the bank we walked ahead, leaving the guides to bring the canoes. We enjoyed the walk along the narrow footpath, which we followed in Indian file through thick woods till we came to a dilapidated log cabin, where there had once been a farm. A woodchuck had established himself in, or rather under, the old house, and he scuttled into his burrow at our approach.

We kept on through more woods, and came out on a high, steep bank, which sloped to the river. We were in a sort of a clearing, but on the other side the trees grew down to the water's edge. Away in the distance we could see the blue outline of a mountain, which we recognized as Kakadjo, and rising behind it was its neighbor, Sabotawan. We sat on the bank, taking in the wild view of the rushing water and listening to its subdued roar, while we watched for the canoes. Since morning the sky had been obscured by a thick haze, through which the sun shone with a dull glare, and this atmospheric condition produced a curious, but beautiful, phenomenon. Whenever the water flowed smoothly over a rock, large or small, it glowed with a brilliant metallic lustre of rich coppery bronze, and as this splendor had the appearance of being under the surface the river was as a stream of liquid fire.

As we looked at this dazzling sight, the canoes suddenly shot around the bend with the stalwart form of Bill taking the lead. There was almost as much excitement in watching as if we had been with them, for we could see and admire their skill. Every movement was the acme of grace as they flew along; the water was very strong, and being too deep for the use of setting-poles, they were plying the paddles; now wielding them with quick, firm strokes, their bodies rising and falling rhythmically with the motion; then as the canoes shot along some stretch of close current, poising ready for the next stroke, their feet planted as firmly as if they stood on shore. Again, the paddles were held firmly against the gunwales and used as rudders, only to be once more flashed in the air while the crystal drops fell sparkling from them. The men had to think quickly and act quickly, yet every motion was made with that deliberation which indicates a clear head in time of emergency. After they had passed we went on along the path and again into the woods. We crossed Stony Brook, and some distance below came out on the bank at the foot of the rapids. The guides came out at about the same time, for, though they had passed us, there were places where the canoes had to be lifted out and this had delayed them. In one bad pitch three of them broke their setting-poles, but they came through safe, and as Bill expressed it, "right side up." We embarked and sailed on as far as another fall, the Rolling Dam Pitch, where we went ashore for dinner. At this place a ledge extends the width of the river, over which the water rolls as over an artificial dam, whence the name. Canoes have to be lifted around this pitch, but there is no long carry to make. We took out three of the canoes and then Dennis, after emptying his, gave an exhibition of his skill by going over the fall. We had previously arranged the camera and as he went over the crest, the drop-shutter and a quick plate made a picture of the scene. Another exposure gave us Francis and Cy as they were busily engaged preparing our meal.

Before we left the Rolling Dam we interviewed the trout with such success that fifteen handsome spotted fish, ranging from 1 to 3lbs. in weight, concluded to accompany us. They were all taken with artificial flies from the seething white water below the fall. Harry, who was casting from his canoe in midstream, struck one which carried away his whole leader with its three flies. This fish was on the hook a quarter of an hour, during which he broke water three times. He was an immense trout, larger than any we landed, and in the raging water where he took the fly he succeeded in breaking the tender tackle. But this is always the angler's experience; the fish which isn't landed is invariably a giant of his species. We divided the honors about equally. Harry struck the largest fish, William landed the heaviest fish and I captured the greatest number. We had to exercise a little of that moral courage which the conscientious angler has to use on occasions in leaving this trout pool while they were giving us noble sport; but we had all we could use, and we made it a point never to waste any. I, for one, could never see what glory there is in making a score; in catching such and such a number of trout in so many hours' or days' fishing. This seems to me a prostitution of the gentle art. "Willful waste" has made "woeful want" in many a stream and pond.

Down the river we paddled, through more rapids, and then along beautiful reaches of dead water where the glassy surface mirrored the wooded banks and reflected the clouds and sky in its dark depths. We stopped at a headworks on Little Brassua Pond, which is a "bulge" in the river, and then had two miles more of smooth deep water before we reached Brassua Lake. Our course lay for three miles across Brassua to the outlet, which is also Moose River, and out in the open lake we had a heavier sea to breast than we had on Long Pond. The wind was not strong, but the lake still felt the influence of the gale of the previous day and night, and we realized that there was some hard paddling to be done. We struck across in a bee line for the outlet, and once away from the shelter of the shore, we looked upon a scene of wild and romantic beauty. We were surrounded by miles of heaving water, spangled by breaking white caps, which rose and fell between us and the forest which frames this lake of the wilderness. Looming up beyond the dark line of the timber were the familiar outlines of various mountains, to the east Kineo and Kokadjo, in the southwest the Miseree group, and in the far northwest the massive bulk of Eskweskwewadjo, or Bald Mountain, which is the most striking feature of the landscape from Brassua. Straight ahead we saw the Blue Ridge, at the base of which Moose River flows for four miles to its mouth at Moosehead Lake. Two miles below Brassua are some rapids known as Sam's Pitch, and just below them a wing dam. There is a logging camp there where we proposed to spend the night. The camp, a substantial low-roofed log structure, contained an old stove and a rude table, which we soon had in use. We shared our bread with two red squirrels which had their nest hidden somewhere in the roof, and the refuse which we threw outside was seized upon by a pair of Canada jays or moose birds, which were hovering about the camp. This species (*Perisoreus canadensis*) is ten or eleven inches in length, of a dark brownish color, with white neck and breast, and is not generally so well known as its cousin, the bluejay. To the camper in the forest, however, it is a familiar object, for one of its peculiarities, and an interesting trait of its nature, is the familiar manner in which it fraternizes with man in the woods. They are often seen around a camp picking at the crumbs and scraps which may be strewn about, and they will sometimes even investigate the contents of packages.

As the twilight deepened into night we sat on the "deacon seats," enjoying our rest after a day which had been crowded with many different phases of backwoods life, and to which this quiet hour seemed a fit ending. In the valley of the river the shadows had blended into impenetrable darkness, from which arose on the still night air the ceaseless refrain of the rapids. Beyond was the great black wall of the Blue Ridge, and all around us the silent forest. Swosh, swosh; swosh, swosh—sang the river—swosh, swosh—the same song it has chanted for untold ages—swosh, swosh—the same music which it will sing long after we who have heard it have passed away—swosh, swosh; swosh, swosh—and the soft, sweet threnody was the last sound we heard as we fell asleep.

WILLIAM AUSTIN BROOKS.

A RAINY DAY.

THE rain has poured down incessantly all day, making it impossible to attend to any business out of doors, so I have been looking over back numbers of FOREST AND STREAM. I venture the assertion that no where else can be found such a delightful collection of pleasure-giving articles. Each number breathes out the aroma of the pine woods, of spruce and balsam thickets, of tamerack and cypress swamps, of the prairie and the woods, of the mountain top and the seashore. After reading its pages I can close my eyes and lean back in my chair, and I hear the sighing of the breeze through the treetops, the hiss and whistle of the blizzard, the ripple and babble of the brook, the dash and roar of the mountain torrent, and the surging of the waves on the beach. From the dark forests and mountains of British Columbia to the everglades of Florida, and from the hills of New Brunswick to the sunny slopes of Mexico, every section of our broad land contributes its share to interest and please the reader.

And what a host of friends I have made by reading its pages. Friends whom I dearly love but whose faces I never saw. I seem to know them so well through their writings, that I can hardly realize that I have no other acquaintance with them. I have a mental photograph of every one, and imagine that I should know them instinctively if we should chance to meet. How I should like to climb the mountains with "Yo" and "Dulog," navigate the waters with "Tarpon," share the camp with "Kelpie," thread the mazes of the canebrake with "Coahoma," try my skill with the rifle with "Iron Ramrod" after squirrels, follow the quail with "Wells," or ducks with "Chasseur," or lure the finny denizens of the waters with the "Kingfishers." But why try to enumerate them. I think I should not have to travel far in any direction without finding some friend already known to share my sports. Who ever had the privilege of sitting around camp-fire with such a host of congenial spirits, congregated from every clime, experienced in every variety of sports, possessed of intelligence, refinement and education, and hear each one tell of the pleasures of the chase, the triumphs and disappointments that have fallen to his share, of his favorite dog, or gun or rod? But all of these gather round me when I sit down to read a number of FOREST AND STREAM. "Long may it wave," and "may its shadow never be less," is the wish of LEW WILLOW.

ARKANSAS.

Natural History.

A GROUSE COMBAT.

ONE day about the 1st of June, while walking along a country road, I was somewhat startled by a strange and weird sound that issued from the depths of a very large woods adjacent. I stopped and listened. The sound was repeated at intervals of perhaps a minute or so. Not knowing what to make of it, never having heard such sounds, I got over the fence and proceeded as cautiously and silently as possible toward the place whence the sound seemed to come. After I had gone about 50yds., screening myself as much as possible behind trees, I came up to about 20yds. of a large dead log, upon which stood two ruffed grouse in battle array. They stood something like 6ft. from each other, with the black feathers around their necks (called the ruff) raised till they almost pointed toward their heads, which were lowered and which they were shaking at each other in defiance. In a few moments they gradually approached each other and when about 2ft. apart they rushed together, the momentum and their wings carrying them into the air about a foot from the log. While there they struck repeated blows and then fell back to the log, where a short tussle took place, when they separated and moved back to about 6ft. of each other.

After an interval they advanced toward each other again and repeated the same performance as before. The desperate battle went on by "rounds," till several were fought. How long the fight had been going on before I came upon the scene I had no means of knowing, but after they had come together several times in my presence, the bird that seemed the smaller moved backward, still presenting a defiant attitude, with his head lowered, till he came to the end of the log, when he jumped off and disappeared.

Upon this the victor raised himself and stretched up till he nearly stood on his toes, expanding his wings the same time. (It looked for a moment as if he would crow). Then settling himself back, he brought his wings down against his breast with a sound like that produced by forcibly striking a brass drum. Again he raised his wings and repeated the sound. Still continuing to drum and lower his wings more and more rapidly the sound finally rolled away "in one continuous murmur and then all was still." The sound was indescribable. As soon as he had finished drumming he jumped off the log and disappeared. Wish

ing to know if the female (the probable cause of the conflict) was near by, I advanced rapidly, and started her, together with the victor, and a short distance away the defeated bird. DORP.

THE LION OF FANCY AND OF FACT.

"FROM the earliest times," says the writer in the "Encyclopedia Britannica," "few animals have been better known to man than the lion." If by knowledge is meant the possession of a series of connected facts such as will enable one to arrive at the truth concerning anything, this statement is very far from being accurate; but, on the other hand, if the author means that this animal has been for ages much talked of and the center of innumerable superstitions, traditions, fanciful tales, etc., no one will question the truth of the observation. "The strongly marked physical and moral characteristics" of the lion impressed themselves powerfully upon the imaginations of many peoples. His habitats placed "the king of beasts" in contact with races who were capable of recording their impressions, idealizing their feelings and representing their fancies in cabalistic forms. Formerly it was customary among authors regardful of their reputations to put down all they remembered, and all that could be collected indiscriminately from books, concerning the subject treated of. Furthermore, quantity of reference was usually taken to be indicative of quality in material, and a book or essay was conventionally called learned, and was assumed to be valuable, in proportion as it was a patchwork of opinions.

Now, books are used as evidence; as witnesses to facts which require to be correlated with other facts and with theories, failing in which respect they are discredited. There are a certain number of principles in biology which have ceased to be matters of opinion, and it is with reference to these that the testimony of observers will be reviewed, so far as it relates to the descriptive natural history of the lion.

Without entering upon any detailed examination of the question, it may be assumed that there is only one species of lion extant in this era. It is quite certain that the present African and Indian lions are identical.

Organic likeness does not, except in general outline, imply likeness in character and habit, and the lions of these continents and of different localities in the same continents differ in the way of temper and behavior very greatly. The famous hunters exhibit an entire absence of unanimity in respect of the unity of species among lions, as well as with regard to their character, and there is scarcely any better illustration of the causes of error which beset ordinary observation than can be found in their works.

A certain vanity in discovery is nearly universal in mankind, and this is obviously a disturbing element in the mental processes involved in discovering anything. In addition to this it must with reluctance be admitted that eminent sportsmen have not generally been either highly cultured or very thoroughly trained zoölogists, and that they have not commonly exhibited a tendency to generalize from undistributed premises, to put ignorance in the place of knowledge and to confound inference with observation.

Sir Samuel Baker's observations upon recorded judgments in the case of the Cingalese buffalo perfectly apply to the majority of those which have been promulgated about the lion. No opinion, he remarks, of the habits and character of a wild beast "can be depended upon," unless its pursuit "has been followed up as a sport by itself," because the traits of no class of animals can be inferred from those displayed by any particular beast. "Many persons kill a wild buffalo now and then," but no one, says Sir Samuel, had to his knowledge hunted the buffalo exclusively; "and unless this is done, the real character" of the animal "must remain unknown."

Gérard seems to have been the only man who fulfilled to any extent this requirement, but his lions unfortunately were often too much Gallicised by a residence in the French provinces of Africa to adequately represent the race. However, like Capt. Sheriff, as described by D'Ewes ("Sporting in Both Hemispheres"), the famous Spahi pursued mainly the great cats, and so far as facts go, he has materially contributed to our store.

A misconception of the nature and origin of instinct has very generally involved the erroneous idea that animals inferior to man are vitalized machines, and that they act, and must act invariably, in a definite manner. What is called instinct is not a supernatural endowment that supplies the place of reason; it is the experience of the race and of the individual, organized to the extent of having become automatic in action. This physiologically recorded experience differs in every class and in every subdivision of class, according to the circumstances under which the group has developed. Such diversities, corresponding to diversities in the environment, imply that they were acquired, a conclusion which the study of instinct in every phase corroborates.

That wild animals have, as a rule, an instinctive fear of man, is a very common opinion, and rests upon the same basis as that concerning the occult power of the human eye. It is questionable whether any proof whatever can be adduced to show that man, as man, is dreaded, before he has made himself terrible to the animals who fly from his scent or sight. In the latter instance, it may be said that, for anatomical and physiological reasons, smell is in many species as ideally representative as hearing or sight; and everything goes to show that in these instances, where acquaintance with his destructive power and propensities is not the cause of dread, it is the unusual that excites terror apart from its manifestation in any particular form. This is so universal a trait among all highly-developed animals, including man, that it seems unnecessary to do more than specify its existence.

"In the attack upon the tiger or other savage animals," says Captain Shakespear ["Wild Sports of India"], "the human eye, fixed without wavering in its steadfast gaze from the eyes of the animal, exerts a power which of itself appears to be sufficient either to stop the meditated attack, or to turn the animal in its career." It may be remarked of this statement, first that there is no indication in his work that its author had ever found the plan to succeed. He always turned charging tigers with a double-barreled rifle. In the second place it might be questioned whether it be improbable that there is something, perhaps, apart from the power of the eye that may have contributed to the result, as, for example, the man's attitude, arms, expression, not to speak of the inherited knowledge upon the beast's part that his enemy had the power to destroy him. Anderson mentions the belief in this eye power over the lion, and supposes that it may have averted death in certain instances, as in the case of Diedrich Muller, who confronted a wounded lion that finally drew off. Drummond's hunter, however, shut his eyes, as he confessed, when he unexpectedly found himself in the midst of a family of lions, whence he escaped unharmed, and Gert Schepus was killed under circumstances peculiarly favorable for overawing the lion with a look. Moffatt ["Missionary Labors and Scenes in South Africa], of whom Anderson says that he "probably knew more about the lion and his habits than any other man," remarks in this connection, that eyeing the beast is of doubtful efficacy. It may succeed "under ordinary circumstances," but if he be hungry or a man-eater, "he does not spend time gazing on the human eye * * * but takes the easiest and most expeditious way of making a meal of a man."

With respect to these preliminary matters then, we may conclude that there is but one species of lion, which includes many temporary varieties in color, length of mane, size, and character. That maneless lions, either naturally, or from having dragged their hair out in jungles, are purely imaginary species, the lion being maned in Asia, Africa, Asia Minor, Persia, Syria, Asiatic Turkey, and the Valley of the Euphrates. Further, that the wild lion has, as a rule, less mane than the captive animal, and that his instinctive fear of man, and of man's eye, is a fable in the sense in which it is ordinarily accepted. J. H. P.

[TO BE CONTINUED.]

HALF-HOURS IN THE SIERRA NEVADA.

IV.—THE LITTLE CHIEF HARE.

IN the autumn of 1888 I promised Dr. R. W. Shufeldt to procure him some specimens of the little chief hare, preserve them in alcohol and forward the following summer. If he sees this he will know why I did not keep my promise. I went up in July of '89, carrying a full supply of alcohol and proper receptacles for the specimens, but for the first two weeks on the lake there was good fishing, and the trip after the hares was deferred from day to day. On our trips to Echo, B. takes a shotgun and I carry a rifle, a small one for small game. One afternoon, the fish not rising, I took the rifle and went out to shoot a woodchuck. I had climbed the mountain some hundred feet, when I heard the thin piping cry of the little chief in an unexpected place. I sat down on a rock to see if I could locate him, and after ten or fifteen minutes' close scrutiny of the rocks above caught sight of the little fellow. They are very difficult to detect, as they seldom leave the rocks in which they dwell, and as they are almost the color of granite, one can look for a long time without seeing them. Their small size also helps to keep them unnoticed, and although they will allow one to approach within a distance of 25 or 30ft., only the sharpest eye can detect them in the crevices of the rocks. I sat down to watch for this little chap, and after getting my eye on him brought my rifle carefully to bear on a rock above his head, hoping to kill him by the spattering of the bullet. If I had shot him through the head or body the specimen would have been spoiled. I fired and procured him, but was chagrined to find that his lower jaw had been torn away by a fragment of the bullet and the teeth all destroyed. As this partially ruined the specimen I did not keep it, but determined to climb the mountain next day with the shotgun and get some good ones.

On the following afternoon B. took his Kodak and accompanied me, carrying his shotgun, and I again took the rifle. Up, up we climbed until about 800ft. above the lake. It was just at the edge of the timber, where I knew the colony to be located. It was arduous work, and we were both pretty well tired when we arrived. The scene was magnificent, and B. succeeded in taking a landscape view with his Kodak, which proved to be very fine. An enlarged copy hangs above my head as I write these lines, but it only embraces a view of the upper lake and the mountains beyond. A little higher and Lake Tahoe unfolds its flat bosom beyond Mount Tallac's frowning face. Away to the left Mount Pyramid cleaves the air, 1,500ft. higher than where we stand. At our feet the mountain falls away almost perpendicularly, and snugly ensconced at its base lie the two Echoes. Lake Nanon can also be seen, flashing in its quiet bed, while to the right looms Job's Peak and other mountains of the eastern summit. We entered a deep gorge in the mountain side, where on the three sides the cliffs rise 500ft. or more in silent majesty. The bottom of the gorge is filled with perennial snow, which, while not forming a glazier, hardens into ice-like solidity and never entirely melts away. Here B. again shot the scene with his Kodak. That was all we did shoot, however. After a long two hours' wait, with the coveted animals piping on all sides, we had to give it up and return. Not a hare could either of us get our eyes upon, although there were probably a hundred within gunshot. On three other occasions did I climb that steep mountain side, and each time I got nothing for my pains. Hence it is that Dr. Shufelt did not get his specimen.

I regretted not keeping my first, as it was not mutilated enough to spoil it, and it would have shown my good faith in the matter. The fact was, I never for an instant supposed I could not procure dozens of the little fellows if I tried, as on previous visits to the locality I had always seen numbers of them.

V.—A SWIMMING SQUIRREL.

One morning I was rowing down through the lakes, on my way to the road where the stage driver caches our mail, packages of vegetables, etc., when he passes to and fro from Placerville to Lake Tahoe. The stage makes two weekly trips each way, and after each up trip we visit our cache for such things as may be left, and also to take out an occasional box of trout for some of our friends at home. After entering the lower lake, there being no wind stirring, my attention was arrested by a peculiar ripple on the water, away down the lake. The ripple was triangular in shape, with a very sharp angle, and I at once suspected it was made by some creature swimming across the lake. Whatever it was, was headed for the south shore, was half across the lake or more, and was making good time. I put on a greater spread of my ashen sail—so to speak—and after a sharp chase overtook the object of my curiosity. My surprise was great when I found it to be a Douglas pine squirrel which was crossing the lake, and making excellent time, too. He had chosen the widest point of the lake at which to cross, and must have deliberately started in for a mile swim. When I began to get pretty close he worked for dear life, and it was wonderful the speed he attained. It took some moments to overtake him, rowing a boat laden with only myself and a box of fish, and I caught him only when within a few yards of shore. He fairly forced himself upon top of the water, and almost ran on it, so great were his efforts. When I got alongside he was pretty well exhausted and turned to the boat and tried to climb its sides. This he could not do, until I thrust down an oar, up which he ran in a tired way, and jumped from it to my shoulder, from there he clambered to the top of my head. On finding that I was not a tree, and that he could go no higher, he sprang into the water again and resumed his journey. I headed him off, and a second time took him on board. This time he ran rapidly around the gunwales of the boat two or three times, sprang upon my head as before, and back into the boat and hid underneath the seat in the bow. I stopped rowing, and lay upon my oars until the other boat containing B. arrived, when I told him to come and see what I had picked up. The instant the two boats touched, the little fellow shot from his hiding place, leaped into the other boat, then upon B.'s head, from there to the boatman's (whose Christian name was George Washington, but we always called him "Hatchet" for short) then back to mine, and again took to the water. This time I let him go, and in a moment or two he reached the shore, where I hope he is yet.

All this time I could hear another squirrel calling upon the south shore, at the point the first squirrel was swimming for, and from the nature of his remarks I have no doubt he was engaged in reviling the latter, and daring him to come across and tread on the tail of his coat. I think this was the solution, for it was too late in the season for him to be a Leander, swimming the Hellespont to meet his Hero. These squirrels are very belligerent and will answer each others' challenges as far as they can hear. It being a very calm morning these two got to abusing each other across the lake, and probably one of them called the other such outrageous names that he could stand it no longer and started over to see about it.

Over forty years ago, in the little schoolhouse in the East, near where I was born, I remember reading in the old school reader about a squirrel that came to a stream and not being able to swim it launched a piece of bark, got aboard and hoisting his tail for a sail gaily reached the other shore, dry-footed. This had appealed to my boyish mind as a striking example of animal sagacity and of a wonderful adaptation of means to the end. Alas! this beautiful story has been proved false. Thus, one by one, have the beliefs of youth passed away. And when I hear that the great round-topped mountain, that used to flank that same schoolhouse, has become a small and insignificant hill, then will I be ready to disbelieve all things, give up this unsubstantial life and seek another land. AREFAR.

AUBURN, California.

AMERICAN ORNITHOLOGISTS' UNION.—Portland, Conn., Oct. 6.—The eighth congress of the American Ornithologists' Union will convene in Washington, D. C., on Tuesday, Nov. 18, at 11 o'clock A. M. The meetings will be held at the U. S. National Museum. The presentation of ornithological papers will form a prominent feature of the meetings, and members are earnestly requested to contribute, and to notify the secretary in advance as to the titles of their communications, so that a programme for each day may be prepared.—JOHN H. SAGE, Sec'y.

Game Bag and Gun.

A HIGH OLD TIME WITH A COON.

Editor Forest and Stream:

Your editorial, "The Coon Hunters," calls me out, but I cannot report "nights with the coons," as so far this season I have not engaged in the sport.

This is a famous locality for raccoons. The ledges and boulders, for which rugged Cape Ann is noted, affords them a secure retreat, and the hundreds of acres of white oak forest provides an abundance of food. Last season ten coons were killed in the immediate vicinity of my cabin. This season, so far, the hunters have bagged eight, but not in my neighborhood.

An unusual thing happened in the hunt last season near my cabin. Two coons were started from Ledge Hill at the same time. They soon separated and both were followed. The trails diverged so much that at one time they were a mile apart, but strange to tell, the coons came together, at last, and were both killed from the same tree.

The coon hunters of Cape Ann do not start a fire and stand guard till morning, when a coon takes to a tall tree. Some one of the party, skilled in the business, straps on a pair of climbers and goes up, and up, till he disappears in the gloom of the dense and dark foliage. Then he lowers a cord and draws up a lantern, by the light of which he searches the limbs until the coon is found. The coon usually climbs to the topmast branch. He is killed by a pistol shot and falls to the ground. Sometimes, however, he is only wounded and then makes it hot for the dogs before he is laid low.

I well remember one exciting coon hunt in which I participated. Five of us treed a coon near a steep ledge. I mounted the tree and found his coonship on a lower limb. I thought I would have a little sport, so instead of shooting the coon I shook him off and he fell to the ground. Then, perched on a pine limb, forty feet in the air, I witnessed a strange and weird scene. A scene that would make one's fortune could it be transfered to the stage of a theater.

Dogs, hunters, coon, lanterns and leaves were mingled in one furious, struggling, confused mass. In the uncertain light of the swaying lanterns I could only half distinguish what was going on; but there floated up on the night air the sound of whirling leaves, the snarling and spitting of the coon, the sharp cries of pain from the dogs, the shouts of the excited hunters, and I became fully as excited as the combatants. I felt an insane desire to jump from my lofty perch, so anxious was I to take part in the fray. The fight was on the brink of the ledge, and Gus, the heavy weight of our party, lost his

footing and went over with them. The ledge was covered with a thick carpet of rock brake (*Polypodium vulgare*) for 30ft. down its steep side. Gus caught hold of the upper edge of this carpet, when it slowly parted from the ledge, and, doubling over itself, swung him 30ft. below; from thence he dropped a distance of 10ft. on to the dogs and coon, and the blanket of rock brakes fell and completely covered the lot.

By this time I was down the tree, and running round with the boys to the foot of the ledge, saw the blanket in violent motion and heard unearthly yells and terrified cries, mingled with smothered execrations. We pulled the blanket one side and Gus crawled out, stiff and sore, but no much the worse for his rough experience. He was covered with blood and dirt, but when we found he was unhurt we laughed until we nearly split our sides, or till Gus himself stopped laughing long enough to shout, "You danged fools, let no guilty coon escape!" But it was too late. The coon had fought his way to the ledge, in spite of the dogs, and as we made a rush for him he disappeared in a hole and was lost to us forever.

After this we lit our pipes, and while waiting for the dogs to start another coon, each told his experience of the fight. Two of the boys had smashed their lanterns, and in explaining the matter each claimed that he had hit the coon a terrific blow over the back. They were proud of the exploit and disposed to brag. To tell the truth, I was envious until Fred and Gus rolled up their trousers legs and disclosed two black and blue welts, and sarcastically called the company's attention to the fact that said welts might have been made by the sharp edge of a lantern bottom. And so the lantern smashers got left. And so we all got left. HERMIT.

DOWN ON CAPE ANN.

The *Cape Ann Breeze*, of Gloucester, Mass., reports Aug. 20: "On Saturday night eight of the sturdy coon hunters of the Lower Parish, reënforced by the redoubtable 'Ben,' started in search of a monster coon which one of the party had dreamed of the night before. After hunting about for an hour, Ben struck a hot trail and soon a coon was denned in the quarry back of Mr. Gardner Herrick's. The united efforts of the whole party were found necessary to persuade his coonship that he was wanted outside. When at last he came out, Ben tackled him and a royal battle ensued, in which Ben finally put his antagonist *hors de combat*. Ben was covered with scratches from the sharp claws of Mr. Coon; but Ben did not mind them. With nose on the ground, he soon struck another trail and denned another coon near the old farm road, where the coon of Thursday evening was captured. This one was not captured, however, all efforts to get him out of his den were unavailing, and at last the tired but happy hunters started on the homeward journey, Ben enlivening them by his joyful barks. The coon is the largest of the season, weighing 25lbs. His skin is nailed up in James's barn and measures 3½ft. from tip to tip, 3in. across the forelegs and 21in. across the body."

Editor Forest and Stream:

You ask if the coon hunters have been idle or unsuccessful. I think we are killing a few down this way in the little down of Fiskdale. It is a town that holds but a few coon hunters, but what there are of us are doing good service. We have two dogs; one is a beagle hound, the other a foxhound, but they cannot be beat. We divide up into two parties. Stanley Wight is the owner of the beagle hound. George Stover owns the foxhound. We have killed 28 coons, the largest one weighing 18½lbs., the smallest 8¾lbs. The best luck we have had at any one time was last week Friday night. We got 4, the largest 17lbs., the smallest 14¼lbs. I don't think you can go a coon better, not in Worcester county. We hope to get several more before the fall is over. I guess I will close my letter for this time, because we must start by 9 o'clock to see if we cannot get some more. M.

FISKDALE, MASS.

AN ALL-ROUND RIFLE.

Editor Forest and Stream:

Perhaps I might contribute something to the pleasure of other lovers of the rifle by telling how I have managed to arrange the best "all-round rifle" it has ever been my fortune to use. It is a Marlin repeater, using the .32-40 cartridge, and mounted with Lyman sights. I find this cartridge sufficiently strong for any game not larger than deer, and for range and penetration it can hardly be excelled by any other of like weight. I have hardly ever known a bullet from this cartridge to stop inside of a deer, no matter how it struck.

The Marlin rifle has an arrangement of the action by which a cartridge shorter than the regular size may be used without clogging, so I have prepared some shells so that they can be loaded with a light charge of powder and a round ball (patched and pushed down into the shell like loading a muzzleloading rifle) for hunting small game. The only trouble about loading these shells thus is that they are wedge-shaped, being larger at the base and tapering to the .32 size at the point, so that a round ball pushed down into the shell to the bottom would be loose; so I filled some of the shells about two-thirds full of lead, setting a large wire nail, filed to a tapering point, into the shell, the point of the nail filling the hole to the primer chamber, then melting the lead and pouring it into the shell, then drawing out the nail and the shell is ready to load. A rifle using a straight shell would be some advantage for loading in this way, as they could be loaded without any special preparation, and the same shell could be used for either light or heavy charges. But I like the tapering shell, as it is practically impossible for them to stick in the gun. The Marlin rifle is the only one that I know of that will use these short cartridges.

Or I can fill the magazine of my rifle with full cartridges and then load through the top of the action with these light-loaded shells and hunt small game as long as I choose, without using any cartridges in the magazine, but if I find larger game at any time, all I have to do is to throw the lever down as far as it will go, and out comes the squirrel load and a full cartridge is brought up from the magazine and inserted in the barrel, and when the lever comes back to place I am ready. These light charges shoot slightly higher at short range than the full-sized cartridges do, so I have two marks on the Lyman sight, one for each charge. But the difference is so slight that in making a quick shot at running game it works very well, as there are more shots made too high than too low in doing that kind of shooting. This makes a very convenient rifle for all kinds of hunting where there is no larger game than is found here. LEW WILLOW.

ARKANSAS.

THE NINE BARR'L CLUB.

SOME four years ago a Cape bound train bore out of the Old Colony depot in Boston four men, four dogs and four guns. There may have been other dogs, guns and men on the train. If there were, I certainly don't remember them, so they could not have been of any importance.

It was when we descended from our chariot, amid the sand dunes of the Cape, that the club received its name. Our good and generally rational friend Bert bore on his off shoulder, in addition to his handsome double Daly, an ancient and very awful singlebarrel, presumably a relic of his boy days, and doubtless as dear to his heart, as it proved to his reputation on this occasion. Uncle Zeke saw that line of gunners coming—dogs, guns and all—and was duly impressed thereby. The first thing we heard him say was: "Wall, I swan, ef here an't four boys and nine barrl's!"

That settled it. We four were the original Nine Barr'l Club, and the Nine Barr'l Club we are to-day, though "we" are more than four now you may be sure. Our shooting was mostly "just going to" on the Cape that time, but we won a name, and for the lack of birds we have more than made up since.

The Nine Barr'l Club's specialty is gunning right here at home where there is "nothing to shoot." Individually we may wander off to Maine, Minnesota, Georgia and the like. But the Nine Barr'l Club, as a club, shoots right here at home in Massachusetts. And though the universal croak is no birds, "we get there just the same," and to some purpose too.

In the very heart of a huge wild marsh not twenty miles from Boston stands a little cedar-covered club house, in front of which the litte fleet of deceitful blocks floats in a way that makes one's finger jerk. By the way, some of those blocks are well shotted—the old story of "the early morning," etc. Here the club has its headquarters, and ropes in the wily black duck, wood duck, widgeon and teal to some purpose almost every squally morning in the autumn. It shall be my task to tell all about one of our good sample mornings one day soon, but meantime I rather want to put on record one of our big days with the snipe last autumn; a day not often to be equalled here or anywhere else that I have been, and I have shot over "pretty considerable ground in my day."

There were three of us on hand when we pushed the canoe off that morning. Not the great original four, but about as good. There was Bert and his big blue belton Whit, a strong team at any time; there was Jim the Reckless with his wild red Irishman, Dan; and lastly, there was the Prof. with the liver and white Jud, borrowed from Fred, one of the original four—poor bow-wow, he's gone to dog's heaven now.

There was a wonderful sorting of cartridges, filling of belts and wiping of guns that morning. All through the early gray before the sunrise we had heard the sharp *teek tweek* of the snipe coming in, far overhead, and making for the mud flats a mile up river.

The way we scrambled into that canoe, and the kindly condsiderate manner in which each man (having shot more than the other boys) instructed each other man "how to shoot snipe," was distinctly typical of Yankee gunners in an amiable mood. Corkscrew—though we are strictly non-alcoholic—was one of the most frequent words to be heard. One fellow ventured to say that he never had seen a snipe "corkscrew" yet, whereupon all hands said he never had seen a snipe anyway; and the unfortunate Prof. requested to be allowed to "get out and swim."

Long before the flats were reached, however, all were silent as death, the dogs trotted along the banks, or splashed in the river as best they could, now and then flushing a rail, and looking wistfully after it, but not chasing, unless perhaps the "wild Irishman" broke his parole once or twice, coming back panting after a time, with tail down, to the tune of a shrill dog whistle.

A long swift sweep of the paddles sent the boat's nose up on to the mud bank, and, pulling up our long boots, we all tumbled out and pulled the boat away up, the dogs meantime charging obediently in a half-inch of chilly water.

Before us stretched the flats, an ideal snipe ground—a good mile of black mud, with thinly scattered clumps of marsh and sword grass, a ditch here and there, with its ever present "greenhorn-catching," blue-joint, and honey pots *ad infinitum*—we all know a good deal about those honey pots!

Then we spread fifty yards apart, Jim and the red dog on the extreme inside, the Prof. next him in center field, with Fred's dog Jud adorning him (a very handsome liver and white "borrowed plume"). Next the river, in the mud and spatterdocks, stalked the two "big-uns," Bert and his massive blue belton Whit. We gave the dogs, ranging fast and furious, fifteen yards law, and the procession moved. Not a thing to be seen, not a bird in air. A few steps and, *tweek! tweek!* out of the nothingness of the mud, at the very nose of the Irishman, rose Longbill number one with a quick dart to windward. Jim was on him, the gun spoke, and there was no bird in the air. But a strange and beautiful thing was happening; as he fired, out of the ground at his heels rose another snipe, Jim whirled completely around, the left barrel barked, and a wonderful double had been made on snipe. Not a bad start?

Another bird rose to Dan, went across to Prof. and carried his charge of No. 10 for 50yds., dropping in the river to be retrieved by Whit.

A moment more and Bert killed two birds in rapid succession, one of them a king rail, by the way. And then the fun began, such fun as I never had seen and never may hope to see again.

The birds whirled up from everywhere, lying perfectly to the dogs, waiting for us every time. The setters went mad and, tell it not abroad, I fear we very nearly did too.

The guns got hot and we began to miss scandalously. We fell into "honey pots" up to our waists and scrambled out again, with both boots full of black mud, without even knowing it, till afterward.

We walked across that flat in the clouds (smoke), accompanied by three insane dogs. It was the noisiest walk I ever took.

There ought to be a big crop of "Rivals" springing up there now, but there isn't. I picked up a decaying shell there the other day, it bore the mark of my left striker. I should know the trail of that plunger anywhere. It fairly gave me the blues, that shell did.

Well, we crossed the flat and sat down on the tussocks, and thought and counted *coups*, and emptied the mud from our boots and wondered where we got it, anyway. Then we beat back over the meadows, starting a few stray birds here and there, and knocking over a suprised clapper rail at a good 80yds. Then down stream, stopping at the shanty for some shells and a bite to eat, and pushing on further down to the lower flats.

Here the birds were shyer and mud holes plentier, but it was a noisy session for all that, and when we got back to the shanty that night, and the bacon was frizzling and the coffee bubbling, and we all had got our dry clothes on, we talked it over quietly, with the dogs' heads between our knees, and unanimously agreed that it was the biggest thing any of us had ever been in.

Out along the front of the shanty that night hung a big bunch of birds, over sixty of them and almost all snipe, with a teal or two, a mud hen and a few rail. That was all! And one does not hit snipe every time. All this within twenty miles of the Hub, in the flight of eighty-nine. PROF.

WHERE BOSTON SPORTSMEN HUNT.

EVERY Maine paper from anywhere near the backwoods is embellished with bear items. It would seem that this class of game is more plenty than ever, or else the papers are giving more attention to the subject. Mr. John Atwood's store, on Commerce street, Boston, was ornamented with the carcass of a very fat bear last week. The beast, a two-year-old, was shot in Washington county, Maine, where bears are reported very plenty. Mr. Atwood is an old bear hunter himself, and his friends in Maine send him the results of their hunting to sell. This was his second this season. Bears are reported plenty in Franklin county also. John Sargent, with his son Herman, captured a fine two-year-old bear in Madrid the other day, and they report that there is an "old ranger" in that section, that is making havoc with the sheep. They believe that this old fellow will seek some other locality, if the hunters turn out and frighten him. This corresponds with the old idea of "The Old Ranger" of years ago. It was then believed that old male bears were great travelers. If they took a notion to tramp, they might turn up any day fifty miles from where they had last inhabited. They generally followed the mountains in their wanderings, though frequently swimming lakes and rivers. There is a legend of an old bear with only three feet, one having been taken off by a steel trap in the days of his youth. He was a great traveler, and was frequently seen in several counties in Maine. He finally came to his end in a trap that was set in the town of Rumford, in Oxford county. At the least it is true that a very old bear was taken there that had only three feet.

Venison is plenty in Maine. It hangs in all the markets at Bangor and the towns further north and east. It is also seen at Portland and Lewiston, and it is said that the price is low. I have not seen it in the Boston markets yet. It began to come into the Maine markets as soon as the season opened. Maine sportsmen are getting deer, though the best of the season is not reckoned to have come till the first snows and cooler weather are at hand. A veteran at this sport tells me that it is rare—like no other sport. The weather is cold, with the ground just covered with snow, and walking is not difficult nor very fatiguing. The hunter should wear moccasins, in order that he may travel as "still as death." If the morning be still, the snow having fallen the night before, a deer can be tracked in a very short time in a good locality. The real business begins then. The deer may be within a very few rods or he may be half a mile away. Not a twig must be snapped. Not a fallen tree approached till the hunter is certain that the game is not behind it. The deer are not wild in Maine, and a good deal of the theory about their "winding you" or scenting you, more properly, is nonsense. There is far more danger that you may approach within a few feet of some old log or windfall, and first be aware that your deer is lying behind it by his seeing you and bounding into the air and away. If he is not badly frightened he may turn and look at you when he has placed a few rods between you and himself. But if he is badly frightened he may run a couple of miles. Deer that have never been dogged will suffer the hunter to come within a very short distance, but where hounding has been tolerated they are up and away at the slightest alarm.

You need a hard-hitting gun, well loaded, and your aim cannot be too sure on a deer. Small rifles are not to be desired. The missile is not heavy enough. No matter how well the small rifle is loaded, the larger bones of a deer are sufficient to stop the lead. A party of gunners from Andover, Maine, went on a deer hunt in the vicinity of the lakes last winter. The morning was a good one. They soon tracked a fine buck, and following him only a quarter of a mile he gave them a shot. One of the hunters had a .22cal. rifle, and he was the first to shoot. The buck stood sideways. The aim was a good one, and the bullet struck the deer in the side just behind the shoulder. It passed through the lower and hindmost portion of the lungs, and went slightly forward till it struck the other shoulder blade on the other side. Here the bone was hard enough to stop the ball. The deer ran five miles, and three days afterward he was found on the shore of the lake. He had bled internally till he fell, and the meat was good for nothing. On the same day the other hunter also tracked his deer. When first seen he was head on, looking at the man. His rifle was .38cal. The shell was a Marlin, with 55 grains of powder. He aimed at the head of the buck. The missile struck plumb between the eyes. The deer fell almost in his tracks. The bullet penetrated the brain, passed through the head and out at the back of the neck, completely severing the spinal chord. Small rifles are not fit for heavy game, and indeed buckshot, unless the shooter is very near, will more often wound than kill.

The shooting advantages of the South are attracting the attention of Boston sportsmen more and more every year. The good sport they are having, together with the fact that the best hunting comes at a season of the year when it is too late for good shooting in New England, are among the features that draw. A strong team of promi-

nent business men from Boston and Lowell will leave this week for the wilds of North Carolina; Dr. J. C. French, who spent the greater part of last winter in the hunting regions of that State, is the pioneer of the party. It is made up of Geo. C. Moore, of North Chelmsford, Mass.; E. W. Lovejoy, Henry Jones, E. A. Smith, Walter Bagshaw and Wm. Edwards, of Lowell; Dr. J. C. French, mentioned above, and Harry B. Moore, considerably known to the readers of the FOREST AND STREAM as author of some of those deer and moose stories. Mr. Geo. C. Moore is a manufacturer of woollen yarns, E. W. Lovejoy is a manufacturer of cutter knives, of the firm of D. W. Lovejoy & Sons. He is also known as the manager of the Androscoggin Lakes Transportation Co.—the trout lakes of Maine. Henry Jones is a plumber and dealer in plumbers' supplies. Walter Bagshaw and Wm. Edwards are manufacturers in the busy city of spindles. Mr. Smith is a contractor and real estate dealer, and the genial Harry Moore is well known in the grain trade of Boston. The party will leave New York on Wednesday evening by the Old Dominion line of steamers for Norfolk. From Norfolk they will take another line of steamers down Currituck Sound, and from thence to Pamlico Sound. Thence they will go up to Durham's Creek in North Carolina. Here they will be quartered for some weeks with J. S. Kittle, who has some 5,000 acres of wilderness under his control. He has kept the pioneers of the party posted all the fall, and in a recent letter he says now is the time to come. He desires the party to come before the hunting has been troubled at all by local hunters, and that is the reason why he urges them to come thus early, though he says the hunting will be fine even considerably later in the season. Dr. French spent a good part of last winter there, and is so much pleased with the region that he has worked his friends up to join him this season.

Deer are reported plenty in that part of the State of North Carolina. Dr. French was fortunate enough to secure more than one last winter, and one he attempted to forward to Harry Moore by express. But it proved a costly job, and the worst of it all was that it was spoiled when it reached Boston. Wild turkey hunting the Boston and Lowell boys will try for the first time. The numbers of this rare game are said to be more plenty there than usual this season. Tired of the day hunting there will be the possum and the coon for night work, with the darky and his dogs to add zest to the sport. Quail are in abundance. In fact, it is rarely the case that a party of New England sportsmen has gone South with better prospects, and the intention is that the FOREST AND STREAM shall hear from them again. SPECIAL.

ILLINOIS GAME FIELDS.

FLORA, Ill., Oct. 22.—Quail are more plentiful here than they have been during the recollection of the oldest local sportsmen. The game laws have been strictly observed, and law breakers, thanks to the game constable, are a thing of the past. There are several hundred bevies within an hour's walk of the town hall; they are large and the birds in excellent condition; some bevies contain at a careful estimate from twenty-five to thirty birds.

Good dogs are at a premium here on account of the contemptible individuals who have taken a brutal enjoyment in tendering them strychnine. At present we can boast of but one hunting dog, a setter, and the family Bible shows that he is enjoying his eleventh year. Mr. "Link" Leebus and myself bagged thirty-six quail this afternoon without any exertion. We had enough and turned homeward long before sunset. Chickens are scarce and very wild. Jack snipe are also few and far between. Mallard ducks are fairly plenty, but the season is too dry to make this sport at all interesting. J. T. WARING, JR.

I have derived much pleasure from Antoine Bissette's dialect articles. They are unique and of a character not threadbare, as are the negro dialect stories. I trust the series will be continued. Fall shooting is fair at Tolleston, where the water has been raised about 3ft. by a recently constructed dam, keeping the water at a uniform stage over the marsh. The system of baiting the ducks with a liberal supply of corn put regularly on the feeding grounds is practiced by this club with very satisfactory results. This is also done at the Swan Lake Club, near Henry, on the Illinois River, where shooting has been particularly good during the past week. I got 51 there on Monday and Tuesday of last week. Mr. E. W. Bangs killed 71 on Monday, 17 on Tuesday and 97 on Wednesday, over half mallards and balance pintails and teal. Low water on the Kankakee marshes seems to concentrate the birds to the few marshes that have water and feed. EDMUND NORTON.

THE TRANSGRESSORS' CORNER.

GAME PROTECTOR WILLET KIDD, of Newburgh, N. Y., is making it hot for the transgressors in his district. On Sunday, Oct. 12, he received a telegram calling him to Sloatsburg, Rockland county. He hastened there and learned that Thomas Downing, of Newburgh, had shot eight quail on that day in violation of the game law. Downing returned to Newburgh on the same train with the doctor and was pointed out to him by some of the residents of Sloatsburg. Judge Barnard caused an order of arrest to be issued against Downing, placing his bail bonds at $300 to await trial in the Supreme Court for the recovery of the penalty of $25 per bird. Downing was arrested by Sheriff Goodale and if the bonds are not furnished will be compelled to remain in jail until the case is tried.

George Sparks is employed at the outlet of Orange Lake. For several years he has kept an eel rack at the outlet. It was suspected he caught something besides eels. Dr. Kidd not long ago discovered that two black bass had been caught and he instituted a suit in the Supreme Court against Sparks for the recovery of two penalties, $50 in all, for these two fish. A judgment was at last obtained for the full penalties, $50 and costs, amounting to $82.70 in all. An execution was issued against his property. He ignored it. An execution against his body was issued. Under Sheriff Goodale brought him to Newburgh. After some delay Sparks paid the judgment. Bass "come high, but we must have them." Unless a man is of independent means, though, he will do well to curb his appetite for eel-racked fish.

Thomas Price, of Rondout, was arrested near Springtown, Wednesday, on an execution against his body upon a judgment of $100 obtained against him by Prosecutor Hirschberg, of Newburgh. Game Protector Kidd complained of Price a year ago for violating the game laws by snaring and trapping partridges in Ulster county, near the Orange county line. Price failed to appear for trial and judgment was taken against him by default. His arrest was in consequence to satisfy the judgment. Price was taken to Kingston and lodged in jail.

LACONIA, N. H., Oct. 20.—Curtis Pickering and William Moorley, both of Meredith, were brought here this morning and sentenced to 30 days imprisonment in jail for spearing trout in Lake Winnesquam.

GAME IN CENTRAL CALIFORNIA.

AUBURN, Cal., Oct. 21.—*Editor Forest and Stream:* Your correspondent, "Jo," in your issue of Oct. 9 gives a very cheerful report of the game prospects of the Pacific coast for this year. His account may be quite accurate as far as the northwest portion of the coast is concerned, and perhaps for the Coast Range in this State also, but, unfortunately for us, the very reverse is the case in the Sierra Nevada. You may remember that I reported a great mortality among the game last spring in the mountains, and our fall shooting proves the truth of my statements. The unprecedentedly deep snows of last winter decimated the ranks of our game to such an extent that a true sportsman is loth to shoot any of the remaining supply, feeling that they should be left to replenish our stock. I have seen dozens of hunters who have been up in our far-famed Rubicon country, on the Middle Fork of the American River, and they all tell the same tale. No deer! One party of five expert hunters went to that famous region, and have just passed through our little city after a two weeks' stay, and they had just two deer to their rifles. Another party of three staid ten days, and got starved out; not a deer falling to any one of them.

The writer was in the mountains himself for nearly four weeks on the South Fork of the American, and saw only one old doe during the trip; and although there were scores of hunters passing up and down the grade, only heard of one deer being killed. The same story comes from the headwaters of the Yuba River and North Fork of the American, also from the Cosumnes, all splendid hunting grounds for the black-tail deer. There are quite a number of does and fawns in the foothills, and the reason is that does heavy with fawn come down lower than the bucks and barren does, and the snows were so deep and lay so late upon the ground that they could not get back into the mountains in time to drop their fawns, and consequently dropped and raised them here. This gives a chance for a future supply.

The mountain quail were almost exterminated. There is not one this year where there were a hundred last. The valley quail are plentiful as ever, and the foothills are full of them. The man that shoots valley quail in the foothills, however, needs a staunch dog and a phenomenally quick aim for more than three-quarters of his game.

Stream fishing was extra good during the past season, but was very late, owing to prolonged high water, caused by the melting snows.

In conclusion, the writer gives it as his opinion that it will take at least five or six years for our game to recover from the severe losses of the winter of 1889-90.

AREFAR.

NOVA SCOTIA MOOSE.

MY companion, H. O. Wilbur, and I have just returned from a three weeks' moose hunting trip in Nova Scotia. We met our man (hunter, caller and cook) on the morning of Sept. 12. The same day the cook started out with the provisions and camp duffle on an ox team. The next day the rest of us met him at the appointed place, where we made our first camp, the team and driver returning the same evening. Two days after this we arrived at our camping ground, situated on a broadening of the river and overlooking a large savannah. Here we found excellent trout fishing. We were unfortunate in having seven or eight days of rainy weather. The river rose so high we had to shift our tents. This prevented our calling.

We killed two fine bull moose, besides, unfortunately, wounding three others badly, which we followed for several miles by the blood, but we had to give them up. One bull moose was shot at 400yds. and knocked down as he was crossing the savannah, near our camp; the other two, a large bull and a cow, were shot at a distance of 150yds. Both we followed for a long distance, but we failed to get them, although they were bleeding badly. The two bulls we got were shot, one the day before leaving camp and the other at sunrise on the morning we left for the settlements. The one I shot the last morning made a tremendous racket in coming through the woods. I heard him answering and breaking branches, which made a noise like pistol shots, more than a mile away. He came out in the open and stood about 150yds. off when a .45-90 bullet, followed by two more of the same kind, did the work. It was very exciting and I must confess to being a little shaky before I got down to business. Both the bulls were about the same size and age-800lbs. dressed, three years old, with fine sets of antlers, which in time will be added to our other trophies of the chase. All the other moose that came to the "call" came quietly and were within shooting distance before we heard a sound.

Partridges we found very scarce, only shooting four. Bear signs were quite numerous and fresh, and two came close to our camp at night, but on account of the darkness we could not get a shot. I had a shot at a large red fox on the way to the settlements but failed to connect on the shooting. Moose we found fairly plentiful and I know of at least twelve that were shot in the vicinity we were hunting in. H. W. HAMLYN.

NEW JERSEY.

ABOUT SIGHTS.

FIRST the heresy. A beautiful Lyman rear sight having been presented me by a friend, it was promptly attached to the stock of the old Sharps, and for a time the old uncle rejoiced in the consciousness that not only was he in possession of the most ingenious device ever planned for sighting a rifle, but also, that he was for the time being in line with the other dudes of America in following the prevailing fashion. For a time all went smoothly, and various animals, deer, etc., bit the dust as quickly as in the old days when the old rifle was crowned with the queer rear sighting device of Van Dyke. As the fall weather of the present year approached, and the fog and mist shrouded with a deeper gloom the dark cañons of the mighty hills, upon a certain evening I followed the fresh trails of a band of deer which had hidden in the cover of the thickets, and just as night was deepening the shadows a deer sprang up in my front, 30yds. distant, and jumping from side to side and running low was enabled by the help of the low bushes and the deepening gloom to completely give me the slip. I could not be sure that I had got a true look through the peephole of the sight without, for the instant, losing sight of the flitting bunch of gray and white, so rapidly receding into deeper shade. To be sure, I had removed altogether the inner disk of the sight, leaving only the large outside peep-hole, yet, somehow or other, it did not seem to give the quick unobstructed glance possible under the old regime. To say that I felt badly does not express it. Was it possible that I was "losing my grip?" Was advancing age really dimming the sight of the hunter who seldom failed to get first sight of the cunning deer and who asked no living man to point out game for his rifle? I resolved to keep the knowledge to myself. What thanks did the faithful Gil Blas secure from the failing archbishop? Excusing my failure with as few words as possible when reaching home the old rifle was again hung up on the hooks and I tried in vain to dismiss the subject which haunted me.

A night or two after the very same identical experience happened to my oldest son, with this same rifle, at the same place and hour of the day. He is a better running shot with the rifle than I am myself, and when he returned disgusted, explaining in detail the very things which so annoyed me in my efforts to get a running shot, and clamoring for the old Van Dyke rear sight, I joyfully proceeded to make the change, leaving the Lyman still attached for long shots in good light, but with the "old reliable" Van Dyke for the gloom and shadows of the cañons.

Possibly this is the very rankest of heresy, yet it is the cold, uncompromising fact; which I stand ready to demonstrate to the satisfaction of any one who will take the trouble to test both sights now atttached to the old rifle.

ORIN BELKNAP.

WASHINGTON.

BLAZING AWAY AT A RUSTLE.—A Michigan correspondent sends us this feeling note on the fellows who shoot their guns off at a noise in the woods, or a movement of the brush: "While the season for the hunting of large game generally is not yet open in the lower peninsula of this State, the papers have chronicled a number of fatal accidents in the woods. What the harvest will be when the open season for deer has passed and the returns are all in it is difficult to say, but these casualties will probably beat any previous year's record, if the beginning is any criterion. These so-called accidents have become by far too frequent, and they are enough to prevent a careful sportsman going into the woods in search of large game. My father, who is an old-time deer hunter, while on a hunting trip many years ago in the northern part of Tuscola county on the Cass River, came very near being shot at by a reckless scoundrel, who walked up to a tree a few feet to steady his rifle, and who was some 15 rods off. My father seeing his intention shouted at him, and the fellow took down his gun and ran off without stopping to explain his action. My father sought an explanation of the man's actions from the settlers about there, and they coolly informed him they were all in the habit of shooting where they saw the brush stir without seeing the object, for fear they would lose a shot at a deer; and then my father gave up hunting for large game, and has never been on a trip of that kind since. We never read of an Indian or a savage shooting a white man or one of his own people for a deer, bear or turkey, because they readily distinguish any part of a wild animal from man's anatomy, and know what they are shooting at. I would rather hunt in near proximity to the Indians than to a camp of these reckless white scoundrels who set so little value on human life, and who go into the woods to drink and gamble and shoot at everything that stirs the brush, and whether it turns out to be a man or a beast they are willing to take the chances. I have read your comments time and again on this large class of accidents, but your warnings and good advice to the public seem to be lost and ignored in some sections.—J. W.

HE WILL MAKE A SPORTSMAN.—Williamsport, Pa.—*Editor Forest and Stream:* I send you a letter which I received from my nephew, Master Hardt, son of Chief Engineer Hardt, of Wellsboro, the home of our old and lamented "Nessmuk." He will be an enthusiastic sportsman some of these days. If you wish to publish his letter as a boy's letter you are welcome to it.—AUG. KOCH. The letter reads: WELLSBORO, Pa., Oct. 15.—*Dear Uncle:* Although I do not owe you any letter I must write to you to tell you of something. Yesterday I started from home at 4 o'clock, and when I got home at 5 my hunting bag bulged out some. What do you think you would have seen if you had been out here? A *Bonasa umbellus*, pheasant, ruffed grouse. It was a fine bird, a male, I think, and think it was larger than the ones you shot. I went in the woods above the reservoir, and I had gone quite far back from the reservoir and in the edge of the woods all the way. I was walking on a side hill, and all at once I heard something run, then bur-r-r-r—bang! He had "darted down hill like a flash," and I could just get a glimpse as I shot. Well, I walked along and was going to follow him up, when there, 20yds. away, he lay—dead! I had shot him in the back and broken a wing. He never knew what killed him, for he never winked after I came up. It began to rain then, so I went home and had been gone only an hour. So you see I beat you. You went about four miles and staid half a day and got two pheasants, and I went a mile, stayed an hour and got one. When you come up in November we'll make 'em wish they never had been born. I forgot to tell you I stuffed his head last night, as Ed. did with his first pheasant. It doesn't look very good, but it's all there. * * * Your nephew, WILL.

QUAIL INVADE WASHINGTON.—Washington, D. C., Oct. 27.—Mr. W. S. Thompson, Jr. has a drug store in the heart of the fashionable section of the city and the birds here referred to were all observed within about a square of his place of business. Sept. 4 a covey containing about 30 quail was seen in the parking of the Chinese Legation at Dupont Circle. A week later in the vacant triangular lot adjacent to this circle eleven quail were noticed and they remained in this place the greater part of the day; several of them were flushed by boys and took refuge in trees. Oct. 27, in the vacant lot adjoining Secretary Blaine's house, eight quail were flushed, one of them alighting on a doorway of a residence opposite; three more, after having been flushed a second time, went on to Senator Edmunds's stable. The birds were thoroughly bewildered and some of them flew into trees. Mr. Thompson attempted to drive them toward the cover along Rock Creek, hoping to shield them from the attacks of boys and the parlor-rifle fiend. All of these birds were fine, full grown and in splendid condition.—T. H. B.

PENNSYLVANIA GROUSE SHOOTING.—Lykens, Pa.—All true sportsmen are bound to accord with the opinions of "Dorp," in a late issue of this paper, concerning the habits and wariness of the ruffed grouse; he is certainly a noble bird, and the man who kills him over a setter and on the wing may be proud of the accomplishment, for no small degree of skill is required experience will teach. The spot in which I write this is surrounded with hills that in some years, and especially this season, abound with this grand bird; and having hunted for the last twelve years every season I dare say I am thoroughly acquainted with the grouse at home. I have seen and studied him from when he was a chick not bigger than a week old, and able (as we say here) to take a leaf in his toes and hide from the dog under it, to when he weighs 1lb. 10oz. and can fly at the rate of sixty miles an hour. As far as my knowledge from experience goes, your editorial notes in the issue of Oct. 9 are correct in every detail. I have missed many such shots myself. Our season opened on Oct. 1, and since then I have killed in four days the following score: First day 2, second day 7, third day 8 and a woodcock, fourth day 4 and a doe that weighed 100lbs. I killed her with a 9¼lbs. hammerless at 25yds., No. 7 chilled shot. We have quail here in abundance, and expect when the season opens to have grand sport. Any one desiring information regarding the fall shooting here can find that by addressing me.—WM. V. BARRETT.

NOTES FROM UTAH.—Ogden, Utah, Oct. 9.—The California quail were introduced here eight or nine years ago, and have been protected every year but one. I think that they are not suited to a cold climate, as the cold kills most of them off. They multiply to a surprising degree, but cannot stand the cold. I am not able to state how the supply is this year, as the bush is so thick. After the last snow we had last spring I counted 25 in a barn yard feeding with the chickens. Sharp-tailed grouse are not as thick as usual this season. I have killed 152 this year, but have worked hard for them. Duck shooting is better this year than usual. Big bags have been made. The northern ducks have not put in an appearance yet. While out hunting to-day I saw a large flock of geese going south. The duck hunters here go down to the edge of the lake and make a blind about 6in. high of mud. There is no vegetation growing around the salt water. They make what is called mud ducks, pieces of mud the size of a duck. The ducks come to these decoys as readily as to wooden ones. A man that understands it kills as high as eight dozen in a day. One shooter told me he did not care to kill more because he did not have time to pick the feathers off them. There is a family living down by the lake who hunt for the market; all of them take a hand at it.—W. D. C.

ST. LOUIS, Mo., Oct. 24.—Quail are plentiful everywhere in this locality, but owing in a large measure to the extreme rankness of the weeds, no great number of birds have been bagged. One serious drawback, which the sportsmen are running up against, is the objection of farmers to permit shooting on their lands. A gentleman informed me that while on a quail shoot a few days ago, near Sparta, Ill., he was run off of no less than ten different farms. In this State affairs are not quite so bad; still there are certain sections where the farmers are very strict regarding shooting on their lands. The bluewing duck has been sojourning round about here for several weeks, and the past week he was joined by that favorite of all Western sportsmen, the mallard. In fact, nearly all varieties except the greenwing are here. Reports to hand from all the game preserves controlled by residents of this city are to the effect that the webfeet have made their appearance in fair numbers. During the week at the Dordenne and Quivre grounds, in St. Charles county, were to be found a few snipe. Of course they were not by any means plentiful, but one gentleman succeeded after a day's diligent work in bagging 27.—UNSER FRITZ.

A GROWL FROM MAINE.—Upton, Me., Oct. 20.—Partridges are not plenty in the real forest region near Lake Umbagog. Partial migration, it seems, as they were plenty in August. Perhaps a good score obtained by the guides and boys all shooting for one man is the thing for an off year like this. Deer tracks a little more plenty than last year. The jack fever this summer has been worse than ever, and New Hampshire has hound on the brain. The deer have been wiped out at a great rate. The mud sneak and jack were at it before the deer were through dropping their fawns. Now, you see, if we have an old-fashioned winter, the result will be that the deer will get but about thirty days of safety in the whole year. The killing will be the worst through March and more than half of April. By May 20 men will be looking for deer not a thousand miles from the Richardson ponds. At least two of the guides told me that the margin of one or both of the Richardson ponds fairly stank of carrion. There are other words to describe it in, but I guess plain Saxon is good enough. I believe that I have never killed a deer or so much as a partridge in close time in Maine or New Hampshire, so I have some right to growl. I have seen more Canada grouse this season than any other year since 1876.—C. B. S.

SOME NEW HAMPSHIRE GAME RESORTS. — Lisbon, which is 160 miles from Boston, and reached by the Concord and Montreal R. R., is said to furnish excellent ruffed grouse shooting this season. The hotel charges are $2.50 per day, and a team for a ten mile drive can be had for $1.50. Good covers are reported within a radius of three miles in all directions. North Woodstock, 150 miles from Boston and 25 miles from Plymouth, reached by the Concord and Montreal R. R. to Plymouth, and thence by the P. V. R. R. to destination, is said to be a good center for deer and ruffed grouse. Easton Corner, Campton, eight miles from Plymouth, from whence it is reached by team, is a very good locality for ruffed grouse. We assume it to be known that the name of ruffed grouse in all these places is partridge.

BRITISH COLUMBIA.—Edgar, Neb., Oct. 24.—Have just returned from a hunting trip up the Straits of Georgia, British Columbia, and also a short hunt in northern Idaho. Had fair success, but would have done better only for rainy weather, which set in this season some weeks earlier than usual; and we had at one time twelve days of almost continuous rain and snow.—H.

BLACK PARTRIDGES FOR ILLINOIS.—Dr. W. O. Blaisdell, of Macomb, Ill., has ordered from a Calcutta firm of animal dealers four pairs of the black partridge of India, which he expects to receive in March of next year, and will put out in Illinois. This letter was received by Dr. Blaisdell from the firm: "CALCUTTA, Aug. 18, 1890. —The black francolin (*Francolinus vulgaris*) is, we believe, the type of partridge alluded to in your favor of the 13th current. We do not keep a stock of these game birds, but we shall be much pleased to procure them for you. As this particular type inhabits distant parts of India, reckoning the expense of capture, carriage and attendant, the birds would cost, delivered at Calcutta, about 10 rupees per pair. Awaiting orders, we are, sir, yours obediently, RUTLEDGE & Co." The attention of Dr. Blaisdell was called to these birds by a note in the FOREST AND STREAM from our English correspondent, who recommended the birds for transportation to this country.

FOREST COMMISSIONER GEORGE SALISBURY, of Sandy Creek, Henry H. Rhubart, J. W. Empey, Milo Cleveland and A. E. Ayres, of Watertown; Dr. Tamblin, Frank Lansing, Frank Stockwell and Geo. Hubbard, of Copenhagen; James Waldo, R. Dillenbeck and Mr. Comins, of Northwestern, and John White, of Pulaski, had been in the Big Woods just two weeks at the time they emerged at Lowville yesterday with loads of venison that make the eye of an average visitor to the Adirondacks glisten with delight. They were at Little Rapids, Beaver River, and put up at A. J. Monsett's hotel. They report a great time. The party were out nearly every day, and killed five deer a day, supplying themselves and the hotel with venison. Some fine heads were secured, and every night there would be held an exciting auction, the highest bidder among those of the party being allowed the heads and the deerskin. The fawns, of which they caught two, were disposed of in the same way. Each one of the party brought out all the venison the law would allow.—*Watertown Times, Oct. 14.*

ONTARIO DEER.—The Belleville, Ont., *Intelligencer* of Oct. 22, says: "On Friday last Mr. Geo. Sterling and Col. Strong left for the north, and the former returned home last evening, bringing with him two fine fawns and a number of partridges. Col. Strong is visiting with M. A. Riddell on the Bruton farm in North Hastings. Messrs. Geo. N. Leavens and W. H. Campbell have returned home. The party of which they were members had captured but two deer up to the time they left. The weather thus far has been very unfavorable for the sport. Hunters report that in the adjoining county of Addington, large numbers of deer were slaughtered in July and August for their skins and hair. One lawless ruffian is said to have boasted that he killed forty-one. No one can be found with courage enough to testify against these law breakers, but next season the Forest and Stream Club of this city—although the offense was committed outside of their territory—will probably make a strong effort to suppress such rascality."

DUCKS AND LIGHTHOUSES.—A curious thing happened at the Whaleshead Light, North Carolina, last winter. It became necessary to protect this light from the flying ducks, and a netting was made of telegraph wire. The net was about 3-inch mesh, and the whole light was covered with it. One night the keeper was partly scared out of his wits by a great noise and the falling of several ducks through the light into where he was sitting. Upon investigation it was found that a flock of ducks had flown against the netting, breaking it down, and keeping right on through the heavy glass in front of the light; it was found even that pieces of the reflector were broken off. Five ducks fell into the lighthouse dead and several were found outside of the building.—CLIFF.

MASSACHUSETTS. — Milton, Oct. 24. — Ruffed grouse, woodcock and quail shooting are to be had within five minutes' walk of my kennels. Ponkapog Pond and the great fowl meadows (which for miles are often entirely everflowed by the Neponset River) are each about 30min. walk from my kennels. Both of these places afford good duck and some goose shooting in flight season. At the former place is situated the convenient and commodious bough house of the Cedar Lodge Shooting Club. At the latter place, when the water is down, are to be found snipe, yellowlegs and rail birds in the order of their erratic natures and gradually diminishing numbers.—E. S. G.

THE MULE DEER'S JUMP.—In all which has appeared by way of illustration in the FOREST AND STREAM and elsewhere concerning the mule deer, I have never seen his jump properly illustrated or described. The mule deer jumps with all his feet lifted from the ground at the same instant, and does not double his legs up under his body during his bound, but each and every one of his legs hang down just exactly like table legs during his flight through the air. My son just now insists that he once saw a mule deer double its forelegs up under its body while running. It may be, at times, yet the rule is a stiff-legged jump.—ORIN BELKNAP.

NORTH CAROLINA QUAIL.—Monroe, N. C., Oct. 22.—I went out with a friend on the 15th, the first day, and bagged 47 quail; could have easily bagged 75 or more half grown birds, but we are not built exactly that way. The season ought to open Nov. 1. Quail are very numerous and any one with good high ranging dogs can make good bags and have glorious sport. On Monday evening I bagged 22, all fine grown birds. I notice an unusual quantity of young rabbits and the rabbit hunter can also have fine sport. These two are practically all the game we have. There are a few turkeys, but hard to get at.—A. T. L.

LONG ISLAND DUCKS.—Mr. L. E. Howell, whose father keeps the "Sportsmen's Home" at Atlanticville, Long Island, writes from there Oct. 27: "A. Jackson and myself killed 226 broadbill ducks from a double battery; we shot 302 shells. It is the largest score made by two men in many years in these waters in one day. Shooting is splendid here now. More ducks than have been for years."

FOUR HUNDRED LAWS AND MORE are quoted from in the *Book of the Game Laws*. Of their compilation an editorial says: "The first qualities demanded of a compendium of laws are accuracy and completeness. In the lack of any collection of fish and game laws having these qualities this one was undertaken. The preparation of the work has involved an examination of more than 800 distinct, original and amendatory acts, scattered through fifty-nine States, Territories and Provinces here represented. The labor of compilation has been largely increased by the often careless and sometimes seemingly contradictory nature of the legislation. It would be presumption to hope that in the hundreds of laws here given no minor errors will be discovered; but it may at least be said that the *Book of the Game Laws*, as it appears to-day, is the result of a painstaking and conscientious endeavor to furnish an accurate and reliable compendium. Similar care will be exercised to give all future enactments promptly and correctly."

WHERE GAME ABOUNDS.—The following letter was written to Mr. Henry C. Squires, who hands it to us for the benefit of whom it may concern. It is dated at Pine Bluff, Ark., Oct. 18: The Catalogue is decidedly the neatest and most attractive work of its kind I have ever seen. After perusing it carefully I could not rest until I could go out and take a good shoot; was gone an entire week. Do you know of a party from your city wanting to take a real good Western hunt this winter? I have been at it all my life. I found last week the best hunting grounds that can be found, unquestionably, in the United States. I have tried it all and know whereof I speak. Ducks and quail abundant, more deer and turkeys also than I know of anywhere else. I often hear of parties from New York out West hunting, but they do not find the right place. If you know of a party wanting to find a place, have them write me and I will give all the details and also join them.—R. G. ATKINSON.

"HAL DACOTAH."—A report from St. Paul, Minn., says that Gen. Henry Hastings Sibley, the first Governor of Minnesota and the only Democrat who ever held that office, has suffered a stroke of paralysis and is in a critical condition. He has been suffering from dropsy for some time, and the absent members of the family have all assembled at his home in St. Paul, a sister from England being among the number. Gen. Sibley is nearly eighty years old, and his once powerful frame has succumbed slowly to the attacks of disease.

SKY-ROCKETS FOR GAME PRESERVES.—"Colonel" writes of a device for protection against poachers: "Upon my estate I employ alarm guns, which are simple and cheap contrivances and can be set anywhere. An invisible wire is attached to them which, on being touched, fires the gun. Some discharge a rocket and illuminate the spot invaded by the poachers so that their presence is at once detected and their operations thwarted. Since using them I have not been troubled with poachers."

NEW YORK GAME LAW.—Albany, N. Y., Oct. 27.—The commission appointed by the last Legislature to revise and codify the game laws of the State will hold a final public hearing at 2:30 P. M., Nov. 18, in the Assembly parlor of the Capitol. All persons who desire to make suggestions or propose amendments to the present game laws will be heard at that time.

THE *Book of the Game Laws* is for sale by newsdealers and at the gun stores. Price 50 cents.

IN another column Mr. E. G. Vail, of Orient, L. I., advertises some live ducks as decoys. They are broken to corn and wheat and call well.—*Adv.*

Camp-Fire Flickerings.

"That reminds me."

"WELL," sighed the aged sportsman, "fact is I'm getting old. I know it and feel it. My old legs won't carry me as they used to. No. I shall go no more afield. No more shall I follow my good dog from morn till dewy eve over breezy uplands or through forest depths. There's nothing left for me now but to sit in a blind and shoot ducks over decoys. And yet," he added musingly, as a smile lit up his aged features, "not such an unhappy thought that, to go out in the gray dawn to your blind with seventy-five cartridges and return to breakfast with sixty—"

"Cartridges?" interrupted the joker.

"No! Birds, you fool!" thundered the old man, and the fervor of his righteous wrath convinced us that he might follow his good dog afield for a year or two yet.

MARSTRAND.

SWEDEN.

A MAP OF THE UNITED STATES.—A large, handsome map of the United States, showing North and South Dakota, mounted and suitable for office or home use and issued by the Burlington Route, will be furnished responsible parties free on application to the undersigned. Playing cards for 15 cents in postage by applying to the undersigned. P. S. EUSTIS, General Passenger and Ticket Agent, C., B. & Q. R. R., Chicago, Ill.—*Adv.*

If Noah had used the chosen pair
O' worms that went in the ark
To fish through the windows in the flood
From his somewhat crowded bark,
And thus had used up the squirming stock
In his own original way,
How many a lie it had spared and saved
To the fishermen of to-day.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

Sea and River Fishing.

CHICAGO AND THE WEST.

CHICAGO, Ill., Oct. 17.—After all the comment upon the apathetic or unsuccessful state of affairs which has marked game protection in this section, it is a pleasure to read or to write about one Illinois game protective society which is not only earnest and conscientious, but which is headed by men who really mean what they say, and who, more than that, have actually results to show for their work. Before me lies the report of the officers of the Fox River Association, to which reference has been made. This report shows that the association has enforced the law in regard to fishways in every dam on the Fox River, so that a complete passage way is offered the fish from the Illinois River all the way up through the Fox Lake system. This was accomplished only after stubborn fighting in the courts. The association has had a patrol out all summer on the river, and on Aug. 1 there was traceable to this work the destruction of twenty-one nets, besides the arrest and conviction of thirteen offenders against the fish and game laws. In addition to this, many persons were cautioned against illegal shooting and fishing, many copies of the law were distributed. Since the date of the report much work has been done along the Illinois River also, and I believe it is not wrong to state that the lifting of the illegal nets at Spring Lake, in the country visited and mentioned a few weeks ago, was caused through the efforts of the Fox River Association. It has enlisted club after club, further down the waterway toward the Mississippi, and the result will doubtless be that ultimately it will have a fishway in every dam clear through to the Mississippi, and will clear out the bulk of the illegal nets throughout the whole waterway.

It is a pleasure to offer for inspection a treasurer's report which shows a balance in the treasury. Following is the last report of the association:

Cash on hand Jan. 9, 1890	$158 35
From annual dues	45 00
From life membership	150 00
From contributions	172 70
Total	$526 05
DISBURSEMENTS.	
Prosecuting cases	$ 25 00
Paid F. L. Buck (for service)	210 00
Printing and postage	27 70
Expense examining dams	38 67
Total	$301 37
Cash on hand	$224 68

J. WILKINSON, Treas.

The officers append the following to their report: "You will see from the above that we have accomplished much good, but there is much more to be done, and in order to carry it to a successful conclusion we need more money. Our only dependence is in the voluntary work of the members. Annual membership costs but $1, life membership but $10, no initiation fee in either case; and all that is necessary to obtain membership tickets is to send the money with name and address of applicant to the president or secretary. We also solicit contributions in any amounts. Our work is in the interest of fish and game protection everywhere; if we fail, other organizations will be deterred from making the attempt.

"We hope you will consider this a personal appeal to you—to give us what help you can directly—and also to interest your sportsmen friends. It is a fact that the greatest stumbling block in our way at the present time is the apathy of sportsmen themselves. We hope this appeal will help to overcome that apathy.

"Respectfully submitted by order of the board of directors. GEO. E. COSE, Pres., 86 and 88 Dearborn street. JOHN WILKINSON, Sec.-Treas., 150 Kinzie street."

To-day I talked with Mr. Geo. E. Cole, the president of the association, and he showed me a letter from the secretary of the State Fish Commission, Dr. Bartlett, which has still further good news about the work along the lower rivers. Dr. Bartlett says, under date of Oct. 8, that he has evidence of nineteen cases at Havanna, on the Illinois River, and that Gen. Ruggles, an able attorney and ex-legislator of that town, has interested himself on the cases. He reports trouble at Lacon, but says the warden there has evidence for about ten cases more, some with a half dozen complaints in each. At Virginia, Cass county, on the Sangamon River, the local warden has secured nine convictions during the past month. In Porter county four convictions are reported. The State's attorney is at work there. Dr. Bartlett also reports efforts to secure testimony in the late Pope glucose factory horror, in which so much fish life was destroyed.

It must be encouraging to Dr. Bartlett to feel behind him the aid and support of the Fox River Association, which is, so far as is known, the only society and the main factor that takes the least notice of the actual work of fish and game protection in the State of Illinois. Once in a while, when we look upon their earnestness and their actual disposition to do something besides pass resolutions, there does seem a temptation to believe that these men are going to accomplish something practical in the way of fish protection, and certainly if game protection ever amounts to anything in this State, it will be through the efforts of this society, whose main men are first and all the time anglers and not shooters.

Mr. Geo. E. Cole, the president of this association, is one of the most actually earnest and enthusiastic sportsmen I ever knew, meaning in matters of game protection. He is a busy man, but he is in this association for results, and when he talks he means it is a personal belief and not as a sportsman's fad. Mr. Cole is a member of the wealthy and important Union League Club here. Last summer he found prairie chicken on the bill of fare, of course illegal. He called the steward of the club to him and told him he should institute prosecution against him. This was no idle threat, and he would have brought suit had not the steward agreed to serve no more duck or prairie chicken out of season. Some such steps as this should be taken against Kinsley and other prominent runners of soup houses in this place, and they probably will be taken. It is Mr. Cole's idea that the hotels and restaurants can be attacked more successfully than the South Water street game dealers.

I like to talk to Mr. Cole. It is a novelty to see a man whom you can actually believe to be anxious to do something to save the rapidly-passing fish and game of this region. He is by no means the only one of that sort in the Fox River Association. This association scheme is simple, and is set forth in the report above. Let every member and every club of the sporting fraternity of Illinois rally around the standard of this body. It only costs $1 to rally, and that is the only kind of rally that is any good. Surely the men in this State can see what a power this association can grow to be, practically and politically, if it represents the amalgamation, without clique or faction, of the best of the general organizations and the local clubs of the State. Illinois has never been behind the world. This one association has done more in the same time than any one protective organization in the Union. It is only the nucleus now. What can it not become? If the fire of its genuine enthusiasm for work and for results shall touch the soul of slumbering sportsmanship all over the State, what cannot the sportsmen of Illinois do? In union is strength. Here is the place to unite. You pay $1, or $2, or $3, as an entrance for a little sweepstake, where you shoot at artificial targets, and get shot out and lose your money besides. Pay that into the treasury of the Fox River Association, and after a while you'll get to shoot at actual game birds, big enough to fly. No man will miss that dollar, and since we have here a body of men in actual earnest, and an organized and practical machine for work, why not turn in, unite, concentrate, and help it all we can?

E. HOUGH.

A STORY OF "THE GUNNERY."

I WENT to school in Washington, Litchfield county, Connecticut. F. W. Gunn was the teacher. If he were alive now and I could meet him as a man. I know that we would be friends. As my schoolmaster—well, we had differences of opinion.

There were three fishermen among us boys, W. C. Beecher, C. Deming and I. Quite a number of the other boys fished occasionally, but we fished in season and out of season as regards school hours.

One afternoon in July it commenced to rain slowly, and when the sun set it was still drizzling, so I went to Gunn and asked permission to go fishing before school in the morning. I knew that the trout would be on the feed and I also knew that no one had been trouting for a month, on account of the drought. Gunn chewed his toothpick, stroked his long gray beard, looked at the ceiling and said, "Well, yes; but you must get back in time for school, or *you will hear from me!*" "Yes sir," and I slid out. "Mrs. Gunn will you pull the string at my window when you go out to pick strawberries?" "Yes," promised the madam with a kindly smile. She was in the habit of getting up before day in strawberry season, and I used to tie a piece of fish line to a dumbbell, lay it on a shelf and let the string hang out of the window.

When Mrs. G. pulled the string it came down on the floor with an awful clatter, and I jumped up. It was just getting light. The grass and trees were fresh and green from their washing, and the sandy road was hard. The day was going to be clear and still.

I started on a run down the road for the Parrish Dam, which was the last dam in the brook and only half a mile from the Shepang River. Another road from the upper part of the village ran into mine about half a mile away, and when I reached there I looked for the track of a No. 10 boot with hob nails in the sole; but it was not ahead of me. More than once I had seen those footprints and been forced to change my intention and go to some other brook, for it was no use to fish for trout after W. H. H. Murray, who was our spiritual adviser in those days. When I saw that Murray was not ahead of me I slackened my pace to a fast walk, and soon reached the little dam, where the wine-colored water poured over it into a pool circular and 10yds. in diameter. My rod was put together, and I let the bait float down over the dam. Snap! a trout has broken water to get it; and I have him on the bank with a flip. He weighs at least 6oz. Five more come out; and then they stop biting, and I move on. The brook is full of trout; and when I reach the river my creel is full of trout, and the pockets of my old sack coat wiggle delightfully, for they are full, too. I cast into the river and the line ran away. He was too heavy to flip out, and I managed him carefully and soon tired him out, and landed a pounder. I fished till my bait gave out; and then fished with trout eyes and occasionally a piece of a trout's belly. They bit all the same. I got wet all over by slipping down, as I stood up to my knees in the water; and at last stopped, not because the trout stopped biting, but because it was 10 o'clock and I feared the consequences. I had the creel full, my pockets full and two strings of trout—at least 30lbs.—none less than a good quarter of a pound in weight and one pounder.

When I reached home Mrs. Gunn was looking for me, and said, "Mr. Gunn is mad about your being late, I know, but I'll try to save you this time. I will have the girls clean those beautiful trout and set them in platters in the ice-house; and when Mr. Gunn comes home, don't say a word back, but get him to the ice-house and show him the trout. Leave the rest to me." Then she gave me a nice breakfast she had saved for me.

Soon Clarence Deming came down and said, with a grin, that my rod was going to be taken away from me for the rest of the term. Billy Beecher came down and said, like the gentleman that he always was and is, if he lives, "I am sorry that Mr. Gunn is so angry with you. I will talk to him to-morrow and see if I can't get him to give you back your rod." I told Will that I had hopes that I could fix it. And then came Mr. Gunn, looking stern. When he saw me he started to speak, but I interrupted him, "Don't say one word, Mr. Gunn, but come with me." He followed me to the ice-house. There on a stone table stood four turkey platters full of trout, cleaned and fresh, with their colors as lovely as the flowers in a garden.

He looked for five minutes and heaved a sigh. The sportsman's instinct overpowered him, and he said, "If I had been you, Dixon, I would have staid all day." "My bait gave out." "Well, come up to school after recess and I will have to talk to you some." I appeared in due time. Gunn called me before him and asked me, "When did you get home this morning?" I said I was a little late, but that I would be more careful in future. "Well, I intended to take away your rod for the rest of the term if you were late at school; but I have concluded to let you go this time." I went to my seat and smiled at Clarence. He was disgusted, as he hoped to have most of the fishing to himself for the rest of the term.

This story does not read as I can still feel it. If I could only word-paint the perfect day, the beautiful laughing water, the birds' song, and, above all, my youth and health. Some of you that read this will remember me as a boy. Our paths in life have diverged widely, but I remember you all fondly still. W. J. DIXON.

KANSAS.

CANADIAN FISH AND GAME INTERESTS

MONTREAL, Oct. 21.—A special meeting of the committee of the Fish and Game Protection Club was held in the Windsor last evening, Mr. I. H. Stearns in the chair, and Messrs. Ives, Boyer, Brown, Horne and Shewan (secretary) being present. After the reading of the minutes it was, on motion of Mr. Horne, resolved that Mr. Boulter be appointed on the committee in place of Mr. Skelton, who is at present in Europe. The secretary stated that since April last the club had proceeded successfully in forty-one suits in the police courts for violations of the fish and game laws, and out of this the offenders were mulcted in the sum of something over $400. Mr. W. S. Walker, the attorney for the club, had pushed the cases diligently and deserved well of all sportsmen who take an interest in protecting the game of Canada from extinction. But this method of proceeding had cost the club a considerable sum of money, and although good work had been done by the club and considerable fines imposed there was still a very large expense attending the prosecutions. The following letter, of which cognizance has been taken by the Government, will be of interest:

Lieut.-Col. Tilton, Deputy Minister of Finance: DEAR SIR—At a meeting of the committee of the club, held in the Windsor Hotel here on June 27, the report of the deputation to Ottawa was received and approved. On behalf of the club we desire to tender the hearty thanks of the club to the honorable the Minister of Marine and yourself for the kind reception given to the deputation, and beg to offer the following suggestions:

1. That the Chateauguay de Lille and Beaudette rivers have fishways put in, and that the "Sawdust act" be strictly enforced on those rivers.

2. That the licensed nets on those rivers be reduced at least one-half, and that no netting licenses be issued within at least ten miles of Montreal, this limit being reserved for rod fish.

3. That Missisquoi Bay be closed to net fishing for five years from May 1, 1891.

4. That the mesh of net used be not less than 2in. when wet.

5. The club desires to ask the appointment of Alfred Marsoin as a fish warden to act in concert with John Norris, of St. Lambert, over the whole district mentioned above, and that local wardens be abolished in the said localities.

6. That the secretary of this club be *ex-officio* an officer of your department, and that the club be authorized to appoint sub-wardens during the close season.

7. That the close season for lake (gray) trout and brook trout commence at the same time, the first of October, and end together.

8. That the close season for bass, maskinonge and dore end the same time, June 15.

Should your department decide on granting the above, the club will hold itself responsible for the protection of fish in above districts, and will furnish the department with all information in their power as to quantity and kinds of fish caught in this neighborhood, provided the department furnishes the forms to be filled. All of which is respectfully submitted.

GEO. W. STEPHENS, President.
HENRY W. ATWATER, Sec.-Treas.
A. N. SHEWAN, Hon. Secretary.

HANOVER LAKE PIKE.

Editor Forest and Stream:

A few days since, receiving an invitation to come and put in a day at pike fishing from a friend of mine, Ben Harker, living at Oakwood Mansion, near Wrightstown, a small village not far from Pemberton, N. J., I packed up a small amount of duffle in my knapsack and took the evening train for a station near his residence. When I arrived Ben was waiting for me with his lively team, and soon we were going at a good speed toward Marion.

Next morning the weather was extremely pleasant, and after a very early breakfast we, accompanied by his brother Dick, were soon on the road going at a lively rate behind the same team, headed for a place off in the pines some ten miles distant called Hanover, once a thriving and busy village, containing a large furnace and other iron works, but now dilapidated and deserted, save, perhaps, some half a dozen families of woodchoppers, charcoal burners and berry-pickers (during the berry season). At Hanover is a large deep pond, in which pike of a good size are abundant.

Stopping at a stream on the way, Dick managed with his scoop-net to get a suitable supply of minnows for bait, and in good time we reached our destination.

Having obtained a boat and arranged our tackle, we were soon off on the pond, and in a short time the fishing commenced. Although the weather suddenly changed and became cold and showery, with wind northwest, we had reasonobly good luck with the fish during the forenoon; and after disposing of a noonday meal supply, enough for six men at least, with big drafts of new cider, we resumed our fishing and continued it until near night with fair results, after which we returned to Ben's home, getting there in the evening, having had a very enjoyable time of it.

Had the weather continued pleasant throughout the day without doubt we would have had extra good luck, for that is one of the best ponds for pike in South Jersey, being fished but a little on account of its being remote from villages and thickly settled regions.

In going there, and while in the neighborhood of the pond, we saw many gunners and heard the reports of firearms in all directions, thus showing that the game laws of this State are but a little, if at all, respected in that section, as shooting does not commence legally until Nov. 1. Around the pond we saw considerable game; but at the rate the shooting was going on but a little, if any, game would be left after a short time. It is unfair for lawbreakers to scoop in nearly all the game before the season commences, leaving but the poorest kind of shooting for law-abiding citizens after the game law is off. No true sportsman would be guilty of doing it, for the law, if respected throughout the State, would be a great benefit to every sportsman in it. A. L. L.

HOMERSTOWN, Oct. 23.

NORTH CAROLINA NOTES.

A LARGE black caterpillar is found on the red and Spanish oaks, it is almost black in color and from 1 to 2½ in. long, and about as big around as a lead pencil. It is exceedingly common and the bugs are gathered into gourds, and kept there until the fishing commences, when they are allowed to crawl forth over the angler and boat and make a very convenient bait. In the rivers and creeks that come out of the swamps in the flat coast region of the pine tar belt bream and crappie are abundant, and when a school of either of these fish is struck, using this black caterpillar for bait, you can take the last one of them without moving from the spot.

In Orton Lake the large-mouthed black bass abound, and more can be caught than desired. The perch family generally is well represented here. Col. Murchison, proprietor of the Orton House in Wilmington, controls the fishing privileges of the lake, and reserves it for the guests of the hotel and his New York friends. The pond is fifteen miles long and its banks are heavily covered with brush. On account of the latter it is necessary to have a short line when fishing from the banks. This brush is a great rendezvous for the different kinds of herons. A half dozen nests of these birds are often found in one small bush. They are undisturbed and quite tame. Alligators are very common in the lake also.

The Black River and its system of waters, which enter into the Cape Fear River, twelve miles above Wilmington, contain a large number of game fish. A friend of mine tells me that he saw a man in Wilmington in the spring who had a small boat and live boxes, in which were 507 large black bass, crappie and yellow perch, caught in the Black River.

The Lumber River perch is considered the finest game and pan fish in the State. This perch has been thinned out immediately around Lumberton, but good fishing is still to be had within five or six miles of this place.

Overfishing is being practiced here. The market fisherman takes 300 hooks and ties them to overhanging bushes as he goes along; by the time he has the last one tied the first are ready to be looked after, and in this way many fish are secured.

At Elizabetha City I saw fishermen using skim-nets in the Pasquotank River, and was very much astonished to find that they were catching beautiful specimens of crappie with these shallow nets right at the surface of this very clear juniper water. On seeing a bunch of the fish taken into a house I followed and asked to be allowed to see the fish opened. We found that they were feeding on small minnows, and upon further investigation found that the minnows were exceedingly plentiful right over a portion of the river where the bottom was covered with slabs from saw mills close by, and from these slabs come a small insect larva, upon which the minnows were feeding. The crappie were so intent in their feeding upon these small fish that it was possible for the skim-netters to scoop them up. S. G. WORTH.

VERMONT FISH AND GAME LEAGUE.

A CALL has been sent out by Mr. John W. Titcomb, of Rutland, Vt., acting for the Rutland Fish and Game Club, the purpose of which is to invite the sportsmen of the State to unite in a league. The call sets forth:

"Some years ago a local association known as the Rutland Fish and Game Club was formed here for the purpose of protecting the fish and game of Rutland county and stocking its streams with trout. This club, with very small means, has been notably successful in the enforcement of existing fish and game laws and in stocking our streams with trout; and we are led to believe that a somewhat similar association of sportsmen throughout the State would accomplish far greater results for the pleasure and profit of all its inhabitants. * * *

"With natural advantages which cannot be surpassed, it is unfortunate that Vermont should be allowed to fall behind her sister States, and it is the purpose of the proposed league to take advantage of the opportunities for good work in this direction which are presented everywhere throughout the Green Mountains.

"With this end in view, we ask you to pledge yourself to become a member of the State League by filling out the accompanying blank.

"The objects of the association are: To procure and enforce suitable laws for the protection and preservation of food fishes, game, song and insectivorous birds; the revision and codification of our present laws on this subject; the promotion of fish culture; the introduction of new species and varieties of fish, game and useful birds; and to disseminate information relating thereto."

Among the many prominent men who have indorsed this movement and pledged themselves to become members are Charles H. Sheldon, president Rutland Fish and Game Club; Gen. W. Y. W. Ripley, W. C. Clement and H. R. Dorr, Rutland; Hon. Herbert Brainerd, Fish Commissioner, St. Albans; Gen. W. W. Henry, Burlington; Col. Geo. W. Hooker, Brattleboro; Hon. B. B. Smalley and Hon. Geo. F. Edmunds, Burlington; Gen. J. G. McCullough, Bennington; Chas. F. Orvis, Manchester; Col. M. S. Colburn, Manchester Centre; Hiram Atkins, Montpelier; Hon. Redfield Proctor and Hon. Fletcher D. Proctor, Proctor; Gov. Carroll S. Page, Hyde Park; Hon. Edward Smith and H. H. Swift, M.D., Pittsford; J. S. Viles, Montpelier; W. H. H. Murray, Burlington; E. Jas. Ritchie, St. Johnsbury; Hon. T. W. Moloney, Rutland.

We trust that Mr. Titcomb and his associates will meet a suitable response from the sportsmen of Vermont. The Rutland Club has already shown that it understands the needs of the time, and there is every assurance that the proposed association will be efficient for good under the direction of such promoters as are here named. In this connection the following paragraphs from the report of the Vermont Commission will be read with interest:

FISH AND GAME PROTECTIVE SOCIETIES.

The Commissioners recommend as one of the most efficient instrumentalities for the accomplishment of the objects contemplated by our laws, the organization of local clubs or societies for the protection of fish and game; that all who are interested (and every citizen should be) in true sport, and in the preservation of our forest and stream life, take steps for the organization of such clubs, which may also be made the means of much social enjoyment and healthful and legitimate sport. There are now several societies of this kind in the State, and the assistance rendered by them to the Commissioners has been most valuable and highly appreciated, and the good work they have done is deserving of all praise and emulation.

STATE FISH HATCHERY.

After careful consideration and examination of the subject in all its bearings, the Commissioners deem it their duty to recommend, strongly, the establishment of a State fish hatchery. They believe this recommendation to be in the interest of true economy, and that the results of its adoption would be most satisfactory.

The people throughout the State are coming to realize that there is an actual, tangible and considerable profit to be derived from trout ponds and streams—a profit in many instances exceeding that which could be realized from the cultivation of a corresponding acreage of the most fertile land. As a consequence, the Commissioners have not been able, with the means at their command, to meet the call made upon them for speckled and lake trout and landlocked salmon during the past two years; and the demand is steadily increasing. The cost of eggs and expenses for hatching and distributing the fry of these fish alone in the last two years, without considering many incidental expenses connected with it, has been nearly two thousand dollars, or about one-half the entire appropriation, while, as above stated, the supply has not been equal to the demand.

To purchase the eggs and defray the cost of hatching and necessary care, as it has to be done at present, on a basis of retail prices is unduly expensive. A hatchery adapted to all requirements would not cost more than from twelve to sixteen hundred dollars, a competent man to manage and care for it could be secured at from four to six hundred dollars per year, and such an establishment would produce, according to the best information we have been able to obtain, a thousand times more stock than one thousand dollars per year will obtain expended as it now has to be. This output would so replenish and supply our ponds and streams that they would soon be fairly teeming with "speckled beauties," to the great advantage, not only of Vermont palates, but Vermont pockets as well; besides this, there would be a large supply of fry which would find ready sale at good prices, and should bring in a very considerable revenue.

Many of the other States have institutions of this kind, and are fully satisfied of the actual profit resulting from them. When this subject is duly considered and investigated, taking into account the direct revenue to be derived from well-stocked trout ponds and streams, the advantage to the people of the State from an increase in the number of summer visitors, and the money which will be distributed by them finding its way through all the different channels of trade and business (for it is beyond question that no greater attraction can be offered the average summer tourist than the reasonable certainty of a handsome string of the finest fish in the world as a reward for his day's sport), and the profit to be derived from the propagation of fry for market, the conclusion is unavoidable that the establishment of a State hatchery in Vermont would be a measure of wise economy and a source of profit to the State.

New Hampshire annually appropriates many thousands of dollars for her fish interests, and finds the investment a most satisfactory one. The Commissioners trust this matter will receive the careful attention it deserves, and that some action may be taken upon the subject by the General Assembly.

RECOMMENDATIONS AS TO THE LAWS, ETC.

The Commissioners respectfully recommend that section 3872 of the Revised Laws be so amended as to make the open season for trout, lake trout and landlocked salmon from May 1 to Sept. 1, instead of from April 1 to Aug. 1, as at present. The law as it now stands is seriously objectionable, and works detrimentally.

In April the ice is not out of the ponds and large streams in ordinary seasons. If holes are cut through the ice the fish naturally collect around them for sunlight and fresh air, and as they are very hungry after a long winter's fast (for the food supply in winter is so scanty that it amounts to almost that for trout), the poor half-starved fish are an easy prey, and may be taken by thousands, until in two or three seasons a well-stocked pond or stream will be almost entirely depleted. In April, too, the trout are not in condition or properly fit for eating; while the closing of the season at the beginning of August, which is one of the best months, if not the best, for fly-fishing in most of our waters, debars many of our own and visiting anglers from the pleasure of this choicest of outdoor recreations, and that unnecessarily and without compensating benefit of any kind. August has come to be the best month of the season for summer visitors, and to make it a close trout season seriously interferes with their plans and pleasures, and tends to drive them to other States, where the laws are more accommodating, to the manifest detriment of our landlords, farmers, merchants and others, who derive a benefit directly or indirectly from their patronage.

The Commissioners earnestly protest against the repeal of the present law limiting the size of trout to be caught to 6in. The effect of that law has been most excellent, and already the size, quality and quantity of trout taken where it has been observed and enforced afford the strongest testimony in its favor. It is practical, sensible and right. No change should be made in it, in the opinion of the Commissioners, unless to make it more effective.

A "WORM CHARMER."—Here at last is what the world has been crying for for six thousand years and more. There was a time when a part of the fun of going fishing was in digging the worms for bait; but all that has gone by in this progressive age. A man came into the FOREST AND STREAM office the other day, said his name was Paulsen, and announced that he had discovered a way to make the worms come forth; that he knew the angling fraternity would hail him as a benefactor, and that he wanted to advertise. He offered to go down into the street, which nowadays is always torn up, and prove it to us by invoking a million worms from the soil of Broadway; but we accepted his statements without ocular demonstration, and to-day in our advertising pages is set forth the virtue of Paulsen's "Worm Charmer." It is a liquid, Mr. Paulsen tells us, which is sprinkled on the ground, without incantation, and immediately the worms emerge in hordes with their gripsacks packed, and scuttle off for the next county. A tolerably fast runner can head them off before they climb the fence.

NAMES OF THE ROUND WHITEFISH.—One of the small whitefishes of North America, which extends from New England to Alaska and from the Great Lake region to the Arctic ocean is the round whitefish or shad waiter (*Coregonus quadrilateralis*). This species is also called the Menomonee whitefish. The name shad waiter is applied at Lake Winipiseogee and in Memphremagog Lake. From Col. Hodge we learn that in the Connecticut Lakes, N. H., it is called "bill fish." In Newfound Lake it is the "mackerel." In Megantic Lake it is known as the "cucumber fish," and in some other portions of New Hampshire it is styled "clear fish." Chesterfield Lake, according to Col. Hodge, appears to be the southern limit of the round whitefish in New Hampshire, and it is smaller in this lake than in any of the others. This little whitefish is of especial interest because it furnishes abundant and wholesome food for the lake trout. It is an excellent food fish, but owing to its size and remarkably small mouth it is difficult of capture by means of hook and line.

LAKE TROUT NOTES.—Mr. Walter Aiken has informed us that the lake trout in Winnipiseogee Lake, N. H., are usually long and lank fish, with flesh of a pale color and inferior taste; yet the landlocked smelt, which is considered one of the best food species for the lake trout to feed upon, is abundant in Winnipiseogee. In Newfound Lake, N. H., according to Mr. Aiken, the lake trout are shorter and thicker and the flesh is more highly colored and has an excellent flavor. Col. Hodge confirms the opinion as to Winnipiseogee lake trout, and states that the species in Newfound Lake has yellow flesh. The voracity of the species may be appreciated from the fact that fifty-nine smelt have been found in a 7lbs. individual caught at Bristol, N. H. The lake trout is a rival of the cod in its omnivorous habits. Last winter at Winnesquam Lake a 17½lbs. fish, caught through the ice, had in its stomach a pebble about as big in circumference as a copper cent, and an entire fish hook, which was in a very rusty condition.

FISH AND GAME IN TAMPICO.—Consul-General Sutton in a report to the Department of State from Nuevo Laredo, Mexico, published July, 1890, has the following interesting note on the wealth of animal life in Tampico: "In the gulf and inner waters north and south are vast supplies of fish, turtles, alligators and birds. From here to Corpus Christi, Tex., is a sportsman's paradise from October until April. Considerable quantities of dried bird skins, plumage, etc., have been sent from here, and a New Jersey firm has had its buyers here for several years, getting large numbers of alligator skins." The fishes are known to be essentially those of the West Indian fauna and, consequently, agree in the main with the species found at Key West, Florida, which embrace a great variety of showy and excellent game fishes. Among these are the groupers, the snappers, the tarpum, the grunts, porgies, barracuda, pompano, big-eyed scad and mullets.

BLUEFISH ON NORTH CAROLINA COAST.—At Life-Saving Station No. 12, Currituck, N. C., more bluefish were seen last spring than have been seen for years. The captain of this station caught 26 large ones by impaling them with a pitchfork as they came upon the beach one day. These fish were chasing the mullets inshore and were rolled up by the surf. Hundreds of mullets were washed up on the shore, many of them being bitten in half by the bluefish, and the water at times was actually crimson with the blood of the mullets devoured by the "pirates." Owing to the good prospects for fishing an unusual number of camps were established on the coast. I counted seven fishing camps from Life-Saving Station No. 12.—CLIFF.

LAKE ST. JOHN.—The new hotel at Roberval has been so well patronized this year by American tourists that Mr. Beemer is now building two large wings, which will increase the accommodation so as to lodge 300 guests instead of 100, as at present. In addition to this he has built a magnificent hotel, equal to that at Roberval, on one of the islands in the Grand Discharge, the center of the ouananiche (French for winninish) fishing grounds. This will be run in connection with the Hotel Roberval, and two steamers will run daily between Roberval and the Grand Discharge during the tourist and fishing season.

EVERY PROTECTIVE CLUB should subscribe for the *Book of the Game Laws*. It will prove invaluable, for it gives the full text of the law.

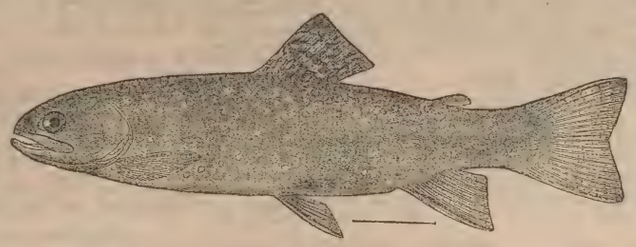
Fishculture.

NOTES ON THE BROOK TROUT.

AT the hatchery at Plymouth, N. H., Col. E. B. Hodge, Fish and Game Commissioner, found a female brook trout full of ripe eggs ready to be cast in July of this year. Unfortunately no male could be found in proper condition to fertilize the eggs. Brook trout have been found with mature eggs in most of the summer months, and this is an additional instance of irregularity in the spawning season.

The brook trout of Sunapee Lake are noted for their large size and beautiful colors. The good condition of the fish is attributed to the abundance of smelt, upon which they and the larger *Salmonidæ* feed. A brook trout weighing 1lb., when opened was found to contain nine smelt.

The number of eggs obtained from the breeding females at Sunapee Lake hatchery is remarkably large. On Oct. 11, for example, Col. Hodge took 13,000 eggs from four females. The Colonel called our attention to a peculiarity in the spawning of a pale-colored brook trout inhabiting Sunapee Lake. This variety is not profusely reticulated like the common form and spawns later than the ordinary *fontinalis*.



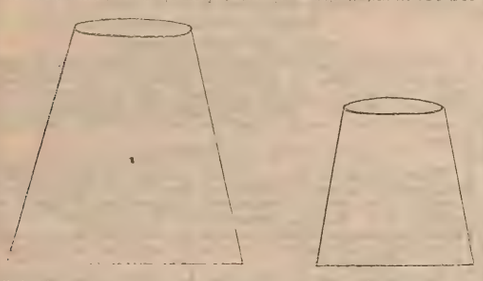
Brook trout commenced spawning at Plymouth Sept. 10, about eighteen days ahead of their usual time, and on Oct. 9 some eggs in the trays had already begun to show eye spots. Col. Hodge does not feed his trout at all when the spawning time is near at hand. In this way when the eggs are taken they are entirely free from digestive products. After the spawning is completed the breeders are fed as soon as they will take food and are given as much nourishment as possible, in order to prevent the attacks of fungus.

There is a great deal of variation in the ease of manipulating female trout at Plymouth. Some of them have thin

abdominal walls and can be stripped of their eggs without much pressure; others have thick, tough integuments and belly walls and yield their eggs slowly and with difficulty.

Col. Hodge finds that small brook trout spawn later than large ones, sometimes continuing into January.

There is a good deal of difference in the color of the eggs of brook trout. The large *fontinalis* of Sunapee Lake have orange eggs, while at Plymouth the eggs of the same species are pale lemon. Col. Hodge attributes this difference to the food. At Sunapee this cousists chiefly of smelt, crustaceans and insects, while at Plymouth the trout are fed on raw liver and heart and cooked lungs of beef and sheep. At Plymouth some wild trout are obtained every year and their eggs are at first orange, but after being fed in the manner described for about two years, they have become lemon-colored.



THE BROOK TROUT.

Some of the enemies of trout at Plymouth are minks and bullfrogs. The former are troublesome only in fall and winter. A big bullfrog was found at one time with a 5in. trout in its stomach. A cat was discovered killing trout at the hatchery in the winter and was caught in a trap.

The State hatchery near Plymouth receives its water supply by gravitation from three springs having a winter temperature of 34deg., 37deg. and 41deg. Owing to this circumstance it is easy to retard or accelerate the hatching of the eggs by manipulating the water supply alone.

The form of the dip-net in common use for handling salmon and trout is open to the objection that it causes the death of a large percentage of the fish, amounting in many cases to 25 per cent. of the whole number. In order to prevent this destruction of trout and salmon Col. Hodge has devised a new form of net, which is much wider at the bottom than at the top and allows the fish to lie at full length. This reduces the tendency to struggle and injure themselves. For brook trout the hoop is 15in. in diameter, the depth of the net is 24in., and its width at the bottom is also 24in. For the landlocked salmon the hoop is 17in. in diameter, depth 36in., and width of bottom 36in. We can testify from our own observation to the superiority of these nets over those of the usual pattern; they are made by the American Net and Twine Company, of Boston, Mass., from specifications furnished by Col. Hodge. The sketches herewith given, on a scale of 1in. to 1ft., will sufficiently show the style of the net. The size of the mesh can be regulated to suit the kind of fish to be handled; those in use at Plymouth have the lower portion scarcely one-half inch from knot to knot.

YEARLING LANDLOCKED SALMON.

Editor Forest and Stream:

Noticing an article in FOREST AND STREAM of Oct. 25, stating the growth of yearling landlocked salmon at Sunapee Lake, New Hampshire, I am reminded of the experience of the Bisby Club with this fish in their preserve at Bisby Lake, in Herkimer county. The club hatched at their station in this lake in the winter of 1889, 15,000 landlocked salmon eggs, which were planted in the lake and into two small spring ponds flowing into it in March following. In June, 1890, only fifteen months after the plant was made, the young fish appeared in both places. They could have been none other than the fry planted the preceding year, as none had been planted there before. These young fish measured respectively from 8in. to 11½in. in length. Several were taken on the hook ranging between these lengths. Some were taken with the fly on the surface and several at baited buoys in 20ft. of water. Their appearance was in all specimens but one like adult fish. The color was steel gray on the back, silvery white underneath, with characteristic black spots on the gill covers and sides, but no red spots or transverse bars. I took several of these fish myself and therefore know what I say respecting them. The facts show the extraordinary adaption of the Adirondack waters to landlocked salmon.

R. U. SHERMAN.

NEW HAMPSHIRE FISHCULTURE.

WE paid a flying visit to our friend Col. E. B. Hodge, Fish and Game Commissioner of New Hampshire, recently, and saw the beginning of fishcultural work at Plymouth and Sunapee Lake. At Plymouth the Commissioner had begun taking eggs of the brook trout and a good supply of fertilized eggs were laid down in the hatching house, some of which began to show the eye spots as early as Oct. 9. The number of breeding brook trout at Plymouth is very large and their condition highly satisfactory. There are, also, a few Loch Leven trout and a very small number of rainbow at this place. The latter species is reported to be unsatisfactory for New Hampshire waters. The eggs of the brook trout, which have been kept at Plymouth for a period of two years or longer, are usually of a pale lemon color. This Col. Hodge attributes to their food.

At Sunapee Lake may be seen some of the finest breeding brook trout in any waters. We saw examples that must have approached 6lbs. in weight and the colors of the large males were particularly brilliant. The eggs of the fish at this station are orange colored. Thirteen thousand eggs of brook trout were obtained from four females during our stay.

It was supposed that the golden trout (*Salvelinus aureolus*) would be found on its spawning grounds at Loon Island in Sunapee Lake; but a strong and persistent northwest wind made the water so rough that it would have been almost impossible to see the trout, and it was entirely too stormy to make the attempt. The wind was stranding landlocked smelt in small numbers on the sand beach forming the east shore of the lake near the hatching station. One of the curiosities in the tank is a male golden trout, 18in. long, which should weigh not less than 3lbs., but probably will not weigh 1lb., owing to its emaciated condition. It resembles the cod, described to us in Alaska by the superintendent of the salting station at Pirate Cove, which was so thin that "you could read the San Francisco *Bulletin* through it." The thickness of the body immediately behind the head is only 1⅛in., and at the root of the ventral fin only 1in., diminishing rapidly from this point to the tail. Notwithstanding its emaciation milt was developed and the full breeding colors are present. The lower parts from the head to the tail, but not extending up to the middle of the body, are brilliant orange. The sides have numerous pink spots, which are mostly below the middle line. The pectoral, ventral and anal fins, in addition to the usual colors already described in these columns, are beautifully marked with a pinkish tinge.

A beautiful hybrid between the golden trout and the brook trout has been produced at this station, and we have taken notes upon specimens three years old, which we will publish later on. On Oct. 13 Col. Hodge took 100,000 brook trout eggs at Plymouth. On the 14th he began work at the Keene hatchery, and was to start for Dublin Pond the following day to instruct the men in collecting and handling the eggs of the trout found in that body of water and described in our Trout Supplement under the name of *Salvelinus agassizi*. From Dublin Pond the Commissioner was to go to Laconia and from thence to Newfound Lake, and afterward to Sunapee Lake, to continue the work with the brook trout and inaugurate operations with the golden trout and landlocked salmon if they prove to be in suitable condition.

At Plymouth some landlocked salmon in the pond were beginning to act as if about to commence spawning, but work upon them did not begin at that early date. Upward of twenty landlocked salmon were confined in the tanks at Sunapee, some of them very large and stout, and most of the males with the jaws greatly enlarged. There is a good deal of variation in the shape of the cartilaginous tip on the lower jaw of the breeding male. In one example this tip is about ¾ of an inch in length and projects from the end of the jaw almost at a right angle. In most cases the upper jaw has a deep notch in front to receive the enlarged tip of the mandible, but in one case at least there is no notch and the tip is received in a cavity in the upper jaw which does not extend to the upper surface of the snout

The condition of fishculture in New Hampshire is most gratifying and the results of the work astonishing, especially when the small amount of the appropriation is considered.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 13 to 17.—Third Annual Dog Show of the South Carolina Poultry and Pet Stock Association, at Charleston, S. C. Benj. McInness, Jr., Secretary.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1658.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.

March 2 to 5.—First Annual Dog Show of the Duquesne Kennel Club, at Pittsburg, Pa. W. E. Littell, Secretary.

March 3 to 6.—Second Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderffer, Secretary.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

FIELD TRIALS.

November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 3.—Fourth Annual Field Trials of the Indiana Kennel Club, at Carlisle, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 3.—Second Annual Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Toronto, Ont., Secretary.

Nov. 4 to 8.—First Beagle Field Trials of the National Beagle Club, at Hyannis, Mass. F. W. Chapman, Secretary, 304 Washington street, Boston, Mass.

Nov. 7.—Ninth Annual Field Trials of the Robins Island Club. W. L. Wellington, Secretary, Brooklyn, N. Y.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

THE AMERICAN COURSING CLUB MEET.

GREAT BEND, Kansas, Oct. 21.—The fifth annual meeting of the American Coursing Club was announced to begin to-day, and most of the attendants of the meet are now on hand, but the heavy rains of last night and this morning have necessitated a postponement of the running. Should it clear to-morrow, the ground will be in all the better condition for running, by reason of the rain.

At the business meeting held at the Morrison House last evening, little of interest transpired beyond routine matters. Mr. D. N. Heizer, president, was in the chair, and Mr. Ira D. Brougher, secretary of the club, was at the desk. In the matter of applications for membership, on motion of Mr. Carney the rules were suspended and the secretary cast the ballots for the following new members: Mr. Cecil Granville Egerton and Mr John Russell, both of Ness City, Kas.; Mr. Geo. Nichol, of Cable, Ill; Mr. Fred Hoey, of Long Branch, N. J.; Mr. August Belmont, Jr., of Hempstead, N. Y.; Mr. John J. Mannion, of Allegheny, Pa.; Dr. Lewis and G. Tandy, of St. Louis, Mo.; Mr. Benj. O'Keif, also of St. Louis, Mo. Dr. Mulford and Mr. Hasbrook, of Kansas City, were then, on motion of Mr. Carney, elected by acclamation honorary members of the club. A resolution was adopted that only owners of competing greyhounds or their servants should be permitted to follow the dogs, and that Rule 19, relative to impugning of a judge should be enforced. Messrs. A. C. Schermerhorn, G. N. Moses and C. G. Page were appointed field stewards. The drawings for the order of slipping then went on, and the meeting adjourned shortly after 11 P. M.

The work of both secretary and executive committee has been well carried out, Mr. Luse, resident member of the committee, deserving abundant credit for his industry. It is announced that the Uhl & Carney ranch, so long known as the running grounds, and doubtless the best natural coursing grounds, taking into consideration the abundance of strong hares, in this or any other country, has been sold to a Kansas City syndicate; possession to be given at an early date. This will not interfere with the running this year in any way, and probably will not next year, but it may deprive the club and also Great Bend of Mr. Carney's presence, since business arrangements may take him to some other locality. Mr. Carney's services in the past have been invaluable, and his standing in the club is such that to miss him at any meet would seem little short of a calamity.

It should be remarked here that the quality of the greyhounds brought out this year is far above that of any preceding year. Good blood and better breeding have done their work, and to-day perhaps the best greyhounds in America are assembled here for the sport of this week. The All-Aged Stakes, however, only show thirty-two entries, and it is a matter of disappointment to record that in the puppy stakes only ten nominations appear, out of all the fine young dogs now coming on in such numbers.

In the slips there will be some new dogs, and some of the familiar ones will be missed. Mr. Lowe does not enter White Lips, for instance, she now having a litter, nor shall we see Partera, which never has run here, but was thought a rare good one. It was announced, also, that Trales would not go this year, but he is entered, though, with three or four new and tenderish toenails to trouble him. One sees here now an entirely new type. The big and rangy ones of the first few years are hardly to be seen now. The compact, muscular, smaller dog is recognized in theory and practice to be the better hare courser. Doubtless we shall see good sport and merry working at this meeting.

Mr. Joseph Holloway, well remembered as the judge of the first meeting of the club, five years ago, will judge this year, and doubtless very acceptably to all. Arthur Massey, the old reliable Waukenphast, will do the slipping.

Mr. M. Phister, of Cincinnati, well known as an enthusiastic lover and good judge of greyhounds, and importer of some of the best in the country, will be here to-morrow with his wife and child. Mr. Phister has entered into a limited agreement, by which he furnishes to Rookwood-Landseer Kennels for handling, three of his dogs, Nettlefield, Norwegian and Belle of Eltham. These dogs will all run here and should be among the best of the imported ones.

Mr. J. Herbert Watson, of New York, secretary of the Eastern Coursing Club, is present, and as the agent of the new organization, the National Greyhound Club, brings with him an elegant and valuable trophy cup, which will be given to the winner of the All-Aged Stakes. Mr. Watson has with him his imported bitch Dry Time and will run her. German Hopkins, agent for August Belmont, Jr., has also here a remarkably clever-looking imported bitch in Minnie Staton. These, with Mr. Phister's three, make a splendid group of greyhounds of themselves. Mr. H. C. Lowe has a grand lot of young dogs in his Neversettle—Partera litter. Mr. Heizer has several good ones, and Mr. Luse has a whole yard full of likely ones to choose from. There will be also a number of Trales puppies entered, and all in all, this meeting will show a lot of dogs quite different from those offered in the crude beginning of the first year's meeting here five years ago.

Mr. and Mrs. C. G. Page are here from Illinois. Mr. Page has no dog of his own breeding to run this year, but will join Mr. Lowe in his nominations. Mr. Alfred Haigh is on from Cable, Ill., with a clever-looking couple. Dr. Foncannon and Mr. Lyon, of Emporia, have some that are apt to stay well down. Some new and valued men here also, are Messrs. John P. Usher, F. L. Webster and S. T. Field, all of Lawrence. The Great Bend men are all on hand and wide awake as usual. To-day this little Western city has many of the best greyhounds and some of the best greyhound men of the country within her walls.

Wednesday, Second Day, Oct. 22.

A heavy fog obscured the country in the morning, so dense that several riders got astray on the flats while riding in search of the club house. A fairish crowd was on hand to start, and this by evening had grown a large and unruly one. The original package showed its work to some little extent. The dogs went to the slips at 10:30.

The first pair down was

DRY TIME—KING LEAR.

Dry Time is the property of Mr. J. H. Watson. She is imported, is by Britain Still ex Haytime, and is a nice looking light fawn, though she was scarcely hard enough for this work. King Lear is one of Mr. Lowe's lot of puppies, by Lord Neversettle ex Partera. He is a dark brindle, like all the rest, with Partera's markings and some of Neversettle's size. These got one of Mr. Carney's great whitetails, and the hare left both the dogs. King Lear would not be denied from first to last and set the pace. The bitch, not being in it after three-fourths of a mile, King Lear won.

LORD MACPHERSON—NETTLEFIELD.

Mr. D. C. Luse's Lord McPherson and Rookwood-Landseer Kennels' nomination for Mr. Phister, the tidy bitch Nettlefield, were the next brace in. They got another tremendous jack that led to the hills and gave them a punishing course. They ran across a fence which kept the judge back so much that he could not see all of the course, and he made it an undecided. The hare escaped.

LORD MOSES GLENDYNE—LIBERTY.

Mannion & Halladay's dog Lord Moses Glendyne and Lowe & Page's bitch Liberty went in. They got the third whitetail, and it led Liberty a punishing race till it escaped in high grass. Moses got enough of it and quit. Liberty won.

DECK—MAJOR GLENDYNE.

Emporia Kennels' dog Deck and M. E. Allison's Major Glendyne. Major was best up, did the work of four go-bys and was doubling points long before Deck got in. Deck came in strong and scored. Major was in for a point or two, as could be seen from the fence that stopped the judge and riders. Deck then led again to the end. The hare was killed, but by which dog could not be told. Major Glendyne won.

LINE OF LUCK—NORWEGIAN.

Low & Page's Line of Luck and Rookwood-Landseer's nomination for Mr. Phister, the big and fine-looking light brindle Norwegian, half-brother to the great Fullerton, now went down. A jack started close and passed near them. The dogs became excited and the slipper could not hold them. They broke on a short and poor slip, and the hare was killed within 200 or 300yds., before much work was done or the dogs were really extended. Line of Luck killed on Norwegian's turn. Norwegian won by half a point and was given the course. It would have been better had they been put in again for another test.

The party now went into the club house for lunch. A trap-shooting tournament was going on at the club house and the grounds appeared lively.

NETTLEFIELD—LORD MACPHERSON.

After lunch Lord McPherson and Nettlefield went in for another course. Another jack escaped. The coursing was very pretty and even, Nettlefield finally getting the hare from Lord McPherson and showing much merit. He, however, retaliated and led, scoring but little to the hills. Lord McPherson won.

BELLE OF ELTHAM—LITTLE CLIMBER.

Rookwood-Landseer Kennels' nomination for Mr. Phister, the tidy bitch Belle of Eltham (Jester—Bit of Fashion) and Lowe & Page's Little Climber had four hares up before they got off. The run up was neck and neck, and beautifully done. Belle was perhaps better up in this. Climber, how-

ever, held the hare as the dogs drew off for the straightaway, showed the speed and won. The hare escaped. The Eastern dogs seem to be unable to stay with the tremendously fast jacks which have been found here this meet. They are fine and close at first, but are not up to the long gallop. Thus it may almost be said the hares are too good for the best coursing style.

LANCASTER—MISS BEATRICE.

D. C. Luse's Lancaster and Dr. L. G. Landy's Miss Beatrice were not well sighted, but on straightening out Lancaster showed a tremendous going power, and had it practically all over a hard course. The hare escaped. Lancaster won.

LADY IN BLACK—LADY JANE.

Mr. Luse's Lady in Black and Mr. Heizer's Lady Jane made much of a repetition of the above course, and Lady in Black won handily.

MASTER GLENDYNE—LANCASHIRE LASS.

Mr. Alfred Haigh's Master Glendyne and Lowe & Page's Lancashire Lass did not sight their first jack, but afterward got a big one. They made the third race that was all one way, Lancashire Lass leading and doing the work and winning with all to spare.

LORD NEVERSTILL—MINNIE STATON.

Lowe & Page's Lord Neverstill and Blemton Hollywood Kennels' (of Hempstead, N. Y.) bitch Minnie Staton, got a long slip on a big jack over hard ground. Minnie went up with a great burst of speed, and scored, holding the hare for a half mile. Neverstill drew by and worked ahead over the flat to the hills, wrenching occasionally. Minnie stopped at the hills. The hare escaped. Lord Neverstill won. Thus Mr. Hopkins, who brought out Minnie Staton for Mr. Belmont, saw his dog go out on the first heat, as indeed all the Eastern dogs had done. It was thought by many that the rarefied air of these plains, about 1,800ft. above sea level, is too much for a dog that is not acclimated. The main truth is, nowever, that all these Eastern dogs were fitted miserably. A Mongolian Chinese sort of handling is what victimized them.

SNOWBALL—BELLE.

Mr. D. N. Heizer's Snowball and Mr. A. C. Schermerhorn's Belle got a good whitetail. This was a one-dog course. Belle led up and harried, and placed Snowball twice, but she could not hold. Belle went ahead, worked the hare in redhot style across the flat quite unaided, coursed it up the hills, clung to it, and killed alone beyond the bluffs. Belle must have scored over 30 points, and gave the prettiest exhibition of close work yet seen. Belle won.

VERDURE CLAD—LADY GRAHAM GLENDYNE.

Rookwood-Landseer's bitch Verdure Clad and Mr. W. W. Carney's bitch Lady Graham Glendyne got a "long" jack, which got away. Verdure led up and turned, placing Lady, who lost it soon. Verdure was then ahead for a half mile or more, but scored only by wrenches, and but three of those, the hare leading her too far. On the hillside Lady took a straight go-by and a turn, and the dogs passed out of sight, the judge being entrapped by one of the numerous wire fences, which are flagged, but not gapped as they should be. The course was undecided.

LADY BARTON—CUTE.

Mr. Luse's Lady Barton and Emporia Kennels' dog Cute got another of Mr. Carney's phantom jacks. Lady did the work nicely for three-quarters of a mile. She works very close. Cute then drew by and scored repeatedly, holding the hare to the hills, where both dogs and hare escaped the judge, who made it undecided. This closed the running of the day. Out of 14 hares coursed only 3 were killed.

A business meeting was called at the Morrison House during the evening. It was discovered that by the resolution passed the evening previous the representatives of the press would technically, though unintentionally, be excluded from the course. The resolution was therefore rescinded, and the full courtesies of the grounds were extended to all the press.

Thursday, Third Day, Oct. 23.

The weather was bright and warm. The crowd was the largest ever seen at any of the meets here, and was hard to keep in order. The system of field marshals has never been extensive or well organized enough in the club, and might be improved in this respect, although the gentlemen in charge did their best in their difficult task of managing a quarter of a mile of excited horsemen and tangled equipages. No accident had as yet happened, till in the afternoon Dr. Foncannon, of Emporia, got an ugly fall while his horse was at full speed. This ground is as dangerous to ride over as any in the West, and there will be a serious accident here yet. A judge takes his life in his hands every course he runs. Mr. Halloway is to be complimented on his skillful and determined horsemanship. He has been fairly mounted, and has been in at the finish in nearly every course unless stopped by wire. His judging is thus not guessing, and those who have objected to his judging have for the most part simply displayed their ignorance. The reporters for the press, not having so good a string to pick their mounts from, and being for the most part confined to weak-kneed cow ponies, whose law is hardly over a half day, have found it hard to see some of the long straightaways, which have so much marked this meet. More hares were killed to-day, but once more it was apparent that the jack rabbits of these flats, now bred by the survival of the fittest for the past five years, are actually too fast for pretty coursing. Fine condition and wind are necessary. The Eastern dogs, especially Mr. Phister's, had this against them; they were not fitted for this work in the least, were nearly all soft and not strung up, and lacked the weeks of actual work on this very country that they needed to command any chance to win. A feel along the loins of Mr. Lowe's or Mr. Luse's dogs to-day would tell the story. They were hard and fine. The gentlemen from the East brought fine dogs here, but they should blame themselves chiefly, and not the dogs, that they went out in their first or second course so generally. Next year they will have the wisdom of experience, and being men of pluck, they will doubtless come again, and knowing more, do better.

LADY BARTON—CUTE.

At 10:20 the first brace went in, Mr. Luse's Lady Barton and Emporia Kennels' Cute. This was quite a repetition of their undecided course of last night. Lady ran and turned twice, coursing the hare admirably, none better. At three-fourths of a mile Cute took up the running, scoring but little. After a mile of it he ran past the hare in grass, and Lady came on and picked it up to no merit. Lady Barton won.

DOLLIE—NIP.

Dr. Shaw's Dollie and Mr. Haigh's Nip got a good hare. Nip set the pace emphatically for a mile. Dollie drew by, earned three go-bys, coursed well and strong, Nip helping her nicely in the exchanging. In a watery flat, belly deep to the hare, Dollie made a sensational kill, and won a very pretty course.

BARNEY, JR.—MASTER PETER.

Mr. Brougher's Barney, Jr., and Lowe & Page's Master Peter got a red hot hare. Peter ran up, turned, wrenched often, earned a go-by, and did it all for a half mile, rolling up a lot of points. Barney then drew by, and settled to cut down the score, standing to win had he not killed too soon. Master Peter won.

YONDER HE GOES—TRALES.

Mr. Luse's Yonder He Goes and Mr. G. N. Moses's Trales went in. Trales went up the better when they got laid out for the hare, each being a bit unsighted at start. Trales showed ahead for four turns, a go-by and repeated wrenches. Yonder He Goes then drew by and worked the hare beautifully for four turns and a dozen wrenches. Trales was placed, but lost on a straight go-by, Yonder going in and killing to a very creditable win. Trales is last year's champion. His feet are badly banged up, and except for the late rain he would not have been entered, being also rather soft in flesh. Yonder He Goes is a Trales puppy, and seemed a very good one indeed, albeit a bit lacking in filial respect.

Running was now be gun in the

GREAT BEND DERBY.

BUSY BEE—GIRL'S FAVORITE.

The first puppies in were Russell & Nichols's Busy Bee and Emporia Kennels' Girl's Favorite. A bad start was made, but by judicious riding the judge laid the dogs on. Girl drew up, and in hot exchanging had the better of it, doing it all alone at the close and picking up the hare in her stride. Both these bitches were jet black and of the same size. They made a spirited course. Girl's Favorite won.

Luncheon was now had and a few photographs of the dogs taken.

DENMARK—LIEUTENANT LEO.

Emporia Kennels' Denmark and Mr. Luse's Lieutenant Leo then ran a hot and long undecided course.

AJAX—SURPLUS.

Emporia Kennels' Ajax and Rookwood-Landseer Kennels' Surplus ran a bruising course on a "long" hare, neither doing much to speak of. Surplus fell and Ajax got his first advantage, but could earn little. Surplus won.

MADDOX—BARTENDER.

Emporia Kennels' Maddox and Nichol's Bartender got a twisting young whitetail and made a pretty course of it in full view of the crowd. Bartender was a bit the better to the hare, took a turn, placing Maddox for a turn. Bartender drew past, coursed merrily close in and at length turned to Maddox, which killed. Bartender won.

LANARADZO—DEWLAP.

Mr. Luse's Lanaradzo and Rookwood-Landseer Kennels' Dewlap got a bruising run on one of Mr. Carney's ghost rabbits, but if they ever got a point from it, nobody but an owner could have seen it. Undecided.

DENMARK—LIEUTENANT LEO.

Denmark and Lieutenant Leo went in to decide their former difficulty. Four jacks got off unsighted, the crowd being now very unruly. At length they got a good hare. Denmark got the run-up and turn and shoved ahead in the exchanging. Leo drew by, turned and wrenched. The hare led to the hills, Denmark following after a racing go-by, and possibly turning the hare. Leo was beaten before he got up a second hare, which he coursed. Denmark won.

LANARADZO—DEWLAP.

In the undecided course, Lanaradzo—Dewlap, three hares got off unsighted, and the dogs then got a short slip and ran a hare to earth in a quarter of a mile, Lanaradzo being best to the hare and a bit better in the brief exchanging, won. A second hare was sighted before the dogs were taken up and they coursed it, Dewlap never giving Lanaradzo a look in and killing alone, on a hard hare. Such is life.

ALL-AGE STAKE—*Second Series.*

KING LEAR—LORD MACPHERSON.

The first pair to tempt fortune a second time were King Lear and Lord McPherson. This was a clinking course and full of work. The judge gave McPherson 14 points and Lear 12. To the reporter it seemed that this might have been reversed, and the totals of both not so large, but this should be said with diffidence, for the judge had the better horse. Lord McPherson won.

LIBERTY—MAJOR GLENDYNE.

Liberty and Major Glendyne got a hare which did not belong among Mr. Carney's bright galaxy of immortals, and they gave it a merry course. Major was better in the run-up, and showed all the speed at first and got his six points in advance, showing fine work for a half-mile. Liberty then was placed, and did a lot of close and plucky work, ahead of Major part of the time, and ran out a neat kill to win. A very close and showy course.

NORWEGIAN—LITTLE CLIMBER.

The fine light brindle, Norwegian, now went in with the tidy bitch Little Climber, and he gave her quite the worst of it at the run up, and could outfoot her at will for three-quarters of a mile. He, however, did not seem to turn so closely as he should, losing his stride several times on the hot corners. Climber learned his weakness, got to the hare and did the better work toward the close, killing and falling over the hare. Little Climber won. Thus Mr. Phister saw his last dog go out. Much sympathy was expressed for him, as this was his first appearance here, and his generous enthusiasm in greyhound matters grounded a hope that he might see his dogs in plenty of events. Norwegian is a half-brother to Fullerton, and he is a greyhound every inch, but it is very likely that if Fullerton himself, no better fitted and as much unused to these hares and this climate, were here to-day, the story would be much the same. This might shock some coursers in England, until they knew more of the conditions of the running here on the wild native jacks. There are jack rabbits here, plenty of them, which, on a slip of 100yds., will run clear away from any two greyhounds on earth, bar none. The man who says his dogs will catch them all, simply shows either his ignorance or his lack of candor.

BELLE—LADY GLENDYNE.

Belle and Lady Graham Glendyne ran a long and pretty course. Lady was first up and had the better of it for a dozen points. Belle then went by her as she liked, taking six go-bys, and working the hare in wonderful style. Belle turned the hare to Lady, who barely missed it as it took to earth. Belle won. A very good bitch, unless she has outclassed herself in her two courses up to date.

LANCASHIRE LASS—LANCASTER.

Lancashire Lass and Lancaster did not work well in the slips, the Lass not leading well. A hare was started and passed within 10ft. of them. In their struggles, the dogs were mixed up, and the Lass was thrown and unsighted. Not much merit, therefore, was in the run-up, which lay through the line of vehicles. Lass got a bad fall in the course and fell behind, but gathered herself up, steamed by on a great go-by, and was then the better in a long following run to the hills. Lass then closed up and turned the hare to Lancaster, which killed. This was the hardest course yet run, the pace of hare and dogs being simply terrific. Lancashire Lass won.

This closed the day's running. The representatives of the press were once more laid under their annual indebtedness to Mr. and Mrs. Carney for the hospitality of their home, without which feature the meet would not seem a success. A ball at the Morrison House, in town, concluded the festivities of the day.

Friday, Fourth Day, Oct. 24.

The day was bright and very warm, the heat in the afternoon being fairly blistering. The attendance was again very large and among the crowd, there were numerous unruly spirits, who became impressed with the belief that the whole show was intended for their especial benefit. One of that gentry refused to obey the commands of field marshals Schermerhorn and Page, and was promptly unhorsed, the brawny president of the club, Mr. Heizer, assisting in this with a grace and ease which showed his fitness for his office. The offender was sent from the grounds, and this well-merited and too-long-delayed lesson had a very good effect. It was reported during the afternoon that one, Jay Gould, of New York, would be upon the grounds, he being then at Hoisington, near by, but Mr. Gould did not appear, much to the relief of those who owned valuable stock in the greyhound line.

At 10:30 A.M. running began again in the second series of the All-Age Stake.

LADY IN BLACK—LORD NEVERSTILL.

Lady was first in on a rather twisting lead up, and won the turn and a wrench. At the end of a half mile Neverstill made a burst to close, but the black outfooted him, working and staying beyond belief for so slight and weedy-looking a bitch. Neverstill got a go-by on the inner circle, but lost again, and Lady led for the balance of a corking course of two miles, the hare escaping in grass. Lady in Black won.

LADY BARTON—DOLLIE.

Lady Barton and Dollie were two wicked little ones, the latter being a sister to Dr. Shaw's other fine little bitch Belle. Lady won the run-up and first work, Dollie a go-by and two wrenches. Lady drew by and placed Dollie. Dollie took up the challenge and crowded the bare ahead for three-quarters of a mile, showing the speed and grit of all the Trales puppies, and would have killed in a moment had the hare not taken to high grass. A kill would have meant a win for her, but as it was, Lady Barton won. The latter is a wonder for so small a creature.

MASTER PETER—YONDER HE GOES.

Much interest was felt over the course between Master Peter and Yonder He Goes. Master Peter being thought about as good as any of Mr. Lowe's fine lot of young ones. Peter had the best of it for the first few wrenches, and was the speedier. Yonder He Goes closed with great pluck, wrenched and reached to kill, flecking the hare and taking an ugly fall, which threw him over cover. He rose, closed the gap at once, with the hare turning slightly in his favor, turned, wrenched, and with a snake-like reaching kill, peculiar to himself, ended and won the course.

DERBY—*Second Series.*

GIRL'S FAVORITE—DENMARK.

They let two hares off unsighted, and then ran a short undecided. Later on they lost another hare unsighted. After dinner they got off. Favorite had the run-up and a wrench. Denmark drew past and did the little that remained for over a mile, when the hare was lost. Denmark won.

SURPLUS—BARTENDER.

These two got a long screwing lead-up, Bartender taking the scanty honors, and holding ahead for a mile with six points to his credit. He passed Surplus out of hand and placed him. Surplus later drew in on the inner lap and killed to no merit whatever, making only a point and a half according to the judge's score in his course of a mile and a half. Bartender won.

Lanaradzo now ran his bye, Lieutenant Leo for mate. Luncheon was then had, and a late start made after that. Running now started in the

ALL-AGE—*Third Series.*

LORD MACPHERSON—LIBERTY.

These two got a very strong hare. McPherson ran up and was better in the first light exchanging. Liberty then held ahead for a mile and a half, but the hare was too strong for her to score and escaped in the bluffs. Lord McPherson won.

LITTLE CLIMBER—LADY IN BLACK.

They got a crossing run-up, the hare favoring Lady, which wrenched and turned wide, placing Climber who turned, trying then to close at full extension on a straightaway. Lady then put on a terrible burst of speed and went right by, turning also. The hare took to earth a few hundred yards further on. Little Climber is out of the question a fine bitch, but the black freak, Lady In Black, was too much for her here.

YONDER HE GOES—LANCASHIRE LASS

got a long, hard, bruising course, with plenty of scoring, and Yonder killed the hare. The judge made it undecided. The Lass had apparently the better of it, but as to that no one could tell who was not right up with the dogs.

BELLE—LADY BARTON.

The remarkable little bitch Belle now tried conclusions with her short-tailed half sister Lady Barton, the lady with the iron legs. There was no credit in the run up, the hare favoring Lady, who traded turns at once with Belle. No real go-by was had, but Lady seemed a bit the quicker. She placed Belle, who crowded up, tripped the hare and fell. Lady then killed and won. The course was very short, and it might perhaps have been well to put them in again. It would at least have been a pleasure to see the white and brindle Belle at work on a "long" hare. Thus Dr. Shaw's bitches both went out. They have been very good, and in it lies a lesson. Both Dollie and Belle were in the country all summer, and they had killed over sixty jacks themselves and were nicely fitted. They were beaten only by a bitch whose fitting and care had been equally good, and whose sire was the same.

DERBY—*Third Series.*

DENMARK—LANARADZO.

They got a hard hare for puppies to handle, but worked it very cleverly and evenly. Denmark was stronger for the finish, drew ahead, killed and won.

Bartender ran a bye with Lieutenant Leo.

There now remained in the All-Age, Lady in Black, Lady Barton, Yonder He Goes and Lord McPherson, all the property of Mr. Luse, and Mr. Lowe's brindle bitch Lancashire Lass. For the latter the prospect seemed very far from pleasing, one against four, and when Yonder He Goes and Lancashire Lass were called again to the slips, Mr. Lowe withdrew the Lass and Mr. Luse had all the stakes. He was urged to run it down, and not leave the championship for four dogs to divide, but at first consenting, he later took up his dogs. Mr. Luse thus won the American Field cup, which is offered in $100 cash, the entire moneys of the All-Age Stakes and also the beautiful cup, value $100, which the National Greyhound Club, by its agent Mr. Watson, had with fraternal greetings sent out to its older Western confrère. The cup was later on formally presented and received with great applause and a vote of thanks from the American Coursing Club.

DERBY—*Fourth Series.*

BARTENDER—DENMARK.

These two now went into the slips to determine the winner of the puppy stakes. They got off well in a very pretty course, which they worked to an early kill by Denmark, which won.

This closed the running of the meeting, as Mr. Luse had now determined not to run down the last four in the All-Age. There is therefore no championship in the All-Age Stakes this year. Following is the

SUMMARY.

THE AMERICAN FIELD CUP, ALL-AGE STAKES.

Open to the world. For thirty-two or more all-age grey

hounds. Entrance fee $10; the winner to receive 50 per cent. of entrance money, and cup ($100 cash) donated by Dr. N. Rowe, also a silver cup donated by the National Greyhound Club of New York; the runner up, 50 per cent. of the remaining entrance money; third and fourth, 25 per cent. each of the money remaining after second division.

First Series.

Lowe & Page's (Lawrence, Kan.) brindle dog King Lear (Lord Neversettle—Partera)
beat
J. H. Watson's (Brooklyn, N. Y.) fawn bitch Dry Time (Britain Still—Hay Time).

D. C. Luse's (Great Bend, Kan.) white brindle dog Lord McPherson (Trales—Dick's Darling)
beat
Rookwood-Landseer Kennels' (Lexington, Ky.) white and black bitch Nettlefield (Dick Day—Camborne).

Lowe & Page's (Lawrence, Kan.) brindle and white bitch Liberty (Lord Neversettle—Partera)
beat
Mannion & Halladay's (Allegheny, Pa.) black and white dog Lord Moses Glendyne (Trales—Lady Graham Glendyne).

M. E. Allison's (Huchinson, Kan.) white and brindle dog Major Glendyne (Trales—Little Lady Glendyne)
beat
Emporia Kennels' (Emporia, Kan.) brindle dog Deck (Palmer—Blue Queen).

Rookwood-Landseer Kennels' (Lexington, Ky.) brindle and white dog Norwegian (Jester—Bit of Fashion)
beat
Lowe & Page's (Lawrence, Kan.) brindle dog Line of Luck (Lord Neversettle—Partera).

Lowe & Page's (Lawrence, Kan.) white and brindle bitch Little Climber (Lord Neversettle—Partera)
beat
Rookwood-Landseer Kennels' (Lexington, Ky.) brindle and white bitch Belle of Eltham (Jester—Bit of Fashion).

D. C. Luse's (Great Bend, Kan.) brindle dog Lancaster (Trales—Dick's Darling)
beat
Dr. Lewis G. Tandy's (St. Louis, Mo.) white and black bitch Miss Beatrice (Sir Charles—Lady Rebecca).

D. C. Luse's (Great Bend, Kan.) black bitch Lady in Black (Trales—Dick's Darling)
beat
D. N. Heizer's (Great Bend, Kan.) white and black bitch Lady Jane (Trales—Lady Graham Glendyne).

Lowe & Page's (Lawrence, Kan.) brindle bitch Lancashire Lass (Lord Neversettle—Partera)
beat
Alfred Haigh's (Cable, Ill.) white dog Master Glendyne (Trales—Little Glendyne).

Lowe & Page's (Lawrence, Kan.) brindle dog Lord Neverstill (Lord Neversettle—Partera)
beat
Blemton—Hollywood Kennels' (Hempstead, N. Y.) brindle bitch Minnie Staton (Pinkerton—Madeline).

A. C. Schermerhorn's (Great Bend, Kan.) white and brindle bitch Belle (Trales—Blue Bell)
beat
D. N. Heizer's (Great Bend, Kan.) white bitch Snow Ball (Trales—Lady Millie).

W. W. Carney's (Great Bend, Kan.) white and black bitch Lady Graham Glendyne (Jester—Glendyne)
beat
Rookwood—Landseer Kennels' (Lexington, Ky.) brindle bitch Verdure Clad (Greentick—Cotillon).

D. C. Luse's (Great Bend, Kas.) fawn bitch Lady Barton (Trales—Dick's Darling.)
beat
Emporia Kennels' (Emporia, Kan.) fawn dog Cute (Palmer—Blue Queen).

Dr. S. J. Shaw's (Great Bend, Kan.) white and brindle bitch Dollie (Trales—Blue Belle)
beat
Alfred Haigh's (Cable, Ill.) fawn dog Nip.

Lowe & Page's (Lawrence, Kan.) brindle dog Master Peter (Lord Neversettle—Partera)
beat
Ira D. Brougher's (Great Bend, Kan.) fawn dog Barney, Jr. (——— —Minnie).

D. C. Luse's (Great Bend, Kan.) fawn dog Yonder He Goes (Trales—Arthur's Gypsy)
beat
G. N. Moses's (Great Bend, Kas.) white and brindle dog Trales (Wandering Tour—Little Emily III.).

Second Series.

Lord McPherson beat King Lear.
Liberty beat Major Glendyne.
Little Climber beat Norwegian.
Belle beat Lady Graham Glendyne.
Lancashire Lass beat Lancaster.
Lady in Black beat Lord Neverstill.
Lady Barton beat Dollie.
Yonder He Goes beat Master Peter.

Third Series.

Lord McPherson beat Liberty.
Lady in Black beat Little Climber.
Lady Barton beat Belle.
Yonder He Goes beat Lancashire Lass (withdrawn).

Stakes divided. Total winnings, $380, and the N. G. C. cup.

Lord McPherson is a good greyhound, white and brindle, upstanding and well muscled, showing much the quality of his sire, last year's champion, Trales. Lady in Black is simply a freak, and not even her owner would claim she shows greyhound points or quality. She is cat-hammed, thin-legged, narrow on the loins and flat-sided, and as she stands, looks scarcely larger than a big terrier. She is black, with white front. Where she finds material to run upon is hard to say, but has showed her ability to run killing courses in the same day, and her speed in a long course is one of the queer things in greyhound theory and practice. She is, however, well bred, by Trales out of the old bitch Dick's Darling, though she shows the type of neither.

Lady Barton, which divided the Derby Stakes last year with Lady in Black, is by Trales out of Dick's Darling, and is another small one, yet wonderfully compact and muscular. There are few closer or prettier workers than she. Her color is red fawn. She can hardly stay a long course with Lady in Black, but is quicker from the slips and a closer worker.

Yonder He Goes is a useful-looking red fawn, showing nothing of his sire's form or marking. He is out of Arthur's Gypsy, by Trales, the service of Trales being stolen. He shows the quality of most natural sons, and is fast, staying and gritty to a degree. All four of the above dogs were run in perfect condition, few fitters being better qualified than Mr. Luse. The latter gentleman is coming to be called "Lucky Luse." He won first in the All-Age two years ago, took all the Derby stakes last year, and this year takes the whole of the All-Age.

THE GREAT BEND DERBY, PUPPY STAKES.

For 16 or more greyhounds, 18 months old or younger. Entrance fee $5; the winner to receive 50 per cent. of entrance money and $50 cash, donated by the Morrison House, Great Bend; the runner up 50 per cent. of remaining money; third and fourth 25 per cent. each of money remaining after second division. Affidavit of age must be made by owner.

First Series.

Emporia Kennels' (Emporia, Kan.) black bitch Girl's Favorite (Trales—Bessie Lee)
beat
Russell & Nichol's (Cable, Ill.) black and white bitch Busy Bee (Spring—Alas).

Emporia Kennels' (Emporia, Kan.) black dog Denmark (Bobolink—Meta)
beat
D. C. Luse's (Great Bend, Kan.) white dog Lieut. Leo (Trales—Dick's Darling).

Rookwood-Landseer Kennels' (Lexington, Ky.) brindle dog Surplus (Master Rich— ———)
beat
Emporia Kennels' (Emporia, Kan.) brindle dog Ajax (Bobolink—Meta).

Russell & Nichol's (Cable, Ill.) black and white dog Bartender (Spring—Alas)
beat
Emporia Kennels' (Emporia, Kan.) black dog Maddox (Bobolink—Meta).

D. C. Luse's (Great Bend, Kan.) red dog Lanaradzo (Trales—Dick's Darling)
beat
Rookwood-Landseer Kennels' (Lexington, Ky.) red and white bitch Dewlap (Gobbert's Sport—Queen).

Second Series.

Denmark beat Girl's Favorite.
Bartender beat Surplus.
Lanaradzo a bye.

Third Series.

Denmark beat Lanaradzo.
Bartender a bye.

Fourth Series.

Denmark beat Bartender and won first prize, $75.
Bartender won second, $12.50.
Lanaradzo won third, $3.
Girl's Favorite won fourth, $3.

Denmark is a light brindle dog of good speed, limbs and pluck. Bartender is a black, with a little white in front, a likely one of some dash. Lanaradzo is a light fawn of good promise, a speedy courser. Girl's Favorite is a smallish bitch, black, with a little white about her, a gamy, merry little worker.

At the regular business meeting, held Friday evening, the following officers were elected for the ensuing year: President, D. N. Heizer, of Great Bend; Vice-President, J. Herbert Watson, of New York; Secretary, Ira D. Brougher, of Great Bend; Treasurer, J. V. Brinkman, of Great Bend; Executive Committee, C. G. Page, Aurora, Ill.; H. C. Lowe, Lawrence, Kas.; Dr. S. J. Shaw, of Great Bend; Committee on Grounds, W. W. Carney, G. N. Moses and A. C. Schermerhorn, all of Great Bend. Votes of thanks were extended to Messrs. Uhl & Carney for the use of their ranch as running ground; to Dr. N. Rowe, for his donation to the stakes; to the press at large for its efforts; to the National Greyhound Club for its interest and its offer of the trophy cup. The treasurer's report showed a neat balance on hand after the paying of all bills. Mr. M. Phister, of Cincinnati, was elected a member of the club. Mr. Holloway has this year filled the unenviable task of judging in an able and apparently very satisfactory manner. The meet may very well be called a successful one. The American Coursing Club can report progress. E. HOUGH.

[In last week's despatch, sent at the opening of the meet, the palpable error was made of announcing only 16 entries in the All-Age Stake instead of 32.]

DOG CHAT.

THE proposed meeting of the English Setter Club, which was to have been held last Thursday, did not take place, there not being sufficient members present to make up a quorum, which is a majority of the members. The meeting was therefore adjourned to Thursday, Oct. 30, at 3:30 P. M.

Dr. James E. Hair writes us that the Juno mentioned in our report of the pointer bitches at Danbury as taking Reserve, is not his dog. The Juno we had in mind is a large, coarse, black bitch, which was brought in after the regular awards were made; but as we made the award list from the secretary's list of entries, which was the only book from which we could get the names of dogs and owners, we supposed the entry was correct. Dr. Hair's bitch Juno, though entered, was not at the show, and we can quite believe his assertion that the mother of his promising puppy, Juno A., is a bitch of much better quality than the one taking Reserve.

We understand from Mr. Hart, the secretary, that the Elmira Poultry and Pet Stock Association will hold a dog show in connection with their poultry exhibition at Elmira, N. Y., Jan. 21–26, 1891. Though not under the wing of the A. K. C., a show held in this section of the country will no doubt stimulate the canine interest in that part of New York State.

In a letter from Mr. Washington A. Coster, he tells us that he has received a letter of acceptance from Mr. Thomas Johnson, of Winnipeg, Manitoba, to judge at the coming Eastern Field Trials, in place of Mr. T. I. Stone, who was obliged to decline on account of business engagements. The judges will therefore be Col. Arthur Merriman, Thos. Johnson and H. B. Duryea. Mr. Coster also writes that all parties desiring any information as regards reduced rates and transportation of dogs to and from the Eastern Field Trials, to be held at Otterburn Springs, Amelia Court House, Va., from western New York or Canada, should apply to B. P. Fraser, Trav. Pass. Agt., 19 Exchange street, Buffalo, N. Y.; and from New York, New Jersey and the Eastern States, to William Fleming, Sec'y Trunk Line Asso., 345 Broadway, New York city; and from points South, to M. Slaughter, Assist. Comm., Atlanta, Ga.

We hear from Mr. Goldsmith, that the mastiff bitch Lady Cobrey, consigned to his care by Mr. W. K. Taunton, England, arrived on the S. S. France, consigned to Mr. Chas. E. Bunn, of Peoria, Ill. Mr. Goldsmith speaks of her as being a very large and fine specimen, and one not to be dwarfed even by the six lions which came over on the same vessel.

Speaking of these lions reminds us of the great Dane which performs with them. In one act Nero, as he is called, serves as the pinnacle of a pyramid, formed by the lions. He is perched on the top of a couple of tables, against which, reared on their hindlegs, their muzzles touching the dog, stand two of the lions, these in turn standing on the backs of the other two lions. The total absence of fear on the part of the great Dane is almost as remarkable as the docility of the lions; yet we know not what a day may bring forth, and Mr. Nero may find himself serving as a *pièce de résistance* to the lords of the jungle. By the way, though lions are not exactly in the doggy line, we may remark that their trainer, a German, completely explodes the idea which generally prevails, that to control wild beasts and savage dogs, one must keep his eye continually on the focus; for he walks about as unconcernedly as possible, and, often as not, turns his back upon the beasts. Another idea he has, is never to touch them with the whip, the crack of the lash being in his mind quite sufficient to cow them; as he says, with some truth no doubt, that once they knew how little it hurts, they would lose all respect for it.

We call special attention to the notice at the head of this department as to time when copy should reach us.

We have received a pleasant letter from Mrs. Lee, owner of the Alta Kennels, in which she informs us of the purchase of the noted St. Bernard bitch Jael (E.K.C.S.B. 20,821). Jael is by champion Plinlimmon out of Deborah, who is by champion Beauchief. In color she is a rich orange and white with dense shadings. Height 30½in., and weighs 160lbs. She is quite a winner on the other side and at first class shows too, as her record includes first and cup, Kennel Club show at the Aquarium; first Brighton, two seconds at St. Bernard Club shows, and equal third with Prudence at the last Leeds show. *Stock-Keeper* speaks of her as a rare stamp of brood bitch, and with justice, as she is the dam of the noted Lady Sneerwell, winner of twelve prizes and cups this year, and Proselyte, who won first at Warwick, first Richmond, and two seconds at St. Bernard Club shows, among other winners.

Mrs. Lee also tells us she has a pair of Lord Bute—Ellen Terry pups that are simply huge, and promises the weights later on. She concludes with a paragraph of interest to all St. Bernard breeders. Ellen Terry rested for one year and then was bred again to the same dog, Lord Bute, and if these dogs are not as large as those of her first litter, she will begin to think there is something in our climate against raising "big 'uns." Perhaps there is, but may we not also find a reason in the way they are raised. We believe that as a general rule more attention is paid to the feeding and proper rearing of dogs on the other side than here. There is a class of men over there who are able to devote almost their entire time to their kennels, and when the cry is all for size there is little likelihood of their neglecting any point whereby they can get ahead of their rivals. We know of one instance on this side, in the case of the mastiff Presto, where by a system of feeding and exercise this dog attained a growth and weight far in advance of the others in the litter, and is now one of, if not the, largest mastiff in the country. Breeders, if you do get a promising puppy, leave no stone unturned to further its development even if it does cost a little more, feed it on beefsteaks if necessary, and don't forget the bone meal and gentle exercise.

Our Hamilton correspondent writes us that at a meeting of the Hamilton Kennel Club, held on the 21st inst., the following resolutions were adopted: Moved by Mr. Murdoch, seconded by Mr. Hendrie, Resolved, That in the opinion of this meeting, it is advisable that at all bench shows given in Canada and America under the rules of the C. K. C. or A. K. C., the colors of the prize cards and ribbons should be uniform, and that a copy of this resolution be sent to the secretaries of the C. K. C. and A. K. C. with a request that the colors of all prize cards and ribbons be made uniform, and distinctly specified in the rules governing bench shows. Carried. Moved by Mr. Tinsley, seconded by Mr. Hore, That whereas the date of some of the fall bench shows held in Canada conflict with one another, thus not only interrupting what would otherwise be a complete circuit, and preventing exhibitors from showing at all shows, but actually affording an opportunity for inferior dogs to win prizes in the absence of good animals; Resolved, That the executive committee of the Canadian Kennel Club be corresponded with and asked to endeavor so to arrange the dates of the Canadian bench shows as to render them non-conflicting. Carried. Moved by Mr. Davis, seconded by Mr. Tuckett, Resolved, That in the opinion of this meeting the practice of giving prizes for puppy classes at bench shows should be discontinued, and a copy of this resolution be sent to the secretaries of the C. K. C. and A. K. C., and the various kennel clubs in Canada. Carried. Moved by Mr. Close, seconded by Mr. Ricketts, Resolved, That in the opinion of this meeting pure-bred dogs and bitches, imported for breeding purposes, with the object of improving the breed of dogs in Canada, should be admitted to the country free of customs duty, and that a copy of this resolution be sent to the secretaries of the C. K. C. and A. K. C., and the various kennel clubs in Canada, with a view of securing their co-operation in securing the legislation necessary to this end.

In a recent issue we gave the new law regarding the importation of dogs into the States. We are not aware of the workings of the Canadian laws with regard to importations from Europe, but the agitation of such a resolution as the above may result in abolishing the existing duty between this country and Canada, and would no doubt be a great benefit to breeders. At any rate our Hamilton friends seem to be an active lot of new brooms, and we wish them every success in their efforts.

It is said that Dr. Dixon, having heard of Mr. Cruser's method of training, proposes sending his champion Gordon, Little Boy, to him, and if he can be cured of his infirmity he will run Little Boy next year in the field trials for that breed.

It is not often that writers on the daily papers tell the truth when speaking of dogs; as a rule they are given to picturing them as monsters of iniquity, especially the larger ones. The *World* is the authority for the statement that the New York dog *par-excellence* now, is the great Dane, and with truth says that "the huge animals are as gentle and inoffensive as kittens, and their temper is so equable that nothing short of the most serious kind of an imposition will drive them to resentment." This has been our experience with the breed, and they are also intelligent to a degree. This paper also adds this tribute to human nature the world over: "The possession of a big dog in New York is more than a matter of fancy. It indicates that the owner does not live in a boarding house or flat, and that he has sufficient leisure to lead his dog up and down the highways for the sake of exercising the animal." Indications of this sort imply well.

A little bird whispers that a cablegram left Melrose, Mass., last Saturday for England, for another crack rough-coated St. Bernard bitch. Mr. Moore, did you say? Well, we won't tell any tales this time.

We learn that San Antonio, Tex., is to have a field trial this winter. Several gentlemen have pledged themselves to run their dogs. We believe there are a number of good dogs in that section of the country, and the venture could be

made a success. Our authority, the *Texas Field*, says very tritely, that the result would, at any rate, eliminate one breed of dogs, "The best field dog in the country, sah!"

Mr. John H. Mathews, who has surrounded himself with a goodly lot of bulldogs, chief among them being Portswood Tiger, sends us a number of excellent photos of his favorites. This reminds us that we hear little nowadays of the new Bulldog Club. There are some good dogs owned in different parts of the country now, and there ought to be little difficulty in still further increasing the interest in this breed.

The friendly rivalry between Col. Wellesley's Barzoi Krilutt and Mr. Hacke's new purchases, has given rise to a good deal of comment on these dogs lately, and as we do not wish to be lacking in any courtesy to the coming strangers we give our readers their pedigree as set forth in the *Canine World* this week. The dog is Zloeem, bred by Prince D. B. Galitzine. Zloeem is just 2yrs. 5½mos. old, and his pedigree is: Sire, Onoran, by Ondar out of Roussalka II.; dam, Iskra, by Tchorkai out of Poebda. The bitch is named Prokaza: she is just 4yrs. 4mos. old and gave birth Oct. 8 to eleven puppies, by Mr. Rousseau's Alaman. Prokaza is quite a noted bitch, having won the prize of $250 at the wolf hunting at Tzarkoe Coels, and she also won the silver medal at the great dog show at St. Petersburg, 1889. Her breeder was Mr. W. A. Tchelrscheffs, and her pedigree is: Sire, Pewlai, by Podar out of Roussalka; dam, Kracotka, by Varvar out of Prokaza. In giving these jaw-breaking pedigrees we have in mind our friend Mr. Fellowes, who simply revels in them.

Rather an unpleasant incident happened lately to an English judge, Mr. Tom Ashton. It seems he awarded a third prize to a dog led into the ring by a lady, and this did not meet with her approval. In the next class, in which the lady also had a dog, to which he intended giving first, the judge unfortunately left her to the last before taking her dog's number, a misleading proceeding at the best. When he asked her for the number she not very politely told him she could do without anything that he could give her. He answered, "All right, I will see that you don't have it now." We can readily understand a judge being somewhat nettled, but still, for the sake of his own judgment, we should think it would have been better to award the prize to the dog and pay no attention to the other end of the chain. In justice to the exhibitor we may say that she afterward wrote to the judge apologizing for her action.

We note in our English exchanges that a man committed suicide the other day by the aid of cyanide of potassium. This in itself is nothing very extraordinary, but it seems it was "all on account of" his great affection for a toy terrier, as stated in a farewell letter to his wife.

It is to be regretted that the Eastern dogs did not make a better showing in the recent coursing meet at Great Bend. No doubt the rarity of the air had something to do with it, as evinced by the fact of Minnie Staton stopping so suddenly after doing such grand work. Then again it is not enough to harden them up by running along a road, but an occasional brush with a hare itself must be indulged in. It is not altogether the straightaway running that winds the dog, but the sharp twisting and turning necessary in working the hare from one to the other. It is very evident that, however good a dog may be in a, what we may term, cut and dried course, a dog must be brought up and regularly coursed on those Western plains to stand much chance with the kind of game they are likely to meet there, as is very evident from the fact of only three hares being killed in the first series. In future we would advise our greyhound men to do as the field trial men do, and send their dogs West weeks—aye months—before the meet takes place. It will cost very little more and the honor to be won is quite worth it, as the Western dogs are foemen worthy of their steel. It has been suggested that, as there are so many of the National Greyhound Club men who are buying young stock with a view to running in next year's meeting, a man be sent out with a string of Eastern dogs early in the summer, the expense to be borne *pro rata* by the several owners. This is the best and only plan for them to do if a suitable man can be found.

We wish to remind the breeders of collies that entries for the Collie Club sweepstakes close Nov. 1, with J. D. Shotwell, Sec'y, 82 Hillside avenue, Orange, N. J.

Mr. J. Burkart, of Brooklyn, N. Y., is importing three King Charles spaniel pups, by champion Bend 'Or II. out of Ivo Myrtle, from the kennels of Mr. Charles Stony. They have already been shipped from Liverpool by the American Express Company.

The English Bulldog Club has very properly passed a resolution condemning the practice of some of its members of putting up the medals that they have won, as special prizes to be competed for at other shows. This is a practice we have seen indulged in to some extent on this side, and cannot be frowned upon too much.

As might have been expected, with its liberal classification, the coming Crystal Palace show has secured the unprecedented number of 1,729 entries. There are 177 St. Bernards, 124 collies, 74 mastiffs and 67 Newfoundlands. What a grand sight that will be, either of those numbers alone will represent more than we can scare up at our shows. Another big class is that for dachshunde, fancy 60 of these quaint little hounds or terriers—which are they?—in a row. Altogether this is a grand showing for a committee which has not the protection of the ruling body.

Mr. Krehl brings his interesting sketches of a holiday tour in Norway to a close this week, much to the regret of his readers who have followed him in his rambles; but we can't get over that very peculiar picture of the goat.

We hear that the entries for the beagle trials next week, though small in number, are of very superior quality, and this latter fact has doubtless kept several other entries back. At the meeting of the club, held Oct. 23, it was decided to make some changes in the classes. As the puppy class did not fill it was decided to drop that altogether, and enter the dogs in that class in the other classes and only run four instead of five as was intended originally. We are thus unable to give the list of entries this week, but are promised them for our next issue. Those who intend going to these trials from New York had better take either the Sunday night boat to Fall River, and then the Old Colony Railroad to Hyannis, arriving at noon Monday, or leave Grand Central at 9:15 A. M. for Boston and then take the 4:15 P. M. train on Old Colony road from there to Hyannis. The Boston contingent intend taking the latter train.

The judges for the South Carolina Poultry and Pet Stock Association's bench show at Charleston, S. C., Jan. 13 to 17, 1891, have been selected. Dr. H. Clay Glover will take the sporting classes and Mr. H. W. Lacy the remainder. The show promises to be a very successful one, as the show last winter created a wide interest in dog flesh throughout that section of the country. As the show is under A. K. C. jurisdiction, no doubt a good many Northern exhibitors will avail themselves of the opportunity to put their dogs a step higher toward the challenge classes. The Clyde line of steamers makes special rates for both exhibitors and stock, and this is a very pleasant way to make the trip. The Georgia Pet Stock Association dog show is on the week after, and as Augusta is only 130 miles from there, the two shows can be taken in on the same trip.

A letter from Mr. Geo. Bell tells us that his new purchase, the cocker spaniel Kildare, is down with distemper, but he hopes to pull him through all right. We hope he may.

The black and tan terriers Salisbury and Queen III., purchased from Mr. Lacy, of England, by Mr. Comstock, of Providence, R. I., arrived safely in port on Tuesday last. As we expected, there is some trouble getting them through the customs, owing to the new regulations regarding the importation of dogs, to which we referred in a recent issue, not having been complied with. The dogs are in good shape. They were sent over through the American Express Co. and consigned to Mr. Stoddard, 600 Greenwich street, and this accounts for the present delay in delivering them.

The Radnor Hunt will meet on Saturday next at 3 P. M. at the kennels of Mr. Harrison's Chestnut Hill Stock Farm. The meet promises to be one of the most interesting of the season, and we shall endeavor to give our readers next week our full experience and the correct number of falls we expect to undergo during the run.

The *Canine World* has a very good picture this week of the noted and gigantic St. Bernard Lord Bute. We suppose the reason he is drawn reposing at full length is, that were he standing, an enlargement of the page would be necessary. His want of blaze rather detracts from an otherwise fine head, giving him somewhat the expression of Plinlimmon, Jr.

CHRISTOPHER.

THE subject of our illustration this week is the Chestnut Hill Kennels' collie dog, champion Christopher. Christopher was bred by the Rev. Hans Hamilton, and was whelped April 16, 1887. He is by the renowned Metchley Wonder (Sefton—Minnie) out of champion Peggy II. (Ruthven—champion Madge). He was purchased in the spring of this year by the Chestnut Hill Kennels for $5,000 from Mr. T. H. Stretch, of Ormskirk, England. This is the highest price that has yet been paid for a collie, and no doubt many will hardly believe the dog can be worth so much. However, this is not the first time these kennels have startled the kennel world by a big purchase, and if Christopher lives another two or three years—and no doubt he will, being now only 3½ years old—he will probably prove as profitable as their several other investments have done. Dublin Scot, for instance, was the first crack purchased by the kennels, and in the three years he was in this country his stud fees alone amounted to over $2,000. Although a most successful dog on the show bench, it is as a sire that Christopher has proved himself of such great value; his list of first prize winners has already nearly reached three figures, and includes such well known dogs as Ormskirk Amazement, Ormskirk Dolly, Stracathro Ralph and the latest sensation Mortimer, sold when 9 months old for $500.

CHAMPION CHRISTOPHER.

THE NATIONAL BEAGLE CLUB AND THE A. K. C.

Editor Forest and Stream:

Regarding the refusal of the A. K. C. to admit the National Beagle Club to membership, "J. W.'s" points are mostly well taken. I am pleased to hear that he was absent and also that Mr. Leslie made a motion to accept.

True, the club has not framed any standard nor do they intend to at present, but the club's object is to encourage the breeding of the beagle in every possible way, hence the cash prize offered at Toronto, which is only the forerunner of many.

"J. W." states that he cannot see any advantage accruing from a field trial club being a member of the A. K. C. "Familiarity breeds contempt," and possibly "J. W.'s" intimate knowledge of A. K. C. matters leads him to underestimate its value in the estimation of the average dog lover. The National Beagle Club still exists, and is daily adding to its strength without the fostering care of the A. K. C. The club is not at all heart-broken over the refusal of recognition, but at the same time it cannot fail to see the injustice of the action, and to recognize the fact that were it admitted it would add additional strength to the club. Should the club confine itself wholly to field trials? Every man knows that in case of any dissatisfaction arising from mistakes of any kind he has the A. K. C. to fall back upon for redress. Personally, I know that the club lost several entries to the trials, when they lost their case with the A. K. C.

"J. W." in Oct. 23 issue quotes from Mr. Anthony's letter as follows: "In fact, the club had for its main object the destroying of the older club." I don't own a solitary beagle. I do not know Mr. Schellhass, and am not intimately acquainted with any member of the moribund club. But this I do know. I attended the organization meeting of the National Beagle Club as a reporter, I recognized the fact that the organizers were gentlemen as incapable of such a purpose as that stated by Mr. Anthony, as they were enthusiastic on their pet hobby. There was but one idea in the lot, namely, the advancement of the beagle.

The old club was mentioned by but one party, and then solely as being dead to all intents and purposes. I joined them that night; and although amply able to defend themselves, I take it upon my own shoulders to deny the false, misleading statement of Mr. Anthony. I defy him to prove that he had the slightest ground for his remark, and for fear that he may be so ignorant of kennel matters that he will not know my *nom de plume*, I sign my name.

A. RUSSELL CROWELL.

DOGS OF THE DAY.

WHEN two weeks ago I criticised certain actions taken at the late A. K. C. it was not my desire to go beyond what was perfectly legitimate in the discussion of an official document meant for the information of all dog men. In response came a letter to myself from Mr. Anthony, couched in terms which I could not ignore in justice to myself, and I gave the letter last week with my reply thereto. Had I so desired I could have responded in equally strong language, but I had no wish to bring about a wordy war on a subject of no vital importance, and was perfectly willing to leave the subject where it then was. I have, however, received another letter from Mr. Anthony, which he evidently challenges me to make public, under the impression, doubtless, that I would be unwilling to do so. If he really is of that opinion he mistakes his man, for there is nothing that shows the weakness of a case so much as when resort is had to blackguarding the attorney on the other side. Mr. Anthony's letter is as follows:

"I was to-day handed your article in the FOREST AND STREAM, where, by *publishing* a purely *private* and *personal* letter with comments on the same (*that are unworthy the pen of any one*), *you have violated* every *rule of decency*.

"You have now and always have had (with occasional *exceptional lapses toward truth*) a very unfortunate habit of *making facts*, without due regard to their existence, if such made facts FIT at the time your *special news*.

"I *privately* called your attention to this, *forgetting* at the time that you were no longer a delegate to the A. K. C. If I had desired to discuss the matter with you publicly I should have done so, but *you know* full well that of late I have not done anything of the kind, believing that any one holding an official position should not do so except in rare instances.

"Your allusion to my kennel and their field record is *simply malicious*, quite on a par with some of your past actions, that I had hoped association with gentlemen *might have improved*. Your remarks as to the Beagle Club are *silly*, as you will see if you read what the secretary said as to their application for membership. Your statements as to my actions *re* the English Setter Club are equally unreliable, the application of the older club having been withdrawn before the application of the new one was voted on, if I am not misinformed, and the use of the club room is and always has been free to any club desiring to avail themselves of the accommodation.

"As you published my last letter, suppose you publish this one."

In the first place the previous letter was in no sense private and personal, but an accusation of error. If it had been marked private I should have returned it with the information that I could not receive such a letter as a privilegd communication, and it would either have to be withdrawn or sent in form for use. The remarks that I make facts come with particularly bad grace from Mr. Anthony, considering that he made a grossly libelous statement with regard to myself, when he knew that the only person who could emphatically deny what he said was dead. Readers of FOREST AND STREAM may remember that he accused me of having stolen a letter he had bought, the implication being that I had deceived the editor of the *Sporting Life* and obtained a letter from him by subterfuge, which I had through a friend sold to Mr. Anthony, and when censured by the editor I had pathetically appealed to my friend to save me by getting it back. Unfortunately for Mr. Anthony, though he did not apparently know it, the full facts with regard to that letter were published in the *Sporting Life* at the time, and had he gone any further in the matter I would have unmasked the battery I had in reserve. I will now add that the person he said sold him the letter he assumed was stolen by me, was the late Frank Satterthwaite, formerly kennel editor of FOREST AND STREAM. I need say no more on that score, and will leave my readers to judge whether I have had much chance of being improved by associating with the person who evidently imagines he is one of the gentlemen who have been doing the missionary act.

There was nothing malicious in my reference to Mr. Anthony's kennel. He claimed to be an upholder or supporter in some way of field trials, and if I had chosen to be malicious I might have referred to the Graphic business at the Eastern Field Trials; the sand burr bugaboo out West, and the Indiana Field Trials Club correspondence. Regarding the Setter Club meeting at the A. K. C. room, I have a letter from an officer of the A. K. C. which takes a different view of the affair from that held by Mr. Anthony, but as I do not wish to drag any one else into the discussion, I will simply say that if Mr. Anthony still thinks that all the officials are of his opinion regarding the propriety of holding that meeting at the A. K. C. rooms, I will take the liberty of forwarding him the letter for his perusal.

Mr. L. W. Kemble, of Philadelphia, has purchased the English setter Dashing Kent, a full brother to the better-known Sir Tatton. This is an excellent dog, and I hope he will be in good condition for the spring circuit next year.

Mr. Mitchell Harrison I notice replies to a remark I made respecting the possibility of his interest in horses detracting from that he has shown in regard to collies. I am glad to know he purposes remaining true to the latter. I am indebted to Mr. Harrison for a notice of the Radnor Hunt meeting, at Chestnut Hill Stock Farm, on Saturday next, and I regret it will be impossible for me to witness the meet and the run. It ought to be a very pretty sight reviewed from the heights by the kennels, and one well worth making the journey to witness.

Dr. M. H. Cryer has sent me the stud card of champion

Bob Ivy, who, although but 2½ years old, is a champion of record. As the stud card gives the extended pedigree and also much useful information regarding his progenitors, champions Dude, Max and Roderick, besides imported Dolly, imported Othello and Vesta, it will be found very useful to pug breeders. Dr. Cryer's address is 1527 Arch street, Philadelphia.

It may be old news to some, but it is only within a day or two that I heard that Dr. Niven of London, Ont., had had his collar bone broken from a fall in the hunting field. Since then he has gone on a trip across the Atlantic to build up.

The Scottish Kennel Club has a rare good friend in its president, Mr. H. Panmure Gordon. The club's late show, owing to counter attractions, fell behind some £75, and at the next meeting of the committee a letter was read from the president, with which he sent his check for £100 as a donation to the funds of the club.

A correspondent of the *Fanciers' Gazette* has an eight-months-old fox-terrier which "is over distemper, mange and eczema, from which it suffered severely, but is suffering from an inflamed eye." What a nice, clean, comfortable home it must have. Here is another case in the same journal: "I have a bull-terrier dog ten months old; his tail curls the slightest bit at the end. Is there any way I can cure it? Ans. Probably by keeping a gum bandage (fine muslin soaked in a thick solution of gum) round the lower part of the tail the carriage would improve." This is improving, not faking.

A correspondent in a contemporary has been calling attention to a few typographical errors which have recently appeared in its pages, but in the same issue Mr. Wade is made to speak of my judicious explanation of the A. K. C. accounts. Of course Mr. Wade wrote "lucid."

The question of the A. K. C. accounts and Vredenburgh vs. Peshall have been completely eclipsed in Philadelphia dog circles by that of "shall negro handlers be allowed at the P. K. C. field trials?" It is an ill wind that blows nobody good, and the steward in the back parlor has been doing a rushing business in slaking the throats of the argumentative members. Mr. Harrington Fitzgerald, gun editor of the *Item*, is a most liberal supporter of the club, and in addition to his many valuable gifts has now offered a watch to the best handler at the club field trials.

I desire to thank Mr. Blake, of Detroit, for what I take to be his reply to my remarks on whippet racing and the records given to his dogs. Owners are so prone to fly off at a tangent when any question is raised respecting their dogs, that it is quite a pleasure to read such a pleasant reply as that of Mr. Blake. J. W.

ROGER AND DUKE OF VERNON AT HOME.

"WOULD you care to have a look at Roger and Duke in my kennel back of Mount Vernon?" inquires Mr. Gardner before we separate at the ferry landing. "Rather," is my ungrammatical reply. "Will to-morrow suit you?" "Perfectly." "Then will you come out on the 9:30 train in the morning to Mount Vernon, and call at my house on Fourth avenue? Davis' place, where I keep some of my dogs, is about two miles back in the country, and we will either walk or drive, whichever you prefer."

I tell a bell-boy to awaken me in time for breakfast and the 9:30 train, and in due time arrive at the anything but humble suburban village of Mount Vernon. A very cosy looking place it is, full of pretty villa residences surrounded by ample grounds. Besides Mr. Gardner's dogs, the Erminie Kennels of St. Bernards are located there. I had hoped to inspect the home of Barry II. and his kennel mates, but despite the cordial invitation of the proprietor, Mr. Thurston, was unable to find time for the visit. Mr. L. Gardner's residence is a pleasant villa on one of the tree-shadowed avenues, and on the veranda he was discovered smoking a cigar, philosophically awaiting my tardy arrival.

He is a man rather below the medium height and quite stout, with a full face and closely cropped moustache. There is not much credit in a man of great wealth buying celebrated and developed dogs with which to form a world-beating kennel. If "money makes the mare go" there is no doubt but that it can also fill a kennel with dogs of high degree. Mr. Gardner is not one of these. A traveling salesman for the leading woolen goods house of New York city, he has purchased young, unknown and undeveloped dogs, and by sheer pluck and bulldog perseverance, pushed them into the positions the setter Roger and the pointer Duke of Vernon now hold. These are the men who are entitled to kudos. Men who hazard their hard earned gains in the risky and precarious speculation of dog flesh, not with a view to profit, but out of sheer love of dogs.

"I have a couple of oils, Tallman of Providence has just sent me, and should like you to see them," says Mr. Gardner. I follow him into the house with eagerness, for a good dog picture, like a good dog, is a thing I love to see, and Harry Tallman can paint a dog as well as "wood-cut" him.

The paintings show me a magnificent pointer on point, with a decidedly indifferent light-weight bitch backing him. Roger's portrait, taken in company with the heavily marked bitch Dora Deane, does not do him justice, though taken as a whole the pictures are life-like and good.

Ere starting for Davis', where most of the dogs are kept, we inspect the home kennel in which but one bitch is penned. This is a litter sister to Miss Freedom, who won, I think, fourth in novice bitches at New York a year ago, and who at Boston. Like her sister, she is a light-weight, and having only two days before allowed a litter of Duke of Vernon puppies to die through want of nourishment, her lord and master does not regard her with very loving gaze. The kennel is small but neatly arranged, half a dozen dogs being easily accommodated. Two of the setter bitches, Dora Dean and another, were down at "Tom" Aldrich's, so I could not see them.

It is altogether too lovely a day for driving, and as I beg for a walk, Mr. Gardner good naturedly accedes to my request. A country walk in the vicinity of Gotham is a treat, by way of change, to one from rugged Canada. The billiard-table-like roads, handsome houses and well-tilled fields are a contrast to mud roads, log snake-fences, neglected-looking, half-tumble-down farmhouses and barns, and stump-besprinkled fields. Our Northland doesn't look very pretty, except from an artistic point of view. If a farmer can get a good crop out of the rich soil he reasons that there is no crying necessity to cause him to break his back rooting up stumps, and from the same standpoint, if the house keeps out wind and weather, why in the name of wonder should he spend time and money in painting it! A house, he justly remarks, is meant to live in, not to look at.

It is pleasant chatting with a man like Mr. Gardner. His business engagements take him all over the country, north, south, east and west, and during the course of his peregrinations many a good dog has come under his observation. Out in Ohio somewhere he came upon Duke of Vernon. It was in the evening and business concluded, Mr. Gardner strolled out in the fields with some local "sports" to give the dogs a run. One among them at once caught his eye, a magnificent fellow, which he at once set down, though keeping the opinion to himself for obvious reasons, as the best heavy-weight pointer dog in America. When they were all tied on he found this wonder could go as well as look handsome, and at once formed the determination to become his owner. The first offer was refused, and my companion thinking it, under the circumstances, amply sufficient, took his departure, leaving the matter to simmer in the owner's mind. Soon he received a letter intimating that "Duke," as he was then called, could be bought. Raising his bid, Mr. Gardner became possessed of the dog, which he promptly rechristened Duke of Vernon in contradistinction to their many other "Graces."

He was first shown at the Buffalo National Dog Club show, where he pretty well cleaned up everything and created a great sensation among the pointer men. Since then he has been shown but seldom, though winning everywhere, and he is now in the challenge class. These dogs of Mr. Gardner's are no carpet knights, and Duke has run in several trials, though without having secured a bracket. Billy Tallman, however, told me he had run in hard luck, and was really a grand fielder. This I can well believe after seeing him afield with the great and only Roger. Fast as the $1,000 stake winner could go, the pointer kept right at his heels. Mr. Gardner told me the old long hair could put rings around the pointer; but I certainly did not see him do it, so conclude that Duke of Vernon can kick up dust a little bit.

Talking about this notorious $1,000 race at the Central Trials last year, Mr. Gardner assured me that he had received a check for $1,000 in full as his prize. I have heard it insinuated that the race was a fake; but this proves it was not.

We stepped out at a good rate and soon covered a couple of miles. It being a hot day, and as neither of us can truthfully be placed in the category with Pharaoh's lean kind, we began to lose considerable adipose tissue. This would never do; so, coming to a likely looking roadside inn, my friend suggested refreshments, and accordingly we refreshed.

There was a short cut through the gun club grounds down by the lake (forgive me, please, it really was a pond) and through a gully, which we took.

There is one thing we Canucks can beat you all hollow at, and that is ice. We don't have to fence in every mud puddle and build a big storehouse beside it. Why, hang it, I'll give all the ice dealers around New York all they can cut, and ask no thanks either. And why? It isn't mine nor anybody else's, and no one cares a cent. Such is the generosity of superabundance.

An uproarious barking shows that we are coming to Davis' abode. It is a tumble-down looking stone building, set in a ravine among the hillocks, with lovely hard wood trees around with a distant view of the Sound. Grouped around it on the southern slope are pointers, setters and collies, chained to barrels, boxes and other ramshackle quarters, whose occupants maintain an incessant uproar during our stay. Davis is a trapper at one of the clubs in the vicinity, which one I forget, and was absent when we arrived.

I do not remember the dogs we looked at first, except Miss Freedom's dam, an all white bitch, and a Bang Bang lemon and white, that looked like going. There was also a very moderate collie.

Naturally Mr. Gardner would not allow Roger and Duke of Vernon to "rustle" in a barrel, and he led the way to quite a neatly arranged structure on the summit of one of the hillocks, in the wire-encircled yards of which the celebreties stood, barking with joy at their master's approach and the glorious run they knew was in store.

"We had better let them have their run first to cool off and you can have a good look over them afterward," suggested Mr. Gardner.

So we let the frantic creatures out, when with a wild rush they were off and over the ravine. Mr. Gardner and I are fairly agile, but we don't take any twelve foot brooks in our stride, so we just hunted around for a tree, which to my astonishment was found incredibly quickly. My friend had been there before. Beyond the ravine was a grand treeless slope, on which the dogs could be seen at any distance; at least so Mr. Gardner said, and as I could only see a street car a hundred yards off I was bound to believe it. I never deplored my luck so much as at not being able to see those grand dogs work when at a distance. Grand old Roger taking everything as it came, with Duke not far behind and Miss Freedom in close company.

Roger needs no introduction to readers of FOREST AND STREAM. He is by that king of field setters, old Count Noble, and in show ring and field together, has upheld the honor of his breeding with the best. The dog is named after his breeder, a Mr. Rogers, of New York, and was purchased when a puppy by his present owner. When first exhibited at New York in some incomprehensible way he only got a card, c., I think it was; but since then has won prizes in the best company. While not, strictly speaking, a first-class show specimen, he is one of those grandly-made ones that cannot be passed by; and has the dearest old face imaginable. Just the sort of dog that captivates one at first sight.

Roger has amply proved that a bench show winner can do well afield, for among other achievements his highest glory has been the winning of the $1,000 stake at the Central trials last autumn, in which he beat Chance and other notabilities. He has proved that he can "go," so I need say nothing about that here. After the dogs had run for half a hour or thereabouts, Mr. Gardner whistled them in and we returned to the kennel to get a closer inspection. Housing the others up we looked over Duke of Vernon first. I never expected to prefer a pointer to a setter, but with Duke before me I had eyes only for him. Take him point by point he is certainly a wonder.

Of course I couldn't "take notes," but I don't know that it matters much. I remember remarking one slight defect, but forget what it was, and then his action when on lead is certainly a little stilty. He is the grandest pointer it has been my good fortune to see. By Glendale—Spotless, his breeding is not fashionable, but to use a vulgarism, he arrives there nevertheless, and, anyway, he strains back to the best of blood. I asked Mr. Gardner how his relations compared with him; but he told me they were of no account. "As I told them last fall, they have the blood, but don't seem to breed another Duke."

Miss Freedom, Duke's companion, I did not care for at all. Bad taste, perhaps, on my part, for Mr. Gardner seemed to think a good deal of her, and I don't pose as a judge of pointers. She is a nice affectionate creature though, and made a tremendous fuss on seeing me pass her bench at the Boston show. It was certainly hard lines on the little bitch to look her over after Duke of Vernon.

Roger, Duke and Miss screamed with disgust as we turned our backs upon them, chorused by their more lowly and humble confrères in the barrels. A mongrel terrier broke loose and betrayed an anxiety to sample us; but it's just astonishing how fast fat men can run when they have to.

DOGWHIP.

KING MARK IN CHAMPION STAKE.—*Editor Forest and Stream:* Mr. Ridgway's King Mark was wrongly entered in All-Aged Stake. He should have been in Champion Stake. The mistake is mine, as his entry in my possession plainly shows he was regularly and correctly entered. The cause of the mistake was that the entry was made in a letter, written to me, and I mistook Ch. for A. A. Stake. I hope you will make this correction.—WASHINGTON A. COSTER, Sec'y and Treas. E. F. T. C.

THE FREE FOR ALL STAKE.—New York, Oct. 23.—*Editor Forest and Stream:* The Central Field Trial Club begs to notify its patrons that entries for the Free for All Stake (four-hour heat race) close Nov. 1.—C. H. ODELL.

THE MARGUERITE II. LITTER.

FANWOOD, N. J., Oct. 20.—*Editor Forest and Stream:* While not at all desirous of trespassing upon the columns of the FOREST AND STREAM, a card in your last issue from one John H. Dey, of Red Bank, N. J., and headed "Mr. Pentz's Mistake," demands both my attention and an answer. Mr. Dey concludes his note by saying as follows: "I wish it understood that I don't claim my puppies are by Pentz's dog, but I do claim they are by Chapen's Brake, by which name he is known, and I cannot understand Mr. Pentz publishing such an assertion when he knows it is not so."

Men with convenient consciences should have good memories. Men who write letters without retaining copies are in need of still better ones. The following extracts from Mr. Dey's letters to me need no further comment at my hands than the simple one of publication. I would premise these extracts by saying that when I saw the misleading claim as to breeding in your columns, I at once wrote to Mr. Dey, calling his attention to the fact that Brake had never been bred to Marguerite II., and that if his explanation was not satisfactory would have to make the fact public for the protection of myself as well as to protect those who might have purchased the puppies, believing them to be as represented.

Extract No. 1, in letter bearing date of Aug. 29, 1890: "The dog Brake that I bred my bitch to is, I presume, the same dog you claim to own; he is lemon and white, No. 7035, bred by F. S. Underhill, Newark, April 7, 1886; by Bang-Bang (4022, Vol. III.) out of Jane, by champion Sensation (1261, Vol. I.) out of Heath's Lill, by Grigg's Mack II. I was very much surprised when I received your letter; I knew you did own him, for I have seen the dog at the shows. The gentleman who gave me permission to use the dog through his agent told me that he had bought Brake. I knew the dog as soon as I saw him."

Extract No. 2, letter bearing date Sept. 20, 1890: "I have written to the parties that have my puppies not to register them until they heard from me again. The thing is now to find out who sent me your dog's number and pedigree. If you keep still I will hunt him up, etc., etc."

I have but little to add. Mr. Dey appears to have my dog's pedigree all right, and to have sold his puppies out of Marguerite II., representing them as being by Brake (7035). Knew the dog, too, as soon as he saw him. Indeed! Knew him of course, so that his litter of puppies could find a market. Further, he writes me to "keep still," and when I decline to do so, sends you his card as published. He wants to find out, "does he," who sent him Brake's pedigree? Perhaps an examination of the files of letters at the American Kennel Club's room will show one from Mr. Dey himself, asking for information as to Brake's pedigree.

The one thing I feel happy over is that I have brought to the knowledge of those who may have bought any puppy of the litter referred to, the fact that the breeding is not that which was given the purchasers at the time of sale (see extract referring to the fact that he will have to correct his statement as to their breeding).

Who can doubt that a correction would have been the last thing thought of had not the matter been made public in your valuable columns?

"I have never claimed that I used his dog, nor do I wish to; he asserts what is not true." That is one of the gentleman's remarks, which the extracts taken from his own letters fully answer. STANTON W. PENTZ.

THE SPECIAL STAKE FOR GORDON SETTERS.—Oct. 27.—*Editor Forest and Stream:* I would remind Gordon setter men that this is the last week in which to make their entries for the special stake for Gordons at the Central Field Trials. Entries close Saturday, Nov. 1, 1890. On closing of entries, full particulars will be published as to the division of money and number of prizes. If you have no entry blank, send the name of your dog, color and sex, date when whelped, name of sire and dam, name of owner and deputy, town, county and State you live in, and $10 for forfeit money to JOHN H. MEYER, 159 West Thirty-fourth street, New York city.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Bones. By C. S. Hanks, Manchester-by-the-Sea, Mass., for white and black marked fox-terrier dog, whelped July 13, 1889, by Dusky Trap (Dusky Splinter—Spider) out of Nina (Mixture—Shamel).

Little Boy, Jersey Duke and Jersey Maid. By Central Kennels, Jersey City, N. J., for black and tan King Charles spaniels, two dogs and one bitch, whelped Aug. 16, 1890, by Roscius out of Twilight (Don II.—Duchess of Albany).

BRED.

☞ **Prepared Blanks sent free on application.**

Ford Lass—Border Dandy. W. E. Hoff's (Chattanooga, Tenn., Dandie Dinmont terrier bitch Ford Lass (Old Jock—Gypsy Queen to his Border Dandy (Border Clinker—Forest Vic), Sept. 28.

Brazer—Robber Chieftain. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Brazer (Bras—Mercia) to their Robber Chieftain, Aug. 25.

Highland Lassie—Chieftain. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Highland Lassie (Bran—Lorna II.) to their Chieftain, Aug. 10.

Lorna Secunda—Bran. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Lorna Secunda (Chieftain—Lorna II.) to their Bran, Aug. 6.

Nina—Bones. C. S. Hanks's (Manchester-by-the-Sea, Mass.) fox-terrier bitch Nina (Mixture—Shame) to his Bones (Dusky Trap—Nina), April 12.

Hillside Brilliant—Reckoner. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Brilliant (Raby Mixer—Princess) to their Reckoner, Aug. 10.

Princess—Brokenhurst Quick. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Princess (Venetian—Lurette) to Mr Wilton's Brokenhurst Quick (The Moonstone—Brokenhurst Dainty II.), Aug. 12.

Lady Mixture—Reckoner. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Lady Mixture (Mixture—Warren Lady) to their Reckoner, Aug. 26.

Freya—Raby Mixer. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Freya (Darkie—Fredn) to their Raby Mixer, Aug. 27.

Hillside Linden—Raby Mixer. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Linden (Belgrave Sequence—Linden Nettie) to their Raby Mixer, Aug. 11.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Ramona. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Ramona, Aug. 20, one dog, by their Chieftain.

Berga. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Berga (Bran—Maida), Aug. 13, eight (five dogs), by their Bran.

Theodora. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Theodora (Chieftain—Thora), Aug. 18, four (three dogs), by their Bran.

Heatherbelle. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Heatherbelle, Aug. 7, five (three dogs), by their Robber Chieftain.

Wanda. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Wanda (Gunnar—Sheila), June 18, five (one dog), by their Bran.

Fashion. G. H. Bush's (Buffalo, N. Y.) cocker spaniel bitch Fashion (Brant—Bonita), Oct. 16, five (four dogs), by his Adonis (Horneli Mikado—Venus).

Novel. G. H. Bush's (Buffalo, N. Y.) cocker spaniel bitch Novel (Black Pete—Miss Nance), June —, four (two dogs), by J. P. Willey's Jersey (Ohio II.—Darkie).

Warren Lady. Hillside Kennels' (Lancaster, Mass.) fox-terrier

bitch Warren Lady (Brokenhurst Joe—Swansdown), May 25, five (three dogs), by their Raby Mixer.

Meersbrook Nan. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Meersbrook Nan (Meersbrook Ross—Meersbrook Model), June 10, one bit h, by their Reckoner.

Hillside Model. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Model (Reckoner—Meersbrook Nan), June 10, five (one dog), by their Raby Mixer.

Nina. C. S. Hanks's (Manchester-by-the-Sea, Mass.) fox-terrier bitch Nina (Mixture—Shame), June 13, two dogs, by his Bones (Dusky Trap—Nina).

Richmond Dazzle. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Richmond Dazzle (Raby Mixture—Richmond Puzzle), June 18, five (one dog), by L. & W. Rutherfurd's Raffle.

Hillside Sapphire. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Sapphire (Mixture—Freya), July 26, one dog, by their Reckoner.

Lady Reckon. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Lady Reckon (Reckon—Richmond Myrtle), July 31, five (four dogs), by their Raby Mixer.

Hillside Ruth. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Ruth (Mixture—Wasp II.), Aug. 2, one bitch, by their Reckon.

Hillside Freda. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Freda (Mixture—Freya), Aug. 12, one bitch, by their Raby Mixer.

Jaunty. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Jaunty (Joker—Torment), Aug. 10, one dog, by their Raby Mixer

SALES.

☞ **Prepared Blanks sent free on application.**

Viola. Black and tan setter bitch, whelped May 25, 1888, by champion Royal Duke out of Carmen K., by Chas. Bedford, Philadelphia, Pa., to Joseph S. Gaus, same place.

Jersey Obo. Black cocker spaniel dog, whelped Feb. 6, 1890, by Jersey out of champion Shina, by J. P. Willey, Salmon Falls, N. H., to G. H. Bush, Buffalo, N. Y.

Psyche. Black cocker spaniel bitch, whelped Oct. 18, 1887, by Brant out of June W., by G. H. Bush, Buffalo, N. Y., to C. R. Kimball, Willink, N. Y.

Chimes. Black cocker spaniel dog, whelped Dec. 6, 1889, by Obo II. out of Psyche, by G. H. Bush, Buffalo, N. Y., to J. J. Laing, Buffalo, N. Y.

Hillside Bess. Light tan head, body white, fox-terrier bitch, whelped Sept. 13, 1889, by Raby Mixer out of Princess, by Hillside Kennels, Lancaster, Mass., to A. E. Shaw, New Orleans, La.

Hillside Diana. Black and tan head, body white, fox-terrier bitch, whelped Sept. 6, 1889, by Raby Mixer out of Richmond Dazzle, by Hillside Kennels, Lancaster, Mass., to A. E. Shaw, New Orleans, La.

Hillside Rue. Black head, body white, fox-terrier bitch, whelped July 7, 1889, by Reckoner out of Lady Mixture, by Hillside Kennels, Lancaster, Mass., to A. E. Shaw, New Orleans, La.

Hillside Grace. Black head, body white, fox-terrier bitch, whelped June 14, 1889, by Reckoner out of Hillside Ruth, by Hillside Kennels, Lancaster, Mass., to A. E. Shaw, New Orleans, La.

Hillside Pirate. Brindle deerhound dog, whelped Aug. 7, 1890, by Robber Chieftain out of Heatherbelle, by Hillside Kennels, Lancaster, Mass., to B. S. Dering, Utica, N. Y.

Hillside Treasure. Black and white head, body white, fox-terrier bitch, whelped Aug. 27, 1889, by Reckoner out of Meersbrook Nan, by Hillside Kennels, Lancaster, Masss., to Halleck Alvord, Gloversville, N. Y.

Reckoner—Lady Mixture whelp. Black and tan head, body white, fox terrier bitch, whelped May 15, 1890, by Hillside Kennels, Lancaster, Mass., to A. M. Aiken, Danville, Va.

KENNEL MANAGEMENT.

There is no charge for answering questions under this head; we shall be glad to give advice on the care and management of dogs; and we shall make this a special feature.

M. C., Amsterdam, N. Y.—Please inform me what to do for a dog that runs at one eye. The dog is in a good healthy condition, with the exception of the one eye, that runs constantly. The trouble seems to be local, although I am unable to discover any thing that would cause the eye to run. Ans. Drop in the eye, morning and evening, a solution of nitrate of silver, one part to thirty parts water.

W. H. S., Trenton, N. Y.—I have a red Irish setter by champion Chief. Recently he has been given to shaking his head until his ears flap, also scratching at the root of his ears. I have sponged his ears out with warm water and applied glycerine, which I think helped him some; otherwise he seems all right, eats well, etc. He will wake out of a sound sleep and shake his head. His hearing is good. Can you suggest a remedy? Ans. See answer to W. E. S. in this issue.

E. G. S., Parkersburg, W. Va.—I have a setter pup, four months old, that is just recovering from a severe attack of distemper, and it seems to have affected his back and hindlegs. His legs seem to be very weak, and he has a tendency to stagger and fall when he attempts to walk. What can I do for it? Ans. Your dog needs a nutritious diet. Give strong mutton broth, mixing in the meat with some stale bread. Vary the diet as you deem necessary. Give gentle exercise daily and the following tonic:

℞ Strychniæ sulph.....gr. ij
Aquæ.....ʒj

Ft. mist. Sig. Dose, three drops twice a day. Give this treatment regularly and faithfully, and report result. As the dog gets better, cod liver oil will be found beneficial; dose, a dessertspoonful every night.

W. E. S., Cherry Creek, N. Y.—I have an Irish setter dog that has some trouble with his ears. They look red and inflamed on the inside close down in his head as far as I can see, and seem to give him much uneasiness. He will work at them with his hind feet and shake his head and flap his ears as if they itched. Will hold very still for me to rub them, but will invariably shake his head when I am through. I have washed them with Cuticura soap and warm water, then applying vaseline and it would relieve them for a time, but would get as bad as ever in a few days. I would esteem it a great favor if you would tell me the trouble and how to cure him, as I am afraid it will impair his hearing. 2. He also has worms, I have seen them come away from him in large numbers. They are about one inch in length and flat, white and almost transparent. What can I do for him? He is lively, looks and eats well, and his coat is smooth and glossy. Ans. 1. Sponge and syringe the ear gently with suds made from castile soap and warm water, wipe dry. Then pour into the ear the following: Bromo chloralum and laudanum equal parts, mixed with six times the bulk of water. Gently clean the base of the ear, and repeat this treatment twice a day. Keep the dog warm during and after treatment. 2. Your dog has a tapeworm. One of the best remedies is areca nut. Procure the nut and grate it to a powder just before you need it, give half a drachm in a pill of lard and in one hour repeat the dose. If in half an hour there is no sign of a movement, give a dessertspoonful of castor oil. Before giving the areca nut it is necessary to fast the dog for 24 hours, also, if he is at all constipated, give him a spoonful of castor oil. The object of this is to clear the intestinal canal, so that the worm may be expelled more quickly. Another good remedy, with the same preparatory treatment, is male fern. Take of the extract (oil of fern) 12 drops, beat it well into a raw egg and administer. this should also be followed in an hour by the castor oil as stated above. After this treatment, it would be well to watch the faces if you are not certain the head of the worm has been removed. If any more segments appear in a month or so repeat the treatment as before.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

PARTNER WANTED.—Partner wanted in an old established skiff and canoe factory. Amount of capital not so material, as a man with the necessary experience and qualifications capable of taking entire charge of the manufacturing and management of the whole business, as present partners (two) reside at a distance and are unable to take any active interest in it. Address SKIFFS, care Forest and Stream office, New York.—*Adv.*

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

Rifle and Trap Shooting.

RANGE AND GALLERY.

BULLSHEAD CLUB, Oct. 27.—The Bullshead Rifle Club, of New York, held its annual prize shoot at the Washington Park range to-day. The majority of the rifle clubs in New York, Newark and vicinity, as well as in some of the country towns, were represented. The marksmen present shot at the ring and bullseye target, and members of the club also on the target of honor. R. Busse won the first prize on the latter with 64, F. Schmidt taking second. On the ring target G. Zimmermann was the winner with 72 points, the first score put up by him. Although there were many of New York's best rifle shooters present, his score stood in first place throughout the entire contest, thanks mainly to the mediocre light. The distance was 200yds., position standing, any rifle, entries unlimited, except on the target of honor. The following are the results:

Target of Honor:					
R Busse	64	E C Gentsch	50	Siss	38
F Schmidt	64	V Steinbach	49	Roedel	37
A Stein	63	A Stahl	49	Lewitzkis	32
G Zimmermann	60	Schnackenberg	46	Walter	32
F Schroeder	54	C Rein	45	Klappert	26
B Walther	53	Meister	43	Vreage	24
J Schutz	52				
Ring Target:					
G Zimmermann	72	M B Engel	68	V Steinbach	64
L Flach	71	J Coppersmith	68	F Schmidt	63
Dr Boyken	71	B Walther	67	H Keyes	63
M Dorrier	71	F Schroeder	67	C Rein	62
E Fischer	71	C G Zettler	66	Roedel	56
D Miller	70	R Busse	65	Kroeger	56
A Stein	69	J Hesse	64		

Greatest number of bullseyes:

G Zimmermann	5	L Flach	4	F Schmidt	4
J A Boyken	3	M Dorrier	1	M B Engel	1

Best bullseye, by measurement, 1-100 of an inch standard:

G Zimmermann	21½	M B Engel	37	F Stuart	41
R Busse	25	J A Boyken	37½	L Flach	43
A Stein	32	V Steinbach	38½	C G Zettler	44
B Walther	34	Schroeder	40		

SCHUETZEN SHOTS.—Sixteen members of the New York Schuetzen Corps assembled at the Union Hill Schuetzen Park on Friday afternoon, Oct. 24, to take part in the last club shoot of the season. The proprietor of the restaurant, who claimed to have been notified that the shoot had been postponed, but could not tell by whom, had sent the markers and warners home, so that the club members could not shoot. After holding an indignation meeting, at which it was decided to hold the shoot to-day, to begin at 1 P. M., the marksmen consoled themselves by participating in a good dinner at the expense of the corps.

BENNETT BROS.—The two brothers Bennett, now full-fledged stage shooters, left New York for Paris last week. Their clever work with pistol and rifle will be much appreciated at the French capital.

ST. LOUIS, Mo., Oct. 24.—Interest in the St. Louis Pistol Club appears to be on the wane. Only six members took part in the last shoot. Sam Dorman won the medal by a score of 94. For all shooting the club uses a 12½yds. standard American target. The score:

Sam Dorman	9	10	10	8	10	9	10	10	9	9—94
G Alexander	9	10	9	10	10	7	10	9	10	9—93
M Summerfield	9	10	9	9	6	9	9	9	10	9—89
W Bauer	10	9	8	10	10	9	7	9	7	10—89
M Billmeyer	10	9	8	10	9	7	8	10	8	8—87
A McBean	7	8	9	9	10	9	10	8	8	7—85

UNSER FRITZ.

CREEDMOOR.—Frequenters of Creedmoor will miss a familiar figure after this month. The adjutant-general, as custodian of Creedmoor under the provisions of the act transferring the range to the National Rifle Association of the State, has notified Superintendent Wm. H. Bower, through Gen. Robbins, general inspector of rifle practice, that the position of superintendent will be abolished on Nov. 1, and after that date only a watchman will be maintained on the grounds. Superintendent Brower has had charge of the Creedmoor range for seventeen years. In all that long period there has never been a complaint as to his conduct of affairs, but he has invariably shown himself to be the right man in the right place. His retirement will be universally regretted. The newly-created position of watchman, it is stated, will go to the present chief of scorers. Notice has also been served upon "Tim" Scully that he must vacate the club house on or before Nov. 1, although it is just possible that he may be permitted to continue in possession for a few days longer to give him opportunity to close out his stock at the election day matches. What is to be done another season has not yet been determined, but it looks very much as if officers and men would either have to provide themselves with rations or go outside the grounds to obtain meals and refreshments.

BOSTON, Oct. 25.—The regular weekly shoot of the Massachusetts Rifle Association was held to-day at its range. The attendance of shooters was good, but the shooting conditions were unfavorable for good shooting, and yet some fine scores were made. Following are the best scoses made to-day, at 200yds., Standard American target, re-entries allowed:

Record Pistol Match, 50yds.

H Severance	91	A S Hunt	79	M T Day	79
H L Lee	86				

All-Comers' Off-Hand Match.

H L Lee	87	S G Sydney	75	J B Hobbs	64
W O Burnite (M.)	78	A S Hunt	65	A N Mann	63
O M Howard	76	M T Day	64		

All-Comers' Rest Match.

W P Thomson	99	M T Day	102	M R Barter	94
S Wilder	107	A S Hunt	100	S D Martin	92
F Daniels	107	John French	97	M Underwood	91
A H Ballard	105	S W French	96	T Oliver	90
F W Chester	103				

Five-Shot Military Match, 200yds.

Burnite	55555—25	Day	54544—22	Hobbs	44541—21
Field	54554—23	Lenfest	44455—22	Martin	44444—20

BROOKLYN, Oct. 28.—The Williamsburgh Shooting Society has just finished its summer shoot on the 200yd. range at Wissel's Cypress Hill Park, thirteen members taking part in the six monthly contests. The money shot in and $20 donated by the club were divided among the competing marksmen in proportion to the number of points. The club will decide on its winter programme at the next monthly meeting. The results attained this summer are:

	Possible.	Total.	Highest.	Average.	Per cent.
F Ross	1,500	1,239	214	206.50	.826
W Vorbach	1,500	1,165	211	198.33	.777
Capt Horney	1,500	1,138	195	189.67	.759
C W Horney	1,500	1,133	208	188.83	.755
G Kleinbub	1,500	1,079	202	179.83	.719

H Horney	250	107	107	107.00	.428

ZETTLER CLUB, Oct. 26.—The weather conditions were not all that could be desired for the last shoot in the Zettler Rifle Club's competition at Cypress Hill Park to-day. The scores made were higher than usual. The four members present shot a 100-shot match, half winners and half losers, for a nominal stake. The number of centers made—25 ring, 1½in. diameter—was very large. J. A. Boyken scoring 7, C. G. Zettler 6, V. Steinbach 5, and F. Ross 1. J. A. Boyken and F. Ross came out ahead. Out of the 100 shots fired by Dr. Boyken only one was off the black, a clean miss on the 25th shot. But for this Boyken would have beaten W. Hayes's record of 2,235. The total scores were: J. A. Boyken 2,219, C. G. Zettler 2,072, V. Steinbach 2,014, F. Ross 2,116. In the regular club competition V. Steinbach won the first premium on the greatest number of points, J. A. Boyken the second and E. Zettler the third. The best average for the day as well as for the entire season was made by J. A. Boyken. Scores: Club shoot, entries unlimited, 200yds. distance, off-hand, 25 ring target, 12in. bullseye, ¾in. rings, strings of 10 shots, possible 250 points—J. A. Boyken, total 1,997, average 221.89; F. Ross, total 1,917, average 213.00; C. G. Zettler, total 1,857, average 206.33; V. Steinbach, total 1,819, average 202.11.

WELLINGTON, Mass., Oct. 25.—The merchandise match for October was closed to-day at the grounds of the Wellington Gun Club. Following are the scores made today at 20 singles and five pair standards: Perry 24, Melcher 23, Gore 22, Bradbury 21. The winners of the prizes out of a possible 90 were: Bond 71, Melcher, Gore and Stone 70, Dill 63, Cowee 54, Bailey 52.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

Nov. 18-19.—Open-to-All Tournament of the Woodside Gun Club, Woodside, N. J. Carl Von Lengerke, Sec'y, 843 Broad street, Newark.

Nov. 25-28.—Tournament of the Newark Gun Club, at Erb' Park, Newark, N. J. Two days at inanimate targets and two days at live birds. Jacob Pentz, Secretary.

OMAHA.

OMAHA, Neb., Oct. 24.—The Omaha tournament given by Messrs. Parmalee and Nason was fairly attended. Among the visitors were S. A. Tucker, W. H. Skinner, John A. Ruble, R. O. Heikes, and a number of other well-known sportsmen. The weather was fine and the shooting excellent. The live birds were a good lot, and, helped by a strong wind, made the use of the second barrel quite frequent. A number of the shooters go from here to the Des Moines tournament, Oct. 28 to 30. Saturday, Oct. 25, Mr. Parmalee and Mr. Budd shot a match at 50 live birds, American Association rules. There was a high wind blowing from left to right across the traps and carried a number of birds out of bounds. Mr. Parmalee won the match, scoring 44 to Mr. Budd's 42. Parmalee had two birds dead out, while Budd had eight. The match was for a purse of $100, and Mr. Parmalee invited all the shooters to stay and help him spend his $50.

Match at 10 single targets: Smith 6, Nason 9, Ruble 8, Bray 10, Heikes 9, Skinner 10, Parmalee 8, Budd 9, Fogg 10, Simpson 10. The first live bird shoot was eight birds, entrance $8. The managers had taken great pains in the selection of their birds and the latter conducted themselves in a very satisfactory manner. One or two hovered near the trap when they were released and refused to become targets, but most of them flew as soon as the trap was opened:

Parmalee	21121101—7	Grimm	12011212—7
Tucker	11112111—8	Smith	20101202—5
Budd	11121121—8	Field	11110210—6
Skinner	10212002—5	Heikes	01110111—6
Simpson	00111112—6	Nason	11210221—7

In the third event a purse of $25 was added to the entrance fee. Fogg 10, Parmalee 15, Budd 15, Skinner 11, Simpson 11, Bray 14, Grimm 11, Rowley 11, Ruble 13, Field 11, Heikes 14, Smith 12.

The next was the most important event of the day. It consisted of 10 pigeons, entrance $50 added:

Budd	2111112121—10	Nason	1022112211— 9
Parmalee	2211121111—10	Brucker	0111211110— 8
Tucker	1212110111— 9	Bray	1111112101— 9
Grimm	1111122212—10	Ruble	1111111111—10
Heikes	1110120101— 7	Ackerman	1102202221— 8
Smith	1011011112— 8	Fogg	0220212201— 7
Field	1102021011— 7	Gwin	2011110211— 8
Simpson	1122111202— 9		

The fifth shoot was at 10 bluerocks, entrance $2.50: Musselman 7, Grimm 8, Brucker 7, Fogg 6, Heikes 8, Parmalee 9, Budd 10, Field 9, Simpson 8, Smith 5, Rowley 7, Skinner 9, Ruble 8, Nason 8, Bray 7.

Some of the best shooting of the day was done in the 5 live-birds shoot which followed. Eight men made a clean score and shot out the tie fa a miss-and-out contest. It finally narrowed down to Grim and Nason, who killed 15 consecutive birds each and then divided the money. Score:

Tucker	11121—5	Musselman	12111—5
Brucker	01212—4	Budd	11112 5
Parmelee	11111—5	Field	21010—3
Grimm	21212—5	Simpson	02111—4
Heikes	01111—4	Ackerman	00121—3
Dickey	11001—3		
Fogg	11111—5		
Smith	12112—5		
Nason	11111—5		
Ruble	00110—2		

In the shoot at 9 single targets and 3 doubles Parmelee won without a miss. Budd 12, Grimm 13, Brucker 8, Dickey 9, Fogg 9, Heikes 13, Parmelee 15, Field 9.

The last regular contest was 8 live birds:

Heikes	11111111—8	Dickey	01011111—6
Budd	11111111—8	Grimm	11011111—7
Parmelee	11110112—6	Tucker	01101111—6
Brucker	01111111—7	Field	11111111—8
Ackerman	10001111—5	Nason	11110111—7

Second Day.

The Parmalee-Nason tournament continued at the fair grounds with an increased attendance and there was a good list of entries in all the events. The first was a single target shoot: Parmalee 10, Budd 10, Grimm 10, Skinner 9, Heikes 9, Simpson 8, Smith 8, Brucker 8, Green 8, Clark 7, Sanford 3.

Live birds:

Grimm	12120000—4	Green	20101211—6
Smith	11002111—6	Rowley	00211111—6
Brucker	11110112—6	Heikes	00212111—6
Parmalee	11112110—7	Budd	11202112—6
Tucker	00220111—5	Ruble	01111110—6
Budd	22112122—8	Nason	00221112—6
Ackerman	20011121—6		

The third event was at 15 singles, 7 entries: Parmalee 14, Grimm 14, Budd 13, Ruble 13, Heikes 12, Nason 10, Brucker 9.

The next shoot was the best contest of the day. It was a match at 10 live birds, $10 entrance, and $75 added:

Grimm	2122210101— 8	Green	1121112011— 9
Bray	1111111111—10	Ruble	2212002101— 7
Smith	0111120112— 8	Nason	0120011121— 7
Skinner	2120012222— 8	Clark	0211221200— 7
Brucker	1011212220— 8	Gwin	2100101010— 5
Ackermann	2101121220— 8	Rowley	0112211210— 7
Heikes	2102101122— 8	Parmalee	1101111111— 9
Tucker	2102222111— 9	Musselman	1110001121— 7
Budd	2121221111—10	Sanford	0000000011— 2
Dickey	0102220112— 7	Howard	1110220010— 6
Montmorency	1211120111— 9		

At 20 single targets, entrance $3.50, and $25 added: Brewer 17, Townsend 17, Fogg 14, Heikes 18, Budd 19, Green 17, Parmalee 19, Skinner 16, Simpson 17, Eisenheimer 15, Clark 16, Brucker 17, Icker 18, Field 17, Dickey 19, Montmorency 10, Ruble 16, Smith 14, Bray 18, Grimm 20, Hunt 11, Paulson 11, Musselman 14.

The next event was 6 live birds, and was one of the closest of the afternoon:

Grimm	112221—6	Hulett	112021—5
Budd	111211—6	Dickey	110210—4
Brucker	101112—5	Field	121001—4
Fogg	100112—5	Ackerman	111102—5
Blume	101011—4	Parmalee	112121—6
Montmorency	101101—4	Smith	2112112—6
Paulson	101111—5	Simpson	211101—5
Hunt	011111—5	Icken	121211—6
		Heikes	212111—6
		Bray	111211—6
		Clark	000111—3
		Ruble	211010—4
		Tucker	101111—5
		Green	111111—6

The last regular shoot was 9 single targets, in which Heikes, Icken and Simpson made clean scores: Heikes 9, Dickey 7, Icken 9, Sohnson 3, Paulson 5, Fogg 7, Field 7, Hunt 2, Budd 7, Simpson 9, Clark 2, Ruble 8, Parmalee 7, Blume 8, Grimm 8.

Third Day.

The third day of the shooting tournament passed off successfully. Nearly all the marksmen who had participated in the contests of the preceding days were present, and also a number of new men. Only four of the regular events of the day were shot out, the remainder of the time being occupied by a series of special shoots for small purses. The first event was a live-bird shoot:

Grimm	11211112—8	Budd	12102112—7
Parmelee	22111112—8	Heikes	11012211—7
Brucker	20112121—7		

The following scores were made on 20 single targets: Parmelee 18, Budd 20, Skinner 17, Fogg 18, Grimm 16, Heikes 19, Miller 14, Hawkes 14, Dickey 17, Evans 11, Fox 18, Ruble 19.

The next event was 7 birds:

Simpson	2010121—5	Grimm	2212121—7
Babcock	2121010—5	Brucker	1101210—5
Fogg	1211001—5	Parmelee	1111211—7
Evans	1112101—6	Dickey	1120210—5
Budd	2111111—7	Clarke	1112101—6
Babcock	1112101—6	Heikes	2111121—7
Smith	1111201—6		

The last regular shoot was 9 single targets and 3 pairs. Budd and Grimm shot out the string without a miss. Score: Dicke Fox 11, Fogg 10, Parmelee 13, Budd 15, Grimm 15, Heders 13.

C. W.

NEW JERSEY., Oct. 23.—The tournament of the Maplewood Gun Club, held on the club's grounds to-day was a fairly successful affair, despite the pouring rain and shifting wind, which combined to make the shooting extremely difficult. Several Newark shooters took part. The programme comprised eight events at bluerocks. Owing to the slim attendance, the team match open to three men from each club was omitted.

SHOOTING IN THE RAIN.

CATSKILL, N. Y., Oct. 23.—Tolley's ninth kingbird tournament on Oct. 14 met with the usual rainy day, which seems to accompany his shoots. It is a common remark in town, "You can bet we will have rain because Fred Tolley has advertised a tournament." The ten events on the programme were shot to a finish, all on the Keystone system, four moneys in all events and divided, three ordinary 10-bird events, two double-bird events, two events with incomers (which are marked with a star, indicating the incoming birds), one team race, one medal shoot, all of which made an interesting card and was enjoyed by a dozen shooter from Albany, Troy, Saratoga and Saugerties. Following are the scores:

No. 1, 10 kingbirds; entrance $1:

Mattice	9	"Buck"	8
Beach	9	Hollis	8
Goggin	9	Betts	8
Adams	9	Pidgeon	7
		Levengston	10
		Tolley	7
		Buesser	6
		Leon	6

No. 2, 10 kingbirds, 6 outgoers and 4 incomers:

Levengston	1	1	1*	1	1*1 1 1 1* 1 0*—9
Buck	1	1*	1	1*	1 1 0* 1 1* 1 —9
Mattice	1	1*	1	1	0* 1 1* 1 1 1*—9
Hollis	1	1	1*	1	0* 1 1 1* 1 1*—9
Goggin	0	1*	1	1*	1 0 1* 1 1* 1 —9
Pidgeon	1*	0	0*	0	1 1* 1 1* 1 1 —9
Beach	0*	1	0	1*	1 0* 1 1 1* 1 —7
Betts	0	0*	1	1*	1 1 0* 1 1* 1 —7
Leon	1*	1	1	0*	1 1* 0 0 1* 1 —7
Buesser	0*	1	1*	1	0 0* 1 1* 1 0 —6
Adams	1	1*	0	0	0* 1 1* 0 0 1* —5

No. 3, 6 pairs kingbirds, entrance $1.50:

Beach	11	11	11	11	11 11—12
Buck	11	11	11	11	01 11—11
Mattice	01	10	10	11	11 11— 9
Adams	11	11	11	10	10 10— 9
Hollis	11	00	10	11	11 10— 8
Buesser	10	01	00	11	11 10— 8
Levengston	11	10	10	10	11 10—8
Goggin	11	11	01	00	10 11—7
Betts	00	10	11	11	00 00—7
Leon	11	10	11	00	00 01—7
Pidgeon	00	00	11	11	10 00—5

No. 4, 15 kingbirds, entrance $1.50:

Levengston	15	Mattice	13	Goggin	10
Beach	14	Betts	13	Leon	10
Hollis	14	Buesser	13	Pidgeon	9
Buck	13	Adams	11		

No. 5, team match, open to teams of two men from any club, 25 birds per man, 50 per team, entrance per team $2.50:

Saratoga Gun Club.

Levengston	1111111111111111111111111—25
Buck	1110111110101111111111011—21–46

West End Gun Club, Albany.

Adams	1111111111111111111111111—25
Leon	1110011110111010101111111—19–44

Catskill Gun Club.

Mattice	1100111111111111111111111—23
Beach	1110111101101011111111101—20–43

Hudson River Association.

Buesser	1111110110111111111111111—23
Pidgeon	1111011111110101111101101—20–43

Trojan Gun Club.

Betts	1111111111101111101111010—22
Goggin	1011111111111101111000100l—18–40

No. 6, 10 kingbirds, entrance $1:

Goggin	10	Buesser	9
Buck	9	Leon	9
Levengston	9	Mattice	8
Betts	9	Beach	8
		Hollis	8
		Adams	7
		Pidgeon	6

No. 7, 6 pairs kingbirds, entrance $1:

Levengston	10	Adams	10
Mattice	10	Pidgeon	10
Hollis	10	Buck	9
		Goggin	8
		Beach	7
		Leon	6

No. 8, 15 kingbirds, entrance $1.50. Birds thrown, 9 outgoers and 6 incomers:

Mattice	1	1*	1	1	0*	1	1*	1	1*	1	1*	1	1	1*	—14
Levengston	0*	1	1*	1	1	1*	1	1*	1	1	1*	0	1	1*	—13
Adams	1	1*	1	1	0*	1	1*	1	1	1*	1*	1	0	1*	—13
Hollis	1	1	1*	1	1*	1	1	1*	1	1*	0	1	1*	1	0*—13
Beach	0*	1	1	1*	1	0*	1	1	0*	1	1*	1	1*	1	—12
Betts	1	1*	1	1*	1	1	0*	1	1*	1	1	0*	1	1*	0 —12
Buck	1	0*	1	1*	1	1	1*	0	0*	1	1	0*	1	1*	0 —10
Buesser	0*	1	1*	1	1	0*	1	1*	0	0	1*	0	1*	1	1 —10
Pidgeon	1*	0	1	0*	1	0*	1	1	0*	1	1*	0	1	1*	1 —10
Goggin	1	0*	1	1*	0	0	0*	1	1*	1	0	1*	1	1*	0 — 9
Leon	1	1	0*	1	0*	1	1	0*	1	1*	0	0	0*	1	0*— 8

No. 9 was the grand contest of the day, for the league medal. Conditions, at 25 kingbirds per man, entrance $2.75. Nine entries were taken, but Adams and Pidgeon did not enter for the medal, but for company's sake:

Levengston	1111111111111111111011111—24
Mattice	1110111111111111111111011—23
Beach	1111110111111111111011111—23
Buck	1111101011111111111111111—22
Buesser	0111111011111111111111101—22
Betts	1010110011101111111111101—19
Goggin	0111001100101000011111111—15
Pidgeon	1111111111101111111111111—24
Adams	1111111101110111w.	—13

Levengston winner of league medal.

No. 10, at 10 kingbirds, entrance $1:

Levengston	10	Pidgeon	8
Mattice	10	Hollis	7
Buck	9	Goggin	6
Adams	9		
		Betts	6
		Beach	6
		Leon	5

WATSON'S PARK.

BURNSIDE, Ill., Oct. 24.—Score made here to-day by Lake County Gun Club at 10 live pigeons, 30yds. rise, 80yds. boundry, Illinois State rules, for club m dal:

W J Edbrook	2211212111	N H Ford	1203211022 — 7
L W Whitney	1010201220 — 5	A Marquardt	1010211102 — 7
H Koehler	2210202211 — 8	C Buckleman	2211210221 — 9

Sweeps same day, 5 birds:

W J Edbrook	11112—5	N H Ford	01112—4
L W Whitney	21122—5	A Marqnardt	21111—5
H Koehler	21111—5	C Buckleman	01211—4

Second div. On shoot off Edbrook and Marquardt div. first.

Five birds:

W J Edbrook	11011—4	N H Ford	12122—5
L W Whitney	00001—1	A Marquardt	01121—4
H Koehler	02201—3	C Buckleman	10001—2

Second div.

Oct. 15.—Scores made here to-day by Chicago men, a practice shoot for Kansas City team. American rules, 80yds. boundary, 28yds. rise:

John Watson	1011012112111 0 —12	McFarland	0101022102102 0 — 9

C Willard	0001101001111111011—13	Hamiline	1101001111101111111—16

RAVELRIGG.

BLOOMING GROVE PARK.

A VERY interesting tournament was held at Blooming Grove Park on the 18th and 20th inst. The first event was for live birds for a silver cup, 25 birds each, won for the second time by Mr. Fred Engle, the conditions of the match for the cup are three winnings entitle holder to the possession. Following the live bird contest came the rifle match 200yds. off hand, open sights, for a cup, value $100 presented by C. C. Worthington. Last spring Mr. Fred Engle bore off the honors for this cup, but the contest this fall brought out a new member, Mr. Daniel A. Keep, of Philadelphia, who beat Mr. Engle by one point, wresting the glory won by him in this event last spring. The emblem is of very chaste design, and worthy of the generous donor. The rifle contest was not as interesting to the contestants as might be supposed, from the fact that most of them had participated in the live pigeon match, but there was such a high wind early in the day that it was deemed best to await a quiet hour in the evening for contesting with the rifle. The afternoon was very fine with almost no wind, which enabled the shooters to put the bullets just where they held—but most of them could not "hold." Following the rifle match there was a contest at fly-casting, Mr. James L. Breese gracefully taking first with 82½ft. to his credit, and Dr. S. M. Nash second with 71ft. As there was but one other event—trap for inaminate birds—left for the remaining day of the tournament, many of the members took advantage of the facilities for fishing and gunning, afforded by the association's magnificient territory, and were bountifully rewarded. The inaminate bird contest was won by Mr. R. Heber Breintnall with Mr. Engle a close second. This contest was also for a silver cup, three times to win for possession. Following the regular club matches were innumerable sweepstake contests resulting in much sport and some disappointments. While a match for live birds was going on Dr. S. M. Nash came in from a still-hunt with the tail of a nice buck, breaking the cold clammy atmosphere surrounding the trap shooters with a huzza that awakened the dormant souls of those who feared braving the elements for the purpose of pursuing the noble game through wet brush over hill through vale and perplexing laurel bushes. For it was a day styled "nasty" in every sense of the English term.

The next morning several went in pursuit of grouse, several after deer, and a few for the inspection of the club's trout hatchery, retaining ponds, etc. The grouse hunters were most successful, returning with something like a bushel basket full of grouse. The deer hunters were unsuccessful, the day being lowry and scent close to the ground. Many deer were seen but they invariably got the first shot, as is generally the case under such conditions, the same conditions accounting for the success of the grouse hunters. Nothing happened to mar the pleasure and the tournament was on the whole a most enjoyable affair, sixty-four being present.

WALLOT.

THE LYMAN CARTRIDGE.

J. P. DANNEFELSER'S shop at No. 9 Chambers street, New York, is the headquarters of the Lyman Cartridge Co. The Lyman cartridge is the production after long experimenting, of Mr. Lyman, of Englewood, and is in the line of ammunition improvement now so popular. The ordinary material is used, so far as shell, wads and shot go, but the powder is a brownish mass as of fine dust closely compressed. Up the center of this small mass runs an opening, permitting the flash from the fulminate cap to pass up into the powder interior. In speaking of the merits of the new shotgun explosive the company says:

"The Lyman's expert accelerating cartridge is constructed upon scientific principles, and the powder used is manufactured especially for it. To the sportsman it is practically smokeless. The combustion is progressive, and as rapid as can be utilized in any gun, and is cleaner than others. The gun does not heat up quickly. The recoil is hardly perceptible, and the noise is greatly reduced. Detonating is impossible, and with no unaccountables it gives equal results at all times with improved pattern and increased penetration. Using only thoroughly tested materials, and each charge being weighed, is unaffected by change of climate."

A test of the new powder against Black, Schultze and wood is promised on the FOREST AND STREAM gun testing ground, and a full report will be made in these columns.

SARATOGA GUN CLUB.—The fall and winter season of the Saratoga Gun Club has commenced and the regular meetings, held on Thursday of each week, with an occasional extra day, are well attended. The members generally are opposed to shooting for a money stake, but a number of very interesting individual and team races for the birds have been shot. The scores of several of the last meetings are appended. The targets used at present by the club are kingbirds, thrown from the new Keystone trap, Keystone system. Nearly all of the members use 12-bore guns, Mr. Gibbs being at, present, our only 10-bore man. It is always interesting to us to know what make of gun, and the load, other trap-shooters are using, and I append a list of those in use in our club: Levengston, 3drs. Hazard's trap, 1⅛oz. No. 8. Pike, 3drs. Hazard's trap, 1⅛oz. Hanson, 4drs. Hazard's Kentucky rifle, 1¼oz. shot. Meehan, 4drs. Hazard's trap, 1¼oz. shot. Coster, 4drs. Hazard's trap, 1¼oz. Crawford, 4drs. Hazard's trap, 1¼oz. shot. Hodgman, 4drs. Hazard's trap, 1¼oz. shot. Ramsdill, 3¼rs. dead shot, 1¼oz. Gage, 3drs. Kentucky rifle, 1¼oz. Gibbs, 4½drs. dead shot, 1¼oz. shot. McNair, 3drs. Hazard's trap, 1¼oz. shot. Bockes, 3drs. Hazard's trap, 1¼oz. shot. Atkins, 3drs. Hazard's trap, 1¼oz. shot.

Sept. 16:

Levengston	0111111111111111111111111111101111111111111111111—48

BADGER.

EASTERN NEW YORK.—Saratoga Springs, N. Y., Oct. 17.—The Trap-Shooters' League of Eastern New York has proved a great success, and we now have a schedule arranged by the secretary, Mr. Horace B. Derby, of the Albany *Argus*, which gives us a tournament at some one of the league club's grounds on Tuesday of each week. The attendance at our tournaments has largely increased, the entries running as high as 30. H. M. Levengston, Jr., one of the Saratoga Big Four at the recent tournaments of the Albany and Troy gun clubs, made one of the longest straight runs in regular sweepstakes on record—123 straight and 172 out of 173.—BADGER.

NEWARK, N. J., Oct. 23.—The rain prevented the shooting of the live bird match between Frank Class and Frank Kleinz at John Erb's to-day, but the afternoon was pleasantly spent by the party present in sweepstake shooting. The postponed match at 100 live birds will take place on the fair grounds at White Plains, Westchester county, N. Y., on Wednesday next.

CREAM CITY GUN CLUB.

WE have received from the Cream City Gun Club, of Milwaukee, Wis., its report for the season ending Oct. 1 last. The awards of medals were: Championship, L. J. Petit, with 92 out of 100 doubles and 43 out of 50 singles. A Class—First, H. F. Bosworth, 89 out of 100; second, Geo. W. Atwell, 85; third, A. W. Friese, 83. B Class—First, Geo. R Marsh, 71; second, H. E. Campbell, 67; third, George Gibbs, 62; fourth, F. L. Pierce, 61.

President Petit's address to the members is as follows:

"I desire most particularly to congratulate you upon the fact that not a single accident has occurred on our grounds since the organization of this club. It is equally true that there has not been the slightest dissention or controversy among the members; on the contrary, the spirit of good fellowship has prevailed in a marked degree under all circumstances, which is in itself sufficient evidence that our club is exclusively composed of 'gentlemen' in every sense the word implies.

"The proficiency in marksmanship attained by many during the season has been remarkable; every member, including those who failed to secure a prize, can justly feel proud of his record, when it is understood that all shooting has been done at either unknown angles or from screened traps set strictly according to the rules of the American Association.

"As regards target shooting in general I can conscientiously add that it is rapidly growing in public favor and promises to become a popular out-door sport, but cannot in my opinion ever take its proper rank as such, until the unsportsmanlike practice of shooting live birds from the trap is abolished. There might have been some apology for that kind of shooting in former years when wild pigeons were numerous, but there is none whatever since the invention of inanimate targets, which furnish a perfect substitute for the exercise of skill with a shotgun. Shooting tame pigeons, in range of which fly directly toward the shooter or refuse to fly at all, certainly cannot be considered very elevating in its influence and character, to say the least, in this enlightened age.

"With due respect for all who may not indorse my views, I earnestly recommend some action on the part of this club toward the enactment of laws for this and every other State in the Union, prohibiting live-bird trap-shooting. When this is accomplished target shooting will without doubt appeal to every class of professional and business men, and receive the patronage it deserves as one of the most innocent and healthful recreations known, and one eminently calculated to develope both the mental and physical powers.

"The secretary and treasurer's report shows the club to be in a prosperous and substantial condition, and I beg to express my most grateful appreciation for the co-operation of all in making the season just closed such a complete success."

SAUGERTIES, N. Y.—The first grand kingbird tournament and live pigeon shoot of the Saugerties Gun Club will be held Nov. 5, rain or shine; all money prizes; open to all; latest improved traps. Grounds at Driving Park. Keystone system, to commence at 10 o'clock, American Shooting Association rules to govern. For further particulars address Geo. F. Tolley, Saugerties, N. Y. New York and Jersey shooters can take Saugerties night boat, 6 P. M., foot Franklin street, New York. All purses divided 40, 30, 20 and 10 per cent. Any shooter tied on a purse can draw his share. There will be a fish and game dinner given under the auspices of the Hudson River Fish and Game Protective Association, at the Phoenix Hotel, at 5 o'clock, thus enabling shooters to leave on the early evening trains north 7:29 and 8:25, and south on the 7:56 West Shore. Particular attention will be given to the requirements of amateur shooters at special traps for their exclusive use. All shooters who, in the opinion of the management, do not come under this head, and who have shot at open tournaments, will be excluded.

NEAR-BY TRAP EVENTS.—The Woodside Gun Club will hold an open-to-all fall tournament on Nov. 18 and 19. This will be the formal opening of the new grounds and clubhouse, and the members intend to make it a memorable occasion. The Eureka and Algonquin gun clubs will shoot a team match at Marion on Thursday, Oct. 30. The conditions will be 10 men per team, 10 live birds per man. The conditions will be 50yds. boundary, gun below the elbow until bird is on the wing.

FORT HAMILTON, N. Y., Oct. 18.—Shoot of the New Utrecht Rod and Gun Club at live birds, 25yds., 60yds. boundary, entrance $2, divided 50, 30 and 20 per cent. Two matches, first match:

R R Street	1222212122—10	Dr F S Cook	0122112100—7
Jere Lott	1022111121— 9	M Van Brunt	0010111221—7
D Deacon	1111221100— 8	R J Van Brunt	0220021100—5
A A Hegeman	1110110221— 8	G F Bondies	1210000001—4
J Koster	2112001222— 8		

Second match:

R R Street	1221211211—10	M Van Brunt	2012111022— 8
Jere Lott	2120221211— 9	G Nostrand	2011201122— 8
D Deacon	1111212111—10	A Squires	1212120211— 9
J Koster	1000110010— 4	Duke Grebner	1200020121— 6

MAPLEWOOD, N. J., scores will be given next week.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

THE A. C. A. MEET OF 1890.—I.

NOW that the great meet of 1890 at Jessup's Neck, the long promised "salt water meet," has taken its place on the shelf of history beside the many pleasant inland camps of the past, there is a chance for a more thorough and deliberate review of its many features, pleasant and unpleasant, than was possible in the brief and hurried reports written amid the bustle and excitement of camp life. The value to the Association of each of its meets by no means ends with the striking of the tents and the breaking of the camp, there is always much to be learned from a careful study of the various details, that will aid in decreasing the annoyances and inconveniences of future meets, and in this respect the present one has proved most fruitful.

From the time that a meet on salt, and presumably tidal water, was first suggested, it has been apparent to those who have most interested themselves in the matter, that such a meet would be far more difficult and expensive than any of the inland camps, and such has proved to be the case. Not only has the expense of each individual member, and in particular of the officers and committees, far exceeded that of previous meets; but certain difficulties which attend every large camp have in the present case reached such serious proportions that it would be impossible in any truthful report of the meet to ignore them, or to pass them without comment. Knowing as we do how much good work was done by the officers, and realizing fully that on the whole the present meet was one of the most successful ever held, it would be pleasanter and easier to touch only on the bright side of the picture; but the success if not the permanency of future meets depends largely on the perfection of two great details, and to this end it is necessary to recognize the attempts of this year as failures, in each case, and to seek a speedy remedy.

That the first salt-water meet was a success will be admitted by all who were present in camp long enough to become familiar with its many pleasant features. That, at the same time, there were some very serious drawbacks is fully known to all who were present and many who were not. While the officers were entirely undeserving of the wholesale condemnation and misrepresentation which was heaped on them by one irresponsible critic, neither were the lay members such a collection of captious and discontented grumblers as they are represented by one eager apologist for the powers that were; there was a deal of grumbling over the mess and the transportation, and with good reason, but we believe that every one present recognized the fact that all had been done that was possible, and that the failures in certain directions were due to circumstances beyond the control of the officers. It was not necessary, at least to any intelligent and fair-minded A. C. A. man, to make any excuse for these gentlemen, even if it were, this matter has been so well attended to that little is left for us to say. Every one knows that they receive no salary, that so far from making money out of the meet, as was intimated in one account alluded to above, they find it necessary to spend considerable on their private accounts; while as to the work they do, it not only turns their nominal vacation into a fortnight of exceptional labor and responsibility, but involves a constant draft on their time throughout the whole term of office.

This is plain to any one who spends a week at a meet, but those who are more intimately acquainted with the history of the

present meet know much more of the labor and difficulties attending the selection and preparations of a camp site and the thousand and one details, they know that the work, begun early last fall, continued until the day the camp opened; and they also know that in the case of several of the principal officers it meant a private outlay that has run high up in the hundreds.

Unfortunately the very worst features of the meet were strongly impressed on the canoeist who reached camp after a long and weary struggle with the very inadequate means of transportation and sought refreshment at the mess tent. He appreciated from the first what had not been done, or had been done badly; while only the few who saw the camp ground in the spring and again in midsummer could appreciate the magnitude of the work of preparation. Not one in twenty gave any thought to the many plots entirely bare of grass which showed that but a short time before the whole of the hillsides in the center of the camp had been a mass of dense undergrowth, such as could still be found anywhere beyond its confines on the shore side; and no one went so far as to picture a morass between the two hills, and a jungle along the front of the main camp, as well as among the trees and on the hillside of the ladies' camp. The preliminary search for a camp site, which occupied all of last fall, every proposed locality being traversed on foot or visited in boats by some of the officers, was no easy task, and when a choice was finally made a serious difficulty was met in regard to procuring the ground, which greatly delayed the work of preparation. Even when this difficulty was disposed of, there remained swamps to be filled, undergrowth and trees to be removed, wells to be dug, a wharf to be built, with kitchen, ice house and store to be provided.

In some former years the A. C. A. has been lucky in meeting with men who, with no special interest in canoeing or the Association, have been most generous in offering aid in arranging for the meets; but this year it was most fortunate in meeting with one who, though a total stranger to canoeing, did as much for the Association as it could ask from its oldest and most enthusiastic member. The gentleman in question, Mr. Delevan C. Scoville, owner of Jessup's Neck and the adjoining mainland, not only gave freely the use of the ground, but bore a large proportion of the expense and labor of the preparation, so much so that without his aid it would not have been practicable to have held the meet at this spot. As it was, even with this aid, there was a vast amount of work which devolved on Com. Stanton and Mr. Burchard in particular, which was made more difficult by the distance of the camp from New York.

Camp Site.—In discussing the camp of last year at Stave Island in the FOREST AND STREAM of Sept. 12, 1890, we enumerated certain features which experience has shown to be essential to a perfect camp, and which have on several occasions been decidedly lacking. For once at least they were all present, and it is hard to see how the camp site at Jessup's Neck could have been materially improved. The view of and from the camp was a beautiful one in every direction; going inland toward the head of the peninsula and on the west shore, the neck here being probably a quarter of a mile wide, there was a sandy bluff about 60ft. high, from which point the land sloped away to a height of about 30ft. on the east shore, extending northward from these two points for about three-quarters of a mile, and in this distance falling until from a level tableland at a middle distance it tapered to a pebbly point at the end that was lost beneath the blue waters of Little Peconic Bay. From this extreme point, as well as from the water, the view was most pleasing, the many white tents and brightly colored flags standing out against a green background, while from the bluff at the other end there was visible, in addition to the whole camp spread out beneath the feet, a wide expanse of wooded shores and blue water; Shelter Island, Great and Little Hog Necks, Noyack; Little Peconic and Noyack Bays and Shelter Island Sound. Wild as it all was, there were in the distance villas, church spires and windmills that betrayed the presence of civilization.

The camp ground itself was admirably fitted for its purpose. It was at such an elevation as to be dry at all times, and also to command a full view of the sailing and paddling courses, while not too high to be easily reached by means of several stairways from the beach. At its highest point it was probably 25ft. in front of part of the main camp, falling to not more than 5ft. in front of part of the north end, where the Brooklyn camp was located, beyond which was a low pebbly beach with a little oasis in the shape of a grove in which the Vesper camp was pitched. The south end of the main camp was divided from Squaw Point by a little valley which served to give access from the wharf to both camps by means of inclines up which a wagon could be driven. The ladies' camp was somewhat higher than the main camp, and in a way was a disappointment, but an agreeable one. Almost the only trees in the camp were cedars of not over vigorous growth, and the main camp had practically no shade. The ladies' camp, however, was in a grove of these cedars, which not only answered every purpose of shade, but were free from mosquitoes, so that the tents could be pitched directly among and under them.

The actual center of the camp, the store and mess tent, was in this case where it should be, near the wharf, between the two camps, and readily accessible from both. The headquarters was but a short distance away, in a prominent position in the center of the bluff. The best point from which to witness the races was the bluff in front of the ladies' camp, from which the whole length of both courses was visible, but at the same time the sailing course and much of the paddling could be seen from the extreme end of the main camp, and men could watch the races from within their tents. How different this was from Lake George, or even Bow Arrow or Stave Island, will be understood by all who were at either place. It was not necessary at Jessup's Neck to drop all other occupations and make a regular business of leaving camp and going to a distance or on the water to see the races; one could read, rig sails or cook beside his tent and yet see in a moment whether a race was in progress, and if so, the position of every boat.

The central position and accessibility of the wharf was another admirable feature, not only was the distance less than usual to center camp, but new arrivals were seen and welcomed as they came in, in fact the wharf was as it should be, the center of the bustle and life of the camp at certain hours each day. A man coming to Jessup's Neck had the whole camp directly in view before he reached it; the tents were not hidden in the trees, lon[illegible] to be overlooked entirely, but the banners on the bluffs peri[illegible] that here were the Mohicans, here the Red Dragons, here the Gold[illegible]s and here the Springfields; an invitation to the new comer Janth[illegible] old friends at once.

to hunt[illegible] was a loose coat that was evidently not made specially The so[illegible]gs, for it dried out almost instantly after a rain, to hold t[illegible]e was little or no mud. At the same time there was a so that th[illegible]g contrast to some former camps in the total absence most pleas[illegible]nes and pebbles save on the bench. A man could of rocks, st[illegible]e length of the main street at night without laming walk the wh[illegible] week, and could even run about camp all day with himself for a [illegible]p with a sore toe or a sprained ankle. Very good out being laid[illegible]g was provided by two wells, one in each camp, water for drink[illegible]ained difficulty amounted to little. While the so that this thre[illegible]nenough, it was by no means sultry or oppressweather was war[illegible]ring, the two weeks, so the lack of shade caused sive at any time d[illegible] was more than offset by the rapidity with no discomfort, and [illegible]dried out after a shower. Had the weather which the whole can[illegible]ear grove of Squaw Point would probably proved very hot the c[illegible]rm, while the main camp, exposed to the have been close and w[illegible] have been still hotter, but even this full heat of the sun, wo[illegible]camp, shady camp that is never dry and would be preferable to a[illegible]weather. Had the present camp been warm save in the hottest [illegible]re only two points that could have made for the purpose ther[illegible]ove of deciduous trees in place of been much improved; a [illegible]a similar grove just in the rear of cedars in the ladies' camp, a[illegible] of the plateau, where a refuge the main camp, in the sam[illegible] of the day, and which would also might be found in the middle[illegible] as it swept over the narrow serve to break the force of the neck.

It was no less suited for canoe-

It the site was good for camping proper, the rise and fall of the tide was so slight as to cause no trouble; the beach, though not [illegible]al to sand, being covered with pebbles of various sizes, was by no means bad, and out little more trouble was found in building [illegible]grids and landings than on dead water. Posts or stakes were driven in the usual manner, the tops safely above high water; on these a few joists were laid, with a flooring of boards, making a [illegible]el platform large enough to hold half a dozen canoes, and on to which they could be hauled up at any stage of the tide. In many cases even a simpler construction was relied, the common skids were staked down on the beach, the canoes being drawn up on [illegible]meup until above high water. The waters about the camp afforded every facility for sailing and paddling, there being as a rule smooth water. The only thing that was lacking was good breezes and fairly tunity afforded so abundantly in the Thousand Islands for short and picturesque paddling trips: the long [illegible]ent of beach about Jessup's Neck offered out little in this direction. So far as the camp site itself is concerned it fully bore out for it, not only in natural advantages, but in the admirable way in which all arrangements had been made by the officers and committee.

Transportation.—The A. C. A. meet is to many the only outing of the year, to be looked back to longingly for half a year after it is over, and forward to eagerly for nearly as long in advance. It is short enough at best, not over two weeks and for the majority only ten days or a week. It is natural, then, that the canoeist should be most anxious to reach camp quickly and to stay until the last possible moment; and that he looks on every hour wasted in some dull little town, or every dollar spent spent in hotel bills when he should be living in camp, as a double robbery. As to the present camp, though nominally within less than four hours of New York, it might as well have been five hundred miles away so far as speedy and certain transportation was concerned. The steamer that promised so well at first was all right so far as it went, if a man could manage to reach New York on a sailing day, three times a week, he could get off the camp early next morning, and if the wind was not too strong from the east, or something else did not interfere, he would be landed on the camp wharf. On the other hand, if he could not make connections in New York it meant a delay of 24 hours at least, or perhaps from Saturday night till Tuesday afternoon; and even though he caught the boat there was no certainty that he would not be carried past the camp and landed, with all his traps, at Sag Harbor. The case was no better returning, as there was no certainty whether or no the boat would call at camp, and on a number of days she did not. This irregularity also upset all plans for fresh supplies of meat, ice, etc., from New York, and made the task of catering still more difficult. Once on the boat, the sail was a very pleasant one, and no one grudged the time, while the fare was reasonable enough; but the usual privilege of carrying camp duffle and canoe free was not granted, all goods besides trunks being charged for.

The transit by rail was practically as uncertain and unsatisfactory as by boat, the man who alighted from the train of the Long Island R. R. at Sag Harbor, after a prolonged battle with expressmen of all kinds for the possession of a portion of his baggage, was doomed in all probability to fresh disappointment. So far from the camp being near and his troubles at an end, he was very far distant and the other changed in form, but gaining nothing save variety thereby. In some cases it is true that a launch was waiting, and it remained only to run the final gauntlet of the local expressmen and to ride for half an hour in the launch before reaching camp. In many cases, however, there was no means of reaching camp, save by walking or driving, the latter at summer resort prices, over a very dreary and tortuous road of seven or eight miles, while the transportation of baggage was not to be thought of. Many were consequently compelled to spend a night or longer at a small country hotel, though almost within sight of the camp as the crow flies.

The Canadian canoeists had a specially trying experience, the freight car containing their canoes and camp gear was transported free as far as Jersey City, there being nearly twenty in the party, but there it was met with a heavy charge of lighterage to the Long Island R. R. and when safely on the tracks of the latter it was still delayed for several days in reaching Sag Harbor. As there were ladies in the party and the tents were all in the car this meant a stay of several days at a hotel in Sag Harbor, and even after the car arrived the party was obliged to charter a sailing vessel to transport the canoes and stuff to camp. Others had a similar experience on a smaller scale, finally reaching camp in a very unpleasant frame of mind. There may be some doubt as to the final fate of Captain Kidd and his treasure, but the canoeists at camp have a theory as to the fate of his crew that it would take some argument to remove: this is that they all settled on Long Island and went into the express business, general and local, leaving it in time to their numerous descendants.

That portion of the original plan of transportation which was most successfully carried out was the collecting of canoes and duffle at various points by one steamer and returning them in the same way. In this work the committee was greatly aided by Mr. George P. Douglas, of the Ianthe C. C., and by the captain of the steamer Eagle. Canoes were taken from the various club houses about New York and Newark and safely landed at camp, being returned after the meet, the expense being $5 per boat. In this part of their work, at least, the committee, after making their plans in good season, received but little help or cooperation from individual canoeists, the men being generally backward in announcing their intentions or replying to the committee's circulars, and leaving everything to the last.

Bad as the transportation arrangements undoubtedly were the blame does not rest with the committee, but the whole trouble seems to be that the camp, beautiful and convenient as it was in all other ways, was practically inaccessible; the available facilities, by rail and boat, being entirely inadequate. It may be said that in such a case a more accessible spot should have been chosen; but, of the scores of places suggested to the committee, there was not one that, however convenient to New York and the East, was not totally unsuited for a camp ground; while the natural advantages of the spot finally chosen were such as to justify the committee in selecting it and doing the best they could in the matter of transportation. Besides the arrangements with steamers from New York and New London, an agreement was made with the captain of a very good little steamer to run regular trips between Greenport, Sag Harbor and the camp, charging but 25 cents fare; and it was fully expected that the New York and possibly other boats would call at camp on every trip. The receipts on the launch were so small during the first four days that the captain gave up the job, leaving no means of transport between Greenport or Sag Harbor and the camp; while, as already told, the big boat found the camp wharf too hght to permit her to land in a sea or with a strong onshore wind. Another launch was finally chartered to run to Greenport and Sag Harbor, the financial responsibility being assumed by a number of leading men and officers who chartered the boat and ran her themselves at reasonable rates. The affairs of this company have not been finally adjusted, but it is probable that when all bills are paid the subscribers will come out about even.

The work of transportation committees has been simplified by the passage of the interstate commerce law, as there is now little to do with the railroads, owing to uniform rates. These rates are higher, and fewer concessions in the way of free carriage of canoes are made than prior to the passage of the law; but summer excursion rates are not, as a rule, very high, the round trip to Clayton, Lake George or Lake Champlain not running much over $10. It is not difficult in most cases to arrange for the rail transportation from New York, Boston, Albany, Buffalo and Toronto to the railway town nearest to the camp, and there has always been an express train every morning which left the big cities on the previous evening, the return train leaving the smaller place at night and reaching the cities next morning. These night trains are the ones mainly patronized by canoeists, as they allow an extra day at the office before leaving for camp, and a similar one in camp before returning to business by a fixed date. The chief work then of the transportation committee should be the arrangement of some speedy means of transit between camp and the nearest town, and with special reference to these trains. This has been done very successfully in past years at Grindstone, where a small steamer met the morning train and landed canoeists in camp by 9 or 10 A. M. Last year at Stave Island, thanks in part to unreasonable custom restrictions, there was a delay of a day in Plattsburgh and Burlington. Lake George was very good in this respect; the large steamers that traverse the lake and make special connections with all trains called at the camp on every trip.

A. C. A. COMMITTEES AND ANNUAL MEETING.

Editor Forest and Stream:

In accordance with the requirements of the constitution of the American Canoe Association, it is my pleasure to inform you that the following committees have been appointed to act for the good of our Association during the coming year:

Regatta Committee.—J. Arthur Gage, M.D., 48 Central street, Lowell, Mass.; Lincoln B. Palmer, 77 Lincoln avenue, Newark, N. J.; Will G. MacKendrick, Toronto, Ont.

Committee on Camp Site and Arrangements.—Paul Butler, Chairman, Lowell, Mass.; Thomas G. Budington, Port Kent, N. Y.

Transportation Committee.—Chas. V. Winne, care D. and H. Canal Co., Albany, N. Y. (Central Div.); Wm. A. Hall, 19 Bromfield street, Boston, Mass. (Eastern Div.); Jas. K. Hand, Grand Central Station, New York city (Atlantic Div.); A. H. Mason, Toronto, Ont. (Northern Div.).

Signal Officer.—Henry D. Marsh, Springfield, Mass.

The annual meeting of the executive committee will be held at the Hotel Thorndike, Boston, Mass., on Saturday, Nov. 15, at 10 A. M.

The executive committee and members of the general committees will be entertained by members of the Eastern Division at 7:30 P. M. of that day at the Thorndike. Fraternally yours,

BOSTON, Oct. 22. WALTER U. LAWSON, Commodore.

RED DRAGON C. C., FALL REGATTA.—The fall regatta of the R. D. C. C. was held Oct. 11, two events being contested. First, sailing over the regular club course, distance 3 miles. Start, 3:30.

Times:	
Osceola, H. E. McCormick	4 07 30
Kiel-loe, F. W. Noyes	4 07 37
Cuckoo, R. G. Fleischman	4 08 38
May-Fly, B. F. Fortmer	withdrew.
Enid, A. S. Fernimore	withdrew.

Second—Tandem Paddling: Enid, Kreamer and Fernimore, first; Valesca, Noyes and L. B. Palmer, Ianthe C. C., second; Uto, Haag and Fortmer, third. This was a very close race, the winners crossing the line not over two feet ahead of the second boat. Lunch was served and the evening spent very pleasantly at the club house, quite a number of ladies being present. This was the last canoe racing on the river for this year.

GIPSY TENTS AND HOW TO USE THEM.—This is the season of good resolutions on the part of canoeists and campers, when men who started on their vacations in a hurry, with torn tents and imperfect outfits, are just home again with the firm intention of putting their whole camping outfit in shape at once in readiness for next season. Now is the time for doing such work, but before beginning it will be worth while to look over a little book entitled "Gipsy Tents and How to Use Them," which has just been issued by Horace Cox, of London. Though a great part of the book is devoted to tents, particularly the curious gipsy tent, the author, Mr. G. R. Lowndes, has collected a great deal of useful information on all sorts of camp life, in boats, wagons, and with horses or on foot, including hints on cooking, bedding, clothing, camp-fires, etc. The book makes a useful companion for canoeists, hunters and other outers.

AMENDMENTS TO THE A. C. A. CONSTITUTION.—In order to be acted on by the executive committee, all amendments to the constitution must be published two weeks prior to a meeting, in an official organ. We hereby give notice of an amendment to Art. IX., Sec. 2, to change the words "within four weeks after the A. C. A. camp" to "on or before Aug. 1." The object of the change is to secure earlier returns from the Division pursers to the secretary-treasurer, as the money due from the Divisions is needed at the meet to defray expenses as they arise; while by the present plan no cash is received from the Divisions for at least a month after the meet.

A. C. A. MEMBERSHIP.—Eastern Division: Wm. O. Russell, Lawrence, Mass.

Yachting.

Yachtsmen who do not see what they want under this heading will please look under the hatches of the *Canoe*, peep into the *Kennel*, squint down the barrel of the *Rifle*, open the *Fish Car* and *Game Bag*, inquire of the *Sportsman Tourist*, and if their yearnings are still unsatisfied, push their explorations into the *Editorial* and *Advertising Departments*.

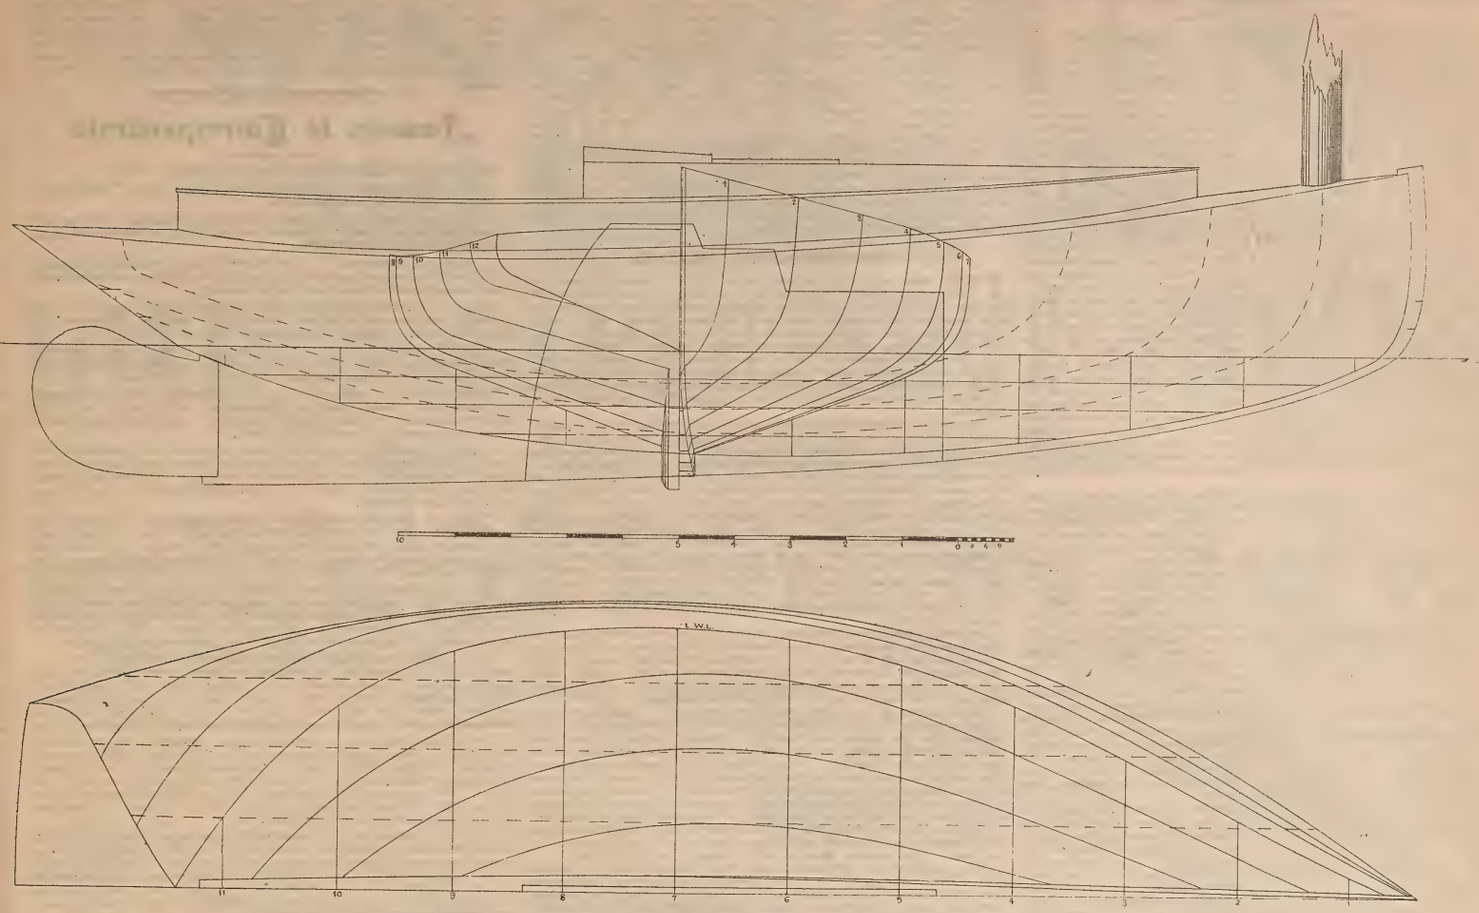
THE CAPE CATBOAT SPENDTHRIFT.

THE boat shown in the accompanying drawings, for which we are indebted to the designer and owner, Mr. V. D. Bacon, of Barnstable, Mass., is one of the so-called Cape Cod catboats, though carrying the same rig as the well-known Harbinger and Almira, properly a "jib and mainsail." The jib is not an after thought, as would appear at first sight, but all of these boats are designed to carry this peculiar rig. Spendthrift was built last summer by Herbert F. Crosby, one of the Crosby Bros., of Osterville, Cape Cod, so well known in connection with the Cape cats. She has proved quite fast and in particular a very satisfactory cruiser, having room to sleep four comfortably in the cabin. The cockpit is watertight, the boat steers with a wheel, and she is fitted with Babbitt's patent sail hoist and blocks. Her centerboard is 7ft. 6in. long and 4ft. 6in. wide. Her designed waterline is shown in the drawings, but in sailing trim she draws about 2½in. more water aft. Her principal dimensions are as follows:

DIMENSIONS OF CAPE COD CATBOAT SPENDTHRIFT.

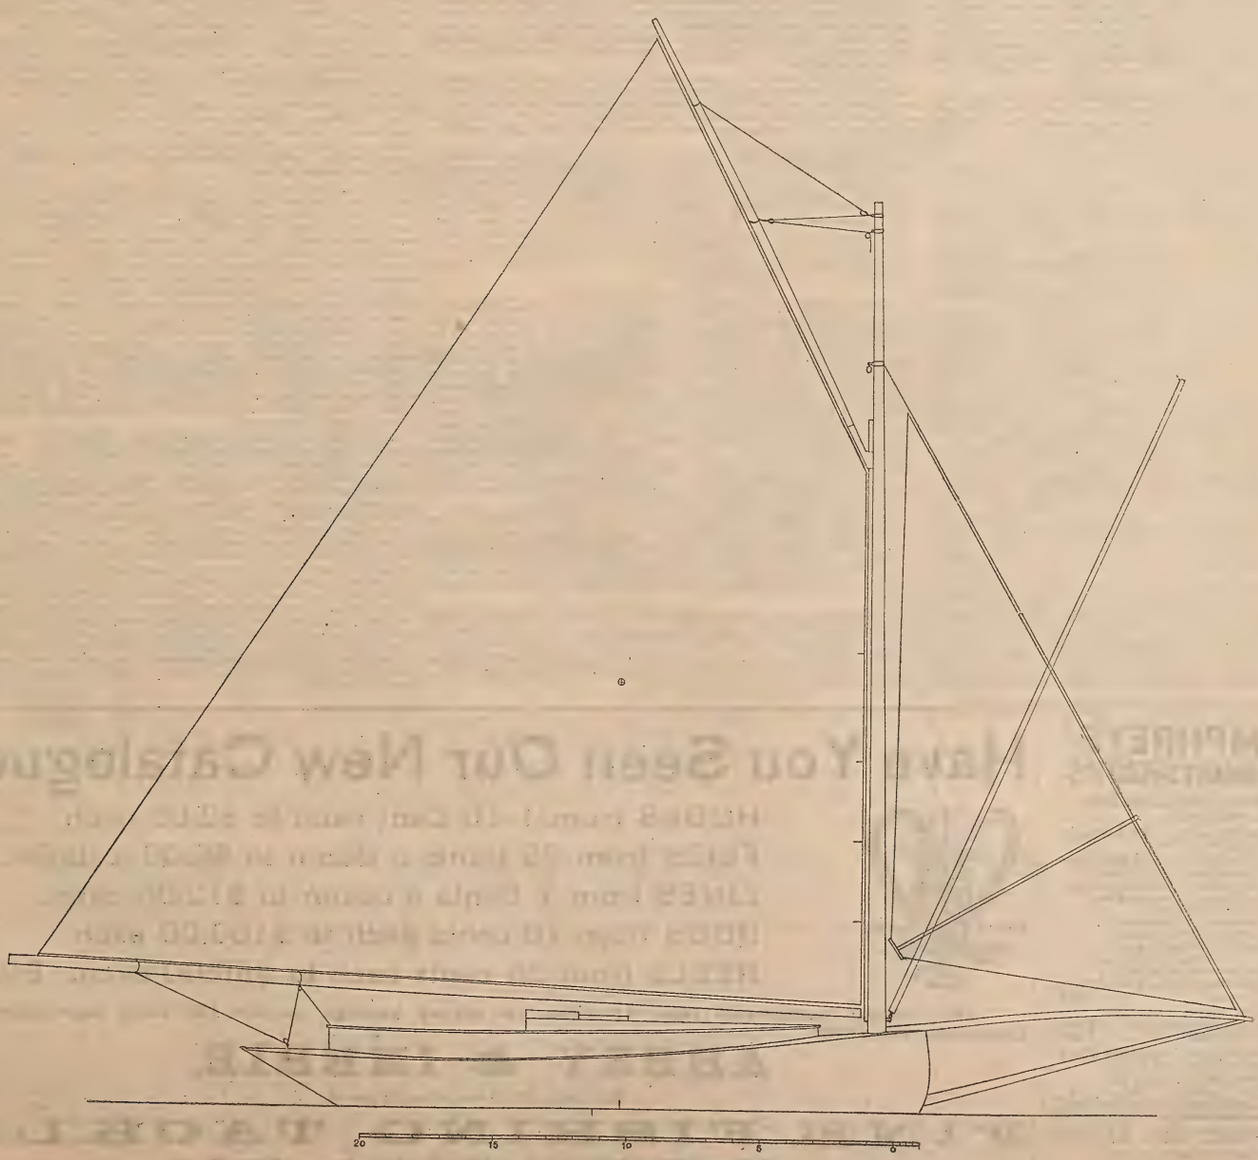
	Ft.	In.
Length over all	25	5
l.w.l.	21	10
Overhang aft	1	10½
Beam, extreme	10	6
l.w.l.	9	6
Sheer, bow	1	5
stern		5
Least freeboard	1	7½
Draft, extreme	2	6
Cabin, length	11	
	4	4
Fore end of l.w.l to—		
Mast, center	1	4½
Cabin house, fore end	3	7
after end	14	1
headroom	8	6
Centerboard pin	21	10
Cockpit, after end	11	4
C. E.	12	4
C. L. R.	51	
Mast, deck to truck		8⅛
diameter at deck	32	
Boom	18	
Gaff	12	6
Bowsprit beyond l.w.l.	26	
Spinaker boom	631.75 sq. ft.	
Mainsail	133.85 sq. ft.	
Jib		
Total	765.60 sq. ft.	

THE WRECK OF THE CATARINA.



THURSDAY and Friday of last week were marked by the big gale of the season on the Atlantic coast, heavy seas and unusually high tides being found ever where. On Thursday at 1 P.M. the iron steam yacht Catarina, owned by Mr. E. D. Morgan, left Newport for New York, with her owner on board and the 40ft. racing yacht Moccasin in tow, to be laid up at City Island. The gale was well under way from N.E. and a heavy sea was met off Point Judith, increasing as the yacht went on through the Sound. Moccasin, with three men on board, was towed by a single heavy hawser. The weather was very bad during the night, the storm obscuring all landmarks. Eaton's Neck Light was sighted at midnight, but after that nothing was seen up to about 3:30 A. M., when the yacht struck on a rock off Matinnicock Point, just east of Hempstead Bay, on the Long Island shore. The bottom was pierced by a rock under the engine-room, the vessel sinking until bedded on the reef of rocks which here runs out from the shore. Besides the owner there were on board Capt. Harry Craven, Mate Alexander Corcoran, Engineer Robt. Taylor, Asst. Engineer Chas. Wood, and a crew of 28 seamen, firemen and stewards. A very heavy sea was running, but all reached the beach in the yacht's boats, finding shelter in a farmhouse.

When the Catarina struck, Mate Corcoran hailed the Moccasin to sheer clear, cutting the hawser at the same time. She cleared the wreck, driving rapidly up the Sound before the gale. Her mainsail was strongly lashed amidships for towing, but a reefed foresteaysail was set, and she was kept on her course, finally bringing up off Piepgrass's yard at City Island. The gale was raging heavily here, damaging more or less a number of yachts at anchor but Mr. Piepgrass sent out a heavy anchor and cable by a tug boat, and Moccasin was safely moored, her crew being badly tired out but uninjured.



The Catarina struck on a rocky reef, lying with her bulwarks out at high water, everything below being ruined by the water. She was nearly upright, but with a bad hole amidships. She is an iron vessel, built by R. Steele & Co., Greenock, Scotland, in 1880, and was purchased this spring by Mr. Morgan from the Duke of Sunderland, her name Sans Peur being changed to Catarina, the name under which she was launched and first known. The Chairman Wrecking Co. will try to raise her.

A DELICIOUS REPAST.—Grand Rapids, Mich., Oct. 13.—*Editor Forest and Stream:* Your article in a late number regarding the adventures of a naputha launch "reminds me." Last spring several of our citizens purchased naphtha launches, and of course got their names in the newspapers in consequence, and were talked about more or less, all of which caused our Mr. Malupre to remark "that as soon as his family returned from Mackinac and the weather got cooler, he intended to give a naphtha lunch. He said he "thought the others made a mistake in having their when the weather was so torpid."—A. W.

AGNES.—This schooner, owned by Mr. J. N. Winslow, is out of Wintringham's ways for a new and more fashionable overhang.

LINES OF CAPE CATBOAT "SPENDTHRIFT."—Designed by V. D. Bacon.

SAIL PLAN OF CAPE CATBOAT "SPENDTHRIFT."

OTHER INTERNATIONAL TROPHIES.

[From the London Field.]

IT is announced in Boston that Mr. Malcolm Forbes, who built the Puritan, is about to build a 90ft. cutter, or sloop, as the American papers style the cutter rig as adapted from the British rig. This 90-footer will be, it is said, designed by Mr. Burgess, and the *raison d'être* of her existence is that Mr. Forbes does not like to have to look ahead to view his antagonist, as he has when on board Puritan in competition with Volunteer. However, the same authority who thus fits Mr. Forbes with a 90-footer, announces that General Paine will build a similar yacht in order to remain in possession of the vanguard, and to make sure of doing this he will design the boat himself. From another quarter we hear that Mr. Malcolm Forbes is not building his cutter with the object of defeating the Volunteer at all, but with the idea of crossing the Atlantic in her and challenging for the Brenton Reef and Cape May Cups. The Cape May Cup, it will be remembered, is now held by Mr. T. B. C. West's Wendur This cup is the property of the New York Y. C., and it is surprising to find that a Boston and not a New York yachtsman is about to challenge for it. But probably in the calm air of Boston the *amor patriæ* feeling is stronger than it is at New York; and it will be remembered that if it had not been for the public spirit of Mr. Malcolm Forbes in building the Puritan, the Genesta would have won the America Cup in 1885; and where should we have been then? We think (barring the new deed of gift) we should not have been so well off as we are, as the defeat of Genesta and the building of Puritan hastened a great many things besides the new deed of gift. The Cape May Cup is subject to be challenged for at fifteen days' notice, except a recent winner of it, who is not liable to be challenged for thirty days, not including the fifteen. The course is "from the Needles, round a stakeboat off the harbor of Cherbourg, and return." We believe the two matches hitherto sailed for it have been from Cowes and Ryde and round the Cherbourg Breakwater; but no doubt an American yachtsman would insist on the stipulated course across the Channel tide only.

One feature in connection with the Cape May cup is rather peculiar. Although it is the property of the New York Y. C., yet the concluding paragraph of clause 2 states: "The cup will become the *bona fide* property of any yacht holding it successfully through three consecutive seasons." Wendur, we take it (if 1889, the year she won it, counts a season), has now held it for two seasons, and if she is not deprived of it next season, it will be the property of Mr. West. This leaves rise to a great many reflections. [In the New York Y. C. book of 1885, this clause is worded "holding it successfully through three consecutive *contests*."—ED. F. AND S.] The Brenton Reef cup is held under similar conditions, except that it can never become the property of the owner of the yacht winning it. The races are to be sailed without time allowance, and the Brenton Reef cup is otherwise to be sailed according to the rules of the New York Y. C. In either case the challenger must deposit £125 with the club holding the cup, and if his yacht is unsuccessful the club has to purchase a cup of the value of £125 and present to the winner. A yacht holding the cup is subject to challenge in American waters between the third Thursday in June and the third Thursday in October; but it is not quite clear if this is intended to apply to a foreign country. For instance, the British season would have to be put at least a month earlier. The racing season opened, for instance, on May 22 on the Thames in 1889.

It will be observed that challenging for these cups is a very simple matter compared with challenging for the America Cup. Hitherto it has been found impossible to get a race for the America Cup without first writing a number of letters, which, when printed, make a pretty thick octavo volume. Now, cannot all this be changed? If, instead of the demand for information about the challenging yacht, so as to enable the challenged party to have a two-to-one chance of winning, such definite clauses were added to the original deed of gift, stating what can and what cannot be done, matters would be much simplified. In reference to this matter, we have heard it stated on good authority that if the Royal Yacht Squadron approached the New York Y. C., with a view of expunging the clause demanding so many dimensions and particulars of the challenging yacht, that most likely an agreement would be arrived at. We understand, however, that the New York Y. C. would not give way about the right to meet the challenger with a 90ft. cutter or 115ft. schooner, as the case may be, as the cup is intended to represent the yachting supremacy of the nation winning it, and this, it is considered, can only be done by building to the limit allowed in the deed, although a 65ft. yacht may challenge for it.

In reference to this matter we may ask, seeing that men like General Paine and Mr. Edward Burgess have recently expressed an opinion that the dimension clause might safely be modified, why the New York Y. C. does not set about doing it? It is useless waiting for the Royal Yacht Squadron to take the initiative in the matter. All they will do is to decline to back a challenge of any of its members under the new deed, or with the condition of ultimately accepting the new deed. And what the premier club of the United Kingdom does in a matter like this must be binding on all other British yacht clubs; and of this there cannot be any doubt, as the action of the Royal Yacht Squadron has been indorsed by the Yacht Racing Association. It is useless to quibble about forms of procedure, and pretend that the objections to the new deed have not been formulated and presented to the New York Y. C. The objections to the new deed are perfectly well known to the New York Y. C.; and if another match is to be sailed for the cup, it is for the club to remove the objections.

It has been contended that the particulars which can be demanded under the new deed can be of very little use to designers. But we think that, after the successful imitation in Boston that has, in the case of Gossoon, been made of Minerva, which could not be beaten until she was imitatated, nothing more need be said on this head, except that successful American designers give little or no information about the vessels they design; and even the Custom House measurements and tonnage of yachts like Puritan, Mayflower and Volunteer, Mariquita, Gossoon, etc., cannot be found in the American Yacht List nor in the club books.

We were saying just now that winning the America Cup is intended to represent the yachting supremacy of the world; but English yachtsmen are getting so sick of the name of the trophy, and the interminable and irritating discussion it has caused, that at last they have set up an "International Challenge Cup" of their own. The lead has been taken by the Royal Victoria Yacht Club, and this seems very fitting, as it will be remembered that it was at a dinner given by this club in 1869, at the club house, Ryde, that Mr. James Ashbury conceived the idea, and announced his intention of challenging for the America Cup. Up to that time the New York Y. C. had not had a single challenge for the Cup, although they had held it for thirteen or fourteen years, and undoubtedly the credit belongs to Mr. Ashbury for rescuing the Cup from oblivion and imparting an international importance to it. What the Royal Victoria Yacht Club has now done is to establish a trophy of the value of £500 as a challenge cup open to all nations, with a money prize added. The conditions are not yet quite settled, but we understand they are very simple, and will involve no more correspondence that a challenging letter and the response. The first match for the possession of this cup will be sailed next August, and the Royal Victoria Yacht Club will give ample notice of the event. It is to be hoped that Mr. Malcolm Forbes will see his way to take part in the match for this valuable trophy; and should he be fortunate enough to carry it to Boston, it is certain some English yachtsmen will speedily go after it, and so there will be at once a revival of international yacht racing. With these facts before them, it is not to be wondered at that British yachtsmen have become quite indifferent to the fate of the America Cup; but for all that we trust the New York Yacht Club will modify the "new deed of gift" in the direction so many times indicated. If they do not, and if the "Royal Victoria International Challenge Cup" goes to Boston, it is certain that Marblehead will in future quite eclipse New York Bay as the scene of international yachting. And, after all, it only seems right that this should be so, as it was Boston, through Mr. Malcolm Forbes, Gen. Paine, and Mr. Edward Burgess, which reconstructed American yachting, and placed it once more in some respects ahead of British yachting.

INTERNATIONAL RACING.

THERE may be very little to fear in the new international cup which the Royal Victoria Y. C. is about to establish; no 90-footers are likely to be built this winter, and no American yachts may care to challenge for the new cup next season; but it is becoming more and more apparent that the whole course of international yachting cannot be permanently blocked by the New York Y. C.; but that sooner or later one of two things must happen. Either the new deed of gift must be declared invalid and the original one restored, or some new trophy, the Paine cup, the Royal Victoria cup, or another, will take the place of the deposed America's Cup.

How soon a change will take place it is impossible to say, though matters have advanced very much during the present year, but there is no immediate haste so far as any of the parties save the New York Y. C. are concerned. British yachtsmen and prospective challenger can well afford to wait a year or two, as they are now placed, having declined to challenge under terms which have been widely condemned as unfair, while expressing their willingness to enter at once into any fair agreement. American yachtsmen may regret a state of affairs that deprives them of the coveted spectacle and is obviously working to the injury of the national yachting, but they can at least solace themselves with the thought that it is no fault of theirs, while seeking excitement in their home racing. The only party that is seriously injured by the delay is the New York Y. C., and those familiar with the sentiment within the club are well aware that this injury is by no means imaginary.

Not only has the club suffered a serious loss of prestige and of the popular favor through the cessation of the great matches, but it is by no means a unit on the question of the new deed of gift; this delightful document having been severely though quietly condemned by members whose standing gives weight to their opinions, and whose number is constantly increasing.

The meeting of last week was by no means as unanimous and harmonious as the brief reports in the daily papers make out, and though the big gavel and the very prompt ruling of the Commodore prevented any too general discussion and kept the members within due bounds, it was evident that there was at least a foundation for the reports that have been drifting about for some months that certain changes would be made. One very important motion was introduced and though it was very promptly disposed of, it shows the feeling among some of the more liberal and fair minded members; who, though still unwilling to admit that the club has done wrong, are anxious to remove any suspicion of unfairness. The motion was in effect that the New York Y. C. would consider any proposal for a race submitted by a foreign club. While this would not bind the club in any way, and leaves the question of the new deed entirely open, it is most important, being the first recognition made by any members of the club of the vital principle of the only legal deed of gift, the mutual agreement between both parties. Though the motion was lost, the public presentation before the club of this principle which is bound to dominate all future international racing, marks a most important point, perhaps the turning point of the whole dispute.

How different this is from all past policy is seen in the challenges of 1884, '85 and '86, when in every case the club has taken advantage of a convenient technicality to avoid making a fair agreement in the fall; compelling the challenge to await until March before sending a challenge, and then raising the regular cry of "too little notice."

On one vital point of the new deed opinion is now fairly unanimous and the obnoxious "dimension clause" must sooner or later be expunged. Even the *Boston Herald*, which once called on every commodore east of Cape Cod to bear testimony to the fairness and generosity of the whole new deed, has given up the fight over the demand for the dimensions.

The whole truth about dimensions and a ten months notice is that if the New York Y. C. would come down off its high pedestal as the great yachting body of both hemispheres, and recognize the possible challenger as having the same rights as the holder, it could have half-a-dozen challenges from yachts of 90ft., and with a year's notice. If both sides desire only a fair race, then there can be no objection to an early and amicable agreement, but this can never be reached while one party possesses such a powerful instrument for the control and coercion of the other, as the illegal "Lawyer's Deed of Gift."

NEW YORK Y. C.—At the meeting on Oct. 23 the following resolution, presented by Fleet Captain Stephen Peabody, was adopted: Whereas by virtue of its right under the deed of gift to accept a challenge for the America's Cup upon any satisfactory condition this club offered by vote of May 17, 1888, to accept a challenge upon the conditions of the Thistle-Volunteer matches: *Resolved*, That said vote is hereby rescinded. The following committee was appointed to nominate officers for the coming year: Messrs. J. D. Smith, Lloyd Phœnix, F. W. Vanderbilt, J. N. Winslow, E. C. Benedict, J. R. Platt, T. B. Asten, D. T. Worden, Augustin Monroe and Stephen Peabody. The following gentlemen were elected members: Messrs. William W. Durant, W. Harry McGill, William C. Whitney, Edward Clarkson Potter, George Trotter, Charles McK. Leoser, C. L. F. Robinson, W. O. B. Macdonough, Charles Greer, W. D. Bishop, Jr., A. H. Fowler, D. G. Henderson, Herman Clark and William Gardner.

GOLDEN FLEECE.—This steamer, chartered last summer in England by Mr. F. P. Osborn, has been purchased by him and will remain in this country. She is a composite vessel, designed and built by J. S. White, at Cowes, in 1880, and is 119.4ft. tonnage length; 22.5ft. beam and 12ft. depth of hold. Her engine is a two-cylinder compound, 12½ and 22 by 12in.; 20 H.P. She is schooner rigged.

SULTANA.—Mr. Trenor L. Park's new auxiliary was out at the Erie Basin last week, a part of her screw aperture being plated over to aid the steering. She will be supplied with a new boiler.

THE 46FT. CLASS.—It is reported that a third 46ft. Burgess yacht will be built for Mr. W. K. Vanderbilt, and that Capt. Chas. Barr and Minerva's crew will sail her.

A STOLEN YACHT.—On Oct. 22 the yacht Petrel was stolen from her moorings off Tompkinsville, S. I. The police were notified and went by rail to Tottenville, where they boarded an oyster sloop and cruised about Raritan Bay, finally sighting the lost yacht. The men on board, who proved to be Wm. Curtis and George Waddi, ran the Petrel ashore in Chesquake Creek, but were captured and held for trial. The yacht was hauled off without damage.

Answers to Correspondents.

Ask your gun dealer for the *Book of the Game Laws*.

YOUNG SPORTSMAN.—Your trap scores are "flimsy" and not to be made out by our compositors.

O. C.—The gun is a well made arm and reliable. We cannot undertake to say that it is better or inferior to the older gun, which is also a standard arm.

CANARSIE, Brooklyn, N. Y.—Messrs. A. B. Shipley & Son, of Philadelphia, make a specialty of supplying bethabara wood and other materials for amateur tackle makers.

W. R. A., St. John.—Rubber geese decoys are not made in this country; but can be imported through the dealers. They are expensive, and of course will not stand being fired into.

C. B. W., Huntington, N. Y.—Where can I buy a good second-hand shotgun? Ans. The dealers who advertise in FOREST AND STREAM supply second-hand guns as well as new ones.

L. H., Ansonia, Conn.—Could you inform us through FOREST AND STREAM if there will be a fly-casting tournament this fall, and what time it would probably be held? Ans. We have heard of no tournament to be held this year.

L. M. S., Yonkers.—I have a large number of comparatively new brass shells which have become swelled so that it is with great trouble that I can get them in my gun. Is there any possible way to fix them? Ans. The Ideal Manufacturing Co. make a tool for this purpose.

C. W. C., Boston.—See note in our game columns about the party from your city going to North Carolina. You will find quail at Tarboro, Lincolnton and all along that vicinity. Klitson's, N. C., is well recommended. You will be fitted out with dogs at the Carolina Hotel, Rock Hill, S. C.

F. S. R., Somerville.—Does Trumbull's "Names and Portraits of Birds" give habits as well as descriptions of all our shore birds or bay shipe, and also all ducks? What is the length and width of the book? Are the illustrations full page? Ans. It does not give habits. The page is 5½×8½. The cuts are not full page.

J. S. H., Sherman, Idaho.—Please inform me through the correspondents's column of your valuable paper the most attractive bait for bears. This part of Idaho is fairly alive with bears, and I have failed to catch one. I have used trout, beef and also a critter's head for bait, and a figure 4 trap. Ans. Try honey or molasses, honey in preference, as bears are very fond of it.

T. G., Vineland, N. J.—Please give me pedigree of Leo (E.K.C. S.B. 2,437). Ans. Rough-coated dog, Leo, whelped 1866; breeder, Monsieur Eggar, Switzerland. Pedigree unknown in England, purchased when a puppy. His color was white with tan about the head. Won second, Birmingham, 1871; second, Islington Dairy Farm, 1889. We advise you to write to Mr. K. E. Hopf, Arlington, N. J., he has the Swiss Stud Book.

J. M. K., Princeton.—Is there any large game along the south eastern border of Madison county, Fla., and if so, would it be a practicable way of getting there, to take a boat from Columbus, on the line of the F. C. & P. Railroad, and descend the Suwanee river to Hudson on the Suwanee? Would I find any hunting along the river? Ans. You will probably find some deer, quail, and turkeys along the Suwanee river.

P. H. F.—Experience shows that the two wads over the powder produce desired results; it confines the gas until the muzzle is reached; then the wads fly off; none of the force of the powder is put into "propelling the wads toward the game." For ruffed grouse in a 10-gauge use 4drs. powder, 1¼oz. No. 8 shot; in 12-gauge use 3½drs., 1¼oz. For black ducks, in 12-gauge use 3¼drs. powder, 1¼oz. No. 5 shot; in 10-gauge use 4¼drs. with 1¼oz.

G. W., Webster, N. Y.—Inclosed please find law giving date between which game can be killed in New York. Is that section correct stating that you can kill robins and larks during October, November and December? Are larks considered as game in the State of New York? Ans. 1. No. Robins and meadow larks are absolutely protected in all parts of the State except on Long Island and Staten Island, where the open season is Nov. 1 to Jan. 1. See laws of 1886-87 as given in full in the *Book of the Game Laws*. 2. They are not recognized as such by the game laws, but some people, notably Commissioner R. B. Roosevelt, consider them legitimate game.

C. B. P., Boston.—Will you be kind enough to let me know in your next number how to plant wild rice, what kind of a place to put it into and when to plant it? Can you plant it in the fall? Ans. Mr. Richard Valentine directs: "I have handled wild rice seed for several years; in fact was the first person to advocate planting it in waters where it did not grow naturally. I have never known it to grow well when planted in the spring, and the sooner it is planted after it is harvested in the fall the better. After the seed has been gathered for some weeks the enamel on the outside of the kernel seems to crack, and this, I believe, accounts for failure in spring planting. It should be planted on a mud bottom, where there is little, if any, current, and if possible where there is no other vegetation. As it grows only in the water it should not be planted on ground that goes dry in midsummer. It will grow in water from a few inchss to four feet in depth, but does best in shallow water. Before sowing I always soak the seed for an hour or so, in order that it will sink at once. I also think it best to sow thickly, rather than to scatter a small amount of seed over a large space."

A READER OF FOREST AND STREAM, Philadelphia.—Is it safe to shoot buckshot from a chokebored breechloader? I have a fine Scott doublebarrel gun, and I wish to go up the mountains this fall and shoot turkeys or perhaps larger game. I always used a muzzleloader before. Which do you think is best, a rifle or shotgun, for large game? And how can I keep the barrels from losing their brown color? And which is the best gun oil to use for a lubricant and preventive of rust? Ans. Buckshot may be used in chokebores if the shot are chambered to pass through the choke. To do this insert a wad in the muzzle, pressing it down to the point of closest choke, then experimentally chamber the buckshot on the wad, ascertaining how many to put in a layer in the shell. It is better, however, not to use buckshot in chokebores. For large game, if you mean deer, a rifle is by all odds the better weapon; many regard it as the only legitimate arm for deer. 2. To keep the color of your gun take good care of it, cleaning it thoroughly after use. A coating of shellac is recommended. 3. There are several excellent specially prepared rust preventives sold in the stores. Vaseline, unsalted tallow, machine oil or cocoa butter are good.

For Sale.

First Class Ducking Shore
Half Interest For Sale.

To any gentleman who is in search of a quiet place to enjoy the pleasures of ducking and comforts, together with everything required for the sport, I have just the place, situated at the mouth of Romney Creek, on the Chesapeake Bay, and a few hundred yards from the celebrated Taylor's Island, twelve miles from Havre de Grace. Have gunned from Back River to Havre de Grace for twenty-five years and finally purchased this property as being one of the most certain places affording cove and bar shooting, containing the celebrated **Locust Point Bar**, 1,100ft. long. Five boxes in bar, making the most comfortable flying point at head of bay. The dwelling house is situated on high land and was built for comfort and is situated fifty yards from the bar.

There is nearly two miles of shore for fishing purposes. Nine miles from Perrymans station P. W. & B. R. R. Six hours from New York to the shore. Want of companionship of some gentleman who only shoots for the pleasure in it, and one who after a hard day's shoot can enjoy a good dinner of fish and duck (provided we get the duck), segars and dominoes as a digester, and to bed *sober* at 9 o'clock. Now to any such gentleman who is looking for an interest in such as I have described, I would say that these places don't *grow*, and the opportunity offers itself once in a lifetime, and this is just that time. The interest on the cost per annum would not purchase a share in any large club, where *all* the shooting is done in the dining room. There is nothing to purchase. No improvements to be made, and the man and wife in charge board you for cost. Map of the property at FOREST AND STREAM office. Nothing misrepresented in any particular. Can give plenty of references as to the shooting to be had, also of myself, and expect in return references as to my associate. GEO. H. WILD, Red Bank, Monmouth county, N. J.

ANSWERS TO CORRESPONDENTS.

NEW YORK'S PROTECTOR.

THE appointment and the discharge of the State Game and Fish Protectors of New York are vested in the Commissioners of Fisheries. At the last meeting of the Commission Fred P. Drew was removed from the office of Chief Protector and J. Warren Pond, of Malone, was appointed in his place. This step met the disapproval of Commissioner R. U. Sherman, who thereupon tendered his resignation; and Gov. Hill has appointed as the new Commissioner Mr. L. D. Huntington, of New Rochelle, who is, we believe, a broker of this city. Gen. Sherman's resignation was made out some eighteen months ago, but was withheld by him at the urgent request of Commissioner Blackford. It is much to be regretted that Gen. Sherman has deemed it necessary to leave the Commission; his devotion to the work and his activity and intelligent comprehension of fish and game interests have always made him a most valued member of that body; and we speak for the people of the State when we express the wish that he might have continued in office.

The removal of Protector Drew appears to have encountered disapprobation in some parts of the State, and the Utica Fish and Game Protective Association has gone so far as to set in motion a petition asking Governor Hill to interfere for his reinstatement. This action has manifestly been taken on the hearing of Protector Drew only. We cannot believe that the Utica Association has inquired into the matter fully. The Commissioners are not men whom we should expect to remove officials in this way unless convinced that the changes were necessary for the good of the service. They have the very best means of knowing the merits of this case, and it may be assumed that they have acted wisely and justly; and that the results will show it. It is known that when the Legislature has been in session, Chief Protector Drew, whose office is in Albany, has been more active as a lobbyist than as a game and fish protector. If Mr. Pond shall let politics severely alone and attend strictly to the business for which the State pays him his salary, there will be found, even in this one respect alone, sufficient justification for the change. As protector in the fifth district, with headquarters at Malone, Mr. Pond has made an excellent record, and there is every reason to believe that he will fill the higher office in a like satisfactory manner.

No intelligent person who knows the composition of the Board of Fish Commissioners of this State will for a moment question that it is dominated by a most commendable public spirit. It has no axes to grind. Its members are not politicians. They have regard only for the public interest. When they discharge one man and put another in his place, their action must be accepted as what appears to them to be right. And the overwhelming probabilities are that they have acted wisely.

In the face of such probabilities, it is of the utmost importance that a game and fish protective society should take the pains to assure itself beyond all question that the Commissioners have erred, before espousing the cause of a removed official. In the absence of such precaution a club might be betrayed into taking action which in the future it would sincerely regret.

A RAINY DAY IN CAMP.

THE plans of the camper, like those of other men, "gang aft aglee." The morrow which he proposed to devote to some long-desired hunting or fishing trip, is no more apt to dawn propitiously on him than on the husbandman, the mariner or any other mortal who looks to the weather for special favor.

On the contrary, instead of the glowing horizon and the glory of the sunburst that should usher in the morning, the slow dawn is quite apt to have the unwelcome accompaniment of rain.

The hearing, first alert of the drowsy senses, catches the sullen patter of the drops on tent or shanty, their spiteful, hissing fall on the smoldering embers of the camp-fire, and with a waft of damp earth and herbage stealing into his nostrils, the disappointed awakener turns fretfully under his blanket, then crawls forth to have his lingering hope smothered in the veil of rain that blurs the landscape almost to annihilation.

He mutters anathemas against the weather, then takes the day as it has come to him, for better or for worse.

First, to make the best of it, he piles high the camp-fire, and dispels with its glow and warmth some cubic feet of gloom and dampness.

Then he sets about breakfast-making, scurrying forth from shelter to fire, in rapid culinary forays, battling with the smoke, for glimpses of the contents of kettle and pan. His repast is as pungent with smoke as the strong waters of Glenlivat, but if that is valued for its flavor of peat-reek, why should he scorn food for the like quality.

Then if he delights in petty warfare with the elements, to bide the pelting of the rain, to storm the abattis of wet thickets and suffer the sapping and mining of insidious moisture, he girds up his loins and goes forth with rod or gun, as his desire of conquest may incline him.

But if he has come to his outing with the intention of pursuing sport with bodily comfort, he is at once assured that this is unattainable under the present conditions of the weather. How then shall he beguile the tediousness of a wet day in camp?

With books and papers? Nay, if they were not, they should have been left behind in the busy, plodding world that he came here to escape from. He wants nothing here that reminds him of traffic or politics; nothing of history, for now he has only to do with the present; nothing of travel, for his concern now is only with the exploration of this wild domain. He does not wish to be bothered with fiction, idealized reality is what he desires. Neither does he care for what other men have written of nature. Her book is before him and he may read it from first hands.

Looking forth from his snug shelter on the circumscribed landscape, he marvels at the brightness of a distant yellow tree that shines like a living flame through the veil of mist. The blaze of his sputtering camp-fire is not brighter. He notices, as perhaps he never did before, how distinctly the dark ramage of the branches is traced among the brilliant leaves, as if with their autumnal hues they were given transparency.

Some unfelt waft of the upper air casts aside for a moment the curtain of mist and briefly discloses a mountain peak, radiant with all the hues of autumn, and it is as if one were given, as in a dream, a glimpse of the undiscovered country.

He realizes a dreamy pleasure in watching the waves coming in out of the obscurity and dashing on the shore, or pulsing away in fading leaden lines into the mystery of the wrack.

In the borders of the mist the ducks revel in the upper and nether wetness, and with uncanny laughter the loon rejoices between his long explorations of the aquatic depths.

A mink, as heedless of rain as the waterfowl, comes stealing along the shore, thridding the intricacies of driftwood and web of wave-washed tree roots, often peering out in inquisitive examination of the quiet camp.

Less cautious visitors draw nearer—the friendly chickadee, hanging from the nearest twig; the nuthatch, sounding his penny trumpet, accompanied by the tap of the woodpecker, as one creeps down, the other up a tree-trunk; the scolding jays, making as noisy protest over human intrusion as if they had just discovered it; a saucy squirrel, scoffing and jeering, till tired of his raillery he settles down to quiet nut-rasping under shelter of his tail.

There are unseen visitors, too—woodmice, astir under cover of the fallen leaves, and, just discernible among the patter of the falling rain and of the squirrels' filings, footfalls unidentified, till a ruffed grouse starts new showers from the wet branches in the thunder of his flight.

Narrowed to the width of tent or shanty front, the background but a pallid shroud of mist, the landscape yet holds much for pleasant study.

But if the weather-bound camper exhausts this or tires of it, he may turn to gun-cleaning or tackle-mending. If a guide be with him, he can listen to his stories of hunting, fishing and adventure, or learn woodcraft of him and the curious ways of birds and beasts.

He may fashion birch bark camp ware, dippers, cups and boxes, or whittle a paddle from a smooth-rifted maple.

If he is of artistic turn, he can pleasantly devote an hour to etching pictures on the white under surface of the fungus that grows on decaying trees, and so provide himself with reminders of this rainy day in camp.

So with one and another pastime, he whiles away the sunless day, which almost before he has thought of it, merges into the early nightfall, and he is lulled to sleep by the same sound that wakened him, the drip and patter of the rain.

And when he looks back to these days of outing he may count this, that dawned so unpropitiously, not the least pleasant and profitable among them, and mark with a white stone the rainy day in camp.

IN PAST YEARS it has been practically impossible to punish game law breakers on Long Island, for local public sentiment as a rule was in sympathy with the offender, and the justices of the peace, elected at town meetings, have usually either shared this sentiment themselves or have taken due account of it, and let off the trespassers and trout netters and game killers very lightly. Two recent cases, however, show a change. The other day Justice Carman, of Sayville, fined a trespasser on the South Side Club's preserves $10 and costs, or about $35 in all; and Justice Hawkins, of Ronkonkoma, imposed a fine of $85 on two men who had killed a deer on Sunday, Oct. 19. These cases give promise of a change which has been long needed and will be warmly welcomed. Justices Carman and Hawkins deserve credit for their action in making fish and game laws something else than by-words.

THE New York Fish Commission made a large figure record for the fiscal year ending with September. There were 477 arrests of persons accused of violating the fish and game laws, and of these 296 were convicted and paid fines to the amount of $7,229.56. Among the other cases pending are some which will materially increase the financial showing, among them the case of the Delmonicos, of this city, who for having served woodcock out of season will be called upon, if convicted—and there is said to be plenty of evidence—something like $600. The illegal nets destroyed by the protectors during the year were valued at $19,696. The fish stocking operations for the period comprised the planting of 4,000,000 lake trout, nearly 4,000,000 whitefish, 2,000,000 shad and other species, making an aggregate of 40,000,000.

The Sportsman Tourist.

MOOSE RIVER AND THE WEST BRANCH.

VIII.

IN the morning we descended the two remaining miles of Sahkhabehaluck, and shot out onto the broad bosom of Moosehead Lake. The gale which had troubled the waters of Long Pond and Brassua was over; it had blown three days, which is the usual length of time in which these mountain wind storms assert themselves, and when we left Moose River we glided out on to a surface which had not a ripple on its broad level. A blue, cloudless sky smiled overhead, and all nature, from the frowning cliff of Kineo to the tiniest leaflet, seemed to be under the influence of the morning. It was one of nature's gala days. At Kineo the guides bought new setting poles, we made some purchases at the store and engaged a steamer to transport our outfit to the Northwest Carry, thereby avoiding a twenty-mile paddle. Magnificent views are to be had from the summit of Kineo, which take in a vast area of country, covered with trackless forest and dotted with lakes and mountains, but as we had made the ascent in former years, we did not attempt it. The staunch little steamer Kineo was placed at our disposal, and with the canoes lashed to her sides and ourselves and the luggage aboard, she soon rounded the Kineo promontory, and steamed rapidly toward the north.

At the carry we found that some changes had been made, which, though they detract from the picturesqueness of the locality, add to the comfort of the traveler who visits this remote and isolated place. The old log cabin, which for many years was the only structure in the rough clearing, is now used as a stable, while a new frame house stands nearer the lake. There is no other house within twelve miles, and Greenville, forty miles distant, is the nearest village. We were greeted at the landing by old Joe Morris, the voluble and garrulous Frenchman, who, at the Northwest Carry, is "monarch of all he surveys." After telling him that we wished to cross the carry immediately, we paddled across the bay to the mouth of Carry Brook and then up that tortuous stream, which is filled with stumps, sunken logs and snags. There was no perceptible current, and the water had set back into the woods till many of the trees were dead, and all along the low, swampy banks they formed an inextricable tangle. We proceeded for a mile and landed on a muddy bank from which a few steps led to the "tote" road. The canoes were lifted out, and we heard Joe shouting to his team in a *patois* which showed that, if they understood him, they were able to obey orders in two languages. The horses were attached to a rude sled on which we loaded two canoes, lashing them tightly so that they would receive no injury from their rough jaunt.

Francis was left in charge of the other two, and we started across the carry. The bank where we landed was covered with bear tracks sunk deep in the mud where bruin had wandered about a day or two before, and while going along the path we saw many deer tracks and in one place the track of a moose.

None but the steadiest of teams could have been controlled on this road, which, to quote Joe, is a "pretty sassy" one; but his horses were trained to the business, and at the sound of his voice would stop or pull as the emergency required. The trail led up hill and down, and was strewn for the whole two miles with rocks and boulders, which threatened to capsize the sled more than once. At times one runner would be elevated two or three feet above the other, but the journey was made without accident. Bog holes and sloughs, some containing a foot of dirty water, underlaid with a 6-inch stratum of mud, were sprinkled in here and there by way of variation, and ruts and gullies all did their best to make things interesting. Traveling over a backwoods "tote" road is certainly replete with the "spice of life." The carry road for some distance is identical with the old Canada road, which runs from the Northwest Carry to Canada Falls on the south branch of Penobscot, and thence to Canada. Since the new Canada road—the one over which we traveled from Skowhegan to Moose River bridge—was built the old one has become obsolete, except as the lumbermen use it as a winter road. It is now pretty well "grown up" and is little more than a green lane through the forest.

The "other end" of the Northwest Carry dumps (this seems to be the only word) one in the edge of the woods and on the borders of Seeboomook meadows. These meadows consist of a tract of open ground covered with a coarse growth of grass. They are surrounded by the woods, and on the eastern side are some rough ledges of gray rock.

A portion of the meadows is covered by shallow Carry Pond, between which and the end of the carry is a quarter of a mile of quaking bog, over which canoes must be dragged, as the horses cannot traverse it. This is not a difficult task, however, for the light canoes slip along easily over the grass. The ground trembles and shakes under the feet and the water oozes up through. We unloaded the canoes, and Joe turned his horses, saying, "Well, boys, I suppose I be back some time." We proceeded to get dinner, and by the time Joe and Francis returned we were ready. A loaf of new bread, bacon, eggs and trout were the delicacies offered on our bill of fare, and our wine cellar, under the roots of a great spruce, produced a choice brand of *aqua pura*, which we quaffed, cold and sparkling, from a birch bark cup. "A man never ought to carry any dishes to the woods," said Cy, "but make them all of birch bark. I can boil potatoes in a birch bark kettle."

While some "led" the canoes, the others toted the luggage across the bog to the pond. There was nothing in this lonely place to indicate the presence of man, and while eating we saw a deer come out of the woods beyond the pond. We had here our first serious annoyance from insects, and were obliged to besmear our hands and faces with tar oil as a protection from the myriads of bloodthirsty mosquitoes which attacked us. We had but little trouble with that other pest, the black fly, as its duration is limited to a few weeks, and its season was nearly over.

When we took the canoes from Carry Pond it was Kennebec water which dripped from them; when we placed them in the pond they floated in Penobscot water.

From the pond we entered narrow, winding Seeboomook Brook, which ran its crooked length between muddy banks, grown up with alder bushes and tracked by deer. At times we stooped to avoid the alders, whose branches met across the little stream, and again we scraped along the bottom where the shallow water would not float us, or felt some snag or log scratch along the canoe. A quarter of a mile of this carried us across Seeboomook Meadows and into the West Branch, opposite Seeboomook Island.

We turned up stream and paddled rapidly, for we wanted to select a good camp site, as our intention was to spend several days on the Branch. We went up for three miles, and after examining several places found a good location on the right bank a mile above Nelhudus Stream. The only bad feature was a steep muddy bank, which we had to climb, but there was plenty of wood, with evergreen boughs for beds, and level ground on which to pitch the tents. At this place, which we called Camp Nelhudus, we pitched all three of the tents, one for ourselves, one for the guides and one for the "waugan."

IX.

The West Branch may be called a classic stream, for with it are associated some of the names famous in American literature. James Russell Lowell, Henry D. Thoreau and Theodore Winthrop have floated on its waters and sung its praises. It is a river of the woods; nowhere is there a village, and but few isolated houses stand upon its banks. The canoe of the Indian and the batteau of the lumberman are the only craft which navigate it. The moose and the deer find sustenance upon its banks, and the beautiful speckled trout swims in its waters. The virgin forest waves over it, and the rushing of its rapids breaks the silence of a wilderness. Its only commerce is the floating down of the lumber drives and the transportation of supplies to the logging camps. It is ever a stream of beauty under whatever conditions it may be seen.

The West Branch! What reminiscences the name suggests to the memory of the writer. Pictures, photographic in the minuteness of their detail, form one after another in the brain. There are beautiful mornings on the dead water when the mist slowly rises and permeates the air, veiling all objects with a silvery, impalpable medium; mornings when the surface is like polished silver, and every tree and blade of grass droops motionless above its reflected image in the sleeping river. There are nights so dark that he who sits motionless in the bow of the canoe, grasping his rifle and straining his eyes to peer through the gloom, is invisible to his companion in the stern, and the phosphorescent flash of the silent paddle is the only light.

There are other nights when the sky is sprinkled with stars and the full moon sheds its soft lustre over river and forest, when as one drifts past the silent shores with their dusky shadows and ghostly trees, or glides along the twinkling path of the moonlight, one feels the witchery of the time and place, and spell-bound, floats on what is now a lethean stream.

The lilies, on which the deer come down to feed, change to lotus flowers, and one is borne on many longer voyages to those far realms of fancy, which lie beyond the forest and the world. Memories of many days on the West Branch come back; days of sunshine and days of storm; days of summer heat and days when the chill of autumn was in the air. It is a stream of many phases; now black and deep, apparently as fathomless as the blue vault above; then smiling and dancing along over a stony bottom, and again, its angry waters dash madly through wild gorges, boiling and seething between walls of rock.

X.

After our camp was ready for occupancy we went down to the mouth of Nelhudus for the evening fishing.

The fishing on the West Branch is confined to certain pools and to the quick water of the falls and pitches, and a stranger might pass this Nelhudus pool without suspecting the wealth it contains.

The canoes slid cautiously to the edge, and while the guides held them stationary we cast our flies. William and I put on a brown-hackle, a red-ibis and a white-miller. Harry substituted a blue-jay for the hackle.

William made the first cast. His feathery lures, as the line straightened, fell lightly down toward the center of the pool, but there was no response, no sign of life in the placid water. Again the tip of his rod described an arc, and once more the flies descended, but before they touched the surface a large trout with a rush so impetuous that the water fairly boiled, flung himself into the air, and turning took the red ibis as he fell.

Then ensued a battle which would have fired with enthusiasm the most indifferent of anglers, and when it ended the fish was in William's landing net. Harry hooked a large fish which, in its struggles to escape, wound the line around a stick which was stuck in the bottom of the pool. While it was threshing about and we were expecting to see the taut line snap asunder, a smaller fish took one of the other flies, and then there was fun for a few moments while Bill untangled the line.

He finally cleared it, but the larger trout broke away, carrying with him the white-miller. Several times we had two fish on at once, and most of the doubles were landed. I lost one good fish which, in spite of my efforts, got under the canoe and snapped the leader.

I never saw trout bite so fiercely and take a fly so viciously, as those we took at Nelhudus Stream. They came with a rush, often leaving their element bodily, and when struck were wild with fright and fought nobly for liberty, contesting every inch of line.

We were often deceived in fish we had on, thinking before we saw them that they must be of good size by the way they fought, but they proved to be small when landed. Their strength and courage were in inverse ratio to their size and weight. We fished this pool each morning and night, and had no difficulty in supplying our table with fresh fish.

One night, leaving the others to angle, Francis and I explored Nelhudus for three miles up stream. It is a narrow, winding stream, and the country about it is comparatively level. The banks are covered with bushes, but wherever there was a bit of sandy beach, or open space of muddy soil, the deer and caribou tracks were as thick as those of cattle in a barn yard, and we saw where moose had been.

We crossed many pools where the trout darted swiftly away at our approuch, and in places we had to wade while we dragged the canoe over the shallows. The bed of the brook was mostly clean white sand and pebbles such as trout like. We saw the remains of a beaver dam and their cuttings on the bank, and in places we had pretty glimpes of the distant Nelhudus Mountains. "Well," said Francis, "I guess mebbe we better go back. Don't want get caught up here all night." And as the light was waning we returned.

We went nearly every evening to a log camp, a mile from our tent, for the purpose of changing our dry plates. It was in a dilapidated condition, but was appreciated by the hedgehogs, which had gnawed the woodwork and the door; it served admirably, however, as a dark room, and we enjoyed the trip back and forth in the quiet and cool of the evening.

One night as we returned to camp we heard a rustling in the underbrush near the "waugan" tent, and Francis, holding up a warning hand and listening a moment, said, "There's somebody 'round the waugan. I guess he's a mink or a rabbit;" but "he" proved to be a woodchuck. Francis usually alluded to everything, whether animate or inanimate as "he." Francis had little to say; he rarely took part in our conversation unless directly addressed, the taciturnity of his race being one of his characteristics. But when I have been alone with him he has related many anecdotes of the woods, and is an intelligent and interesting companion.

At Nelhudus Camp we made a table on which to eat, and Dennis, having more time than when we were traveling, gave us more elaborate meals. He had said that he "could boil water without burning it, but did not claim to be a cook;" but we found him as skillful with the frying pan and the coffee pot as he is with the rifle and the paddle. Of course we ate trout—trout fried in meal and trout fried in fat, broiled trout and baked trout, trout chowder and trout in every form, except raw trout. Trout was supplemented by various "fixins;" fried potatoes, fried onions, fritters and flapjacks, all being consumed in astonishing quanties. Our table was made of four crotched sticks, firmly planted in the ground, with poles laid across and resting in the crotches, while a great sheet of bark, placed over the whole, formed the top.

One morning as we were going up the rixer to Gulliver Falls to try the fishing there, we saw what we at first thought was a musquash swimming across, but on nearer approach it proved to be a little red squirrel.

Harry and Bill saw a deer swim across the stream one morning, and there was scarcely a day but we started deer. One noble buck with branching horns, though still in the velvet, presented a grand sight as he stood in the edge of the water with a doe by his side. We came upon them suddenly as we rounded a bend, and they stood watching us for a moment before they disappeared in the woods.

The laws of the State of Maine do not allow the capture of trout and venison at the same season, and this was close time for deer.

WILLIAM AUSTIN BROOKS.

HALF-HOURS IN THE SIERRA NEVADA.

VI.—THE MAGIC SPELL OF A WILD BIRD'S SONG.

ONE day last summer a stockman came up to camp on his way to visit the cattle on his range, with an urgent request that I should go down into Lake Valley to see the wife of a cattle owner, who was seriously ill. It always makes me ill-natured to receive a professional call when on my summer outing, and I almost invariably refuse. In this case I could not well do so without being guilty of inhumanity. The woman was reported very ill indeed, and the nearest resident physician was over twenty miles away, and a mountain road at that. The messenger stated that a vehicle was coming to the nearest point accessible, to convey me there and back, so making a virtue of necessity I rowed down the lake and climbed the mountain to where the team was to meet me.

On arriving there the team had not put in an appearance, so I walked slowly along in the cool shade of the pines until I reached the old grade. Following this until I reached the summit, and no team appearing, I sat down under the branches of an overhanging pine. Lake Valley spread out at my feet, and beautiful Tahoe wrinkled her face in the distance under the influence of a gentle western breeze. The blue of a cloudless California sky hung over the scene, and the rock-ribbed sides of the mountains gleamed under the brilliant rays of the sun. The granite sands on Job's Peak glistened like new-fallen snow, while the more distant mountains hid their ragged outlines behind the filmy blue veil of distance. The hum of bees was in the air, and the querulous whistle of a woodchuck emphasized the drowsy silence. I leaned back against the tree and tried to fancy that I was gazing upon a portion of fair Italy's storied land.

I had fallen into a deep day-dream, when suddenly there fell upon my ears the ravishing bell-like tones of a hermit thrush. Yes, there could be no mistake about it! Although I had never heard one before in California (nor have I since) and did not know that the bird existed on the coast, yet I could not be mistaken.

Again and again the mystic and enchanting notes rang through the piny arches of the surrounding forest, and I was once more a boy in my native eastern woods. The sombre pines, with their dim aisles of columned shade, faded from sight, and in their place were the smooth gray boles of the maple, birch and beech, with their delicate green foliage trembling in the June breeze. The sunlight filtered through and lay in splashes on the ground. The red squirrel chittered on the dead branch of a neighboring hemlock, and the drumming of a late grouse came booming on the quivering, odorous air. A little truant, I fear, from the neighboring schoolhouse with a willow pole, a cotton line and a liberal "gob" of worms in his jacket pocket comes slipping through the shadows and the sunshine on his way to the brook that sings in the hollow beyond. Now he stops and gathers the spathe of the wild turnip; then again the golden or pale pink slipper of the cypripedium. Here in a little hairy ball at the foot of a tall fern he discovers a chippy's nest. Thank God! that little urchin did not rob the anxious mother of her fragile treasures. Dallying thus, in love, even at that early age, with nature and her ways, he comes to where the little brook is skurrying over mossy stones and under grassy banks and old logs to the distant river. The glimpse of a darting trout arouses the angling spirit in the boy's heart, and he baits his hook and soon "yanks" out a fish. It is done in the orthodox manner of the schoolboy, and the poor trout would have been slung higher into the overhanging branches had the "pole" and line been any longer. Then comes the "shinning" up the tree to retrieve the precious hook and its wriggling captive. A willow twig hacked off with that "sure enough" steel-bladed pocket-knife, and the struggling captive is strung by the gills to flap

his life away in feebler and feebler efforts. Oh, the unconscious cruelty of the boy! Why was he not taught to mercifully kill his captives, and not let them die a slow death by torture? (Fathers, do you teach your sons to perform this merciful act; or do you even practice it yourselves—all of you?)

So the afternoon slips away, and the willow twig is adorned with a score of poor, dried and stiffened effigies, covered with bits of leaves and twigs, with patches of sand on their shrunken scales, their gaping mouths and lusterless eyes making mute protest against their sad condition; while clouds of flies seek every chance to settle upon the poor defiled creatures.

Suddenly pole and fish are dropped, and all else forgotten at the entrancing sight of a shy bird with modest apparel and spotted breast, which is perched upon a branch of an adjacent tree. At regular intervals it gives forth mysterious, thrilling notes, that haunt the memory through life. Not for all the trout in the brook would that little urchin have moved, for fear of frightening away this fairy songster. Never before had his longing eyes beheld the source of those matchless notes that had so often ravished his boyish ears. Has he not, during all his short years, been trying to get sight of this very bird? And here in this secluded nook by the brookside, in all its modest beauty, it swells its spotted breast and sends ringing through the silent woods those wondrously sweet and tender notes.

But here comes the rattle and dust of an approaching team, and the scribe rubs his eyes and finds himself on the summit of the Sierra Nevada, with those dreamed-of scenes lying forty years behind him. Heigho! Such tricks can the unexpected voice of a little bird play upon the memory! AREFAR.

AUBURN, Cal.

A PLEA FOR THE COWBOY.

THE real cowboy, the cowboy of tradition, of the open range, of great round-ups, of endless trail drives, and of wild, reckless deeds and orgies, is almost an extinct species. As soon as the absolute freedom of an unbounded horizon was destroyed by the advent of wire fences, one by one they either gave up their calling, adapted themselves to the new regime or pushed West, and their places are now taken by the steadier class of less-interesting herders, that run the scientifically-conducted ranches in which Eastern capitalists have invested. The present class, while following on a smaller scale almost the same calling as did their predecessors of ten years ago, pursue it in a very different way; and are what they should be in the present condition of affairs, only the motive power to be directed by the business heads of the companies by whom they are employed.

So soon as the land became valuable enough to fence into limited ranges, the old harum-scarum ways, that were successful enough in former days, were discarded and more precise methods adopted, based on business principles. Some of the "old timers," who had regarded with doubting eyes the fencing of lands that had been wrested from savagery by their efforts, submitted to the inevitable and sought employment with the new cattle men; but generally, with a lofty disdain of the despised "tenderfoot" ways, they sought that ever-narrowing belt of country know as the West, where they might herd their cattle a few years longer, unrestrained by strands of aggravating wire.

They were a strange class of men, those old-time cowboys, reared almost entirely in the wild Western land, away from all civilizing and refining influences, and seldom possessing more than the merest rudiments of an education, they had in them traits and characteristics that were full of individuality, and they formed in themselves a race as different from the average Eastern farmer as is the cossack of the Steppes from the dweller in St. Petersburg.

In order to understand the life of these men it must be remembered that ten years ago all of western Texas was virtually unfenced, and except for the cattle ranches was entirely unsettled. Over this wild stretch of country the cattle were allowed to roam at will, in the summer grazing where water was most abundant, and in the winter seeking shelter of cañon or valley and eking out a subsistence on the grass that remained over from the summer. Very few cattlemen owned land, and the country was literally open to all who might choose to come into it, build a temporary shelter and turn a herd of cattle loose upon the luxuriant pasturage that everywhere existed.

The principal feature of the work of a cowboy centered in the round-up. Every spring at a given time each ranchman would send so many hands, with perhaps six or eight horses apiece, to some designated place. Here a foreman would be selected, under whose orders by tacit consent the round-up was to be managed; the camp was governed by a rude system of discipline; certain men were deputed to do the cooking, others to herd the horses that were not in actual use by the riders, while the rest of the "outfit," as it was called, scoured the country and drove into one large herd all the cattle to be found in a certain section. This herd was held until the new calves had all been marked with the brands of their respective owners and the marketable beef—steers—taken out, when they were once more turned loose to roam for another year in undisturbed freedom. By dividing the land into sections and working each carefully, surprisingly few cattle were passed by, and it is safe to say that not more than 2 per cent. of calves would be overlooked by a round-up composed of men who understood their business. One reason of the thoroughness of this work was the absolute unanimity with which all hands worked together. Each helped the other, and in the round-up personal brands were disregarded, and every cow man would brand for his neighbor as carefully as for himself. Thus a ranchman owning perhaps a thousand head of cattle while only hiring one or two men, would have the entire force of the country working to his interest, while he on the other hand would be aiding every one else. The interests were thus pooled. The spring round-up lasted generally two or three months, then came a period of inactivity for a few weeks, followed by a short space at work called the fall round-up, when any calves born late in the season were branded.

This about ended the regular work of the cowboy for the year. During the winter, while still employed, his duties were rather those of a free-lance; he rode about over the country looking at the cattle, and if any large bunch was seen straying off they were herded back and kept as much as possible in the vicinity of the ranch. During northers, to prevent "drifting," as it was called, an imaginary line from east to west was daily patrolled, and all cattle found going south before the piercing wind were herded back and kept as much as possible within certain general boundaries.

The winter work, however, while often presenting times of great hardship and labor, was generally of a free-and-easy character and permitted the wandering about of the hands; and it was during this period that the frolicking was generally indulged in. It was a rough, devil-may-care sort of a life, here to-day and there to-morrow; ranches were at all times open to receive any who might choose to partake of their hospitality, and there was a great deal of free masonry among the boys. A party when roaming about would stop for the night at the first ranch that presented itself, waiting for no invitation; but simply riding up to the door they would throw off their saddle and proceed to make themselves comfortable, it mattered not if the owners were or were not at home.

I can very well understand how, to persons unfamiliar with the country, and more particularly with the men themselves, the cowboy does not seem to be a shining light, as anything except a cowboy. They are usually seen by tourists and others at their worst, and the traveler who, during a short stay in a frontier town, sees the cow-puncher in his reckless moments is very apt to form opinions not just and seldom flattering to the object of this sketch. For, be it confessed, the cowboy in town is usually the cowboy on a tear. It must be taken into consideration, however, that the men do not get into town more than half a dozen times during the year; and then, after weeks of isolation on lonely ranges, it is not so very surprising, if under the exhilaration of certain liquid refreshments, deeds not exactly in accordance with the law are perpetrated. And yet in an experience of four years, during which time I was with the boys, indeed was one of them, I cannot remember a single instance where the fun did not prove of the most harmless sort; though perhaps not always according the deference due to the laws of the commonwealth. Yet it was fun; fun of a wild, reckless type, perhaps, and terrifying to those unaccustomed to the perpetrators; but just such a series of antics as one would expect of a lot of over-grown school-boys let loose on a frolic.

A party of say a dozen cowboys ride into some frontier town. They have not been away from the ranges for several months, and the hundred dollars that are burning holes in their pockets it is their steadfast determination to get rid of in the speediest manner possible, and to have what is known as a "royal Bengal tiger" time in so doing. So they seek the limited amusements that the place affords, live as high as possible under the circumstances, gamble, smoke bad cigars, go to the dance houses, and alas! make veritable "tanks" out of themselves and fill up on the "forty-rod whisky" of the frontier. As a natural consequence, after two or three days of wild, riotous delirium, which is their idea of a good time, all of their money has disappeared into the hands of the blacklegs and saloon keepers, and the crowd is left stranded and broke it may be a hundred miles from home. "Well, never mind, boys, we've got our bronchos left, and we've had a bully time, so what's the difference? Whoop!" So philosophically taking a few more "smiles" to drown a passing recollection of money wasted, they mount their horses and proceed to leave town.

And now sometimes occurs what is to the cowboy as is the playing of "hookey" to his junior type, the school boy. One of the crowd suggests that they show their contempt for the town by racing at full speed through the streets, whooping and yelling and firing off their pistols—"shooting up the town," as it is called. After a cautious survey of the lay of the land, and a careful noting of the positions of the cartridged sheriff or any of his deputies, away they go at a breakneck speed, yelling like demons and emptying their six-shooters into the air. Out of the startled village they race, and over miles of desolate prairie, until safe from all pursuit, they bivouc for the night, to begin on the morrow the long ride back to the ranch, where another three months of labor will enable them to repeat this rather questionable kind of enjoyment.

Sometimes the sheriff gathers up a posse and follows, and occasionally after a long pursuit comes up with the miscreants, but generally with an exclamation having in it something of the pride of a father while watching the pranks of a mischievous but promising son, he "'lows he'll get them the next time they come into town," and lets the cow punchers undisturbed regain their native fastnesses.

When the retreating forces are followed and overtaken, occasionally very severe fights occur, for dazed by the bad liquor and exhilarated by the effects of their dash, the wild riders are in no mood to be taken captive or pay an inconvenient fine, and it is under such circumstances that most of the shootings occur.

I remember one case particularly, when two cowboys late one afternoon rode out of a little town in the Panhandle of Texas, and going through the usual antics disappeared over the prairie. The sheriff, a gallant officer, though possessing a reputation rather of rashness than of discretion, had prided himself on never permitting his town to be "lit up," and followed at once with two deputies. One of these, while going down the trail at a breakneck speed, was thrown by the falling of his horse and had his arm broken, but pluckily remounted and passed on with his companions. The pursued were overtaken at a ranch about ten miles from town, where they had ensconced themselves behind the stone wall of a branding pen, and were awaiting with interest the arrival of the minions of the law.

A desperate, though rather one-sided, fight ensued, in which the sheriff and his remaining able-bodied deputy were badly wounded; and it is probable that the entire party would have been dispatched had it not been for the interference of the ranchman, who prevailed upon the cowboys to cease hostilities and go about their business, while he cared for the wounded members of the sheriff's posse.

While legally and viewed in the strict light of right and wrong the action of the sheriff was correct, still as a matter of discretion, it would have been far better to have overlooked an action which, though lawless, was harmless; and at some future time, when the perpetrators had recovered from their spree and returned to town, he could have enforced the majesty of the law.

And such, indeed, is the general way of regarding the cowboy and his escapades. They are prompted by nothing save mischief and an exuberance of animal—and it may be a dash of vegetable—spirits; and while, of course, such actions could not be overlooked in a large community, in the small frontier hamlets in which the law is at best but an experiment, they may be winked at without endangering the lives or estates of the townspeople.

I must relate a rather amusing incident that will well serve to illustrate the half bullying, half good-natured cowboy on a tear. It was in a small, almost unnamed town on the extreme frontier of Texas. The place was absolutely lawless, no sheriff was present to interfere with the hilarity of the boys, and there was scarcely a bar to anything in the way of reckless deviltry. One evening the tattered stage brought up to the door of the cabin that served as a hotel that most invincible of all the parasites of advancing civilization, a drummer. Now, I have generally noticed that your commercial traveler is a person of peculiar adaptability, and that he usually adopts as one of his mottoes that one which advises always do in Rome as the Romans do. This chap, however, with singular lack of tact, had ventured into the wild West attired in a most fashionable garb, and as though to tempt fate wore a high silk hat. All went well, however, until about dusk, when two cowboys, evidently the worse for liquor, caught sight of the unfamiliar sight, and in a very short time the despised tile was on the ground and serving as a target for two six-shooters. Surprised, doubtless, at a social custom so different from anything that he had seen in Boston, the drummer beat a retreat at what might be termed a dignified fast walk. This roused the lounging crowd, and after him they all went, finally coralling the naturally dismayed man in the bar room of the hotel. "Why, pardner," hiccoughed the destroyer of the hat as he held up the battered tile, "we don't want to rob you of your hat. Just having a little fun. You must 'scuse us. Here, you take my hat, it's a blame sight better than your old one." And without more ado the drummer was adorned with the big greasy sombrero of the cow puncher, while that worthy assumed the once elegant vestige of civilization and wore it over his own long locks.

One of the boys then proposed a drink, "just to show that there was no ill-feeling about the trade." So all hands, including the drummer, who probably thus hoped to get rid of his unwelcome company, engaged in a social glass. Another followed, and still another, until all were like a crowd of bosom friends. The last I saw of the crowd that night the drummer, with the sombrero on his head and a six-shooter buckled around his disordered frock coat, was going down the street of the town, his arms around the necks of the two assailants of a few hours before, one of whom still wore the perforated plug hat. All three were yelling, the drummer as vociferously as any, and all were in equal terms leveled by that greatest of all levelers—drink.

Bad men there certainly are among the cowboys, as indeed there are among all classes; but take them all in all they are a most clever and peaceable set.

Go to the ranges and see them month in and month out, enduring dangers and hardships, living together peaceably and quietly during the round-ups and passing their bold free lines untrammeled by the luxuries and vices of civilization, and you will be more ready to overlook the recklessness of a few wild days in town, and account them as they should be accounted—men—rough, good-natured, reckless at times perhaps, but always ready to attend to the cattle placed under their charge and look after the interests of their employers, if necessary at the risk of their own lives. No one ever saw a true cowboy of the old type shirk a duty, go back on a friend or fail to have that doglike virtue—gratitude.

ALEX. M. REYNOLDS.

Natural History.

WOODCOCK, WHISTLE AND WORM.

Editor Forest and Stream:

"D. T. T." writes in your issue of Oct. 23 that the woodcock makes the whistle with his wings. I quite agree with him that the bird makes the noise with his wings and not with his bill. Twice in one afternoon this month have I been satisfied of this, on my handling two large birds that were wounded, and held them both by their legs and bills. In trying to fly and get away they whistled loudly. I have been quite satisfied in my own mind upon former occasions over and over again of this fact. Any sportsman having shot woodcock to any extent must have had this fact demonstrated to him over and over again.

Woodcock, when boring for worms, have the power, when a worm is felt, of dilating the end of the upper mandible from the lower or outer part of the middle third to the end; in other words, of opening the end of the upper mandible from the lower mandible while their bill is in the ground. The lower mandible of the woodcock is composed of one solid piece; not so the upper, it being composed of two plates or laminæ, the upper or narrowest plate being movable upon the lower. Any one interested can ascertain this by pinching the lower maxillary bone at the base of the bill (in a recently shot woodcock) between the thumb and index finger, when the end of the upper mandible will be found to dilate or raise up from the lower mandible.

In proof that the woodcock has the power of seizing a worm while his bill is thrust in the ground, I might state that I recently found a spot on the side of a creek where woodcock had been boring. The clay was stiff and adhesive. Always anxious to learn more of this game bird, I took my knife from my pocket and sliced the earth piecemeal away from above downward, and I found that one out of every half dozen of the holes made by the bill of the woodcock was large at the bottom and top, and narrow at the middle, like an hour-glass. The other holes corresponded exactly to the impression a woodcock's bill would make by being thrust into the ground, being larger at the top than at the bottom, and gradually becoming smaller from top to bottom. My inference from this is that the bird prods away until he feels a worm, and on doing so, opens the end of his bill and seizes it. Whether he swallows the worm while his bill is still in the ground or pulls it out before doing so, I am unable to say.

COOKSTOWN, Ont.

THE LION OF FANCY AND OF FACT.

[*Continued from Page 287.*]

LET us now see how the lion appears in literature, and in what manner his disposition and habits are described by those who were acquainted with him in his natural state.

Probably no better way could be chosen for showing how vague and discordant are the opinions prevailing upon this subject than to take Buffon's description of the temper and habitudes of the lion (*Histoire Naturelle*) and offer the accounts given of him by great hunters in the way of comment.

The lion, says the French naturalist, owes all the peculiarities he exhibits to climate. Of all species of animals "each is the child of the land where it dwells." He is exclusively an inhabitant of tropical countries. Among the feræ of warm regions he is "*le plus fort, le plus fier, le plus terrible de tous.*" On the Atlas, where snow sometimes falls, lions have neither the strength, courage, nor ferocity of those of the plains, and for the same reason the lion of America, if he deserves the name, is but an inferior animal. Man has greatly circumscribed the lion's former geographical distribution, and his improved arms have altered his character. Formerly he was bolder than at present, but still on the desert of Zaara and in the great torrid tracts of Asia and Africa, "*un seul de ses lions du désert attaque souvent une caravane entière.*" Lions are susceptible of education, and in ancient times were trained both for hunting and for war. Brave and magnanimous in his disposition—unlike the tiger, wolf and fox, he is not cruel, and only kills to obtain food. Certain moral qualities belong to species, and the lion, to the nobility of the race, adds his own individual virtues. Buffon accepts Ælian's and Appian's differentiation of species on the basis of size, thinks that an average lion is from 12 to 13ft. long from nose to end of tail, states that he is less keen of sight and scent than other beasts of prey, and therefore uses the jackal as a scout, and remarks that his game being found upon the surface of the earth, he is not in the habit of climbing trees like the tiger or puma—"*il ne grimpe pas sur les arbres comme le tigre ou le puma.*" Lions spring upon their prey from a distance of 12 or 15ft. and strike it down, the teeth being used to devour game after it has been killed.

Although these statements include most of the points which are still at issue among the hunter naturalists, many of them may be dismissed with a simple statement of the facts in the case. It is, for example, almost needless to say that the range of the lion is not limited to the tropics, that he inhabits temperate climates where, as on the elevated plateaux of South Africa, the temperature falls very low. With respect to the lion of the Atlas, Gérard ("Journal des Chasseurs"), Gen. Daumas ("Les Chevaux du Sahara") and Major Leveson ("Hunting Grounds of the Old World") both state that his average size is greater than that of his southern congener, and that he is more daring, as a rule, does not admit of doubt. So far as size is concerned, the lion is a smaller animal than the tiger, and twelve and thirteen-feet tigers are now banished from domain of the credible. The attack of a caravan by a single lion, or even by a troup of lions, is of course pure fiction, and the story which Buffon repeats probably originated in the beleaguering of camps by lions at night who were after the cattle, in the manner described by Le Vaillant, Oswell, Harris, Cumming, Anderson, etc. Both the sight and scent of the lion are excellent, although like the tiger, he is somewhat dazzled by the full light of the sun; and as for using the jackal to find his food, the case is the other way; it is the jackal who uses the lion. His climbing powers need not be discussed, since there is nothing to show that the lion ever makes use of the means which he certainly possesses for this purpose.

These questions being disposed of, it yet remains to inquire how the lion behaves toward man and other animals, and what is the impression which his appearance, voice and behavior has produced. Is he brave, magnanimous, intelligent and daring? Do traditionary ideas concerning his character conform with facts as observed, and is it possible to get any satisfactory accounts of his traits of temper out of the books which purport to display them?

How does the lion procure his food, and of what nature are his family associations? In the first place the evidence is conclusive against that purely sentimental view, according to which the lion only eats game which he has killed himself. Derogatory as it may be to the dignity of "the king of beasts," there is no doubt that his appetite is somewhat indiscriminate, and that he is often a foul feeder. "Many instances have come to my knowledge," remarks Anderson ("The Lion and the Elephant"), "which show that when half-famished he will not only greedily devour the leavings of other beasts of prey, but even condescend to carrion." In another work, however ("Lake N'gami"), this author, like Gordon Cumming ("A Hunter's Life in Africa"), has spoken of this propensity in the lion to eat carrion whether he was "half-famished" or not. Sir Samuel Baker ("Nile Tributaries of Abyssinia") was continually annoyed by the depredations of lions upon his dead game. Gérard ("Journal des Chasseurs") nearly lost his life by a lioness who came to devour the putrid carcass of a horse. Maj. Leveson ("Sport in Many Lands"), who has the highest opinion of the lion, admits that he is "by no means too proud to eat game killed by other people. Drummond ("The Large Game of Southern Africa"), Selous ("A Hunter's Life in Africa"), Sir W. C. Harris ("Wild Sports in Southern Africa"), Delgorgue ("Voyage dans l'Afrique Australe"), with others whom it is unnecessary to refer to, confirm the fact. So that while this peculiarity fully accords with the extreme laziness Gérard attributes to the lion, the fastidiousness which his admirers have credited him with possessing must be disallowed. "The most prominent traits of character in the lion," remarks Gérard, "are his laziness, his assurance, and his boldness." Moffatt, however, who "knew more about lions and their habits," in Anderson's opinion, "than any one else," adds gluttony to these characteristics. His feats in the way of gormandizing were so astounding that Moffatt ("Missionary Labors and Scenes in Southern Africa") was "taken aback." A full-grown cow at a single sitting, so to speak, is rather an inordinate quantity of food for an animal of the size of a lion, it must be admitted, even when the commissariat is irregularly supplied, as must nearly always be the case with beasts of prey. Drummond mitigates this charge of gluttony somewhat by reporting that he has known his majesty to be satisfied with the haunch of a zebra stallion, and, it is also true, that the lions of the London Zoological Garden, who are as large and, in general, more luxuriantly maned than their brethren of the desert, only receive an allowance of eleven pounds of meat per diem.

It would too greatly enlarge this paper to give reference for every statement, and in regard to the act of hunting it may be simply stated that the testimony of eye witnesses has placed it beyond doubt that game is ambushed, stalked, run down and regularly beaten for by the lion. A point, though one of minor importance, may be noticed in this connection. Gérard, influenced perhaps by the domestic virtues the lion really possesses, represents him as practicing the courtesies of a French gentleman toward his spouse at feeding time. Drummond, however, enjoyed the rare opportunity of seeing a zebra killed by the father of a family, whose consort with several cubs were present. This lion ate, like the savage he is, first and alone. Then the lioness came to the repast, and while she was devouring the remainder of the meat the whelps got what they could.

The behavior of lions to other lions, and to animals which they, for the most part, prey upon, has been variously described.

It may be granted that the lion, unlike most of the feline Carnivora, the fox, and all the weasel tribes, is not ferocious and bloodthirsty, and does not wantonly take life, or kill for the pleasure of killing. Young lions and tigers, according to all accounts, slaughter more than they can consume, but this is done in the way of practice. "The mature lion," says Major Leveson, "kills only for food," but this trait has probably as little to do with sentiments of generosity or magnanimity as it has with economic views concerning waste of material. No gentleness of nature restrains the lion from blood-guiltiness. Temperament and disposition are, in the long run, indisseverable, and with lions, as, for the most part, with men, their temperaments are their fates. Necessarily, this creature is subtle and fierce, since during the immemorial period in which his adjustment to his environment has continued, all the factors which contribute to form character and determine conduct have coöperated toward this end. "We have as yet," observes Wallace ("Geographical Distribution of Animals"), "made little approach toward discovering the epoch when the Felidæ originated, since the oldest forms yet discovered are typical and highly specialized representatives of a group which is itself the most specialized of the Carnivora." It amounts to a certainty that, in this instance, the specialization is primarily expressive of destructive power, and as it is necessity and not sentiment which is conspicuously manifested in the history of organic nature, the presumption is altogether adverse to the conclusion that, upon the part of the lion, structural development does not imply corresponding mental characteristics. Without their fitting respondents in temper and habit, such anomalies as talon, and fang, and padded foot, are not to be found in the animal kingdom, and every theoretical reason, as well as the facts of common observation, justifies Prof. Romane's strictures upon the cat mammalia at large ("Animal Intelligence"). Namely, that "all wildcats are fierce, unsociable and rapacious." The larger Felidæ, he continues, are of high intelligence, as their actions while in the feral state, and their susceptibility to instruction during captivity sufficiently show. But "the conflict of nature with nurture renders even the best trained specimens highly uncertain in their behavior. * * * All cats, however domesticated they may be, when circumstances require it, spontaneously throw off, with the utmost ease, the whole mental clothing of their artificial existence, and return in naked simplicity to the habits of their ancestors."

While not really killing purposelessly, though under some circumstances he appears to do so, the lion often tortures his prey before destroying it (Gérard); sometimes devours it alive (Moffatt) and has been more than suspected of inflicting horrible mutilations—injuries not intended to be immediately fatal—upon animals (the hyena especially) who follow him while in pursuit of game (Anderson). The restrictive influence of structure and heredity upon animal character are always marked; but while most of the errors to which general conclusions on this subject are obnoxious, arising from their effects, the scope of individual variation is so great and so indefinite that it is nearly as impossible to preconceive the conduct of a beast as of a man. If everything by which it was determined could be known beforehand, anticipatory judgments would be possible, but as this is never the case no one can anticipate their behavior in particulars. The present writer reared a puma who made friends with a horse; Gérard's lion Hubert may, in some vague manner, have experienced the emotions his master describes and, in outline, the panther's fondness depicted in Balzac's famous story—"Une Passion du Désert"—might have been approximately true. In general, however, it would not be safe to assume that the lion's forbearance, as illustrated by a host of hunting stories, had other than the most prosaic origin. No creature acts without a motive. Sloth is as marked a characteristic of his as power of offense, and both laziness and repletion probably combined to render the animal harmless on those occasions when he was not withheld from aggression by fear.

Such sweeping assertions as the lion's panegyrists have based upon special instances of peaceableness prove nothing. As a rule, most of those whose experiences have brought them into contact with the lion agree with Drummond, that he "will seldom stand much bullying." "When," says W. C. Kerr ("The Far Interior"), "he is thoroughly hungry there is no limit to his audacity and daring." Moffatt, Lichtenstein, Freeman, Rath, Galton, have had their camps besieged and their trains followed march after march by lions it seemed impossible to shake off. Sanderson ("Thirteen Years Among the Wild Beasts of India") looked upon the bison as more than a match for the tiger, and in the duel by night, which Leveson witnessed between these animals, both combatants were killed; but the buffalo, quite as formidable a creature, is the lion's habitual prey, and books of African travel abound with instances in which the former, having fallen to the rifle, showed by his scars that he had made a successful resistance to the attack of the lion, who in very many instances, no doubt, does not take his prey without a combat.

THE QUAIL.

Lines suggested by an interesting chapter in Laffingwell's late work on "Shooting on Upland, Marsh and Stream," from the pen of Amory R. Starr.

IT is October's festal time,
When fruits and flowers are in their prime,
When woods are colored with all hues,
The rainbow's glories that transfuse,
When orchards flame in royal robes
And apples swing their golden globes;
When Nature wears her richest dress
In pastoral vale and wilderness.

Now in the stubble-spaces pass
The sportsmen thro' the faded grass,
Thro' tufted tussock, bushy swale,
Thro' coppices of lowly vale;
And o'er the level harvest plain
That late was opulent with grain,
They seek, with cautious footstep there,
The quail flock, springing into air.

In upland slopes, at edge of wood,
The brown quail gathers in his brood,
Seeking not wilderness away,
Nor ravine in the mountain way,
But loving rather to abide
By farmer's homes, at valley side;
There in some rural paradise
He seeks the food the earth supplies—
The yellow grain, the garden seed,
The corn, sufficient for his need.
There all the day, O gentle bird,
Thy whistling operas are heard,
Heard till at evening sounds the trill
Of the secluded whippoorwill.

Though numberless thy flocks frequent
Each section of our continent,
'Tis said that year by year they fail,
Diminishing in wood and vale,
E'en as the mighty game of yore
Became extinct by hill and shore—
The bison of the boundless waste
No more o'er prairies may be trac'd;
The stately elk and moose have fled
Before the hunter's wasteful tread;
The deer hath vanish'd from the wood,
The turkey from wild solitude,
And e'en the wildfowl of the air,
That once throng'd creek and thoroughfare,
No longer swarm in multitudes
By lonely lake and ocean floods.

Of all field sports there's no delight
Like seeking bevies of Bob White;
Wild-fowlers have laborious toil
Beside the ocean's fierce turmoil,
The sniper plods thro' marsh and ooze,
Deer hunter fruitlessly pursues,
And he who seeks the grizzly bear,
Through cañon and morass must fare,
But he who thirsts Bob White to slay,
Thro' field and farm may take his way.

ISAAC MCLELLAN.

ELK ON THE SNAKE RIVER.

IN the fall of 1888 Chas. Elliott and myself made arrangements for a four weeks' hunt over the range beyond Egeria Park. But the press of business and fall work prevented us from consummating our plans until it was too late to risk crossing the Snowy Range. One Sunday morning, early in October in the following fall of 1889, Charley and his wife drove into my yard for a day's chat, and of course the principal topic of conversation was planning for another hunt. Maps were consulted, and it was finally settled that we would start from my house on Oct. 21, head for Coe's Ranch in North Park, and go from there to the best hunting grounds suggested by our friend Coe or the Cross boys, whose horse ranch was next neighbor. The time for our preparation was short and we had a great deal to do. On the evening of Oct. 20 Charley drove into my place loaded down to the guards with camp outfit, grub and horse feed. The latter was something we would need a good supply of, for we expected to go where the snow would be deep and pasture poor; and in this we were not disappointed, as the perusal of my trip will show. On my part I was not nearly ready, as I had had business in the District Court that had occupied my time for the past few days. So to-night we were all busily employed until a late hour, making up and packing my mess-box and loading my wagon. When Charley drove in I had my new wall tent set up and stove-pipe sticking out. Charley took a good laugh, and wanted to know if there was any "deer or elk handy." Just then a lone coyote set up a howl out in the field, which made a good prelude to our start.

Early on the morning of Oct. 21 we were on the road to Fort Collins, where we arrived at noon. We had a few purchases to make, a new wagon sheet, lantern, oil, etc.; and by night we were in camp on the banks of the Cache La Poudrie River. I will now give my trip as taken from my camp notes written each night on a cracker box by the camp stove, or on a sack of oats during a snow storm.

Oct. 22.—Were up and on the road early this morning and went into camp on Dale Creek, about half a mile from the old overland stage branch of Virginia Dale, where the noted Slade once held full sway. On the ground where our tent is pitched a settler's cabin was washed away some four years ago by a waterspout. He barely saved the lives of his family by escaping to a dug-out across the road in the mountain side.

Oct. 23.—To-day we made a big drive; went some forty miles, about twenty-five of which lay across the south end of Laramie Plains. About seven or eight miles from camp we crossed State line, and to-night are camped near Pollack road ranch, in Wyoming, at the foot of the Medicine Bow Range. Just before reaching camp to-night we met a party of hunters on their return trip; their

wagons were heavily loaded with game. Said their party of four wagons had killed twenty-six elk and four deer. They were strangers to us; think they were from Laramie City; had been over on head of Snake River; said the hills were full of hunters over there.

Oct. 24.—Pull over the Medicine Bow range to-day. Just before reaching the summit at the Mountain Home Ranch, we met a four-horse load of elk hides on their way out to the railroad. An old trapper, known as "Old Tough," with his pack outfit, stopped and took dinner with us to-day. Arrived at Coe's Ranch at 3 P. M. and camped in the yard, with horses in the stable to hay. To our disappointment we found that Mr. Coe was absent in Laramie City; but Mrs. Coe, daughter and son-in-law, Mr. Patten, were at home, and gave us a warm welcome. We wrote home to-night and then had a social game of cards, at which Mrs. Coe is no novice.

Oct. 25.—I walked over to the Cross ranch this morning to see Ben and get some information in regard to where to go for the best hunting. Ben thought the Hans Peak country would be our best place, although he had killed a deer and saw two bull elk the day before about ten or twelve miles south of here. But he said they were only strangers and most likely were out of the country now. On returning Charley had the teams hitched up and the saddle on my old hunting horse Prince, ready for a start. We concluded to take the Hans Peak road for Hog Park, where I camped three years ago. This is a bad mountain road for the last 25 miles over the Park range and I dread the trip. We are camped to-night at the head of Big Creek Park, near the old Hans Peak cabins. This park has been all taken up by settlers since I was here three years ago. The guides, Luke Wheeler and Cook Ray, both have stock ranches here. Mr. Wheeler's wife rode some five miles up the park with me to-day. She said Mr. Wheeler was over the range after a load of meat for winter. Saw a tame deer at Wheeler's ranch.

Just before dark to-night a young bull elk came rushing down out of the timber near camp with a shrill *ynat*, which stampeded all our horses; and Charley came rushing into camp for his gun, crying "elk." After looking for a moment I told him to put up his gun or he would "get his foot in it," for the elk had a broad strip of red flannel around his neck and no doubt was a pet at a ranch of some Englishmen near by. The elk came direct to our camp and stuck his nose in my hand, eat some hay that was scattered around and then went out to investigate the horses. We had to put them on picket ropes to keep them from skipping out. Late to-night a horse came down the road off the mountain, making tracks for home. We tried to catch him but did not succeed.

Oct. 26.—To-day we drove through to the old camp at Hog Park. This is a fearful road. On the way in to-day we met an outfit from Denver—three men and a lady; had two wagons heavily loaded and only three horses. The horse that passed our camp last night belonged to this party. They had to pull up one wagon and then go back for the other one. Said they had been camped on the Grand Encampment. Had some very fine elk heads on their wagons. We made our camp further up the Park than when in camp here before. There is a large party in camp up above us a short distance, also a camp near by with a lot of game hanging in it and a small dog keeping camp; think the party must be over on the Snake, the head of which is just over the Main Continental Divide, some ten miles away.

Oct. 27.—Saddled up our horses this morning and started over the range for an elk hunt. Stopped at the upper camp and had a chat. Found the party consisted of nine men mostly from Cummings, Wyoming. They were at work cutting a wagon road over the range to the Snake, so they could get over with the front wheels of a wagon, and "snake" over their game. Said they had another camp over the range, and had killed thirty-six elk in all. I think this party was taking only hindquarters and hides. We hunted all day over in the hills on Snake River. Saw four elk but did not get a shot. On our way back to camp to-night we stopped at an old drying camp, now occupied by the party mentioned above and two young Englishmen, who own the camp over near our camp where the dog is. They had a big lot of meat in camp and a lot of hides. They gave us a calf's hindquarter and offered to help us kill our loads if we wanted them to and they would keep the hides. This looked very much to us as if they were more "hide hunters" than sportsmen. We declined their offer, as we were out for some sport as well as game.

Reaching camp to-night we found another party in camp near us, consisting of two four-horse teams from Laramie City, with two men and a young "coon" about thirteen years old, whom they had along to "rangle" horses, tend camp and be sworn at. The men of this party were Con Clifford and F. J. Hunt. [I will diverge from my camp notes and write up this Mr. Hunt, as we traveled, hunted and camped with him for some three weeks from this date, and with the acquaintance we formed with him we think he deserves more than a passing notice. In the fall he advertises in FOREST AND STREAM as "guide" for tourists and English hunting parties. Hunts for heads, hides and hindquarters. This was his second trip out this fall. He told me that on his former trip he took out of here 2,200lbs. of deer and elk hindquarters. Said he killed over twenty deer on the trip; killed nine in one-half day. He sold the meat in Laramie City. On first meeting Mr. Hunt we formed a favorable impression of him as a hunter, and consented to go with his party on over the range where the hunting would be better. The snow became deep; Hunt ran out of horse feed and we, of course, "whacked up" with him. Mr. Hunt claimed to be a first-class taxidermist, and in justice to him I think he is. Before we parted company I secured a fine deer head, and Mr. Hunt offered to take it along and mount it for me and ship to my address some time in January, in return for our kindness to them in a time of need. I consented to let him take the head with some reluctance, as by this time I was beginning to doubt his honesty. The head is still coming, and I expect always will be. If the Gun Club of Laramie City expects to have any deer on Sheep Mountain or Sand Creek Pass, they will do well to look after Mr. Hunt, for he told me that he killed a wagonload of deer at Sand Creek Pass last March and brought it into Laramie City in the night and sold it.]

Oct. 28.—In company with Mr. Hunt's party we move camp to-day and pull up on top of the main range and camp in Long Park. Here we have a nice camp, with good feed for our horses. We also find some other parties camped here, and as Charley and I are returning from a short trip back in the hills, we meet with Luke Wheeler's party packing in some elk. We go down to Luke's camp and have a chat. He advises to go on down and cross the Snake. Says the elk have all gone down that way. I think Mr. Wheeler is putting up a job on us to get us off these grounds. Hunt comes into camp after dark with a fine elk head he killed when on his former trip. Looks like snow to-night.

Oct. 29.—Snowed a little and is still at it. Hunt and Charley went up to Luke Wheeler's camp to see if they can learn anything about the locality of the elk. Hunt claims to be an old friend and acquaintance of Mr. Wheeler. On the return of Charley and Hunt, we conclude to take Wheeler's advice and move down and across the Snake. We are now so near the State line that we cannot tell when we are in Colorado or when in Wyoming. While we are breaking camp Wheeler's party come stringing by with a big pack outfit, going down the trail toward the forks of the Snake, on the trail of the elk. On our road down Hans Peak looms up to our left. We pull down to Snake River through a lot of burnt timber, where there had been a big mountain fire in the fall. Mr. Hunt said it came very near taking him in on his first trip this fall. Crossing the Snake we pull up the mountain some five miles, over a hard road; get on the wrong road once and have to turn back. Darkness overtakes us before we find water. I leave my team to hunt for water, and as I return to my wagon a stranger accosts me with "How do, pard? Looking for a camp?" I reply that I am looking for a good place to camp with water and feed for our stock. He replies: "Here is the best feed in all the Northwest. Wood and water plenty." He points out the location of his camp up on the hillside by the timber. So we turn our teams and drive up to his camp. We soon have the snow cleared off and our tent up, with the horses blanketed and tied to a pine tree eating oats. Our new-found friend is a Mr. Frank Crow, an old railroad engineer, whose health failed him, and he left the road and came West for his health. He has a six-horse team and two partners who are over on the Savory at another camp. They have been out for several days, and he is looking for them in soon. They have only killed two elk so far.

Oct. 30.—Snowed hard all day. Horses left camp last night and we have had a big hunt for them to-day. Con found my horses this afternoon, but did not find his. Hunt's and Charley's horses did not leave camp.

Oct. 31.—Charley and I rode our horses to-day and took a hunt up the range east of camp. About 10 A. M. we strike a trail of ten elk made the night before. After riding some distance on the trail the tracks become fresher and we dismount, tie our horses in a warm nook, and take the trail on foot. We go very slow, as the track is now quite fresh, and I tell Charley to look sharp as we are now in green pine timber and most likely will find our game in their beds. We go a short distance in the pines. I see a fine sleek elk get up and step out into an opening and look at us. It was not more than 40yds. off, and I could have killed it easily, but was looking for more, so as to give Charley a show, for Charley had his first elk to kill. At this moment I saw the hindquarters of an elk; head and shoulders were behind a large pine tree. I at once covered it with my gun as close to the tree as I could, and told Charley to take the other one. At the report of our guns my elk went down, but immediately regained its feet and went plunging up the mountain. Charley, I think, must have had the buck ague, for he scored a clean miss. We took the trail of my elk and soon overtook it just over a ridge, and a ball through the head stopped its performance. We soon had it dressed and found it very fat. We then took the trail of the band and followed them some three miles, when we left them, as they were in no notion of stopping. We got into camp late to-night. Hunt came in late and said he had killed two elk and wounded a big bull. Perhaps he did, but he never brought but one to camp. If he killed two he left one in the hills. A. A. KNOTT.

BERTHOUD, Colorado, 1890.

[TO BE CONCLUDED.]

WILD BOARS IN AMERICA.

THE first specimen of genuine wild boar slain in America was that shot by W. H. Crane, Esq., of Port Jervis, September last, in the town of Forestburgh, Sullivan county, N. Y., near the Orange county line. Although native born the animal was of German stock, descended from members of a herd imported six years ago from the Black Forest by Otto Plock, a New York millionaire, to stock an extended wooded estate surrounding his summer residence on the side of the Shawangunk Mountains, near Port Jervis.

About four years ago all these boars made their escape from what was supposed to be secure confinement. At liberty they seem to have rapidly multiplied. There are now two distinct herds; each sufficiently numerous to be capable of extensive depredations in a single night.

For a year or more after their escape from custody the family remained united, and inhabiting the mountain fastnesses around Godefroy, they made frequent night raids into the Neversink Valley, where they played havoc in the potato and corn fields. Those still remaining in that vicinity continue their forays, and, as a result, several actions for damages against Mr. Plock are now pending.

The herd that has taken up an abode in the wilds of Forestburgh has not only demonstrated an ability to survive, but to increase in number without dependence on man, direct or indirect.

While the last two winters were very favorable for the wild swine, the cold season of 1887-8, succeeding their escape, was unusually severe, during whole weeks the temperature being under zero; and we may conclude that these *ferœ natura* foreigners are now well adapted to the conditions of life in which circumstances have placed them. They are astonishingly swift, at least for short distances, and the region they inhabit is thickly infested with rabbits, squirrels, snakes, water rats, etc. Usually there is also a plentiful crop of oak and beech mast.

Have these wild swine come to stay? Can they be exterminated? For four years hunting parties have persistently sought them, and sportsmen in quest of other game have been on the alert for them. One has just fallen a victim to a deer hunter. This has greatly stimulated the chase; but in a region where deer and bear abound, the latter on the increase, it would seem that for many years the reproductive powers of the prolific boar should outstrip Nimrod's destructive capacity.

The subject is an interesting one from several points of view. To the farmers it is a question of vital importance, since in a single night a few visiting swine would pretty well ruin the average garden plot.

Sullivan and Pike counties are already famed as the hunter's paradise. If the wild swine can hold their own there in one locality no reason obtains why they should not spread throughout this and contiguous counties.

For the zoölogist the situation has attractive aspects. One of Mr. Plock's objects in importing the Carpathian boars was to rid his forests of rabbits, snakes and other vermin. Swine regard snakes as tid-bits and the bite of the dreaded rattler is said to be innocuous to them. Rabbits for the most part make their homes in rotten logs and brush-heaps. Had Mr. Plock succeeded in keeping his voracious imports within bounds this object would undoubtedly, have been accomplished

Might such an effect become appreciable in the region at large? And if so would legislators be moved to enact protective laws for "the gamiest of game," on the ground that they were efficient destroyers of reptiles and other noxious creatures? In a word, sequences may arise from Mr. Plock's importation of which no man living knoweth the end. The shot fired in a Forestburgh swale may reverberate adown the storied page—or is this plunging too far into the tangle of speculation?

The porcine killed is thus described: "In color the hog much resembles a woodchuck, being of a grizzly gray, with a tendency to black. Its bristles were not yet very well developed, but underneath is a thick, heavy coating much resembling fur, which enables the animal to stand any amount of cold. The hog has a long slender face or nose, while the upper jaw extends two inches beyond the lower, the forehead being covered with a thick coat of bristles. Its legs are short, its body long. The hog was a sow and weighed plump 200lbs.

The term "hog" is properly applied to the domestic swine only, all of which are more or less remotely descended from the wild stock. The peccary of Mexico, met with as far north as Colorado, although an allied race is not a true swine. It has been domesticated in Mexico.

Wherever Europeans have settled, from Athabasca to Patagonia, the hog or pig abounds. The species, however, is not indigenous to America. The "wild hogs" of the South are undoubtedly cases of reversion. They have developed traits peculiar to themselves, and differ considerably from the boar of Europe on account of new conditions, climatic and other. B. F. HENLEY.

PORT JERVIS, New York.

ON THE PLAINS OF FLANDERS.

GHENT, Belgium.—*Editor Forest and Stream:* I was invited by some of my friends here to join them in opening the hunting season, Sept. 1. The only game on the plains of Flanders is quail (*perdrix*) and the big English hare, with the common rabbit in the pine forests and sandy portions, and on the dunes along the sea.

Game is carefully preserved here, and it costs something over $20 to obtain a permit to carry hunting weapons, and only a few of the middle and upper classes can afford to hunt.

Sept. 1 we went to Cruystrantem, a village some sixteen miles south of Ghent, in the rolling country dividing the watershed between the Lys and Scheldt. A high plateau in a high state of cultivation, covered with potatoes and other crops, stretched out before us. We divided in a line like sharpshooters, the dogs preceding us. It would be too long to state all the incidents of the day. With five guns we counted 115 *perdrix*, 15 hares, 4 quail and 1 rabbit.

The *perdrix* has nearly the same ways as our Bob White. Coveys number from ten to sixteen or more; and for successful hunting must be shattered and hunted up. The sport is tame, nevertheless, for a man used to the hunting of our prairie chickens and ruffed grouse, and above all our big game and "old sly reynard." The distances seem so small here for us accustomed to the big distances of America, that you are home or at your hunting grounds before one of our American hunting trips one would be fairly settled down in one place.

To-morrow we go to Dinant, in the Province of Namur, in the Belgian Ardennes. Wild boars are doing some damage to the crops; and the residents have organized a great hunt or battue to exterminate them. I hope to see some wolves and wild boars; it is too early in the season for roe deer, in which the country abounds, also in red deer. JULIUS THE FOX HUNTER.

NEW MEXICO GAME GALORE.

CHILILI, New Mexico, Oct. 26.—Antelope at present are very plentiful on the adjacent plains. There is a large spring within one and one-half miles of the ranch, and herds of from half a dozen to fifty arrive daily to quench their thirst. A few days ago the writer killed a splendid two-year-old buck and one doe. Yesterday Mr. John McIntosh killed two fine bucks, two does, and badly wounded another buck. A cowboy from a neighboring ranch who was passing at the time gave chase on horseback, and in a short time successfully lassoed the prize, whereupon it was promptly despatched.

This is one of the few localities in the United States where the pot-hunter is unknown, and in consequence game of all kinds is abundant.

On the Messas del Gallo and in the Gallina Mountains deer, bear, mountain lions, wildcats, wild turkeys and quail are to be found in great numbers. The now almost extinct mountain sheep is also occasionally seen.

Wolves and coyotes have been very destructive on the stock of late, and in the past few days the above have killed seven coyotes, three swifts and one badger.

At present we intend going on a hunting expedition in December to the Gallina Mountains. If so, await further developments. EDWIN DUDLEY SMITH.

VERMONT DEER AND TROUT.—Commissioner Herbert Brainerd writes us under date of Oct. 31: The law protecting deer until 1900, penalty $100, has passed both houses unanimously and has been signed by the Governor, and takes effect to-day. The close season for trout will be changed from April 1 to Sept. 1, to Aug. 1. The six-inch trout law will remain the same as heretofore.

AN ALL-ROUND SPORTING GUN.

Editor Forest and Stream:

Your Arkansas correspondent in issue of Oct. 30, under the caption of "An All-Round Rifle," reminded me of two great events in man's, or at least some man's, history, viz., the selection of a wife and that of a sporting arm. Now, while I would have but little use for "Lew Willow's" Marlin repeater in the woods, no doubt it suits him exactly and none other would fill the bill of his requirements half so well.

I am fifty and three. Born in the wilds of Pennsylvania and but three years ago I killed a fine deer within three miles of where the old log house still stands in which I first saw light, and although a busy professional man for over twenty-five years I still find time to follow my natural instincts in the pursuit of game and fish. My father, who is in his 77th year, spends most of his time with rod and gun, and he and I scarcely fail to have our annual trouting and squirrel shoot. I have hunted in almost every State in the Union and have had personal experience enough to truthfully write volumes of just such lore as is weekly found embellishing the pages of your valuable journal. But all this is foreign to what "Willow's" article suggested.

No man who hunts large game but feels the need of a shotgun, especially when desirous of making a collection of small birds and animals. Besides which a grouse, duck or squirrel when fresh meat is scarce in camp comes handy to put in the pot with the potatoes. Hence I used to take two guns to the mountains—a rifle and shotgun. The rifle, the only square way to take large game, and the shotgun for small game. As to rifles, I have used the Remington, Winchester and Marlin, and they are all good guns for those who know no better. Finally I got tired being bothered with two guns; then I struck the auxiliary barrel racket and hunted with that for two or three years, which was a step in the right direction, but I always thought my shotgun felt more like a heavy club when loaded up with the auxiliary than the well balanced shotgun that it is. The market did not seem to have the gun which a six or eight weeks' experience every year demanded, or else I was one of those cranks who did not know what I did want. Several years ago after a big hunt in the Rockies I decided to have a gun constructed after my own notion of what it should be, whether it pleased any one else or not, and for the benefit of "Lew Willow" and the great army of sportsmen throughout this great country, and with your permission I will attempt a description of what has proven to me by actual experience over and over again to be just what I want.

Before I begin I would say that this gun is not being manufactured. I have the only one ever made and this article is not an advertisement, though I will be glad to reply to any questions asked in relation to the gun. It consists of two barrels, rifle and shot, each 26½in. long, placed one above the other. The rifle is a Remington .45 90 300 grains of lead, and is on top. The under one is a 20 bore shot, straight cut, the furrows being a little deeper than those in the Remington cut. The breech end of the barrels slip into a steel receiver three inches long, which also forms part of the action. They are held in position by a single screw which releases the barrels and permits of slipping in any other calibers if so desired. Thus being interchangeable, two rifle or two shot barrels can be used. The barrels are independent of each other and for the purpose of interchanging and allowing for expansion and contraction they are only fixed at the breech by the receiver and at the muzzles by a removable sleeve or double furl, the top of which furnishes the seat for the front sight. The action and locks are simple and strong. It is semi-hammerless, and in front of the right cocking lever is the break lever which is similar in appearance, but being more than an inch in front of it cannot be mistaken for the cocking lever. Slight pressure on the break lever and pulling toward you, at the same time turning the gun to the left with the break lever side up, the barrels drop, the gun is broken and in the most convenient position for reloading. When the gun is broken, by pressing a button just in front of the left cocking lever and making slight traction, the side bar slips out and the gun is in shape for packing. It is rigged with a Lyman front and rear sight, also an adjustable middle bar sight after the form of the sight used on the Daly three-barrel gun, which is attached near the end of the receiver, being 8in. from the Lyman rear sight. Depth of action 2in., width 1⅝in. The weight is 8¼lbs. Its appearance is neat and strong, pistol-grip and rubber butt-plate, in which is inserted a compass. Perfectly balanced and never fails to get there when properly handled nor to please the most fastidious sportsmen, who invariably pronounce it a daisy.

As to its performance. In this gun I have a .45-90 lead 300grs., which has all the penetration and flat trajectory necessary for the general sportsman in quest of deer, elk, moose, caribou and bear. With the 20-bore I shoot a round ball which weighs just 300grs., and behind it 2¾drs. of American wood powder special grade, well patched in a brass shell, making a perfectly tight air chamber, and therefore getting the benefit of all the force there is in it with the minimum recoil. It is astonishing how accurately this round ball finds its mark at from 100 to 120yds., and it is needless to say that it is a bone breaker of the highest order. This same barrel shoots shot of all sizes as well and better than any cylinder bore I ever owned. On two or three different occasions I lost a second deer by the racket made by throwing out the old and putting in the new shell of my Winchester. The last time I well remember. Standing by the side of a great hemlock on the crest of a ridge on Salmon Creek, Forest county, Pa. Open woods to right and left for 200yds.; in front and 125yds. below me a bench in the slope and the edge of a thicket. After standing for a few minutes, off to my left I see four fine deer feeding leisurely along, and on a line about 100yds. below me. The wind was with me. I heaved a sigh of relief and experienced that sensation familiar to all sportsmen which either has for its effects an attack of that very common disease known as buck ague, or that delightful nerve stimulus which takes us to the woods and enables us to endure hardships untold and without complaint. When they came opposite me I took advantage of a momentary stop of the buck, cut loose and picked a hole through both shoulder blades, my place of election when I have a chance to choose. He dropped in his tracks paralyzed, the other three stopped as if frozen to the snow, and had it not been for the flip-rattle-bang-klick of the infernal repeater, the fine fat barren doe, the next largest, would have laid just ten feet from his lordship the buck. Deer will stand a blatt or a single shot, but they will not suffer the rapid striking of two clapboards together in quick succession or the flip-rattle-bang-klick of a Winchester. Two jumps and they were out of sight over the bank and into the thicket. That settled the Winchester business—as good and perfect a gun as they ever made, and cost me $45. I sold it for $18 about two years ago. Now, "Lew Willow," every one to their fancy, as the old lady remarked when she kissed the brindle cow. You are suited and happy with your Marlin, and I think I have a perfect arm for all kinds of work in mine. To-day under similar circumstances the second deer would have dropped in her tracks pierced by the round ball from the 20-bore and without taking the gun from my face.

Last fall I spent six weeks in the Rockies with the celebrated hunter and guide Geo. W. Rea, of Beaver Cañon, Idaho. One day we sighted a band of 18 elk from the crest of a high range. They were feeding in a scoop out or basin, which was perhaps 600ft. below us, and from two and a half to three miles in diameter. The surface was interspersed here and there with clumps of evergreen scrub pines and patches of barren ground, which was covered with 6in. of snow. After some two hours travel we succeeded in getting off the mountain top and into the basin. Another hour of maneuvering on hands, knees and bellies brought us to a point at the crest of a little knoll, and within about 120yds. of the herd, which having winded us, but imperfectly, had bunched and were standing huddled up like so many scared sheep. They had not seen us, and the currents of air were so uncertain, owing to the contour of the surface, that one moment they could smell us and again for a few minutes the currrent would be coming from the herd to us. Under such circumstances elk will almost invariably bunch and stand several shots before they break. I was on the right of Rea and by previous arrangement I was to fire at the front of the pack while he was to take the left or rear—both to keep firing as long as they stood it. At my whispered order we both fired and the reports were as one. Two fell, shot through—still they stood—and before he had worked the lever of his Winchester my second elk turned up her side, and, having a shell between my teeth, his second shot had hardly spoken when my third broke another's back. Yes, I would prefer a repeater for the kind of work I did between 1861 and the close of our late unpleasantness, but for game of all kinds, large and small, I want my trusty combination gun, and I will get there, you bet. I claim nothing but the suggestion of such a gun as I have described, and whose praises I never get tired singing. To my friend and fellow townsman, Prof. M. B. Hall, belongs the credit of developing and manufacturing, from my very crude ideas, the gun by which I swear as being the perfection of an all-round sporting gun—and while "Lew Willow" and I don't "slide down the same cellar door" on the gun question, there is no doubt we would enjoy trading lies around a camp-fire all the same. SHONGO.

LANCASTER, Pa.

GEESE IN THE DEVIL'S LAKE COUNTRY.

BY common consent of the different railroad lines running west and northwest from Minneapolis, the 14th of October is set apart as a day on which travelers may go anywhere they please, within certain wide limits over the lines named, on payment of one fare for the round trip. These tickets are called "home seekers'" tickets by a sort of poetical license, for the beneficiaries on that day are usually composed of everybody else but the seekers after homes. Many sportsmen make their arrangements to take their annual duck hunt on that day; and among the number of these thrifty sportsmen were myself and friend W., and our destination the Devil's Lake Country of North Dakota, famed for its bad crops of everything but geese; and these, we were told by the phenomenal liar, were so numerous that the shadows of their flight retarded the growth of vegetation.

We found on the same train several other jolly parties of hunters encumbered with a perfect arsenal of guns and ammunition, bound like ourselves for that section of country. We started at 8 o'clock in the evening over the Great Northern R. R. and were due at Grand Harbor, a little station a few miles north from Dent's Lake, at 11 A. M. following day. These far western roads, however, run more on "dead reckoning" than by the card. At times we would travel at a speed suggestive of a "wild engine" in our rear, and then we would slow down to the solemn gait of a funeral train. The result was that we arrived at our destination about three hours late. That night we spent at the home of Mr. Craft, some three miles from the village, a house only a trifle more commodious than the so-called "shack," in which the pre-emptor is content to dwell during the probationary period of his "proving up." We soon, however, found that Mr. C.'s hospitality was far larger than his house, for although he was suffering from a severe attack of rheumatism, both he and his good wife did all they could to make us comfortable and our quest after geese a success.

Next morning a neighbor of his, Mr. Graham, consented to drive us over to Sweetwater Lake, eight miles distant, where the birds were said to be very plentiful. At first some little difficulty was experienced in getting a team, as the voracious chattel mortgage man gobbled one of his horses and another belonging to our host, but the difficulty was overcome at last by making up a complete team of the two odd ones left behind. As my friend and myself were a little uncertain of our prowess on goose shooting, it was reassuring for obvious reasons to learn that our Jehu had the reputation of being a mighty hunter in these parts; it was said that when the birds were in good flight they fell all around him like a meteoric shower.

After a cold drive we arrived at the lake late in the afternoon, and our eyes were gladdened by the sight of large flocks of geese flying in their cuniform fashion from the lake to their feeding grounds. We enjoyed some elegant shooting that evening, bagging quite a number of birds, both ducks and geese. It was dark before we pitched our tent for the night, and as we did not contemplate camping out and were not provided with anything like a proper equipment, our first night's experience was anything but restful. Our tent, to begin with, was a little round affair as thin as the tail of one's shirt, and its diameter less in measurement than the length of our persons. Then, again, the straw we lay in was damp, and the old horse blankets that covered us damp, too, with something else than the dews of heaven! Under these untoward circumstances there was no difficulty in beating the sun rise next morning, and we were rewarded with some capital shooting till a wagonload of St. Paulites invaded our preserves, and by their wild and indiscriminate shooting spoiled all the sport for the remainder of the day.

The next morning we undertook what would appear to a man up a tree as a regular wild goose chase. That is to say, we started off with all our belongings to follow the birds to their feeding grounds, and wonderful to relate, succeeded. Graham was a good shot, but he was something more; he was an unconscious naturalist. From long experience he knew the habits of the birds, and when and where to find them at all hours of the day or night. He could converse with them in their several dialects, and attract them from the skies as Benjamin Franklin did the lightning. If he happened to be in the open when a flock of birds were approaching, and no cover in sight, he had the faculty of reducing his *embonpoint* to the most insignificant proportions, or he would fling himself on the ground on his old fur coat and look for all the world like a wolf skin robe that had dropped by accident from the tail end of a wagon.

On arriving at their feeding grounds we were fortunate in making the acquaintance of a Capt. Jones, who lived near, and who accepted promptly and heartily our proposition to remain with him over night. He made us so comfortable, and we found his family so pleasant and well bred, that we extended our visit over another night, which gave us one whole day's shooting, and wound up our trip for the season. Our bag consisted of 60 geese and several ducks. I am aware that this is no phenomenal sport, but had the weather been boisterous and strong, instead of genial and pleasant, we would have got a far larger number of birds, but at the expense of a good deal of solid comfort, and of the two alternatives we much preferred the latter.

The geese that frequent this part of the country consist of four varieties; the Canadian goose, or honker, as the natives call them, the Hutchins goose, and two kind of brant geese; one snow-white and the other gray with spotted breast.

The country we passed over was a surprise and delight. We had been taught to regard that far away land as chiefly the abode of a wild lot of pioneers, who varied the monotony of their lives by jumping the claims of their neighbors and being promptly assassinated for their pains. The soil was supposed to be poor and so alkaline in character that you could scoop it up with a shovel. Hot winds and drouths devoured their crops, and it was there where the money sharks got in their best hook. Unfortunately the last reports were altogether too true. The farmers of Ramsay county, as we could judge from a very cursory visit, were hopelessly bankrupt, unless, indeed, they can stave off foreclosures for another season and that turns out a benign one for them, but in respect of the other reports nothing could be more inaccurate. We found the people far more intelligent and refined than in most farming districts, and the soil they tilled as fine as anything lying out of doors—a rich, dark friable loam, capable of growing anything that that high latitude would permit. With one good crop to their credit, the farmers now so heavily incumbered could nearly free themselves from debt. They have been improvident, like most of their class, in buying on credit expensive farm implements, but the new comers, we were told, are profiting by the example of the others, and finding freedom and thrift in a walking-beam plow and a yoke of strong oxen. J. D. C.

CHICAGO, Ill.

DAYTON HUNTERS.

DAYTON, Ohio, Nov. 3.—The hunters, S. S. Troup, Adolph Sander, Ed Cooper and Dr. C. F. Makley have returned from a week's sport in Pulaski county, Indiana, a region of marshy land, ditches and small lakes, a region where quail, pheasants and prairie chickens abound, and in season, snipe, woodcock and ducks. The party were not diligent hunters, but they had lots of fun. They, however, were treated to a remarkable exhibition of interest to all shooters.

George Engle and John Baker, residents of Winamac, that county, shoot woodcock and snipe for the Chicago market, and they now have in cold storage at their home 1,000 dozen snipe that they killed last spring, and have hanging in their large refrigerator in strings of dozens, with feathers on and entrails, frozen hard and in perfect condition. These snipe are shipped on orders from Chicago restaurants every day in the year at $2.50 per dozen. Snipe come in immense numbers to these swales and marshes along Tippecanoe River in April, and Messrs. Engle and Baker wait for them to feed and fatten a week or ten days before they begin to shoot. The biggest bag in any one day last spring for either of the gentlemen was by Engle, who bagged 70 pairs, and the brace bagged 800 snipe in three days' shooting. In this way Chicago people have game the year around.

Hunters in this city are having the game laws examined to learn if it be not possible to place quail in cold storage during the open season, clearly establishing the date the birds are killed, and sell at any time during the year. The law is very clear in forbidding the shooting or pursuing of quail with intent to kill except between Nov. 10 and Dec. 15 each year; and as clearly permits express or any other company bringing quail into the State in the close season from any point without the State where the killing of quail is lawful. The hunters and dealers argue that if quail may be killed elsewhere and brought into the State, they may be sold and eaten in the Ohio close season. At any rate, the matter is to be tested. Thousands of Ohio hunters have for two weeks been shooting quail in Indiana and Kentucky, and bringing them home to feast on.

Hunting parties from this city and vicinity who are in camp in the pine forests of northern Michigan and Wisconsin are experiencing snow flurries, just the kind of weather that is favorable for bear and deer. Of course the camps are snug and comfortable, whether formed of tents or cabins, and all are located near springs or small lakes, where fish abound. Spruce hens are plenty, and there is enough other small game to be had for the table. Porcupines are numerous. The cabins were cleared of rats and mice by the weasels in advance of arrival of the hunters.

Roving bands of Indians at first annoyed the camps in Forest and Chippewa counties, Wisconsin; and settlers

have been slaughtering the deer by fire-hunting at night, which is against the law. One of these backwoodsmen passed the Dayton camp on the shore of Lake Hilbert, Wisconsin, with twelve saddles of venison last Tuesday from deer that had been slaughtered at night with a big 8-bore gun. Harvey Puterbaugh, of that camp, killed a six-pronged buck, a 200 pounder, very black skin on the back. One-half of the carcass was as much as two men could carry through the woods.

The Germantown hunters, at Camp Hawkins, on the Soo Railway, in Chippewa county, Wisconsin, have been having fine sport. James Gilman killed a monster buck; and Jacob Judge shot a bear cub, and wounded the old she bear and her other cub, and at last report the hunters were on the trail.

Last Monday Philip Kern, of the Dayton party in Marquette county, Michigan, killed two fawns and Joseph Mauter brought down a spike buck by a long shot. Eight miles from that party are located three Xenia camps, who in the aggregate have killed 44 deer in six weeks, O. W. Linkhart having the champion score of 7 deer killed and taken into camp. BROWN.

WOODCOCK SHOOTING WITH A SPANIEL.

IT appears strange that while all the sporting journals pronounce woodcock to have been so abundant in most parts this season, in this old woodcock locality we should have had no August or September birds. The woodcock to be found here at the present are merely flight birds, and are to be found in the most inaccessible places.

Having hunted all the usual coverts for these birds, and only bagging some half dozen brace, I was about to give up all hopes of getting any woodcock shooting for this year, when a thought struck me to go out on some meadow, and fall wheat fields, and see if I could not get a few snipe. I found these fields literally bored to pieces with what I took at first sight to be snipe at work. Having thoroughly hunted the ground with my spaniel Jill, and succeeded in getting up only two snipe (both of which I bagged) I thought I would examine the dropping, as possibly the boring might be done by woodcock at night. Upon doing so I felt convinced that my surmise was correct. I have found that in the droppings from woodcock, an occasional dropping will be found with a pink tinge in the coloring, while in the snipe's droppings the coloring is black. I felt now sure that woodcock, and a good number of them, were in the neighborhood, and possibly not far away, and commenced a regular systematic search for them, and succeeded after a time in finding their retreat about a mile from their feeding ground. And oh, you setter and pointer men, what a place, as dry as a chip, and composed of swamp willows, cedar, small birch and poplar, and so close together that while I carried my gun in a perpendicular position in my right hand I had to divide the boughs and switches with my left in order to pass through, and succeeded in making a splendid bag with the help of my spaniel, which gives tongue whenever she flushes a bird, be it a woodcock, snipe or partridge; and I know at once by the nature of her bark which it is. Do you hear that, you Clumber men?

For woodcock, snipe, duck and partridge I prefer my black cocker and field spaniels before all other breeds. I have always used them, and hope always to do so to the end. For a handsome, companionable, useful and easily trained dog, commend me to the spaniel, especially the black spaniel.

These October woodcock are unusually large, fat birds, with the most lovely plumage. How any person calling himself a sportsman can shoot a July woodcock after once having killed an October bird, is beyond my comprehension. H. B. N.

COOKSTOWN, Ontario.

WHAT CAN BE DONE?

PHILADELPHIA, Nov. 2.—*Dear Forest and Stream:* Your manner of treating the great question of game preservation, and your habit of giving to the sportsman of limited means and humble desires as good a hearing as you grant to the wealthiest yachtsman or deer hunter, emboldens me to trouble you with this effusion, hoping it may meet your approval in sufficient degree to warrant its publication in your columns. I think it represents the views of many men of square sporting instincts who feel with me in these matters.

An old shooting friend remarked to me in answer to my wail about the scarcity of rail birds, "The Delaware River is played out." I take his terse remark as my text.

We have one hundred miles of river between us and the sea, it is bounded on both sides for almost that entire distance by great meadows and marshes, splendid feeding grounds for snipe, plover, ducks, rail and reed birds; and the river banks are not at all thickly settled, in fact we do not have to go many miles down before the country presents a remarkably wild and uncultivated appearance on both sides of bay and river, the very picture of a natural game preserve; and the great number of tributary creeks, very many of them large enough to be called rivers, add immensely to these advantages. These creeks and the river itself are wonderful breeding grounds for fine fish, and there is room for incalculable quantities of them. Twice in 24 hours a great tidal wave rushes in and recedes from the river and its tributaries; and an immense volume of fresh water from the mountains and hills of northern Pennsylvania and southern New York continually sweeps down to the sea. Nature has supplied every condition with a lavish hand; and many a time I have exclaimed with the poet:

"Every prospect pleases,
And only man is vile."

We have the water and the marshes, but the birds and fish are almost extinct. In plain violation of law our oil refineries pour out their refuse into the stream, vast oily masses, floating up and down with the tide, tainting the marshes and polluting the water. Every flat is swept with "nigger nets" twice every twenty-four hours for almost two months. These nets are of 1in. mesh, and sweep even the smallest perch and sunfish into the lockers of the market boats and the river channel. The creeks are almost paved with hoop nets doing their work all the year round.

I pay the West Jersey Game Protective Association a certain amount of cash every year for a license to shoot, and may be it sounds a little hard when I say I have never known them to protect anything but their charter. Their great work has been done in that flock of particularly gamy game birds that assembles at Trenton. The association is really about as near nothing as it can be as far as protection to game is concerned. I have not heard of their having made a single arrest this year so far, though I could have directed their attention to some glaring violations of the law.

Now, I have stated our case, what are we sportsmen of limited means and leisure to do? We have neither time nor money to turn amateur policemen, and we do not want to see all our ancient hunting grounds fall into the hands of wealthy and exclusive sporting clubs, who will really protect their leased domains.

I write this in the faint hope that in the columns of FOREST AND STREAM it may attract the attention of some of our own opulent and independent shooting and fishing men, who, spending their time and money in distant fields, have lost sight of this great natural game demesne at their very door, and have resigned it to the tender mercies of the oil refiner, the market-shooter and the market-fisherman.

It has been said that we, native born Philadelphians, raised upon Schuylkill River water ("the Schuylkill, oh, lovely sewer!"), wont "kick" at anything; but a little indignation has worked through the fumes of the above-mentioned beverage in yours, H. E.

RIFLE AIMING AT GAME.

Editor Forest and Stream:

I inclose two photographs showing a favorite position among some deer stalkers in this country for taking long shots at large game. I never saw it used when living in America years ago, and think the position must be generally unknown there, having only once read in any American paper of its being tried, and then only for target shooting by one individual. I have killed numbers of deer and antelope at long ranges, sitting down as in Fig. 1. Except in windy weather it is nearly or quite as steady as the prone position often illustrated in books upon prairie shooting, and has the following additional advantages: It is equally adapted for firing down over the edge of a precipice or up the side of a steep hill. It allows of a clear view of the game over rocks, bushes or the top of tall grass. Shots can easily be taken at animals on the fastest gallop by raising the elbows off the knees.

The position can be assumed quietly and quickly on the most even ground, with little risk of alarming the game. If it be advisable to stand up for a better view of the game, the hunter can rise in a moment without the help of his hands, and with the rifle held ready for a quick shot.

Fig. 2 shows a modification of the sitting position which is in common use among many of the Boors of South Africa for long shots at antelope. With a stick held as illustrated shooting can be made almost as good as from a fixed rest. It doubtless was adopted in the days of muzzleloaders when hunters carried loading rods.

Though the stick would of course be debarred as an artificial rest in shooting matches, this position is strongly to be recommended for trying the accuracy of a rifle by those who feel awkward when firing from the back.

J. J. MEYRICK.

DEVONSHIRE, England.

[The position first alluded to is similar to the one here shown, the stick being dispensed with.]

THE ADIRONDACK DEER SUPPLY.

Editor Forest and Stream:

In your issue of Oct. 23 there appears an article over the signature "D. C. L.," which puts deer hounding where it belongs. In the last paragraph of that article he portrays in scathing words how depraved must be the sportsman who indulges in this water butchery.

I beg to differ with your correspondent on two points. First, he does not think hounding is destructive.

Not doubting in the least your correspondent's sincerity, but he has probably not had the opportunities to judge rightly. Many others are of the same opinion.

They have engaged in hounding perhaps in the first half of September on some large lake where there were not hunters enough to command the whole line; and at this season deer do not like to swim, but run into small streams and skirt along the shore of the lake in shallow water, and thus escape the hunters. Had your correspondent been with me here the last week of hounding I am sure he would come to a different conclusion. I have in mind two prominent men who were in the woods here during the last week of hounding. They told me when they came back that this was the first opportunity they had of knowing to what extent and manner hounding was carried on in the Adirondacks, and although they were previously in favor of hounding they were now thoroughly disgusted and opposed to it on the ground of its destructiveness. "Why," they said, "it must be no dogs or no deer."

Along the road here for a distance of ten miles there was a string of men within shooting distance of each other, then they had boats on all the lakes to pick up what deer lived to get to water. In this manner the highest bag they made in one day was twenty deer. They kept this up until the deer were either all killed or driven off.

It is not so much the sportsman that is depleting the deer as those living around the borders of the woods. Hounding makes deer hunting independent of skill or experience. And thus hundreds go in to kill all they can, regardless to numbers or manner of killing. All who are most competent to judge agree that at least three hundred deer have been taken out of the woods in this immediate vicinity.

Secondly, your correspondent says, "There is really no probable moral difference in the manner of killing deer." I beg to differ with him here. If hounding is a proper occupation, then crusting is the same; so too is trapping. Water is only one form of trap, the most destructive, for the steel trap waits for its single victim until it wanders into its jaws, while in the water trap you take advantage of the victim's instinct provided for its safety by forcing it into the trap when the hound is put upon its track. It is no part of the sportsman to subject his game to avoidable suffering or fear. But what terror exceeds that of the timid deer flying before the hound for the instinctive place of safety; and when there his terror is agonized by the approach of the boat and hunter to complete the work of destruction. I have seen the deer raise its body half out of water and bleat most piteously as the boat approached. Whoever can thus kill a deer struggling in the water must be endowed with a greater amount of natural depravity than I am willing to own or attribute to your much respected correspondent.

I think "D. C. L." would experience quite a different sensation were he to travel miles and miles through the thick woods, searching cautiously every jungle and place most likely to harbor the wary deer, only to see his retreating form waving the white flag of defiance, until at last he succeeds in outwitting one, gets in the first shot and brings his noble game to bag from what he would by cracking one's skull at short range or with the club while struggling helplessly in the water.

Deer are not increasing in the Adirondacks, but steadily diminishing. As the result of hounding deer have been concentrated into localities less disturbed. Large areas contain but few deer, and when hunted from their last refuge by the hound and the water butcher their extermination will be practically accomplished. MUSSET.

BEAVER RIVER REGION, Oct. 29.

MINNESOTA GAME FIELDS.

DETROIT CITY, Oct. 29.—Chicken shooting has not been so good as usual. Stephen and I had indifferent success each time we were out, and others reported very moderately-filled bags. Saw two large flocks of chickens the other day when after ducks.

The duck shooting has been extraordinarily good. I never saw so many mallards in my life as I saw on one or two occasions this fall. We've all had rare sport. Several parties from abroad have been camped at Height of Land Lake and Tamarac, and have slaughtered the duck by the thousand.

I just met Tom Richmond on the street and he said, "Let me tell you the trick a duck played on me last Saturday. I shot a big green-head, and he fell into the water seemingly dead. My dog brought him out, and I carried him and another one in my hand half a mile; then I laid my gun and the ducks down to get a string from my pocket to tie them together with. The green-head jumped up, ran between my legs, and started on a duck-run across lots. I ran after him thinking to catch him every step, and leaving my gun further behind all the time. Presently the duck rose, just beyond the reach of my hands, and went off toward the lake seemingly as well as ever, leaving me standing there gazing after him like a fool. The next duck I get I'm going to know he's dead, you bet."

Snipe shooting has been indulged in somewhat this fall. P. O. Stephens and I went out one afternoon and brought home a fine lot. The geese have been reported very plenty around here, but I've not seen them, nor seen any large number brought in. A. R. Stephens and I were out all of one day in a place where they were reported thick, but we did not see one goose.

Parties are already passing through here northward to be in camp ready for the deer. The season opens next Saturday. A. R. Stephens expects to go north of town about eight miles and kill seven big bucks that day. We'll see if he does. P. O. Stephens and I intend to start for the woods Monday, Nov. 3. We expect to achieve so great a success that the Northwest shall ring with the fame thereof. Why shouldn't we, when we each have an elegant new rifle with all the latest improvements? Perhaps you'll hear from us later on. MYRON COOLEY.

GAME IN DELAWARE.—Dover, Del., Nov. 1.—At the annual election last week of officers and directors of the Delaware Game Protective Association, the old board was re-elected. The president, Mr. I. N. Mills, is an efficient and able officer. Since this association was incorporated eleven years ago, much has been done toward making salutary game laws, and the quantity and quality of our game shows a marked increase. The members of this association have not labored for the sake of any private gain, but for the general good. And to-day ours is a State in which the game laws are enforced, and for our extent of territory we have a creditable supply of game. From the 2,200 partridges loosed in the State last spring, there has been a proportionate increase. The dry summer season was favorable to the young birds, and in the two lower counties there are but few farms that have not one or more coveys of birds. The woods and thickets have also a liberal showing of the little "cottontail" denizens. The shooting season opens on Nov. 15, and the farmers are placarding their fences with notices warning the too zealous sportsman against trespassing. In many instances these signs are not to be strictly construed as meaning "no gunning," but they have the effect of preventing a general overrunning of the land by gunners and dogs.—DEL A. WARE.

THE "ASIAN."—The last number of our Calcutta contemporary, the *Asian*, contains the announcement that "with its next number the *Asian*, which will then commence its thirteenth year of existence and its twenty-fifth volume, will become a weekly, instead of being as hitherto a fortnightly paper. The vast strides which sport has made in India during the last twelve years have rendered the more frequent appearance of the journal devoted to its chronicles and interest a matter of necessity: hence the change."

NIGHTS WITH THE COONS.

I HAVE read many of the accounts of different coon hunts published in the columns of your paper. Most of them tell of hunts in the East and are from the pen of Eastern hunters.

Let me here relate some points about Western coon hunting. I notice one article in FOREST AND STREAM for Oct. 30 speaks of the hunter ascending the tree and then shooting the coon. This may be all right in the East, but in southern Missouri, where I hunted last spring, it is considered as unsportsmanlike to shoot a coon as it would be to shoot a pheasant on the ground.

After the coon is treed the first thing to do is (if the size of the tree permits) to climb the tree and get as near to the beast as possible, but if one had to shake him out he would find his hands pretty full. In fact unless the tree was quite small it would be almost impossible to do so. The thing to do then, after reaching the proper place in the tree, is to break off a limb as long and as straight as possible; on the end of this put your hunting cap and thrust it out toward the coon. He is immediately paralyzed with fear, he does not wait to jump out, but literally falls backward off the limb to the ground.

Often a large "boar" coon no sooner sees one coming up into his section of the tree than with an angry growl he starts down to meet the intruder; but once get your cap on a stick, poke it at him, and all of his boldness is gone and he usually goes with it to the ground. Most hunters carry a stick up the tree with them, by putting it down the leg of their boot. An old rifle ramrod makes a good stick and is just about the right length. It is really better to carry the stick up with you, for if the coon is an old male he is liable to show fight, and it is a good thing to have your stick ready. I remember well the last hunt I took before leaving Missouri. It was during the latter part of April and the sap was pretty well up in the trees. The night was very dark and cloudy, one of those nights when it seems as though it would like to rain but could not. The hounds started a trail and had not run it ten minutes when we heard the leader bark "treed." On going to the spot we found the whole pack of nine beagles and foxhounds whining and baying up a large water oak. The night was so dark and the limbs of the tree so thick that the coon could not be seen. I started to climb the tree and had almost reached the top when I heard an angry growl and saw a pair of shining green eyes coming down toward me. I grasped the first limb that I could find and tried to wrench it off, but being green, was not at all inclined to come. The coon was almost at my elbow. I saw I could not break the limb, so I turned and struck him full in the face with my fist. Down he went right in the middle of the howling pack. Well, he kept the dogs busy for almost an hour, and I assure you they were a pretty looking sight when the coon was done for. Old Ben, our jack rabbit dog, had a piece of his ear torn off as big as a quarter, and our leader, "The Old Man," had been bitten through the lip and was almost covered with blood. The other dogs had their share of wounds, too. I fancy I can see them now by the dim light of the lantern in the depths of the gloomy bottom forest, standing around the dead coon, panting and wagging their tails as much as to say, "We are the stuff." Well, after the excitement was all over I found that I too had been injured in the scuffle. The knuckles of my right hand carry a scar to-day where my fist came in contact with the coon's teeth when I struck him in the face. LOTOR.

On Saturday, Oct. 25, the fifth annual coon hunt of the King's Lake Club took place in the bottoms adjacent to the club house in Lincoln county, Missouri. Maj. Dane Caruth, the club's president, is to be complimented upon the thorough manner in which the affair was arranged. When the party left the club house it was a few minutes past 9 o'clock. The sky was cloudless and the moon shone bright. Before he had gone a half mile the welcome baying of the hounds was heard, giving warning that they had one of the vermints treed. The four choppers were set to work, and as darkey Sol remarked, they flung that tree in mighty short order. When the tree fell the dogs rushed in and made short work of him. Nine more were added in quick succession. A light drizzling rain began falling near the bewitching hour of night, but as the sport was of the cyclone order the hunters paid no attention to it. At 2 o'clock in the morning Maj. Caruth gave orders to lead for the club house.

Several of the party indulged in fishing and hunting, but as a rule they met with poor success. Ducks were scarce and the fish would not bite. UNSER FRITZ.

CALIFORNIA LION STORIES.

A VERY interesting animal is *Felis concolor*, and in these days one hears of more adventures with him than with the grizzly. The latter, however, gets into illustration in a thousand forms and will be carved in granite for all time to come as the representative California beast. The great cat of the United States—the sinewy slouching cougar—seldom interests artists. Barye put him in bronze, but how few others have studied the animal.

The California sheep-herder can tell more lion stories than any one else. In the foothills the lion is the most dangerous enemy of the flock—far worse than bears or coyotes. He leaps into the midst of the sheep and slays them right and left for the mere pleasure of killing. The short, stubby shotgun, loaded with slugs and buckshot, that a sheep-herder carries in the thick brush is meant to wreak disaster upon the lithe dun-colored sheep killer, which is liable to spring down from the boughs of an oak and cut a swath of destruction across the frightened flock.

"When I was a boy of fourteen," said an old farmer to me, "I visited some friends in Santa Cruz county. Their farm was on top of the hill in the edge of the Redwood country. I went to the post-office, four miles away, one afternoon, and came back after nightfall. As I went along the path through the broken woods I heard something moving on a line parallel to the path and about 50ft. distant. I thought it was a horse or cow and paid no attention to it. Presently it drew closer and kept exact pace with me. I stopped, faced the mystery and advanced a few paces toward it, when it slowly retreated. In this way the creature accompanied me to the very edge of the garden. The next day the tracks showed that it was an unusually large lion. He stayed in the region living on calves, sheep and pigs, until he was tracked by a pair of good hounds, treed in a pine and killed.

It was only a few days ago that a boy of sixteen, Conrad Alles, of Three Rivers, a wild mountain district in the Tulare region, went out deer hunting, when he discovered a lion in an oak tree, crouching on a branch and ready to spring. He shot it and it fell in a ravine, but immediately recovered sufficiently to spring at the lad, who gave the *coup de grace* with a second rifle ball. The lion measured 6½ft. from tip to tip.

George W. Melone, of San Joaquin, a noted old hunter, tells many sporting stories. One of his lion yarns is about a trip made many years ago to the Mount Shasta region. One day Mr. Melone saw that the top of a small tree near the camp was being shaken as if in a whirl-pool. He went to examine into the matter, and found that a mule had been tied there, and was frightened nearly to death by some dreadful apparation. Melone saw a moving mass on the ground creeping up toward the mule, and, after a glance, took it for a wildcat. He ran for his rifle, rushed back to the spot, and seeing the head of the creature lifted, as it advanced with eyes fixed on the poor mule, he drew a bead between the eyes and fired. A wild cry was heard, and a huge body rose in the air and fell backward down a ravine. It was an immense California lion, engaged in the laudable business of securing his meal. Nine feet from tip to tip was the size of Melone's "wildcat." CHARLES HOWARD SHINN.

THE SALE OF GAME.—Mr. Frank M. Gilbert, who is known as an earnest advocate of game protection and as a practical hard worker in the cause, has this to say in his paper the Evansville, Ind., *Evening Argus*, about the sale of quail: "The farmers are taking steps to preserve the quail, and this is perfectly right, but they are not moving in the right direction. There is just one way to preserve game, and that is to stop its sale. It is not the true sportsman who exterminates game, but the market hunter, who kills game for the money he can get for it. He follows it at all times and in all kinds of weather, and kills it in any way, shape or form he can. If he can catch a covey of quail huddled together, it suits him just that much better, for then he gets more money for the load of ammunition he has expended. The various States are all waking up, and are protecting their game. In Illinois it is against the law to sell quail at all, and this has put a stop to the piles of tens of thousands of quail (nearly all netted, too) that used to be allowed to spoil by sudden changes of weather in all the little towns in southern Illinois. The writer once saw in Galatia, Ill., enough quail to fill a coal cart, heaped up, that spoiled because the roads were too bad to haul them, and they were thrown away. This law has put a stop to the hordes of market hunters who used to swarm over Illinois, killing quail for Chicago. Even in Arkansas, the greatest game State in the Union, the law which prevents shipping game out of the State has been enforced, and has driven out the market hunters who shipped thousands of deer, untold numbers of mallard ducks, turkeys and quail to St. Louis and Chicago. At the sunk lands of the St. Francis River, the writer saw nineteen barrels and five sacks of mallards marked to Chicago, lying at the water tank station, and learned from a railread man that the Cotton Belt road averaged ten barrels each evening from these fellows all through the season of the duck flight. How did they kill them? By slipping down to their 'beds' at night and firing huge swivel guns into their midst as they sat on the water. Was there any sport about this? It was simply a brutal lust for blood money that wiped out untold numbers of ducks, and left thousands of poor cripples to go off into the reeds and die, for, of course, these fellows would not waste time on cripples. Where did the vast herds of buffalo go? Were they killed by sportsmen? Were they killed by hunters to eat? No, they were killed by market skin hunters, who left their carcasses to rot on the prairie while they sold their hides for money. To return to the quail question. If the farmers will start a movement to stop the sale of quail altogether, they will find ready and willing help at the hands of all true sportsmen in the State. Your true sportsman never sells quail. His pleasure in making a neat shot is only equalled by the pleasure of sending a mess of quail to some sick friend, or to some friend who can't get away from business, or perhaps who 'can't hit 'em' if he does get away. It has been said that the quail is a noble bird. He is. He is a game little fellow who, when found by the keen nose of the dog, whirrs up and takes his chances against the skill of the hunter. He is too noble a bird to be peddled out like beefsteak or sausage meat. If the farmers will take steps to prohibit his sale altogether there will be plenty of quail in Indiana a hundred years from now, and our grandchildren will have some sport once in awhile—for the love of field sports goes by inheritance."

A MAINE SIDE-HUNT.—Farmington, Me., Nov. 1.—One of the events which is now looked forward to with much interest by the lover of the gun in Farmington is the hunting match. This year it came on the last day of October. Two well-known hunters, W. Whitcomb and Fred L. Kinsman, each chose twenty-nine men, who at an early hour shouldered their guns and took to the woods. The number included doctor, lawyer, merchant, bank official and editor. The hunters with their game were to reach Hotel Willows by 8 o'clock P. M., when they were to count the score, the side having the least number furnishing the supper. The first to come in was a merchant with slow step and empty game bag. When asked what success, he made answer, "I shooded up a dozen partridges, but not one of the blamed things did I kill; but I have walked fifty miles." One lawyer shot two partridges. The editor shot at one. The best score was made by Capt. Whitcomb, although not on the side that won; his count was 650 points. The next best was 600, made by Herbert Moulton. The 69 hunters with and without game reached the hotel by 8 o'clock, Fred L. Kinsman's side being the victors with this count: 17 rabbits, 850 points; 29 partridges, 2,900; 3 weasels, 300; 2 woodcock, 200; 4 muskrats, 200; 1 fox, 500; total, 4,950 points. Capt. Whitcomb's side brought in as follows: 12 partridges, 1,200; 12 muskrats, 600; 7 rabbits, 350; total, 2,150 points. About 9 o'clock the hunters sat down to one of Landlord McDonald's elegant suppers, which was greatly enjoyed by the merry and hungry crowd, who amid the cigar smoke that followed related the day's sport. We learn that four of the best shots are to try a match hunt for big game in December.—FLYRNT.

KANSAS GAME.—Ottawa, Franklin County, Kansas, Oct. 26.—Eastern Kansas is known as a great quail country. This season has been one of the best we have had for several years for the birds, at least the weather being warm and dry during the nesting season and the food plentiful. Quail are unusually thick; they may be found at almost any time and place, and if they were protected as they should be they would always be thick enough to satisfy any sportsman. Before a storm a great many of them come into town, but even here they are not safe from those who call themselves sportsmen, but who kill game at all times during the close season, even when it is nesting or rearing its young. Prairie chickens are not very plenty at this place, but there are more of them than usual. They are very plentiful at Colony this year. There has been considerable rain lately, and it is bringing in the ducks and geese. They are not very thick as yet, but quite a number of small bags have been made. The sand-hill cranes were observed to be flying south last Saturday in considerable numbers; they nearly all fly at once and seldom stop here. Squirrels and cotton-tails are numerous. There are also quite a number of jack-rabbits, which are mostly hunted with greyhounds. The old ones are only fit to eat during the coldest weather, but the young ones are said to be very good eating. If a society for the protection of game and fish were formed in eastern Kansas it could accomplish great results. A few prosecutions of the law-breaking hunters would change matters perceptibly, and I would be glad to hear of any movement looking to protection.—F. B.

CARE OF DEAD GAME.—*Editor Forest and Stream:* There seems to be a diversity of opinion as to the best method of taking care of game after being killed, consequently I write a few lines on the matter, hoping to call out something from those having experience that may be of service to myself and possibly to others of your readers. In my experience it seems to be the custom in the West and South to draw all game and hang them heads up, in some cases filling the cavity with hay or grass, while in other instances nothing is used in the cavity. Further east, more particularly in ducking portions of Michigan, Ohio and Canada, the game is rarely if ever drawn and is hung heads down, almost the only care being to see that the birds are dry before packing for shipment. I always like to take my game home when I am fortunate enough to get any, consequently have to ask, "What is the best method of taking care of game?"—MC.

CHINESE PHEASANTS IN ILLINOIS.—Macomb, Ill., Nov. 2.—*Editor Forest and Stream:* You will remember I turned loose a pair of Chinese pheasants in this county last spring. Last week several young pheasants three-fourths grown were seen near where the old birds were turned loose. I have no doubt now that these birds will breed and do well all through the West and South, and probably as far north as Pennsylvania and New York. Should they breed as fast here as they do in Oregon, they will soon spread over the State. Nine years ago eleven of them were turned loose in Linn county, Oregon. The secretary of the State Board of Agriculture says he would be safe in saying there are a million in the State now. These birds may revolutionize the whole sporting country in the course of time. I shall import some more in the spring to this county.—W. O. BLAISDELL.

SHOOTING GAME FOR MONEY.—Towanda, Pa., Nov. 1.—Many grouse have been killed by market-hunters in this county. Men and boys by the dozen make it a business, from the time the season opens until it closes, to shoot for the money there is in it. Hundreds of acres that were last season open to shooters are being posted for this and other reasons. Spent a day after grouse and woodcock last week. Put up six bevies of quail. Was unable to go after them opening day, Nov. 1, and have doubts about finding them again, as the market-hunters will probably have them bagged by this time. Of the shooters who were out from this place opening day report the following bags: Ladd 1 quail, Laplant 0, Montanye 0, Snider 0, Cransky 1, Bowen 2, Rittenbury 6 quail and 2 rabbits.—W. F. DITTRICH.

A GLOOMY REPORT.—Central Lake, Mich., Oct. 25.—Game is scarce in this county this fall. Deer tracks are rarely seen, even in the most favored localities. Ruffed grouse (I might be misunderstood by some poet if I said "partridges") are so few in numbers that I have not heard of a respectable bag for two years. No mallards come this way nowadays, and the other ducks are few, far between and half frightened to death. Some blame the State Game Warden for this state of things. I don't; and shall have more to say on this subject after a time.—KELPIE.

A SMOKELESS POWDER TEST.—Mr. Hugo A. Strong, of No. 3 Hanover street, New York, as agent for Dr. Stephen H. Emmens, the inventor of the new high explosives, "Emmensite," "Gelbite," etc., etc., invites attendance at the FOREST AND STREAM gun-testing range, at Claremont, Jersey City, at 2:17 P. M., Nov. 7, for the purpose of witnessing tests with gelbite, which is a smokeless powder, or chemically treated paper, for use in shotguns. To reach Claremont take the New Jersey Central, Liberty street ferry. Trains leave this side at 2 P. M.

NEW YORK GAME LAW.—State of New York, Attorney General's Office. — Albany, Oct. 29. — *Editor Forest and Stream:* The Commission to codify and revise the game laws hold a meeting at Albany, Nov. 18, at 2:30 P. M., in the Assembly Parlor, for the purpose of hearing arguments, suggestions, etc. Will you kindly insert a notice in your paper to that effect.—ED. G. WHITAKER, Commissioner.

RHODE ISLAND.—Providence, R. I., Nov. 2.—The trial of Hoxie is postponed until the last of November. We have more birds this fall than for years. Woodcock very plenty, also quail; partridges more so than for years. I think after protection the coming season it will begin to seem like shooting of years gone by.—E.

THE HUDSON RIVER FISH AND GAME PROTECTIVE ASSOCIATION held its annual reunion and fish and game dinner at the Phœnix Hotel, Saugerties, last night.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

PENNSYLVANIA STREAMS.

AUBURN, Susquehanna County, Pa., Oct. 21.—The trout season, closing July 15, was very satisfactory to the fishermen. More and larger trout were taken than for several years past. Streams that were supposed to be entirely depleted gave good creels of fine fish. The unusual rainfall of the past two years kept the streams full, and the very mild winter furnished favorable conditions.

Pickerel fishing in the ponds has also been good. Perhaps about the usual number have been taken; but all the fish I have seen and handled would average fully twice as heavy as those of several years past.

Bass fishing in the Susquehanna has not been very satisfactory. High water has been the leading obstacle to good sport. For whenever the river cleared, which it has done but a very few times the entire season, good catches of fine fish have been taken. With me, minnows proved the most killing bait; yet stone cats are more generally used. With a dry fall and consequent clear water October is one of the best months for black bass fishing in the Susquehanna. During the forenoon of Oct. 7, '81, myself and a companion took thirty-one, using minnows. But the past three falls have been very wet, destroying the fishing. Unusual high water in May must have covered with sediment and destroyed a great number of eggs, but was beneficial in preventing spearers from getting in their nefarious work while the bass were protecting their nests. With dry weather and clear water another season, we predict good fishing at almost any point on the Susquehanna between Rummerfield and Tunkhannock.

From my own observation and what I can learn I conclude the law has been more respected than ever before. Some arrests were made at Tunkhannock and fines imposed. Still there is need of more thorough enforcement of the law. Dynamite has been used in the east branch of the Meshoppus Creek and hundreds of pounds of fish destroyed. The parties have been very bold in their dastardly work, and should not be allowed to go unpunished. But there are no wardens or associations to prosecute offenders, and it is a thankless job for private individuals to undertake. BON AMI.

THE GOLDEN TROUT.

IN this journal several years ago appeared my first description of a new trout from Sunapee Lake, N. H., under the name of *Salvelinus aureolus.* At the time of the publication of this description there was some dissatisfaction on the part of some persons who were interested in the fish and the lake from which it came because the specific name was not derived from the lake from which the types came. I refrained from applying the name *sunapee* or *sunapeensis* because of my belief that the trout would be found in other parts of New Hampshire and probably other New England States. Dec. 5, 1889, FOREST AND STREAM announced the discovery of the golden trout in Dan Hole Pond, N. H., a lake in the extreme eastern portion of the State and belonging to the drainage system of the Gulf of Maine, while the waters of Sunapee Lake find their way eventually into Long Island Sound. Between Sunapee Lake and Dan Hole Pond numerous mountain ranges exist. We did not call attention at the time to the fact that the two trout obtained at Dan Hole Pond by Col. Hodge in 1889 were collected for him by Mr. Roberts, of Water Village, N. H.

I have learned from Col. Hodge that a golden trout was obtained from this pond before he secured his two specimens. This was forwarded to the Museum of Comparative Zoology, at Cambridge, Mas., and there is scarcely any doubt that it is one of the specimens figured by Mr. Garman in the nineteenth annual report of the Massachusetts Fish Commission. This paper by Mr. Garman was also published separately under the title, "The American Salmon and Trout, Including Introduced Species," and the specimrn here referred to is illustrated in figure 16 of this paper. I think that if any one will examine this figure, which was made by Mr. S. F. Denton, he will at once recognize in it the trout of Sunapee Lake and Dan Hole Pond. Indeed Mr. Denton, when about to make the drawing of the Sunapee trout for me, remarked upon its resemblance to one he had drawn for Mr. Garman.

After the publication in FOREST AND STREAM of Dec. 5, 1889, of the occurrence of *Salvelinus aureolus* in Dan Hole Pond, I learned that a certain amount of skepticism was current as to the fact of its existence in the lake mentioned, and it was asserted that the specimens sent to Col. Hodge, and by him forwarded to the National Museum, were really obtained in Sunapee Lake and palmed off upon him as specimens from Dan Hole Pond. In order to settle the matter beyond all shadow of a doubt, certain friends of Col. Hodge resolved to go personally to Dan Hole Pond and obtain the golden trout, if possible. These two gentlemen, Messrs. Walter Aiken and Frederick M. Dey, went to the pond and, at the cost of much personal discomfort, secured four examples of the trout, and forwarded two of them to me for confirmation of the correctness or Col. Hodge's previous discovery. A male was sent to Dr. Quackenbos, and another one to Col. Hodge. Mr. Aiken tells the story of the undertaking in the following letter:

"FRANKLIN FALLS, N. H., Oct. 31, 1890.—*Dear Dr. Bean:* Well, we have been to Dan Hole Pond and got back alive. The weather was simply infernal. It rained, it snowed and it blowed a gale. We struck the worst place for grub in the United States. I had Col. Hodge's permit to take four trout. The first day we fished all day without a bite or seeing a fish. At night we put out a 75ft. net, one end on shore and the other anchored out in the pond. In the morning we had two preadamite *aureolus* jack trout. They looked to me like very old trout. The next day I took a fine young-looking female trolling with the spoon. I took this fish some distance from our net and away from reputed spawning ground. Next night we got in the net one jack *aureolus.* This filled our permit of four trout, and we started for home. Reached Meredith one hour before train time and packed the fish the best we could. The jacks [males] were very highly colored when taken, but I noticed that they were losing color when packed. I sent you one jack and one female, Dr. Q. one jack and Col. Hodge the other. The question is now fully settled and the doubters should give it up. From what I could learn these trout were once very abundant there, but years of spearing, together with perch, suckers, pickerels, eels and an enormous quantity of redfins to eat the eggs, have made them very scarce. There are no hornpout in the pond. * * *—WALTER AIKEN."

The specimens thus obtained were received by me in due time and are now preserved in the Smithsonian Institution. The female contained no eggs and had either spawned naturally, or was stripped after capture. The length of this example is 20½in. In the stomach were the remains of about 20 smelt. The colors are much plainer than in the male, there being scarcely a trace of golden color on the belly and only a faint pinkish tinge on the lower fins. The male is 16 inches long and his jaws are well developed. The spermaries are moderately large and would have furnished a considerable quantity of milt. The colors of the male were still intense; the rich orange of the belly is particularly noticeable. The ventrals, anal and lower lobe of the caudal have a broad milky white margin, not limited behind by a dark line as in the brook trout. In both examples the gill-rakers are curled at the tip. The male has been injured by having a piece bitten out of his tail behind the adipose fin. The wound healed, leaving a crooked tail; yet the trout was in excellent condition and was doubtless active in its movements.

Thanks to the energy of Col. Hodge and the able co-operation of Messrs. Aiken and Dey we have advanced a step forward in the study of the golden trout. Will those who are interested in the history of these beautiful fishes help us to gain a clearer knowledge of their distribution and habits? T. H. BEAN.

FISHING WITH THE "LITTLE GIANT."

ON reading Dr. Henshall's description in FOREST AND STREAM last winter, of his new invention, the so-called "Little Giant" bass rod, I was at once struck with the fact that here was the very rod I had been looking for to use in sea fishing on the New England seashore, where I have spent several summer vacations. I had found my ordinary Henshall bass rod a good deal too limber to stand the strain of the long line and heavy sinker with anything like comfort. Now, here was a rod but a trifle heavier, and yet designed specially for handling a heavy sinker in deep water. I was therefore much pleased on receiving Chubb's catalogue for 1890, to find that he was prepared to furnish this new rod, and ordered one at once. It is a very pretty rod to look at, even the cheapest grade—ash and lancewood—like mine, and is very well balanced and pleasant to handle. I fancied that I could not cast quite so far with it as with the larger Henshall rod, but this may have been from my greater familiarity with the old rod. Besides, this is no special disadvantage in sea fishing at the place where I intended to fish, as it is not necessary to cast more than 20 or 30ft.

So I took my "Little Giant" last summer down to Manomet, Mass., which is the corner of Plymouth opposite to the tip of Cape Cod, and gave it a fair trial, in the intervals of unsuccessful attempts at black bass fishing, in the famous Plymouth ponds.

I was thoroughly pleased with the rod. The best fishing at Manomet is for tautog, or perhaps better known as blackfish (*Hiatula onitis*), which during the summer are found in considerable numbers round certain rocks close to the shore, usually covered at high water. The local fishermen, of course, use stout handlines, with a sinker weighing some four ounces. They anchor some little distance from the rock, in such a position that the strong tide is running from them toward the rock, and cast in close to it, allowing the sinker to lie on the bottom. Lobster is the bait commonly used, preferably in the condition called "blackskin," that is, just ready to shed the shell, as this holds on better and offers more resistance to the thieving "cunners." Sea clams (*Mactra*) are also used when they can be procured, and once we succeeded in getting half a dozen small rock crabs, and "hung" a tautog with every one of them. The fish run to a good size, 4 and 5-pounders being common, while large fish, up to 10 or 11lbs., are not rare.

I had only fair luck with them myself, averaging only a couple of fish every time I went out, and my largest only weighed 4½lbs., but I got nothing less than 1½lbs., and only one as small as that, with several two and three-pounders. A small tautog succumbs speedily to the "Little Giant," but they are game fish, and the larger ones make a strong fight for their lives, making very savage downward rushes, and trying to get to their shelter under the overhanging rocks. They frequently escape by tangling up the line in the rock-weed so that one is forced to haul in on it by hand till it breaks. I lost several good fish in this way last summer, and twice in playing large fish had them tie me up in the weed, and succeeded in clearing the line without losing the fish, thanks to the tough, leathery lips.

Owing to this habit of the tautog, of rushing for shelter as soon as he is struck, all the pressure the tackle will stand must be put on at once, and I was surprised to find how much the rod would stand, and how soon the fish's rush was checked, as, with thumb on reel, I let the line slowly run off. I never timed myself to see how long it took me to kill a large fish, but it seemed an age when I fastened to the first large one.

The codfish, which we occasionally catch while tautog fishing, is a marked contrast to the latter in regard to gameness. A small codfish, say 2lbs. in weight, yields to the spring of the rod with hardly a struggle, while it took only a couple of minutes to kill a 5lbs. fish—just one good strong rush, dragging off several yards of line from the reel, and then collapse, and victory for the little rod.

I also caught a great many cunners with the little rod, but as none of them exceeded 1lb. weight this was little or no trial of the capability of the rod.

I used an ordinary multiplying reel, with 50yds. of braided linen F line, a 2-0 Sproat hook and a 2oz. sinker, below the hook.

On the whole, I found the rod thoroughly satisfactory for this kind of fishing, both for ease in managing a heavy sinker in deep water and for its killing capacity.

WASHINGTON, D. C. JOHN MURDOCH.

TULLIBEE OR MONGREL WHITEFISH.

Editor Forest and Stream:

I saw to-day, opened in the fish market, a barrel containing whitefish (*Coregonus albus*) and lake herring (*C. arlidi*). Among the lot were some twenty tullibee (*Coregonus tullibee* Richardson). They were taken by gill nets at the lower end of Lake Erie, in its deepest portion, where the water is found to average some 200 or 300ft. in depth. This is the only point in the lake where the salmon trout (*S. namaycush*) is found, only stragglers are ever found at other localities, the lake, as a general thing, being quite shallow, averaging from 20 to 30ft. outside of this deep locality. Dr. Richardson was the first to describe this fish, in his "Fauna Borealis Americana," under the name of *Coregonus tullibee* (more correctly *Orgyrosomus tullibee*), in 1826, while on his overland journey to the Arctic Sea, accompanied by Sir John Franklin. In 1840 I found this fish quite abundant at the Sault Ste. Marie, the natives taking them in the usual way, at the foot of the rapids, with the hand dip-net. They called them the *Poissons des Française*, "the Frenchman's fish;" being, as they declaimed, a most superior fish it was necessary to give them a prominent name. In 1850 Prof. Agassiz, in his *Lake Superior Journal*, gave a description of the fish, then new to him, under the name of *Coregonus tullibee.* In 1855 I found this species, or variety, of the whitefish quite abundant on the Deschutes River, Oregon. Specimens then collected were sent to the Smithsonian and described in the Pacific Railroad Survey, Vol X., p. 326, under the name of *Coregonus williamsoni* Grd.

Three years ago Mr. Charles J. Sheffield, of this city, brought me the skin of a fine specimen that answers in every particular to the descriptions alluded to above, from upper Colorado, where he had passed the season in elk hunting. He informed me they were found in many of the lakelets there, and took the hook freely and at times rose to the fly.

In 1877 I received a specimen of the tullibee from the Bass Islands, Lake Erie. This was the first and only specimen coming from these waters until the ones mentioned above. It was new to the fisherman who sent it, and being an old man in the work and more than an ordinary observer, he considered it something unusual, and as he remarked, "'Tis neither a lake herring nor whitefish, so it seems to me it must be a sort of mongrel between the two." This specimen was described by Dr. Jordan in the "Fishes of Ohio" far the Ohio State Geological Report. I still retain a plaster cast of the same.

We have here a most interesting fish, whose life history is little known, ranging over an immense extent of territory, from a height of 300 to 8,000ft. above the sea; a true *Orgyrosomus*, standing between the genera *Thymallus* and *Coregonus*, and probably more abundant and equally distributed than generally supposed, as it is passed over by the careless observer, taken most often for a very large herring or an undeveloped whitefish.

DR. E. STERLING.

CLEVELAND, Ohio.

[The tullibee is certainly a singular and interesting whitefish and so different from all the rest that Dr. Jordan has set it apart as the representative of a distinct subgenus under the name *Allosomus.* It is readily distinguished from Williamson's whitefish by its projecting lower jaw and narrow premaxillaries as well as the short, deep and shad-like body. It seems to be difficult to obtain specimens of this fish for museum collections. We have seen one recently sent East by Mr. Frank N. Clark, of Northville, Michigan.]

VERMONT TROUT.

WATERBURY, Vt., Oct. 26.—*Editor Forest and Stream:* I notice in a recent issue an item regarding the trout fishing of Vermont the past season, and mentioning Northfield and Waterbury as good points. I heard the fishing was very good at Northfield, and from all reports I think more than the usual number of large trout were taken. They tell a story of one Northfield enthusiast who secured a good supply of "wums" in the fall, and keeping them through the winter, used them to take a nice basket of trout on opening day, April 1, when the snow was a foot deep.

Regarding this place your informant must have been wrong, as I do not think any one would be repaid for coming any distance by the fishing near by, though there is sometimes very good fishing in adjoining towns. Waitsfield, mentioned in your note, and Howe (distant ten miles and reached by Mount Mansfield stage from this place) are usually good points. We get our best fishing near by early in the season, as the streams soon become nearly fished out, and after a few weeks we must go some distance to get good fishing. I think if your correspondent had tried fly-fishing in places where any large trout were found he would have had good success, as it has been my experience that many of our larger trout will take the fly freely at times when they will not notice bait. Worms, however, are the usual bait and are generally successful.

The trout fishing in all this section is very uncertain at best, as many of the finest streams have been "cleaned out" by fish hogs, who fish for count and keep everything they catch, and even if the six-inch law could be enforced it would take more time than we have had since its passage to give the trout any chance to increase. The open season, as it stands now—April 1 to Aug. 1—is favorable to the trout, as the snow remaining on the mountains keeps the water high and roily until late in the spring, and we rarely have much, if any, fishing before May 1. I hear that the Legislature now in session may change the season, making it May 1 to Sept. 1, but if we wish to keep what little fishing we have left this should not be done.

A recent editorial, commenting on the Vermont Commissioners' report, reads very nicely and I have no doubt the gentlemen deserve all the praise that has been given them, but they are taking too much for granted in assuming that the six-inch law is, or can be, by present methods, enforced. Speaking of this section I know it is not, and that the majority have no regard for it whatever, so far as taking the small trout is concerned, though they may not say as much as formerly about the number of their catch. Many of our best streams are so situated that they cannot be protected unless constantly watched and the people living near them are not doing that by a large majority. But these persons are not the only ones who disregard the law. I could name one prominent

citizen who openly laughed at the law, caught a number of small trout and made no secret of it—and such cases are by no means rare. Our best fishermen uphold the law and would be glad to see it fully enforced if it were possible. As it stands now I think the short open season protects the fish and does more good than the six-inch law, as the latter cannot be enforced without a complete game warden system, which the State never had. The proposed hatchery would only turn out more fingerlings to be gobbled up by any one who choose to catch them.

LANCEWOOD.

THE NEW YORK CHIEF PROTECTOR.

Editor Forest and Stream:

At a special meeting of the Black River Fish and Game Protective Association, held this evening, the following resolution was adopted:

Resolved, That we, the members of the Black River Fish and Game Protective Association place on record an expression of our sense of deep regret at the resignation of General R. U. Sherman of the New York Fish Commission, who during his long and active service as Commissioner has accomplished so much for the protection of fish and game, and that we do hereby signify our disapprobation of the seeming effort to concentrate the members of the Commission in and near the city of New York.

A discussion regarding the proposed Adirondack State park followed. The association has taken a deep interest in this subject, and a year or two ago circulated petitions in all parts of the State, and obtained thousands of signatures thereon asking the Legislature to take prompt action for the protection and preservation of the Adirondack forests.

One of the members stated that he had just been told by one of the largest stockholders in the syndicate now engaged in lumbering on the Blake estate tract in the Adirondacks that the proposed railroad to Jock's Lake was going through, and the hard wood as well as the soft wood had got to come out.

Another said it looked as if not only that railroad but the one proposed by President Hurd, of the Northern Adirondack Railroad, extending through to Utica would be built. If these roads are constructed, all the timber, hard or soft, of any value will undoubtedly be taken out.

Secretary W. E. Wolcott offered the following, which was unanimously adopted:

Whereas, We learn, with profound regret and grave apprehension, of the dangers that threaten the forests of the Adirondack region, and the many destructive influences now at work there; of the purchase of large tracts of timber land by individuals and lumber syndicates; of the establishing of saw mills in all parts of the great woods; of the indiscriminate felling of trees of all sizes and varieties; of the many surveys for new railroads, not only on the outskirts of the wilderness on every side, but through its very heart, and

Whereas, We believe that the preservation of the Adirondack wilderness, as nearly in its original state as may be practicable at this late day, is absolutely essential for the equalization of the temperature and rainfall of this State; for the conservation of fish and game; for the purpose of affording a natural sanitarium for invalids and a delightful resort for rest and recreation, and for the comfort, health and general welfare of the people of the State; therefore be it

Resolved, That we sincerely deprecate the existing state of affairs and earnestly urge all friends of forest protection to cooperate with the State Forest Commission in an effort to provide a permanent park in the Adirondack region, which shall include as much of the primitive wilderness as it is possible to secure.

Resolved, That a committee of one be appointed to represent this association at the meeting of the State Forest Commission to be held in the office of Sherman W. Knevals, 32 Nassau street, New York, Nov. 5, 1890.

President H. A. Pride was appointed as the committee called for in the last resolution.

The Board of Directors of the Utica Fish and Game Protective Association met last evening and adopted the following resolutions:

Resolved, That the Governor be asked to withhold his acceptance of the resignation of Gen. Sherman as Commissioner of Fisheries, as we believe that Commissioner Sherman is the father of and the most efficient and valuable member of the Commission, and that without his efforts we believe further that the true interests of protection will be greatly impaired.

Resolved, That Gen. Sherman be requested to reconsider his resignation as Commissioner of Fisheries, at least for the present and until such time as some suitable person can be found to fill his place, and until the important issues now pending be settled.

Resolved, That this Association is opposed to and most emphatically deprecates the summary removal of Fred P. Drew from being chief game protector by a portion of the members of the Board of Commissioners of Fisheries, and especially without consulting all the members of the Commission before taking action. We believe this action to be very unwise, and it is certainly detrimental to the true interests of protection to strike down the man who has done most and so much to organize a systematic enforcement of the game laws, and at a time when by experience and practice he has perfected the proper plans and modes of detection; and that to now place any new man in his place, no matter how competent, will only be to set the work of detection back for years, and in proportion encourage violators to resume their work of destruction.

Resolved, That in our earnest judgment this action of the three members of the Commission is the worst and most severe blow the work of protection has ever received.

Resolved, That the Governor be requested to reconstruct the present Board of Commissioners of Fisheries in the interests of true protection by the exercise of his power of appointment of new Commissioners in place of those now holding over their terms of office, and retain Gen. R. U. Sherman still in office.

Resolved, That we proceed at once to circulate a petition to the Governor remonstrating against the removal of Chief Drew, and in accordance with the foregoing resolutions.

Resolved, That the secretary prepare a heading for the petition and cause the printing thereof.

PORTSA.

UTICA, N. Y., Oct. 31.

NORTHERN LIMIT OF KING SALMON.—Capt. E. P. Herendeen, to whom we are indebted for letters descriptive of fishing in Arctic Alaska, has communicated additional information about the range of the king, quinnat, or Columbia River salmon (*Oncorhynchus chouicha*). We have not been able to trace this, the largest of the Pacific salmons, further north than the Yukon River, but Capt. Herendeen's observations pracically determine its occurrence above the Arctic circle, about north latitude 68°. The facts reported are as follows: Three years ago Mr. Robert Root saw a salmon weighing 80lbs., which was brought into Point Hope by Eskimo early in September from a fishing locality twenty miles to the eastward. There is at this place a lagoon of considerable size into which falls the water of a mountain stream. The natives get all the salmon necessary for their own use and dry them for winter. A salmon of large size is said to occur in the Mackenzie and it may be the king salmon, but the Signal Service party stationed at Point Barrow from 1881 to 1883, of which Capt. Herendeen was a member, did not see a salmon of this species during their stay in Alaska. From this northern point only one kind is certainly known and that is the humpback, which is called *gorbuscha* by the Russian-speaking population.

MINNESOTA NOTES.—Detroit City, Minn., Oct. 29.—The fishing season just closed has been the most successful of any for several years. The catches of black bass have been especially good and the fish large. P. O. Stephens and I went to Franklin Lake for our last fish this season. Took Mrs. Stephens along and camped out for three days. Had a good time, caught some fine bass, but none that went over our August trip to the same lake. We'll pack our rods and reels up this week and lay them away. C. W. Dix smiled for a whole week in anticipation of a trip to Franklin Lake; could hardly come near him he was so frisky. When he came back he looked very glum. "No luck," he said, "I'm heart broken." He has laid away his little bethabara rod until next spring.—MYRON COOLEY.

WINDFISH OF CROTON RIVER.—In the county of Westchester, New York, the chub or fall fish (*Semotilus bullaris*) is known under the name of windfish. The species is found in all the streams of the county. I have never heard it referred to by any other name in New York. Some of the best fishing for the windfish is to be had in Mount Kisco Brook, flowing into Croton Lake. I have caught individuals measuring 18in., and found them very game; examples reaching 20in. are sometimes taken.—A. K. F.

A BIG HIT.—The "Black Bass Number" of July 24. Constant calls for it. Supply not exhausted.

Camp-Fire Flickerings.

"That reminds me."

DIDN'T KNOW IT WAS ON.

[*From the Book of the Game Laws*]

IT is wrong to break the fish laws, of course, and wrong to palliate an offense of this kind, but if such a crime has been and gone and done got committed, the best we can do is to endure it, unless there is something about the circumstances of the overt act sufficiently funny to compel our laughter, as I am half inclined to believe is the case in the story told me by Mr. H. B. Whitney, of Phelps, N. Y., about how his respected father caught a bass last spring before the season was open. Mr. Whitney, *père*, was fishing in a river near the railway, and had the fortune, or misfortune, to hook a fine bass, which at once gave proof of being a prize worth capturing, if only it were a few days later. Mr. Whitney determined to stay there and play that bass until the season opened, for he couldn't for a moment think of turning him loose. Unfortunately, just at the height of the fun, he heard the rumble of wheels and saw approaching the vehicle of a neighbor whom he knew and who knew him. Mr. Whitney threw down his rod on the grass, and putting his foot on it to hold it safe, pretended to be fixing his boot.

"Morning, Whitney," called out the neighbor.

"Morning."

"Any luck?"

"No," said Mr. Whitney, pulling hard at the top of his boot. "They ain't biting at all, and I was just fixing to go home."

Just at this moment, as luck would have it, the bass made a run for the middle of the stream, and coming to the end of the line, went flying out of the water, in full sight of the man on the bridge.

"Jerusalem! Did you see that?" cried the neighbor.

"No, what was it?" asked Mr. Whitney. The answer was given by the bass, which went out of the water a second time, shaking his head hard to loose the hook. This time the neighbor saw what was the matter, for the rod was splashing in the water near the bank.

"Didn't you know you had a bass on?" he asked.

"Know I had him on?" said Mr. Whitney, a good deal irritated by the fellow's lingering so long; "why no, of course I didn't know it. Do you suppose a man is going to know when a bass is on his line when it's five days before the open season? What do you take me for?"

"Well, neighbor," said the other, as he grinned and whipped up his horse, "I must say you're as good a accidental bass fisher as anybody I ever saw." E. HOUGH.

Fishculture.

TRANSPORTING AND PLANTING FISH.

FOR the benefit and instruction of those who are interested in the propagation of fish, we insert the following valuable instuctions, which are from the pen of Elliott B. Hodge, Esq., State Superintendent of Fisheries and Commissioner, of Plymouth, N. H.

While on the cars keep the well aerated and as near the temperature of the water in hatchery as possible; never let the temperature go above 50deg. Use a dipper or air pump as often as three or four times an hour. Do not place ice in the water unless absolutely necessary, and then it should be cut very fine; cut the ice fine in the covers, if it does not melt fast enough.

Parties receiving young fish should be notified, so that they can have team ready on arrival of train, and start immediately for place of deposit. Should a delay of over fifteen minutes occur aerate the water by dipping or with an air pump. If the distance is not more than four or five miles, the ice should all be removed from the covers of the cans before starting. Should there be more than six or eight degrees difference between the water in the cans and that in the stream or lake, it should be gradually brought to the same temperature by adding the water from the stream or lake, a little at a time. If the young fry are brook trout or landlocked salmon, the plant should be made near the head of the stream. Never place them in brooks that dry up in summer. Little spring brooks that empty into the large ones are good places to plant young trout; place only a few in one spot, and they should be scattered as long a distance as possible. After the water in the cans has been brought to the proper temperature, part of it can be removed so that the can can be carried easily. Add fresh water every time a dipper full of fish are taken out.

Lake trout should be planted in lakes that are adapted to them, by reason of a proper depth of water and suitable food; select rocky shoals, such as are used by them for spawning beds.

To transport young fry requires constant care and watchfulness on the part of the person having them in charge. If, through neglect or want of attention, they become sick it is almost impossible to bring them up again, and even if they live to be placed in the waters for which they were intended, a much greater loss will occur after planting than would have taken place had they been kept in a healthy condition during the journey.

Landlocked salmon should always be planted in the largest stream flowing into the lake or pond, and if the stream is of sufficient size they will always return there when large enough to spawn. Avoid placing the young fry in pools where there are shiners, as they naturally become weak during their journey, and fall an easy prey to anything large enough to devour them.—*Report of Vermont Fish Commissioners.*

WHITEFISH IN CARP PONDS.

IN March, 1890, Mr. Carl G. Thompson, of Warren, Ind., received from the U. S. Fish Commission through Mr. Douglass, of Sandusky, Ohio, a lot of fry of the common whitefish (*Coregonus clupeiformis.*) He placed these in one of his carp ponds by way of experiment. Mr. Thompson thus describes the result of his trial in letters to Mr. Douglass and the U. S. Commissioner of Fisheries, Col. Marshall McDonald:

"I placed them in a small pond 7ft. deep and they settled slowly to the bottom. The weather was very cold at the time. I saw very few of them from that time until last May; then I drew off the water and put them into pond number 1; but in drawing off the water I found that the screen on the spout connecting pond number 2 to number 3 did not fully cover the end of the spout, and after taking out over 800 whitefish and allowing number 3 to refill, and with the same screen on the spout, I find that pond number 3 is now well stocked with small carp. This leads me to believe that a great many whitefish have found their way into pond number 2. However, one thing is certain—I have over 800 whitefish from 5 to 6in. long, as I can see them daily and they eat mill feed like so many pigs. Next spring I will drain pond number 2, and I think I will find a great many more. I have never found a dead whitefish in my ponds, which clearly proves that this water is just the thing for them. My purpose is to dispose of all my carp, by turning them into a river adjoining the ponds, and raise nothing but whitefish, as they grow faster and are a more popular fish."

Mr. Thompson desires to obtain additional supplies of young whitefish, to stock his ponds thoroughly and demonstrate the practicability of rearing whitefish in small inclosures. The experiment is a very important one and will be watched with much interest. Rainbow trout have been successfully brought up under such conditions and why should not whitefish thrive readily with similar treatment?

A PRIVATE FISH HATCHERY.—A fish hatchery with a capacity for 1,000,000 fry annually will be completed about Nov. 1 for Col. C. H. Odell's Alder Lake Farm, on the Beaverkill. The establishment is intended for stocking the waters belonging to its proprietor. Col. Odell has ordered 1,000,000 fry of German trout for deposit in the lake.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 13 to 17.—Third Annual Dog Show of the South Carolina Poultry and Pet Stock Association, at Charleston, S. C. Benj. McInness, Jr., Secretary.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1658.

Jan. 20 to 25.—Dog Show of the Georgia Poultry and Pet Stock Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 21 to 26.—Dog Show of the Elmira Poultry and Pet Stock Association, at Elmira, N. Y. Carl Hart, Secretary.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.

March 3 to 6.—Second Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderffer, Secretary.

March 10 to 13.—First Annual Dog Show of the Duquesne Kennel Club, at Pittsburg, Pa. W. E. Littell, Secretary.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

March 31 to April 3.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Secretary.

April 1 to 4.—Fourth Dog Show of the Cleveland Kennel Club, at Cleveland, O. C. M. Munhall, Secretary.

April 8 to 11.—Mascoutah Kennel Club, Chicago.

Sept. 1 to 4.—Youngstown Kennel Club, Youngstown, O.

FIELD TRIALS.

Nov. 4 to 8.—First Beagle Field Trials of the National Beagle Club, at Hyannis, Mass. F. W. Chapman, Secretary, 364 Washington street, Boston, Mass.

Nov. 7.—Ninth Annual Field Trials of the Robins Island Club. W. L. Wellington, Secretary, Brooklyn, N. Y.

Nov. 10.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

NATIONAL COURSING ASSOCIATION MEET.

HUTCHINSON, Kan., Oct. 29.—Previous to last week's meeting of the American Coursing Club at Great Bend, it was not intended, or at least no announcement was made by the management of any intention to hold a meeting at Hutchinson this week, on the grounds of the National Coursing Association. The presence in this country, however, of so notable a collection of fine greyhounds and of so many men devoted to that breed, led Mr. Allison, manager of the National, to propose a little concourse here on the week following the American meet, and his proposition met with ready favor, the distance from Great Bend to Hutchinson being only 55 miles, and the interval before the dates, Wednesday and Thursday following, being sufficient to allow a thorough resting and better fitting of the greyhounds which were in the runnings at the Bend. The result of this has been a very pleasant little meeting indeed, with some pleasant little surprises and some very pretty coursing, albeit in a style quite the contrary of that necessitated by the tremendous wild hares of the Cheyenne Flats. The gentlemen who came down from Great Bend, among them Mr. J. Herbert Watson, Mr. German Hopkins, Mr. D. C. Luse, Mr. H. C. Lowe, Mr. Ira D. Brougher, Dr. S. J. Shaw and others, have been very well pleased, so much so that to-night they have sent back to the Bend for three or four more dogs, and are gamely bent on having even a better day of sport to-morrow. There were only twelve entries to-day, all of them except two being of outside dogs. Hutch-

inson is not now booming as she was a few years ago, and the duller times have detracted from the popular interest in sports. It is hoped that to-morrow there will be more local entries, and a pluckier spirit on the part of the Hutchinson men who feared to put their dogs against the imported ones. As a matter of fact, this meet was a very good time to show inclosed coursing at its best.

To-day at 2 P. M. the drive of the jacks was made over the course into the starting pen, and a stranger sight is rarely seen. About seventy-five of these great wild fellows were in the inclosed course ahead of the line of beaters, who carried a long strip of canvas, which reached from fence to fence. The jacks were apparently not very wild and often broke back through the line or squatting close, hopping off leisurely as the canvas approached them. It was a rare chance to watch the method of locomotion of the jack rabbit. For those who do not know it, it may be said that the jack in running spreads wide and throws his hind feet far ahead of his forefeet in his stride. Mr. Allison thinks he has about 600 jacks in the inclosure of a half section, possibly 1,000. They are multiplying rapidly, and all seem perfectly healthy. Only one "lumpy" jack was seen on the drive. It will be noticed, however, that these inclosed jacks were very slow. The total length of the course has been twice shortened, and is now only 550yds. and its width is only 75yds., yet out of the whole number of jacks coursed to-day, only two or three escaped, exactly the reverse of the first day at Great Bend, where the conditions were altogether more difficult. The dogs were not run muzzled.

The demonstrated fact of rabbit culture shows what coursing might be made in the neighborhood of New York were the S. P. C. A. a trifle less energetic in their opposition. The condition of inclosed jacks depends much upon the amount of exercise they get. The jacks run to-day were very slow because they were corn-fed and very fat and sluggish. The jack as a wild bird is forced to hustle every night for his food, and this hardens him. It is said that the jacks on Long Island are doing well. There seems no reason to suppose they will not soon become numerous if watched carefully. The Kansas experiment, at least so far as hare breeding is concerned, may now be called a success. Inclosed coursing, barring S. P. C. A. opposition in the great cities, might also well grow to a sucess.

Running began shortly before 3 P. M., a crowd of about 160 persons being on hand. Mr. R. Etock, of Hutchinson, acted as judge, Wm. Raill as slipper.

LANCASTER—MAJOR GLENDYNE.

The first brace in was Mr. Luse's red fawn dog Lancaster and Mr. Allison's white and brindle dog Major Glendyne. This course was excruciatingly funny. Both dogs ran cunning, and a slower lead-up or a more waiting race was never seen, each wanting "meat," and each waiting for the other to turn it to him. At the close of the course Major held possession for a few wrenches, Lancaster going wide in his anxiety lest he should do some work. The "meat dogs" were taken up and the course given Major.

NORWEGIAN—LIBERTY.

The big light brindle Norwegian, handled by Rookwood-Landseer Kennels for Mr. Phister, went in against Mr. Lowe's dark brindle bitch Liberty. Norwegian is very fast up and fairly flew to the hare, taking a turn and a possible wrench. Liberty got in on his wide turn, coming a clipping gait, wrenched and turned, wrenched twice and rushed to kill, making a possible trip, though that could not be seen in the dust. Norwegian wrenched but fell out of it again, not getting around quick enough. Liberty took up the hare, killed very cleverly and won.

BABAZOUN—DRY TIME.

Rookwood-Landseer's red dog Babazoun and Mr. Watson's light fawn bitch Dry Time went in next. To the astonishment of everybody Dry Time went ahead with a great burst and won the run-up and a turn. Babazoun ran into her on the corner and unsettled her stride, but he held for only one turn and two wrenches, leaping clear over the hare at the fence in an unhandy pass to kill. Dry Time drew by and shut the red fellow out after that, showing herself unexpectedly close and clever, and killed to great merit, rolling clear over with the hare fast in her mouth. The innocent looking bitch at once sprang into great favor, for she outfooted her speedy rival right and left. Dry Time won.

DOLLIE—MINNIE STATON.

Dr. Shaw's rugged little beauty Dollie went in with Mr. Belmont's elegant brindle bitch Minnie Staton. Dollie was naughty and ran disgustingly queer. Minnie passed her on the run-up as if she were standing still. Minnie turned, wrenched twice, turned again nicely, when Dollie sprang in and killed. Minnie Staton won.

LITTLE THOUGHT OF—LADY ALICE.

Mr. Luse's red bitch Little Thought Of and Mr. Allison's blue and white bitch Lady Alice had a beautiful run up of 225yds. neck and neck till Little Thought Of drew ahead to the scut, earning the lead, the turn, two wrenches and a trip. Lady Alice was thrown in by no merit of her own in the least, and killed, whereupon the judge gave her the course, by just what process of reasoning it is very hard for one who is not a judge to determine. Little Thought Of should unquestionably have had the course.

BELLE—LUSE'S LUCK.

Dr. Shaw's second baby, Belle, closed this series with Mr. Allison's light fawn bitch Luse's Luck. Mr. Allison's choice of names failed to propitiate the goddess of fortune, and Belle beat Luse's Luck, earning the run-up by a trifle, and placing Luck for a turn and wrench, which was about all he wanted. Belle crowded and rushed to kill, both dogs falling. Belle turned the closer on the recover, and crowded the hare to the escape. No kill. Belle won.

Second Series.

MAJOR GLENDYNE—LIBERTY.

This brace made a not very brilliant lead up, Major the better, and taking a turn and a wrench. Liberty was placed, turned and killed, and was given the course. It was a poor exhibition of work all around. The jacks were now recognized to be too slow.

DRY TIME—MINNIE STATON.

Dry Time and Minnie Staton fell together, two good ones, Minnie the favorite for she is held very fast and clever, and it was thought Dry Time had outclassed herself in her first course. The run-up was hard, perhaps 175yds. to the hare, and again, to the amazement of the fancy, the light fawn bitch came ahead, passing Minnie fair and square, earning the lead and two turns in an instant. Minnie got the hare, but though extremely clever fell out of it a bit wide. With another dog it might have mattered little, but Dry Time turned on the space of a handkerchief, and it was turn, turn, turn and wrench in a moment. Minnie was again in, turned and wrenched, but Dry Time would not have it so, and wrenched the hare ahead to a sensational kill, winning by eight points on the score. Whether she could ever do this again is a question, as Minnie is a courser herself, but she did it this time beyond earthly question. Mr. Watson had not expected this, and congratulations on the rapid improvement in the condition of his bitch were poured upon him. Both these bitches have been sadly out of condition, but life and exercise on the plains are doing them a vast deal of good. This was pretty work, and interest grew in the event. Really here was as fine a display of inclosed coursing as we have ever had in this country.

LADY ALICE—BELLE.

Alice ran up and scored again and again, placing Belle, who turned wide, recovered, wrenched and killed very tidily, but too soon for herself. Lady Alice won.

Third Series.

LIBERTY—DRY TIME.

Liberty and Dry Time led in the third series. Dry Time again, amid considerable excitement, showed ahead to the hare, and should have been credited well for speed. The score was a run up, two wrenches and a very pretty kill for Dry Time; a turn, two wrenches and a turn for Liberty. The score was 5 to 3 in favor of Dry Time, but the judge made it undecided, though the course was larger and showed more work than the Liberty—Major Glendyne course. Dry Time came out of this course with a badly cut foot.

Lady Alice ran a bye with Babazoun.

LIBERTY—DRY TIME.

Liberty and Dry Time went in again. Again Dry Time led to the hare, and at first was better. The dark brindle, however, game as a pebble herself, drew by, held possession better to the close, and won very justly.

Fourth Series.

LIBERTY—LADY ALICE.

Liberty and Lady Alice ran a hot undecided of 260yds., Liberty making one of her savage kills, falling with the hare in her mouth. After a short wait and a three-dogs course on a side bet, these went in again, and again the course was hot and short. Liberty ran up, turned, rushed and killed at once, and won.

SUMMARY OF THE DAY.

First Series.

Mr. Allison's Major Glendyne beat Mr. Luse's Lancaster.
Mr. Lowe's Liberty beat Rookwood-Landseer's Norwegian.
Mr. Watson's Dry Time beat Rookwood-Landseer's Babazoun.
Blemton-Hollywood's Minnie Staton beat Dr. Shaw's Dollie.
Mr. Allison's Lady Alice beat Mr. Luse's Little Thought Of.
Dr. Shaw's Belle beat Mr. Allison's Luse's Luck.

Second Series,

Liberty beat Major Glendyne.
Dry Time beat Minnie Staton.
Lady Alice beat Belle.

Third Series.

Liberty beat Dry Time.
Lady Alice a bye.

Fourth Series.

Liberty beat Lady Alice, and won.

Liberty won first, $60 and one-fourth of the gate receipts; Lady Alice second, $30; Dry Time third, $15; Belle fourth, $15.

Liberty is a 54lb., dark brindle bitch (Lord Neversettle—Partera), a rangy one, not yet very fast from slips, but very fit and plucky and a good clinger.

Lady Alice is a blue and white 50lb. bitch (Joe Burnside—Humming Bird), compact and fairly clever.

Dry Time is a 53lb. light fawn bitch, imported (Britain Still—Haytime). She has great quality in head, feet and forelegs. She is not ribbed very well back, and stands over a lot of ground. In tail and coat on quarters she is rough but strong. In hindquarters she is powerful, and very high standing behind. Hardly a bench bitch, to-day's work would show her a great performer, and if she does as well hereafter Mr. Watson need not be afraid of her.

Belle is a 45lb. white brindle bitch (Trales—Humming Bird), showily marked and a nice little bitch. She and her sister Dollie are very popular and pretty little creatures. A photograph of this pair in the slips, with Arthur Massey, the veteran slipper of the American Coursing Club, is forwarded in the hopes it may be received in time for illustration. These little ones are not exceptional winners, but in the photograph, which was happily caught by Mr. Phister, they show exceptionally neat, and make a bit of greyhound life not always easy to get at.

Thursday, Second Day, Oct. 30.

As on the day previous, the weather was bright and clear, but to-day was much cooler. Attendance very light. A 16-dogs stake, at $5 entrance, was arranged. Running began at about 3 P. M., a drive being first made from the lower end of the inclosure, where several hundred jacks could be seen at once on the bare ground as the beaters advanced.

LANCASHIRE LASS—VERDURE CLAD.

The first brace was Mr. Lowe's brindle bitch Lancashire Lass and Rookwood-Landseer Kennels' light brindle bitch Verdure Clad. Verdure led up, turned and wrenched. The Lass was wide two or three times, and though she killed Verdure Clad's work was so much closer that she won.

LITTLE CLIMBER—DANDY.

In a long run-up Mr. Lowe's white and brindle bitch Little Climber led Mr. Allison's black and white dog Dandy, worked handily and rushed to a speedy kill, beating Dandy pointless.

LITTLE THOUGHT OF—NETTLEFIELD.

Mr. Luse's brindle bitch Little Thought Of and Rookwood-Landseer's nomination for Mr. Phister, the white and black bitch Nettlefield, came together, and their course was the occasion of a most singular incident, and one which warrants the common expression to-night that one might as well flip coppers for the winner as to run. Little Thought Of got the run-up clearly beyond any question, and wrenched three times, holding ahead all the way to the escape, the hare being very fast. Nectlefield was thrown in at the close and perhaps wrenched. The judge gave Nettlefield the course, a most ludicrous and remarkable thing to do. He can not have seen the dogs run the course.

BELLE—LANCASTER.

Dr. Shaw's Belle and Mr. Luse's Lancaster went in. Lancaster ran up, turned and fell wide, loafing for Belle. Belle wrenched twice and turned. Lancaster drove to kill, missed and came a cropper. Belle wrenched, clung, killed nicely and won.

DOLLIE—BABAZOUN.

Dr. Shaw's Dollie and Rookwood-Landseer's Babazoun ran a short undecided. Babazoun ran into Dollie and she yelped with pain. Dollie killed. They went off again. Babazoun ran up, and held possession the better. Dollie again broke in and killed at the escape, but too late, and the red dog won. He was much faster than Dollie, but not very clever on the turns.

PAT BOWEN—YONDER HE GOES.

Mr. Ira D. Brougher's black and white dog Pat Bowen, of the same litter as Yonder He Goes (Trales—Arthur's Gipsy) went in with the one-fourth champion of last week. Pat led up in a long run up of 300yds. and wrenched twice. The hare said good-bye and went. Pat beat Yonder pointless.

WITCH HAZEL—MINNIE STATON.

Mr. J. H. Watson's importation from Great Bend, the brindle bitch once known as Lady Go Lightly, rechristened for the occasion as Witch Hazel, and not generally known as one of the Trales—Dick's Darling litter, which produced Lady in Black, Lady Barton and Little Thought Of, now went down against the elegant bitch Minnie Staton, imported by Blemton-Hollywood Kennels. Minnie went off like a rocket, led by 20 lengths, wrenched and turned wide. The little 'un wrenched twice. Minnie got in at the fence, but again fell wide. The Witch closed ahead, and for a wrench and a turn did well. Minnie exchanged the compliment, but the Witch after that did it all, crowding the hare to the escape. It was a very close course, but Witch Hazel won by one point. Minnie leaped the blind at the escape. Witch Hazel in some way got over the escape and was loose in a field full of jacks, which bobbed up one after another about her. She coursed a dozen or so and was taken up at last with a cut foot.

LATER ON—LINE OF LUCK.

Mr. Allison's brindle dog Later On and Mr. Lowe's brindle dog Line of Luck went in next, Luck led up well, being a fair galloper, wrenched and placed Later On for two wrenches. Luck drew by, turned twice, wrenched twice at the escape and won easily. He is too large a dog for close work.

Second Series.

VERDURE CLAD—LITTLE CLIMBER.

Little Climber led up with a clean go-by, passing Verdure Clad at 200yds. from the slips. Climber then wrenched and an instant later killed to great merit, picking up the hare in her stride. Little Climber beat Verdure Clad pointless.

NETTLEFIELD—BELLE.

Nettlefield ran a great course, taking lead-up, five wrenches and two turns ahead of Belle. The latter was placed for three wrenches at the close. The hare escaped. Nettlefield won.

BABAZOUN—PAT BOWEN.

Babazoun led up, turned and shut out Pat for four wrenches. Babazoun then ran wide, with ears a bit pricked up, and beyond question playing cunning. Pat was as cunning as he and waited for a turn before he killed. Babazoun won.

WITCH HAZEL—LINE OF LUCK.

Luck ran up and wrenched. Witch wrenched. Luck turned and led off, wrench and a turn again. Witch drew by and showed her great sticking qualities, wrenching and turning ahead to the close, when Luck killed to no merit. Witch Hazel scored 17¾ points. Line of Luck scored 5½ points. The judge gave the course to Line of Luck.

Witch Hazel is a hardy little burr, of small quality, except in performance, like all her litter. She is slow up, but one of the hardest to get away when once in.

Third Series.

It was announced that Mr. Lowe and Rookwood-Landseer Kennels would divide the stakes, each having two dogs in.

SUMMARY.

First Series.

Verdure Clad beat Lancashire Lass.
Little Climber beat Dandy.
Nettlefield beat Little Thought Of.
Belle beat Lancaster.
Babazoun beat Dollie.
Pat Bowen beat Yonder He Goes.
Witch Hazel beat Minnie Staton.
Line of Luck beat Later On.

Second Series.

Little Climber beat Verdure Clad.
Nettlefield beat Belle.
Babazoun beat Pat Bowen.
Line of Luck beat Witch Hazel.

Third Series.

Little Climber and Line of Luck divided total, $110, with Babazoun and Nettlefield.

Little Climber is Lord Neversettle—Partera, weight 54lbs., a great killer and not a bad one.

Line of Luck, same breeding, is an immense creature, standing apparently over about 10ft. of ground. He has a good loin and can travel, but is too large for this work. He weighs 68lbs. now.

Babazoun is a 61lbs. red dog, Britain Still—Fascination, of good quality, fast, but not especially good on a turn.

Nettlefield (property of Mr. Phister) is by Dick Day ex Camborne. She is a white and black, about 50lbs., and a handsome one. She is the family pet in Mr. Phister's kennels.

This closed the meeting. E. HOUGH.

NATIONAL BEAGLE CLUB TRIALS.

HYANNIS, Mass., Nov. 3.—Most of the members of the club came down to the village by the 4:15 train from Boston, and the sight of six or seven couples of beagles created quite an excitement both on the way down and when we arrived. The whole population of this little town from the postmaster down to the common loafer, is on the *qui vive* for to-morrow's fun, and it is certain that the trials will be well attended. The members of the club present this evening are: O. W. Brooking, F. W. Chapman, A. W. Parry, W. F. Rutter, Jr., A. R. Crowell, Jos. Lewis, Chas. E. Peabody, Bradford S. Turpin, W. A. Power and H. W. Lacy. After seeing the dogs comfortably housed for the night, the party adjourned to the house of Mrs. W. Myer, where a substantial supper having been disposed of, the business of the evening commenced. At the meeting the above named gentlemen were present. Business opened with the election of H. W. Lacy as a member. A member of the club also donated an oil painting of the best beagle in all classes. The trial to be run off after the finals of the regular classes have been decided.

As will be seen by the appended list the bitches are in the majority in every class, the under 15in. class being an especially good one. The complete list is as follows:

Class A—Dogs 15in. and under.

DON (W. F. Rutter, Jr.), white, black and tan (Rattler III.———).

SUNDAY (Geo. E. Greenleaf), black, white and tan (Frank Forest—Sue).

CLYDE (Bradford S. Turpin), white, black and tan (Frank Forest—Susie).

FRANK FOREST (A. Parry), black, white and tan (Riot—Skip).

Class B—Bitches 15in. and under.

BELLE ROSS (Bradford S. Turpin), white, black and tan (Ross W.—Cricket).

BABY DEANE (E. W. Whitcomb), white, black and tan (Fitz Hugh Lee—Belle Dimon).

TWINTWO (Chapman & Jamieson), black, white and tan (Kennealy's Lea—Tone).

MOLLIE (Clark and Rutter), black, white and tan (Comeroe—Nell).

JUNE ROSE (O. W. Brooking), white, black and tan (Frank Forest—Juno).

SUE (Geo. P. Berry), black, white and tan (Comeroe—Susie).

FOREST (A. Parry), black, white and tan (Frank Forest—Sue).

TONE (Glenrose Kennels), white, black and tan (Flute M.—Skip).

LILLA (Glenrose Kennels), tan and white (Cameron's Racket—June).

CORA (F. W. Chapman), white, black and tan (champion Rattler—Scioto).

TOPSY (F. W. Chapman), white, black and tan (champion Trailer—Spot).

DESDEMONA (F. W. Chapman), white, black and tan (Kennealy's Lea—Tone).

Class C—Dogs 13in. and under.

FRANK FOREST (A. Parry), black, white and tan (Riot—Skip).

CLYDE (Bradford S. Turpin), white, black and tan (Ross W.—Cricket).

Class D—Bitches 13in. and under.

BANNER QUEEN (F. W. Chapman), white and tan (champion Bannerman—Queen).

BABY DEANE (E. W. Whitcomb), white, black and tan (champion Fitz Hugh Lee—Belle Dimon).

BELLE ROSS (Bradford S. Turpin), white, black and tan (Ross W.—Cricket).

The drawing for the trials resulted in the following order of running:

Dogs—15in. and under.

Clyde against Don.
Frank Forest against Sunday.

Bitches—Under 15in.

Mollie against Baby Deane.
Desdemona against Sue.
Twintwo against Gypsy Forest.
Lilla against June Rose.
Cora against Belle Ross.
Tone, a bye.

Dogs—Under 13in.

Clyde against Frank Forest.

Bitches—Under 13in.

Belle Ross against Banner Queen.
Baby Deane, a bye.

Afterward an informal discussion took place among the members on the prospects of game to be found in the neighborhood, which was reported as favorable. The whys and wherefores of the club's rejection by the A. K. C. were then discussed. After numerous opinions were expressed, it was the unanimous opinion of the club that this little setback need have no effect on the club or its future. They would carry out the purpose for which the club had been formed, *i. e.*, to improve the working beagle, and doubtless the A. K. C. would see in the future which club best deserved their consideration. It was the general opinion that next year, after the beagle breeders of the country saw that the club was in earnest, and that their first attempt at beagle trial was a success, they would at the next trial have a much larger entry. The members present are full of enthusiasm and everything points to success. The class of dogs present are excellent, many bench winners being among them, and all the best strains are represented, so that the trials will be useful to the breeder in determining which strains are the better to breed to, for dogs that can hunt.

TUESDAY, Nov. 4.—The start for the grounds was made at 6 A. M.

By 6 A. M., after a hearty breakfast, the members of the club and their dogs had comfortably filled two farm wagons and were on their way to the grounds where the trials are to be run. The morning was quite cold and the haw frost covered everything with a white pall. A drive of three miles brought us into a wild section of country, covered with dense shrubbery, which at a glance I saw would be hardly suitable for the running of beagles, and that the judges would have a pretty difficult task to keep track of the dogs at all was apparent. Just as the sun was struggling up beyond the shore, at 7 A. M., the first couple in the first series was put down.

CLYDE—DON.

The dogs soon made for the dense cover, where it was almost impossible to follow them. They soon parted company, and for nearly an hour it was push and scramble all the time for the judges to keep either dog in sight. It was then decided to take them up, as neither had found fur or a sign of it. Heat undecided and left till more likely ground could be reached. Mr. Turpin handled Clyde and W. J. Ruth, Jr., Don. Don showed at once far more hunting sense and style, but the judges decided to give Clyde another chance, on game if possible. Moving near the shore, where rabbits were said to be more plentiful, the next couple were laid on.

FRANK FOREST—SUNDAY.

These were A. Parry's Frank Forest, handled by owner, and Geo. E. Greenleaf's Sunday, handled by O. W. Brooking. After some work in thick cover, more open ground was reached. Near some cranberry beds Sunday struck a trail, and giving tongue, soon hed Frank Forest at his heels, who so far had shown better hunting powers and style. Frank took up the running and soon left Sunday, who pottered round considerably, looking too much to his handler. Frank meanwhile had taken the rabbit in hot pursuit, but the many crossing trails seemed to bother him for a while, which allowed bunny to put some distance between them, when she was seen to cross a ridge in full view of the spectators. Frank soon picked up the trail again and carried it into thickest of cover. He could be heard for several minutes hot on, when the judges decided to give him the heat, and at that moment puss broke cover again, and crossing the open, was followed in about five minutes by Frank, who was then caught. Down one hour. Frank Forest showed most style and hunt, Sunday being seemingly unfamiliar with his work and running very slouchy.

CLYDE—DON.

These two were put down at 8:30 to run off their undecided heat. Don was all fire and go and hunted persistently, but without result. Many likely places were drawn blank by Don, but Clyde did not seem to be himself and walked about in a listless manner. After being down twenty minutes Mr. Turpin asked the judges' permission to withdraw his dog. This was granted and the heat awarded to Don. It seems Clyde had, the previous day, got on the trail of a hare and ran himself to a standstill, but not being accustomed to such hard running it had broken him up.

FRANK FOREST—DON.

These two smart hounds were put into cover at 9:10 by the side of some cranberry bogs. They ranged together for some time in thick brier and bushes here and there, equally good in their work, for nearly an hour. Working toward the swamp, nothing being found they were taken up and the wagons carried all hands to another and more likely part of the woods, alongside the shores of a creek. They ranged through the cover for an hour or more, when Don opened out on a trail, and the rabbit was seen to cross a ridge; but Don failed to hold the scent and hunted round on an uncertain trail for half an hour, giving tongue occasionally, but never getting away. Frank meanwhile was working the same way, but mute. As the dogs had now been down more than two hours and the heavy work was beginnidg to tell on judges and handlers alike, and as there seemed no likelihood of starting any game, it was decided to take the dogs up and go to lunch, and in the meantime find out if more likely ground could be found. The land thereabouts is entirely unsuited for such trials, as the judges must get a chance to see the dogs in their work. In this thick cover they part, as a rule, and there is an end of it, as far as arriving at a decision of their merits is concerned. The heat was left undecided.

On the way to the house the idea of going to Salem, New Hampshire, was discussed, as far more suitable ground could be had there and rabbits were known to be quite plentiful. After luncheon it was finally decided, at a meeting of the members present, to pack up our things and shake the dust of Hyannis from our feet A photograph of the members, their dogs and the judges was taken by Mr. Libbis. Train was then taken for Boston, 79 miles distant. Arriving at 7 this evening, and supper eaten, we are now waiting for the 11 P. M. train for Lawrence, Mass., where the night will be spent and an early train taken to Salem, N. H., about 24 miles from here. We all fervently hope that better ground is in store for us, as the club is deserving of much praise for their pluck and persistence. H. W. L.

INDIANA KENNEL CLUB TRIALS.

THE fourth annual field trials of the Indiana Kennel Club began on the club's grounds at Bicknell, Ind., Thursday, Oct. 30, with the Puppy Stake for all dogs born on or after October, 1889, in which were fourteen nominations and six starters. The drawing was as follows:

EFFIE K. (George E. Gray), black and white English setter bitch, pedigree not given,

against

MARIE BURR (W. F. Burdell), liver and white English setter bitch (Paul Gladstone—Latonia).

NUTWOOD, (Fairbank & Board), liver and white pointer dog (Ossian—Nellie E.),

against

FLORA (Geo. G. Ware), black, white and tan English setter bitch (Gladstone's Boy—Clara).

PAXICO (A. J. Gleason), liver and white pointer dog (Ossian—Nellie E.),

against

ONOTA DAN (F. L. Cheeney), red Irish setter dog (Chief—Bizreena).

First Series.

MARIE BURR AND EFFIE K.

Marie Burr, handled by McLin, and Effie K., handled by Good, were put down in a stubble field on the Horn Farm at 8:20. Both bitches had a very nice way of going, and showed considerable speed for puppies. Mary was first to find a bevy, which she pointed nicely; Effie being brought up to back, refused to do so, but ran in and flushed the birds. Both dogs were steady to wing. The birds were followed and both dogs dropped into a point simultaneously on the same bird. Both handlers shot when bird was flushed, and the dogs were steady. They were taken up at 8:43. In speed and range they were about equal, but in style Marie was superior.

NUTWOOD AND FLORA.

Nutwood, handled by McLin, and Flora, handled by Poindexter, were put down in stubble, where last brace finished, at 8:49. Both handlers called point in a few minutes, but before the judges got up the dogs moved on. Flora was first to find; she pointed a bevy nicely and was steady to wing. Nutwood not near enough to back, the birds went to corn and briers and were not followed. Passed into woods pasture. Flora false pointed, then she duplicated the performance three times. They were taken up at 9:33. In speed and range they were about equal, but in style while moving Nutwood was far superior, as he went with a high head, while Flora was of low carriage.

PAXICO AND ONOTA DON.

Paxico, handled by Gleason, and Onota Don, handled by Morgan, were started in a stubble at 9:50. A bevy flushed in a patch of corn in near proximity to Don. The birds were followed to where they alighted near the railroad. Don pointed a single just in time to prevent his being scored with a flush. Then both dogs pointed a single each, and were taken up at 10:10. In style, range and speed Paxico was decidedly superior.

The judges decided not to spot out any of the dogs, but allow them all to run again for the prizes.

Second Series.

EFFIE C. AND MARIE BURR

were started in a stuble at 10:30. Marie soon pointed, the bird flushed almost instantly. Then Effie pointed a single and was steady to wing. Effie then made a false point and Marie did the same. Then Marie pointed a bevy and won. They were taken up at 10:56. In this heat Marie did some very nice work.

NUTWOOD AND FLORA

were cut loose in an open field at 11:00. Flora flushed a single, then she pointed a rabbit. Nutwood pointed a single nicely and was steady to wing. Flora then made another flush and next false pointed. Passed to woods Nutwood made game and was drawing on his birds when Flora saw him. She rushed in ahead and stole the point. Nutwood backed promptly, which I consider a remarkable piece of work for a puppy of his age, as there are few old dogs that would have acted so nicely under the same circumstances. Both dogs were steady to wing. The birds were followed, Nutwood getting a nice point on a single, to one point and four false points for Flora. The dogs were taken up at 11:38 for dinner. They were cast off again in the woods on the Bunting farm at 1:12, which was drawn blank. Passed to stubble Flora false pointed and Nutwood backed. Then both dogs pointed a bevy at the same time and were steady to wing. Flora pointed a single and Nutwood backed. Flora then made another of her false points, then she repeated the performance. They were taken up at 1:45 and the heat was given to Nutwood. This heat should have been decided before dinner, as there was no comparison in the work of the two dogs, Nutwood showing superiority in everything that is desirable in a bird dog.

PAXICO AND ONOTA DON

were put down in a pasture field at 1:56, which was drawn blank. Passed into stubble, Don was first to find a bevy, which he pointed nicely and was fairly steady to wing. Paxico then located a bevy and pointed them nicely and was steady to wing. Before leaving this stubble Paxico got two nice single points, while Don got one point, and going into corn he made a flush. The dogs were taken up at 2:40 and the heat given to Paxico, who deservedly won, as his performance on birds was really brilliant.

Third Series.

PAXICO AND MARIE BURR.

Nutwood and Marie Burr both being handled by the same handler Paxico had to change places with Nutwood. They were started at 3:08, Paxico in bottom near a branch stopped on a point going down wind just as a bevy flushed and dropped to wing. The birds went to a brier thicket and were followed, where Marie pointed a single; the cover being so very heavy the judges ordered the dogs taken to the open and started again. Near a fence Paxico pointed a bevy and Marie backed. The birds were flushed and followed. Paxico pointed where the birds were marked down and when Gleason went in to flush a bevy arose from the point. Right here the dogs should have been taken up and the heat given to Paxico, but the judges ordered the dogs on and both secured a single. Then Marie pointed a single nicely. Paxico dropped to a single point in time to avoid a flush. Then Paxico flushed a single and Marie did the same. Passed to cornfield Paxico pointed a bevy and Marie backed. I learned after the heat was decided that the judges gave the credit of this find to Marie. Then Marie pointed a single in the corn. Paxico also pointed a single. The birds were followed to an orchard, where Paxico got one single point near the fence. The dogs were taken up after leaving the orchard and going about 300yds. into a stubble without finding anything, and the heat given to Marie Burr. I consider this an eroneous decision, as the dog in my opinion was clearly entitled to the heat. They were taken up at 4:30. Nutwood a bye.

Fourth Series.

FRIDAY, Oct. 31.—The day was cold and raw, and a strong west wind blowing.

MARIE BURR AND NUTWOOD

were put down in the stubble on the Bunting Farm at 8:20 A. M. to run for the first prize. Marie seemed to have lost all of her dash and speed, not going more than fifty yards from her handler, while Nutwood was going at a high rate of speed and hunting the fields with great dash, a high head and a merry tail, not pottering in the least. Marie pointed near the railroad which proved false. Marie ran into a bevy, I might say, by accident, which she pointed; she was steady to wing. The birds were not followed. The dogs were now taken to the woods, which were drawn blank. While going to these woods a bevy flushed wild and went to a cornfield. After leaving the woods the judges ordered the dogs into the corn to find this scattered bevy. Marie by this time was not working further than twenty to thirty feet from her handler, while Nutwood continued his way of going. McLin happened to walk to where the birds were and Marie pointed the bevy. Then she made two false points and one true one, while Nutwood got one point. The dogs were taken up at 9:15 and the heat and first prize given to Marie Burr. The judges seemed to take nothing into consideration but points. In style, range, speed and endurance Marie was very inferior. The dogs should have been run longer or their decision reversed, as the dog was her superior in everything but luck.

Fifth Series.

Effie K., Flora, Nutwood and Paxico were selected to run in the order named for the remaining prizes.

EFFIE K. AND FLORA

were put down in stubble at 9:15. This field was drawn blank. Passed to another stubble, Flora made three false points and was backed by Effie K. Flora then flushed a bevy. The birds were followed to the woods where Effie got two single points, while Flora got two more of her false points. The dogs were taken up at 10:08 and the heat rightly given to Effie K. In all my experience at field trials I have never seen such a persistent false pointing dog as Flora.

NUTWOOD AND PAXICO.

This brace of litter brothers was cast off in a stubble field at 10:15. Paxico pointed near a fence and was backed by Nutwood. Gleason flushed the birds from the briers on the opposite side of the fence. Then Paxico pointed in the briers. Gleason failed to find a bird to the point, although the spectators flushed several birds from the grass near the bushes. Then both dogs pointed singles nicely and were steady to wing. In the last point mentioned Nutwood was entitled to the find. The dogs were taken up at 11:15 and the heat given to Nutwood. Had I been judging the dogs I surely would have continued the heat or given it to Paxico. In style, range and speed they were about equal. An adjournment was now had for dinner.

Sixth Series.

EFFIE K. AND NUTWOOD.

This brace was put down at 1:15 in a stubble field to run for second prize. Nutwood's hard work began to show itself when this heat started; although he gamely worked his ground it was very evident that his powers of endurance had been severely tested. He had worked in five hotly contested heats, while his opponent had only worked in three. Effie K. got two points, while Nutwood scored one. They were taken up at 2 o'clock and the heat and second prize given to Effie K. and Nutwood was placed third. All field trial rules are at fault that will compel a tired dog to run against a fresh one for a prize, and until that fault is eliminated from the rules the result of trials will not be satisfactory to the gentlemen who own and run dogs, neither will they be just.

This Puppy Stake was judged by Dr. J. B. Alexander, Mr. G. D. Jay and Mr. Wm. M. Kerr.

SUMMARY.

Second Series.—All dogs remained in to run for the prizes. Marie beat Effie K., Nutwood beat Flora, Paxico beat Onota Don.

Third Series.—Marie Bur beat Paxico, Nutwood a bye.

Fourth Series.—Marie Bur beat Nutwood and won first.

Fifth Series.—Effie K. beat Flora, Nutwood beat Paxico.

Sixth Series.—Effie K. beat Nutwood and won second, Nutwood third.

MEMBERS' STAKE.

The drawing of the Members' Stake resulted as follows:

JUBILEE (J. M. Freeman), blue belton and tan English setter dog (Gath's Mark—Esther),

against

ROSALINE WILKES (W. M. Kerr), black and white pointer bitch (Ossian—Fannie K.).

HOOSIER HARRY (H. A. Comstock), liver and white pointer dog (Devonshire Sam—Gypsy),

against

LONE JACK (Royal Robinson), black and white English setter dog (Change—Queen B.).

These dogs contested for the club trophy, a handsome silver cup. The owner of last year's winner to receive the entire entrance money, $5 entrance. Each member to handle his own dog.

First Series.

JUBILEE AND ROSALINE WILKES.

This brace was put down in stubble on the Freeman farm at 2:15. Both dogs started off at a clipping gait and convinced the judges and all others that they were good ones, as far as speed, range and style were concerned. Passing into another stubble Jubilee pointed, Freeman called point, but before the judges got up the dog left his point and went on. Rose coming up at great speed wheeled into a magnificent point where Jubilee had been pointing. Kerr flushed a bevy to this point, shot and missed, Rose was steady to shot. On, Rose nailed a single, and Jubilee also pointed one near the fence. The dogs were now sent on to hunt out the balance of the stubble, which was drawn blank. They were then sent into the woods after the scattered birds, where Rose made three points in one, two, three order, while Jubilee backed one of the points indifferently, and scored one false point. The dogs were taken up at 2:56 and the heat given to Rosaline Wilkes. The work done in this heat by Rosaline Wilkes was fully up to the standard of the very best English setters and stamped her as one of the best, if not of the very best pointer bitches in America. She was quick and snappy in her work on birds and stylish and rigid on her points, while her style in action would be very difficult to equal.

LONE JACK AND HOOSIER HARRY.

This brace was put down in stubble at 3:02, and worked east toward a cornfield. Harry began roading down wind and roaded into a bevy; he was, however, steady to wing; he should have pointed these birds. Working back toward where they were first put down, Jack pointed a bevy in heavy cover. On, Harry flushed a single; Jack pointed a single in briers. Harry flushed another single, then both dogs scored a point on a single; both dogs were steady to Comstock's shot. Each secured single points in briers. Then Jack flushed twice and got a good point on a single, nd was steady to Robinson's kill. The dogs were taken up

ROUGH-COATED ST. BERNARD LOTHARIO.

at 3:30 and the heat given to Lone Jack. Neither dog showed much range or speed.

Second Series.

ROSALINE WILKES AND LONE JACK.

This brace was taken about a half mile to a stubble field where they were put down to run for the first position and the cup. They were put down at 3:50; the dogs entered the field at the southeast corner and worked north to the end of the field, then west to the west side, then south. When near the south end Rose, who had been east, wheeled into a bevy point; just as she did this Jack, coming from the same direction, flushed two outlying birds of another bevy which were about thirty feet north of where Rose was pointing. When he flushed these two birds he stopped momentarily, then deliberately jumped into and flushed the bevy. These birds went directly over the bevy that Rose was pointing, and they flushed. The birds entered a cornfield, and judges ordered the handlers to follow the birds.

A short distance in the corn Rose pointed. Kerr failed to flush a bird to the point and ordered his dog on. Your reporter and one spectator who were directly behind Rose when she pointed, came up and flushed the bird. Just at this time Robinson called point for his dog, and the judge told him to kill the bird as he desired it for his breakfast. Robinson shot and killed. He was then ordered to retrieve his bird. Kerr in the meantime had been instructed to hold his dog in check, which he did. Jack, instead of retrieving the bird, pointed another single, and when his handler informed the judge that his dog had another point, he was instructed to shoot and kill that bird also. This being done, the judges instructed Robinson to bring his dog out and work east. Mr. Robinson replied that he would have to find his dog first, as the corn and weeds were very heavy. While looking for his dog a spectator discovered the dog on a point, and called Robinson's attention to the fact. When Robinson informed the judges that his dog was pointing, they ordered the dogs up and gave the heat and first place to Lone Jack.

I think that this was the most unjust decision that I ever heard of or saw in any field trial. The judges claimed that they did not see the work done by the dogs when they found the bevies, therefore did not reward or penalize either dog. They ordered Kerr to hold his bitch in check while Robinson was trying to retrieve his bird and then gave Robinson's dog credit for two points that he got after the bitch had been taken up by her handler. When they ordered Kerr to hold his bitch, of course, she was not in competition and the judges erred in giving Jack credit for three points when he was only entitled to one. In style, speed and range Rose was far superior. This decision was so unjust that Mr. Robinson himself acknowledged that the bitch should have had the heat. A protest has been filed with the secretary by Mr. Kerr, and the matter will come before the board for action at its next meeting.

The judges then placed the remaining dogs in the following order: Rosaline Wilkes, second; Jubilee, third; Hoosier Harry, fourth. Dr. J. B. Alexander and Mr. G. D. Jay were the judges. P. T. MADISON.

A DUMMY JACK DEVICE.—St. Louis, Mo., Oct. 31.—Mr. E. Burgess, of this city, who has just returned from California, will shortly introduce a contrivance which he saw there. The device will no doubt be hailed with delight by the Kansas jack-rabbit. It is a dummy rabbit that works on a wire, and travels at lightning speed. The wire can be stretched for a half-mile or more, and, by the aid of a crank, the dummy covers the ground at a pace that surprises the liveliest greyhound. The movement is a close imitation of the genuine hare, and the sight of the dummy and its movements creates the greatest excitement among the dogs. The device promises to allow coursing all the season round, and there is no danger of the stock of hares giving out. All of the owners of greyhounds in this city are anxious to witness its workings, and have promised to be on hand with their dogs when the trial takes place.—UNSER FRITZ.

CLEVELAND SHOW.—Cleveland, O., Nov. 1.—*Editor Forest and Stream:* The Cleveland Kennel Club claim as dates for their fourth dog show April 1, 2, 3 and 4, 1891.—C. M. MUNHALL, Secretary.

THE ST. BERNARD LOTHARIO.

THE subject of this week's illustration is Mr. E. B. Sears's recent importation Lothario, who in many respects is the equal of any of his breed in America. Mr. Sears purchased him from Mr. George Booth, of Hull, Eng., after he landed in America, he being brought out by Mr. Booth's younger brother Edward. Lothario is by champion Valentine out of Saffron; she by champion Plinlimmon out of Belladonna. Champion Valentine by champion Bayard out out of Vesta. He has one of the grandest of heads with one of the smallest ears ever seen on a St. Bernard. He has grand bone, excellent quality, and if he stood a little higher would be a hard nut to crack. He is a rich orange color, with white nose band and blaze, white chest, forelegs, hindfeet and tip of tail, with dense black shadings; stands 31½in. high and weighed when last shown 178lbs.; his skull measures 27in., muzzle 17in., chest 40in., loin 33in., length of body 36in., tip to tip 84in. His winnings in England are second prize, Liverpool, 1889 (Sir Bedivere first); second prize, Manchester, 1889; third prize, Crystal Palace, 1889 (beaten only by Alton and Lord Bute, and winning over Mayor of Leeds, Plinius, Othello, Refuge II. and Scout, together with over fifty others); third, open class, and second, novice class, Manchester, 1890, in a class of fifty-five St. Bernards. The English *Stock-Keeper* of Feb. 1, 1889, says of him: "Lothario is also a grand one, great bone, immense size, good body, style and coat; he is a good specimen, as he should be to beat Lord Warwick, always a favorite of ours, his breeding and quality should make him valuable for breeders."

DOGS OF THE DAY.

ANTICIPATING the receipt of the *Kennel Gazette* for October on Saturday, I purposed discussing this week the amendments to the A. K. C. constitution which were to be offered by Mr. Vredenburgh and were ordered published in the current issue of the *Gazette*. Owing, I suppose, to the postal clerks at Philadelphia having to participate in some election work, the *Gazette* was not distributed until Monday, and when it did arrive it did not contain the amendments in any shape which would lead to their being easily detected. The proposed new constitution is published without any clue as to what is omitted or what is new, and until such is obtained criticism is without much value.

From a cursory glance through the various articles which go to make up the whole there does not seem to be any very radical change contemplated. I would suggest to Mr. Vredenburgh that in order to let us know what the changes are that he publish them in the customary form in the sporting papers. Even that will hardly meet the requirements of the case, for it precludes the possibility of any amendments thereto, and notice of these cannot be given in time to have them acted upon on Dec. 11. It is doubtless distinctly understood by all that at that meeting the only question that can be put to the delegates is the notified amendment. No person can then offer an amendment or substitution for anything proposed by Mr. Vredenburgh, and a desirable change may, through faulty wording or some slight conflict with another article, fail to be accepted. As a matter of fact it is a debatable question whether the amendments are put in proper form to be acted upon at all unless the view is taken that the proposed constitution is an amendment in its entirety, and that, to me, is strained.

Take, for instance, the first change which I notice. It may not be a change after all, but the wording seems new to me. In Article II. we read, "The object of this Association, * * * It shall adopt and enforce such rules as shall tend to the uniformity, and to the proper conduct of individuals interested in the breeding or sale of dogs, also to the proper regulations of bench shows and field trials." I should suppose that this was meant to be "such rules as shall tend to uniformity in regulations of bench shows and field trials, and to the proper conduct of individuals interested in the breeding or sale of dogs." There is somewhat of a difference between these, and I doubt very much whether Mr. Vredenburgh proposed that the club should adopt "such rules as shall tend to the uniformity * * * of individuals interested in the breeding or sale of dogs." Yet that is the proposition which is to be voted upon. The delegates cannot propose at the meeting to transpose a word or alter a phrase in any way, but must vote yea or nay on each article as it is read in its entirety. The reason for this is found in the fact that thirty days' notice of each amendment is required. This was the ruling as laid down by Mr. W. H. Child when he was president, and it is sound and parliamentary.

I am certainly of the opinion that President Belmont will so hold if he has to decide upon the question of a substitution, and I commend to his particular attention the advisability of opportunity being afforded for a thorough understanding of what the amendments really are, and the offering of substitutions thereto, which in the opinion of any delegate may be deemed advisable. Not being a delegate at present, I cannot officially give notice of any amendment I might favor, though there would be no difficulty about that, for as an associate I have the right to make suggestions to the associate members' president, leaving it to his judgment to present them if he deemed them suitable.

There are other changes which might be suggested if opportunity was afforded. For instance, it is proposed that the treasurer give a bond to the president, but the A. K. C. has no voice in the matter, for the bond need only be satisfactory to the president. Would it not be more suitable to have it made satisfactory to the executive committee or the advisory committee?

My object at present is to draw attention to the lack of opportunity afforded for perfecting the constitution, and I only instance the foregoing to show where substitutions might be desirable, but cannot be made. Take, for example, this matter of the treasurer's bond. It is certainly desirable to have such a bond, but it might not be possible to get a two-thirds vote in favor of the whole section on account of placing the acceptance of the bond entirely in the hands of the president and allowing the club through its executive committee no voice in the matter. If the vote thus failed the entire section goes under.

I remember when Mr. Child and myself were charged with the duty of preparing amendments to the constitution several years ago, we offered what we deemed advisable, but in order to give elasticity to the propositions I personally offered one or two substitutions so as to give a choice in cases where we thought our views might not find favor in their entirety.

We had rather a funny experience, by the way, over these amendments. In some manner Mr. Peshall was supposed to be on the committee through Mr. Elliott Smith resigning. We met in Philadelphia, and Mr. Peshall would not take no to his ideas of a mail vote for officers. Mr. Child did not favor the idea very much and neither did I, but we gave in to Mr. Peshall. When they came before the club Mr. Child was president, and naturally the support of this particular amendment should have fallen upon Mr. Peshall. Judge, however, to Mr. Child's and my amazement when upon its being read Mr. Peshall peremptorily declared that he was opposed to any such idea, whereupon it devolved upon myself, who favored it least of all, to take up the cudgels on behalf of the committee and support the proposition. Needless to say it did not pass.

Mr. Jean Grosvenor, who, by the way, is getting together a kennel of fox-terriers, advises me that "doggy matters are beginning to breathe again" down East, and as an evidence of this renewed life the New England Kennel Club has determined to do business at the old stand during the first week of April. The show committee consists of Messrs. Fay, Moore, Thayer, Grosvenor and Curtis.

Mr. J. P. Willey has lost two promising black and tan spaniels. It was his intention to show a kennel of black and tan cockers at New York next February, but the color combination is now broken up. I have to thank Mr. Willey for an excellent photograph of Black Pete, and also for a photograph copy of the engraving of the late A. W. Langdale and his spaniels. It reminded me of the time I met "the Captain" at Hull show in 1884, just six years ago next week. The weather was anything but inspiriting, but no one could feel out of sorts when the effervescent Langdale was one of the company.

The *Stock-Keeper* says anent my proposition for Mr.

Harding Cox as judge in the event of an international beagle competition, that that gentleman will be eminently satisfactory. It now rests with the beagle men, and Mr. Lacy might see what they think of it when he is at the beagle trials.

The meet of the Radnor Hunt at the Chestnut Hill Kennels last Saturday was a brilliant success socially, and the line of country being in full view of the spectators on the hills it was a very pretty sight. Mr. Harrison was first horse.

An exhibitor at the late Wilmington show asks me to say that two of his dogs died under very peculiar circumstances soon after their return. He held a post-mortem on the second one and was fully convinced that ground glass was the cause of death. Another dog benched near him is also reported dead after exhibiting the same symptoms. The only way he can account for the deaths is the fact that his two dogs defeated those of an exceedingly irate exhibitor, but this charge, if it is a charge, is so serious that it would be well not to give names. J. W.

DOG CHAT.

WE learn from Mr. E. H. Moore, the secretary, that at the annual meeting of the New England Kennel Club the following officers were elected: President, F. Blackwood Fay; Vice-President, Jean Grosvenor; Secretary, E. H. Moore; Treasurer, Geo. A. Fletcher; Delegate to American Kennel Club, F. Blackwood Fay. Board of Governors—John E. Thayer, Bayard Thayer, Frank M. Curtis, Geo. H. Eddy, C. S. Hanks and above officers *ex-officio*. Bench Show Committee—F. Blackwood Fay, Jean Grosvenor, John E. Thayer, Frank M. Curtis, E. H. Moore. They claim the dates March 31 to April 3, 1891, for their seventh annual dog show; consequently they follow the Lynn show, an arrangement which ought to be beneficial to both.

We hear from Mr. A. R. Crowell that he has sold the rough-coated St. Bernard bitch La Pucelle to Mr. E. B. Sears, Melrose, Mass. La Pucelle is by champion Save (E. K.C.S.B. 10,626) out of Faultless, she by champion Bayard, and was whelped Oct. 14, 1886. Her winnings are: Second (litter), St. Bernard Club; 3d, St. Bernard Club, 1887; vhc., Olympia, 1889; reserve, Tunbridge Wells, 1890; beaten only by Lady Sneerwell and the new wonder Andromeda. She has a daughter already in this country, Zenith, owned by Mr. Teague, and is also the dam of Mr. Rutherglen's Rienzi, which he imported recently. This ought to make a welcome addition to Mr. Sears's list of brood bitches.

We did not receive the weights of the winning dogs in the All-Age Stake at Great Bend, Kansas, until just as we were going to press last week. They are as follows: Lord MacPherson 56lbs., Lady Barton 43lbs., Lady in Black 38lbs., and Yonder He Goes 52½lbs. Thus it appears that Lady in Black is indeed somewhat of a freak, as she does not weigh more than a good-sized bull-terrier. We hear that Mr. Hopkins will run Minnie Staton in the inclosed coursing meeting at Hutchinson, Kansas, which was to come off, we believe, either last week or this. No doubt this close-running bitch will stand a better chance with the hare in this mode of coursing, and as the weather will not be very warm, the muzzle will, we trust, be no detriment. This running, and the exercise she is sure to get between now and the Merced meet, will very likely put this bitch into something like shape, when she may give a better account of herself on the Pacific slope, at which meeting "our only German" wishes to retrieve his lost laurels. This also applies to Mr. Watson's Drytime, which we hear is a certain entry for the Merced stakes.

We have received several inquiries about the interesting letter we mentioned in last week's "Dog Chat" as having been received from Mrs. Lee, regarding large St. Bernard pups. We may say in answer that we gave the substance of this letter then. This has raised the question as to the best plan to be pursued in order to attain the good results in raising St. Bernards and other dogs of large breed. Would it not be a good idea for the breeders of these dogs to give us their experience in raising pups; their mode of feeding and exercising, on the principle that two heads are better than one any time. A good deal of valuable information is gained by the tyro in such discussions which he cannot secure in any other way. As proof of my assertion that more attention is paid to this part of kennel management in England than here, we may mention the case of Scout, the noted St. Bernard, which at one time, though a splendid-looking young dog in other respects, was lamentably weak in pasterns. His owner, Mr. Gosling, went to the trouble and expense of having a sort of carriage made for him, in which he could walk about while exercising, and which had the effect of keeping his heavy body from bearing down on his pasterns until they were strong enough to do their duty. In this way the dog was greatly improved, though it was doubtful if he would ever become quite strong in that particular part. There are several dogs we could name which, if such a plan had been pursued when quite young, would now be a good deal straighter and stronger in this respect than they are now.

We almost fell into a similar error as that made by our Philadelphia contemporary, in writing some remarks about the clashing of dates of the Baltimore and Pittsburg shows next spring. It seems that the Duquesne Kennel Club claimed March 2, some time since, at the A. K. C. office, but was decidedly derelict in its duty to the kennel world at large in not advising the other kennel papers of its claim. This led the Baltimoreans to suppose they had a clear field, and naturally they picked out the dates which suited them best, and advised the papers of their decision. We are not aware whether they sent in this claim to the A. K. C. or not, but we find no mention of it in the September number of the official organ. Now we understand that the Maryland Club have been generously allowed this date by the Pittsburg people, as unless they had done so the M. K. C. would have been compelled to forego their show altogether. Pittsburg now takes the following week. After this little contretemps, it would be well for kennel clubs to send in their claims for dates to the kennel papers at once, so that the outside world may not be working in the dark for a month, and thus prevent a repetition of such blunders.

Mr. Malcolm has made the first move in his determination to sever his connections with the "men of dogdom," by sending in his resignation as the Maryland Kennel Club delegate to the A. K. C. We think Mr. Malcolm somewhat wrong in the estimation he has formed of the "men of dogdom." In every walk of life he will find men who are at variance with his ideas of right and wrong, but still for the honor of the "men of dogdom" we differ very much from the views of them he has taken, and because, in one or two instances, he has found men who may not be eligible to the "angel" class, this does not prove that one kennel body, as a whole, is not composed of men who have gentlemanly instincts, and men who are in every respect entitled to be considered on the same high plane Mr. Malcolm has set himself upon.

Mr. Rousseau has received his first set back in the defeat of the Russian wolfhound Zloeem, by the much abused Krilutt, at Brighton show. If the sketches by Mr. Moore in this week's *Stock-Keeper* are to be taken as correct likenesses of the dogs, and we presume they are, Krilutt is ahead both in legs, feet, chest and head. Both are undoubtedly very handsome hounds, and their more general introduction to this country will be a welcome addition to the breeds of dogs we now have.

We are told that the Spratts Co. must be congratulated for the way they prepared Zloeem for the match, which it was, to all intents and purposes, and no less credit is due the new food company, the "Sanitary," for their work on Krilutt. This company treated him with their "Petroleum Shampoo," with the result that he was shown in very fine coat. This preparation will no doubt soon find its way over here and our exhibitors will not be slow to take advantage of it.

A feature of the Brighton show was the fine display of toy spaniels, and it seems to have been a regular rendezvous for the ladies in the fancy.

Stock-Keeper reiterates its assertions that we cannot touch the old country in beagles, from a couple to a full cry, and offers to put up a valued silver horn to toot "Hail Columbia" on if the Western dogs were fortunate enough to win, should any of our breeders like to run the risk of a match. Come, beagle men, have we not a couple that can hold their own with old Ringwood?

The delegates to the A. K. C. are notified, in the issue of the *Gazette* for October, that a special meeting of the A.K.C. will be held Dec. 11 at their rooms, 44 Broadway, New York city, to consider and act upon the proposed amendments to the Constitution and By-Laws. The quarterly meeting of the executive committee will also be held the same day immediately following the meeting of the club. The *Gazette* also publishes the constitution and by-laws containing the proposed amendments, which, owing to pressure of other business and disinclination, we must leave to our confrère "J. W." for discussion and criticism if needed.

At the Stetford (England) show, Mr. Megson put on view in a separate room five collies, Metchley Wonder, Edgbaston Fox, Merry Ben, Mortimer and Pickmere. *Fanciers' Gazette* in commenting on the subject agrees with a visitor who was heard to remark, that no other kennel could show as many good ones. Just by way of rebuttal, how would Christopher, The Squire, Scotilla, Roslyn Wilkes and Flurry II. look alongside them. We fancy from all that we can gather from reports and so forth that the judge would have no envious task before him to determine whether the Chestnut Hill or the Megson kennel was the superior. By the way, we heard that Mr. Harrison has had $2,500 offered for Scotilla to go to England, but he won't part in any way.

We followed the Radnor hounds on Saturday last, accepting Mr. Harrison's kind invitation, and rode one of his horses over the course of about seven miles. Our story must lay over for another week and must content our readers with the remark that we had two tumbles, but really feel too sore to pursue the subject any further this week, suffice to say that we had a glorious outing and would willingly repeat—when fully recovered.

As we anticipated, owing to the new tariff law, those black and tan terriers of Mr. Comstock's felt its full effect, the express company not being able to deliver them for nearly a week after they arrived. Had they been sent to Mr. Stoddard or to some agent, like Mr. Goldsmith, in the first instance, there would have been no trouble. Fortunately the dogs were brought over in good shape and experienced no ill effects. When we saw them they were as lively as crickets and quite fat. They will weigh in the neighborhood of 20lbs., no doubt, but are well formed, with capital heads and rich tan. They are, in my opinion, the right size to make the division of size in this breed more apparent than is usual. Of course, they were dirty and we could not form a very good idea of their leg markings, and besides, we think it unfair to criticise dogs before they have been put on the bench, so will reserve our remarks till the New York show, where they will doubtless compete and help to make the grandest show of these terriers this country has ever seen.

We are indebted to Mr. Power, the editor of the *American Stock-Keeper*, for his kindness in extending to us the courtesies of his office and exchanges, in making up our "Dog Chat" this week, while on the way to Hyannis and the beagle trials. True "men of dogdom" are ever ready to help one another in an emergency.

The best St. Bernard bitch that Mr. Crowell brought from England, Prudence, is not expected to live. Inflammation of the womb and hernia have set in, and there is little hope of her recovery. Should she die it will be a great loss to "Namquoit," as he values her at $1,000.

The Mascoutah Kennel Club claims much later dates this year—April 8 to 11. This will bring it in the week after Boston, rather an awkward date, as the western dogs will hardly risk the trip with so little time between shows.

The prizes at the coursing meet to be held at Merced, Cal., Nov. 18, are very valuable. The Inter-State Coursing Association providing in the cup stake for the winner a cash prize of $500, second $300 and third $100. A consolation stake of $100 has also been made for dogs beaten in the first and second rounds of the cup stake. Nominations are $10 each and close with J. R. Dickson, *Spirit of the Times*, San Francisco, Cal., on Thursday, Nov. 13. This is an opportunity for greyhound men to win prizes that will go a long way to reimburse them for their trouble and expense, and is bound to advance the interests of coursing. It is a pity that this association has not advertised their coming meeting more generally, very little being known about it by greyhound men in the East.

SHOW FIXTURES.

NEW YORK, Nov. 3.—*Editor Forest and Stream:* In accordance with Rule XXVIII. the following clubs have duly filed their claims at this office for their bench shows in 1891:

South Carolina Poultry and Pet Stock Association, at Charleston, Jan. 13 to 17.
Louisiana Poultry and Pet Stock Association, at New Orleans, Jan. 20 to 25.
Westminster Kennel Club, at New York, Feb. 24 to 27.
Maryland Kennel Club, at Baltimore, March 3 to 6.
Duquesne Kennel Club, at Pittsburgh, March 10 to 13.
Cleveland Kennel Club, at Cleveland, April 1 to 4.
Mascoutah Kennel Club, at Chicago, April 3 to 11.
Youngstown Kennel Club, at Youngstown, Sept. 1 to 4.

I beg to advise you that by direction of President Belmont, Jr. all claims for show dates filed with the A. K. C. will hereafter be sent by me to the sporting papers, for publication in the same, for the purpose of preventing a conflict of dates. A. P. VREDENBURGH, Sec'y.

FOX-HUNTING TRIALS.—Auburndale, Mass., Nov. 1.—The Brunswick Fur Club's field trials will take place at Great Island, Brunswick, Me., commencing Nov. 10 and continuing until all races are disposed of, which will take the whole of the week. We expect a large gathering, consequently lots of fun.—J. H. BAIRD, Sec'y B. F. C.

A PLEA FOR THE SMALL DOGS.

SALEM, Mass., Oct. 21.—*Editor Forest and Stream:* Almost every person of refined and cultivated tastes, and a generous and appreciative spirit, have a great fondness for dogs; and there is naturally a wide diversity of tastes regarding their respective favorites, good temper and beauty appearing to have first place in the affections of a large majority of people. Yet there are very many, among them numerous ladies of refinement, who prefer courage and sagacity; and there are those who would not permit a dog, however beautiful, to accompany them in their rides and walks who was unable to defend itself against the mongrels to be met with on the roads. I confess to sympathize in this sentiment, and a fine bull-terrier that has been well bred or a genuine Irish terrier, of which there are but very few in this country, would be our preference. Although the latter are not especially beautiful in color, being a foxy red, these two breeds are our favorites for a house dog or about the farm, as I do not want a dog that has no fight in him, any more than a bosom friend who had no spirit.

Of course, where there are children about—and where are they not?—the little glossy Yorkshire terriers, King Charles spaniels, and other little favorites, are best adapted to accompany early childhood; and this familiarity with dogs gives the child courage to meet any other species without fear. Then there are those who are passionately fond of the larger breed of animals, such as Newfoundland, St. Bernard, mastiffs and Russian poodles. Hunting dogs are not so well adapted to the family companionship. [Why not?—ED.] If I were to possess but one dog, I should unhesitatingly select the red-coated, strong-limbed, agile and faithful Irish terrier, that has no coward blood in his veins and will defend himself and his master against all assults, whether from beast or man, and can easily be trained for almost any service, and, at the same time, is gentle and kind when not aroused to anger. The first favorite of children and ladies would doubtless be the little long-coated silken-fleeced Yorkshire terriers, that are such a great attraction at all bench shows, whether in this country or on the continent. And next we might mention the elegantly-formed black and tan terriers, which are light and speedy of foot, and, if not fighters, can by their agility easily escape harm from any other species of canines—and I am compelled to admit that the dogs of this breed, such as I have seen at the shows this fall, stand first in my estimation among all species of canines. But I am well aware that all may honestly differ in tastes and estimates of excellence. We dog men would be greatly pleased to have experienced fanciers give expression to their preferences, in order to learn to what extent such views might harmonize. G. S. T.

BULLDOG SHOW REPORT.—*Editor Forest and Stream:* With the compliments of Mr. Alfred James Smith, of London, Eng., I have received a copy of the *édition de luxe* of the "Bulldog Club Show of 1890." The book is handsomely bound in sheepskin, contains 147 pages, artistically printed in brown ink on manilla paper, and the whole gotten up in Old English style. It contains: Officers of Bulldog Club, members of Bulldog Club, description of the perfect bulldog. Then follows 21 classes, giving each dog as entered in the show and with pedigree extending back for three generations, thus making it a valuable stud book. Then follows alphabetical list of names of dogs, list of exhibitors, prize awards, reporters' notes from *Kennel Gazette*, *Stock-Keeper*, *Canine Gazette*, *Fanciers' Gazette* and *Field*, then the *édition* ends with a report of the Bulldog Club for 1890; so you see, aside from the fact that there were only 180 copies printed, which will necessarily make them rare and valuable, it is quite valuable as a book of reference and a work of art. Mr. Smith, besides being a prominent member of the Bulldog Club, is quite an enthusiastic breeder and owner, having had 13 entries at the show in question, including such winners as Ruling Passion, Lionfeba, His Lordship, Cigarette, Bo'swain, Stiletto, Lord Pedro and Minka. His letter, that I received at the same time as the *édition*, contains the sad intelligence that the litter by Don Pedro out of Ruling Passion all died, owing to the bitch's milk being bad, and Mr. Smith's inability to procure a foster mother, as he states, "not for love or money." Much was expected of this litter, for Don Pedro is one of the greatest sires living, having sired such as Dryad, Kitty Cole, His Lordship, etc. All bulldog breeders can sympathize with Mr. Smith, for "we've both been there before, many a time." I think that my *édition de luxe* is the "onliest" in America.—CHAS. D. CUGLE (Baltimore, Md., Nov. 1).

PHILADELPHIA CLUB TRIALS.—Philadelphia, Oct. 31.—*Editor Forest and Stream:* Permit me to remove an erroneous impression which may have been made upon the minds of your readers by that part of "J. W.'s" Philadelphia letter of last week, which says: "The question of the A. K. C. accounts and Vredenburgh and Peshall have been completely eclipsed in Philadelphia dog circles by that of 'Shall negro handlers be allowed at the P. K. C. trials?' It is an ill wind that blows nobody good, and the steward in the back parlor has been doing a rushing business in slaking the throats of the argumentative members." The members of the Philadelphia Kennel Club have not, as "J. W." intimates they have, taken any interest in the A. K. C.-Vredenburgh-Peshall matter, so that subject did not exist to be "eclipsed" by that of "Shall negro handlers be allowed, etc.;" and it is not true that "the steward in the back parlor has been doing a rushing business in slaking the thirst of the argumentative members." The subject referred to, so far as I know, and if it had happened I would have known of it, has never been discussed in the presence of the steward, and why a correspondent of a reputable newspaper should write such rot to make an unfair reflection upon a club such as the P. K. C. is more than I can understand. It seems a pity that such falsehood should be resorted to when the truth can be had for the asking. Another error of "J. W.": Mr. Harrington Fitzgerald *is not* gun editor of the *Item*, as "J. W." writes you. Mr. Hildebrand Fitzgerald is, and it is he who has offered a watch, not "to the best handler at the club trials," as "J. W." states, but to the breeder (a member of the club) of the best dog in any stake in the club trials of this year.—FRANCIS S. BROWN.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Mark Dale, Mollie Dale, Dolly Dale and Linny Dale. By Gordondale Kennels, Readville, Mass., for black and white English setters, one dog and three bitches, whelped May 1, 1890, by Gath's Mark, Jr. (Gath's Mark—Katie Noble) out of Belle Dale (Gen. Eli's Breeze—Bessie Dale).

Chequasset Ravenna, Chequasset Romola and Chequasset Rest. By Chequasset Kennels, Lancaster, Mass., for St. Bernards, one brindle and white and two brindle, white marks, bitches, whelped Sept. 9, 1889, by Chequasset Pelion (Duke of Wellington—Champion Pelion) out of Rudolphia (Rudolph II.—Maira).

Chequasset Rainbow and Chequasset Radia. By Chequasset Kennels, Lancaster, Mass., for two orange, white marks, St. Bernard bitches, whelped Feb. 21, 1890, by Alp II. (Alp—Hero) out of Myrtle II. (Alp II.—Myrtle).

Chequasset Roysterer. By Chequasset Kennels, Lancaster, Mass., for brindle, white marks, St. Bernard dog, whelped Feb. 18, 1890, by Plato (champion Victor Joseph—Marvel) out of Chequasset Abbess (Duke of Lancaster—Lyra).

Chequasset Prudence. By Chequasset Kennels, Lancaster, Mass., for fawn, white marks, St. Bernard bitch, whelped August, 1889, by Sir Hubert (champion Plinlimmon—champion Queen Jura) out of Marvel (Hermit—Alma).

BRED.

☞ **Prepared Blanks sent free on application.**

Midget Nellie—Kash. A. E. Pitts's (Columbus, O.) pug bitch Midget Nellie (Lord Clover—Sister) to his champion Kash (Bradford Ruby—Lady Cloudy), Oct. 27.

Bo Peep II.—Kash. H. L. Goodman's (Auburn Park, Ill.) pug bitch Bo Peep II. (champion Joe—Tody) to A. E. Pitts's champion Kash, Oct. 30.

Daisy H.—Eberhart's Cashier. A. Hasselmier's (Covington, Ky.) pug bitch Daisy H. (Joe II.—Pearl) to Eberhart Pug Kennels' Eberhart Cashier (champion Kash—Lady Thora), Oct. 14

Madam Barry—Archduke. Swiss Mountain Kennels' (Germantown, Philadelphia, Pa.) St. Bernard bitch Madam Barry (Barnard—Fannie) to their Archduke (Chequasset Max—Theo), Oct. 18.

Neva—Mascot Bernard. H. H. Phillips's (Crystal Falls, Mich.) St. Bernard bitch Neva (Prince Barry—Myrtle) to A. J. Sawyer's Mascot Bernard (Nero III.—Green's Bena), Aug. 20.

Onota Belle—Inchiquin. N. McIntosh's (Providence, R. I.) Irish setter bitch Onota Belle (champion Chief—Bizreena) to J. J. Scanlan's Inchiquin (Shandon II.—Iona), Oct. 5.

Nellie—Nimrod. John Hopf's (Woodstock, Ont.) cocker spaniel bitch Nellie (Black Duke—Lady Nell) to Woodstock Kennels' Nimrod (champion Obo II.—Jealousy), Oct. 29.

Black Duchess II.—Nimrod. Woodland Kennels' (Woodstock, Ont.) cocker spaniel bitch Black Duchess II. (champion Obo II.—Woodland Queen) to their Nimrod (champion Obo II.—Jealousy), Sept. 26.

Coonie—Black Duke. S. P. Heartt's (Parkersburg, Ia.) cocker spaniel bitch Coonie to Woodland Kennels' Black Duke (champion Obo II.—Woodland Queen), Sept. 11

Chequasset Ravenna—Sir Herbert. Chequasset Kennels' (Lancaster, Mass.) St. Bernard bitch Ravenna (Chequasset Pelion—Rudolphia) to their Sir Herbert (Plinlimmon—champion Queen Jura), Sept. 16.

Mygnon—Chequasset Pelion. C. H. Akerley's (Tonawanda, N. Y.) St. Bernard bitch Mygnon (Beauchamp—Dell) to Chequasset Kennels' Chequasset Pelion (Duke of Wellington—champion Plevna), Oct. 9.

Elizabeth—Sir Herbert. R. Barry's (Peabody, Mass.) St. Bernard bitch Elizabeth (Merchant Prince—Lys) to Chequasset Kennels' Sir Herbert (Plinlimmon—champion Queen Jura), Oct. 9.

Chequasset Romola—Sir Herbert. Chequasset Kennels' (Lancaster, Mass.) St. Bernard bitch Chequasset Romola (Chequasset Pelion—Rudolphia) to their Sir Herbert (Plinlimmon—champion Queen Jura), Oct. 13.

La Vita—Lord Clover. Thos. I. Ballantine's (Peoria, Ill.) pug bitch La Vita (champion Kash—Fair Inez) to his Lord Clover (champion Loris—Goulding's Nellie), Oct. 20.

Cora—Roscius. Central Kennels' (Jersey City, N. J.) King Charles spaniel bitch Cora (Norwich Jumbo—Ina S.) to Wm. Philips's Roscius, Oct. 27.

WHELPS.

☞ **Prepared Blanks sent free on application.**

East Lake Virgie. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch East Lake Virgie (champion Bradford Ruby—Puss B.), Oct. 3, five (four dogs), by their John Bull (champion Loris—May Queen). Three dogs and one bitch since dead.

Neva. H. H. Phillips's (Crystal Falls, Mich.) St. Bernard bitch Neva (Prince Barry—Myrtle), Oct. 22, nine (seven dogs), by R. J. Sawyer's Mascot Bernard (Nero III.—Green's Bena).

Daisy Dale II. Gordondale Kennels' (Readville, Mass.) English setter bitch Daisy Dale II. (Gen. Ely's Breeze—Bassie Dale), Oct. 4, eight (two dogs), by W. C. Chafee's Prince Kent (Royal Kent—Princess Dot).

Blue Nellie. H. J. Behrmann's (English setter bitch Blue Nellie (Blue Dick—Nellie Belton), Oct. 30, five (four dogs), by R. D. Stocking's Gan Gladstone (Boss Gladstone—Vell).

Chequasset Prioress. Chequasset Kennels' (Lancaster, Mass.) St. Bernard bitch Chequasset Prioress (Monte Rosa—Kleine), Oct. 17, 1890, nine (seven dogs), by their Chequasset Pelion (Duke of Wellington—champion Plevna).

Fluff. Mrs. C. Taylor's (Bolton, Mass.) St. Bernard bitch Fluff (Monte Rosa—Theon), Oct. 19, 1890, thirteen (five dogs), by Chequasset Kennels' Sir Herbert (Plinlimmon—champion Queen Jura).

SALES.

☞ **Prepared Blanks sent free on application.**

Bosco. Orange tawny and white St. Bernard dog, whelped Dec. 24, 1889, by Julien out of Alice, by H. H. Phillips, Crystal Falls, Mich., to Dr. A. A. Metcalf, same place.

Brutus IV. White and orange St. Bernard dog, whelped Sept. 9, 1890, by Marquis of Stafford out of Loraine, by Swiss Mountain Kennels, Germantown, Philadelphia, Pa., to H. H. Belding, same place.

Marquis of Stafford—Loraine whelps. St. Bernards, whelped Sept. 9, 1890, by Swiss Mountain Kennels, Germantown, Philadelphia, Pa., an orange tawny, perfect markings, dog to Mrs. Moorehouse, same place; an orange tawny, perfect markings, bitch to F. C. Arnold, Edgewater Park, N. J., and an orange and white bitch to I. H. Jacobs, Hammonton, N. J.

Lady Monarch. Lemon and white English setter bitch, whelped June 23, 1890, by Roy Monarch out of Blue Jennie, by N. McIntosh, Providence, R. I., to M. M. Inman, same place.

Golden Rod. Skye terrier bitch, 3mos. old, by Toodles out of Frousey II., by Dickens Kennels, St. Stephens, N. B., to E. H. Moore, Melrose, Mass.

Fluff. Skye terrier dog, 3mos. old, by Toodles out of Frousey II., by Dickens Kennels, St. Stephens, N. B., to D. B. Clausen, Dorchester, Mass.

Dick Swiveller and Little Nell. Skye terrier dog and bitch, 3mos. old, by Toodles out of Frousey II., by Dickens Kennels, St. Stephens, N. B., to J. D. Crawford, Montreal, Can.

Kildare—Jill whelps. Black cocker spaniels, whelped July 10, 1890, by Dr. Nicol, Cookstown, Ont., two dogs to H. P. Thompson for Geo. Bell, a dog to Richard Melling, both of Toronto, Ont.; a bitch to W. J. Wallace, Montreal, Can., and a dog and bitch to R. A. A. Johnston, Ottawa, Ont.

Kildare. Black cocker spaniel dog, whelped Feb. 13, 1889, by champion Brant out of Bonita, by Dr. Nicol, Cookstown, Ont., to H. P. Thompson for Geo. Bell, Toronto, Ont.

KENNEL MANAGEMENT.

There is no charge for answering questions under this head; we are always glad to give advice on the care and management of dogs; and we shall make this a special feature.

E. W. A., New York.—I have a rough-coated St. Bernard dog very much troubled with lice; what can I do to exterminate them? He is too large a dog to give a bath handily in any particular liquid. Could I apply a lotion on such parts as are mostly affected? Ans. Wash him with one of the advertised soaps for that purpose; or you can use the Persian insect powder with advantage and then wash him a day or two after.

H. C. S., Troy, N. Y.—1. In your issue of to-day, under "Dog Chat," you speak of an interesting letter written by Mrs. Lee, of interest to St. Bernard breeders. Can you tell me where I may read it, as I am much interested in rearing a finely bred puppy of that class. As my puppy should be a big one if properly handled, I wish you would give me the information about feeding and rearing that you speak about in your article. What system of exercise should a puppy of 3 months be given. 2. I notice my dog is getting very much bow-legged. Can I do anything for it? 3. Can you recommend a good worm medicine? Ans. 1. The letter was a private one, and did not specify any particular way of feeding, it referred more to climatic influence than anything else. In feeding your pup we should advise you to use good substantial food, and when the pup is well exercised do not be afraid of giving plenty of meat, and once a day, say at noon, feed it raw, but chopped fine. In making soups, in which is incorporated stale bread, rice or oatmeal (never use corn meal), make it either from good suet or beef bones. A very good food is sheep's head, boiled till the flesh falls from the bones, take these out and mix in the above cereals already cooked. It will also be found beneficial to accustom your dog to Spratts or Goodwin's biscuit, soaking them at first till the dog's teeth become strong enough to gnaw them, when it is better to give them dry. While all this nutritious and rather strong food is being given, the dog must be regularly but not too violently exercised. It is not enough to turn a puppy into a yard and expect him to exercise himself, he gets tired of that. The dog must be walked every day. If you have children have them take it out with them whenever convenient, or employ a boy to do it every day, this is the best plan. Don't jog him after a wagon, that does more harm than good. At first take him half a mile there and back, increased gradually till he can do two to four or five miles every day without tiring. In feeding him it is also beneficial to give your dog a spoonful of bone meal-four or five times a week. Provide clean quarters, not too warm, but free from draughts. With such treatment as the above there is no reason why your dog should not only become a big one, but also a credit to your raising. 2. The bent legs will very likely come all right in time, if the proper exercise is given. Avoid keeping the dog fat, just nicely fleshed up is better; in this, of course, you must be governed by your own judgment. 3. In raising a puppy always be on the lookout for worms. It is well every other day to incorporate with the dog's food a teaspoonful of powdered charcoal, this acts as a cleanser of the stomach, aids digestion, and is a preventive of worms. We have found all of the vermifuges put up by Spratts Company, Dr. Glover or Stedman very effectual. See our advertising columns.

U. S. G. W., Norfolk, Va.—My dogs have some skin irritation that causes them great uneasiness, they scratch almost continually, and as they have the run of the house this scratching is annoying in the extreme. In the first place I have had a constant fight with fleas during the past season, using large quantities of insect powder, but with only temporary relief, as the pests would be just as bad in two or three days after as before using the powder; in the midst of the flea trouble this skin trouble appeared and was more annoying than the fleas had been. This eruption is located on the rump near the root of the tail, extending but a short distance along the back, down along the back and inside of the thighs, on the belly around the sheath and under the arm pits. The dogs scratch themselves raw, then these places heal up and appear in some other place near by. I have tried Fowler's solution, mange cure, carbolic soap, and several ointments prepared by myself, but nothing has ever given any relief; I have tried to use lead plaster but have been unable to apply it. The dogs are fed on scraps during the day with a good feed of cooked meat at night. They are in good spirits, strong and active, with good appetites, bowels in good condition, but are thin in flesh; they are Irish setters, quite handsome, and I am very anxious to get them cured up. Ans. You had better try the following mixture which we have found very good in obstinate cases: One gallon of lard oil, 1lb. sulphur lac, 1lb. antimony, mix and shake well before applying. Rub the affected parts well with the mixture, in fact the whole body may be given a dressing if the dog be kept warm and from draughts. In three or four days wash off with warm water and castile soap. In a couple of weeks report result. A bottle of Glover's blood purifier will be found a good thing to give at the same time.

Rifle and Trap Shooting.

RANGE AND GALLERY.

ST. LOUIS, Mo., Oct. 31.—The St. Louis Pistol Club, which at one time, not very long ago, was the largest organization of its kind in this country, shows signs of going to the wall. Interest in the medal contests is growing beautifully less with each succeeding week. Only the better shots of the club take an active interest in its affairs, the weaker, or majority of the members have quit competing for the trophy. The attendance at the last two shoots was very light, and the probabilities are that when the present tourney is over the club will wind up and go out of existence. McBean won the medal at the last shoot. For all shooting the club uses a 12½yds. standard American target. The score:

A McBean	9	10	10	9	8	8	9	10	10	9—92
W Bauer	10	9	9	9	10	10	8	9	10	7—91
G Alexander	10	8	9	10	8	10	9	7	9	10—90
M Summerfield	7	10	8	10	9	10	7	10	9	8—88
M Billmeyer	10	6	10	8	6	7	9	9	9	10—87
J Bast	7	8	9	8	9	9	9	9	10	7—85

UNSER FRITZ.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

Nov. 11.—First Eastern New York League Tournament for the month of November, under the auspices of the Albany Gun Club, at Elm Grove Shooting Park. Elwood W. Vine, Manager, 14 North Pearl street, Albany, N. Y.

Nov. 18-19.—Open-to-All Tournament of the Woodside Gun Club, Woodside, N. J. Carl Von Lengerke, Sec'y, 843 Broad street, Newark.

Nov. 25-28.—Tournament of the Newark Gun Club, at Erb's Park, Newark, N. J. Two days at inanimate targets and two days at live birds. Jacob Pentz, Secretary.

DES MOINES TOURNAMENT.

DES MOINES, Ia., Oct. 31.—The opening tournament of the Highland Gun Club proved to be a grand success. The attendance was good and the shooting excellent, although the scores do not show many straights. A high wind from left to right made the targets very unsteady, and many of the live birds were dead out of bounds. The five-money system, we think, is the only way to classify shooters. Each shooter can draw his *pro rata*, and is not compelled to shoot off unless he so desires. This club will in the near future give a large tournament and guarantee $600 to $1,000, and will offer inducements to bring some of our Eastern friends among us. Among the visitors were R. O. Heikes, S. A. Tucker, Chas. Grimm, J. G. Smith, Mr. Ryland, Henry Durant, Dr. West, the Fagan brothers, Mr. Campbell, Chas. Leonard, W. Anderson, Frank Frisbee and Lon Lewis.—C. W. BUDD.

Following are the scores:

Extra shoot No. 1, 10 single targets, entrance $1: Searight 10, Budd 9, Durant 9, West 9, W. F. Smith 8, Ketchum 8, J. G. Smith 7, Sanford 7, Brewer 5, Ferguson 5, Dimple 5, Kinsey 2. All ties div.

Shoot No. 1, 9 single targets, entrance $1.50: Sanford 8, Searight 8, J. G. Smith 8, Durant 7, Budd 7, Dimple 7, Ketchum 7, West 7, Roy 6, Campbell 6, W. F. Smith 6, Kinsey 5, Brewer 5, Ferguson 4, W. Fagan 1. All ties div.

Shoot No. 2, 12 single targets, entrance $2: Budd 12, Durant 11, Searight 11, Grimm 11, Bird 11, Sanford 10, Ketchum 10, M. Fagen 10, West 9, Tucker 9, Ferguson 8, Brewer 8, J. G. Smith 8, Roy 8, W. F. Smith 5, Kinsey 5. All ties div.

Shoot 3, at 5 pairs, entrance $1.50:

Bird	11 11 10 11 11—9	Tucker	11 10 10 10 01—6
Durant	11 10 11 10 11—8	Campbell	01 10 10 01 11—6
